# REAUTHORIZATION OF SURFACE TRANSPORTATION PROGRAMS

FRIDAY, MARCH 1, 1991

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON SURFACE TRANSPORTATION,
COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION,
*Crestwood, MO.*

The subcommittee met, pursuant to notice, at 10 a.m., at Crestwood Government Center, Crestwood, MO, Hon. Norman Y. Mineta presiding.

Present: Representatives Mineta, Roe, Hammerschmidt, Emerson, Gephardt, Horn, and Poshard.

Mr. MINETA. We are really pleased to be here at Crestwood at the wonderful hospitality of Mayor Patricia Kellerman. We appreciate this opportunity to have this Regional Field Hearing in order to examine issues concerning the reauthorization of our Federal surface transportation programs.

We are honored to have the Majority Leader of the U.S. House of Representatives, your own Congressman, Richard Gephardt, with us today. Dick has been an active supporter of improving our nation's infrastructure and I look forward to working with him this year as we put together this very important bill.

The participation of today's witnesses in this hearing is very valuable, for what we learn here will help us determine our needs for tomorrow. There is no question that 1991 promises to be an important year for transportation in this country. This year Congress and the White House will rewrite the highway and mass transit map of our nation for years to come. What we achieve, or more importantly, what we fail to achieve, will have a very profound effect on our nation. I believe that we have the opportunity, and the responsibility to craft a visionary transportation system for the future.

I have a great deal of confidence in the Secretary of Transportation, Sam Skinner, and the team that he has put together at the Department of Transportation including Dr. Larson in terms of the Federal Highway Administration, Brian Clymer at Urban Mass Transit Administration, Jerry Curry at the National Highway Transportation Safety Administration as well as the other managers and budget staff. I believe that we have the opportunities with the leadership of our own Chairman, Congressman Bob Roe of New Jersey, ranking Republican Member, John Paul Hammerschmidt, and the subcommittee ranking Republican Member, Congressman

Bud Shuster of Pennsylvania of putting together that kind of visionary program.

All of you know that studies call for transportation investments of up to $3 trillion during the next 20 years. We can dicker about the final cost, but there are no more universal truths than these.

First of all the needs are there.

Second, how we spend the money we have is as important as how much money we have to spend. In the 1990s, the challenges and responsibilities will be first of all to maintain the federal investment in the federal aid highway system.

Third, to continue broad federal support for mass transit, and create transportation partnerships that include federal, State and local governments that include metropolitan planning organizations and include very importantly the private sector.

Now, the only way our transportation network will truly improve in the years ahead is if we put our increasingly scarce federal dollars where the needs are today and where they must be in the future, that foresight demands not a single strategy but a series of policies that will be responsible and responsive to State, regional and local needs well into the very next century.

I look forward to hearing from today's witnesses. Their insights will be very useful as we begin our journey to the best legislation possible. At this time, it's a great pleasure for me to yield the microphone to the Chairman of the Committee on Public Works and Transportation, Congressman Bob Roe. Bob has been a leader on our committee for years, has chaired the Science, Space, and Technology Committee for the House of Representatives, and this year has now assumed the Chairmanship on the full Committee on Public Works and Transportation. At this time I would like to recognize, Mr. Roe.

The CHAIRMAN. I thank the distinguished gentleman from California and chairman of our Subcommittee on Surface Transportation. I thank also John Paul Hammerschmidt, our ranking Member on the full committee.

Mr. Chairman it is especially appropriate that we hold our first hearing this year on the reauthorization of the Surface Transportation Act here in the St. Louis metropolitan area.

I want to, at this point, pay high regards for our special host, Mayor Pat Kellerman of Crestwood. It is an interesting point because many of us on this committee have also served as Mayors of our communities in our respective States. I think it one of the toughest jobs in America.

This metropolitan area, as we know, is almost two-and-a-half million people in parts of two States. The transportation problems truly are a microcosm of many of those metropolitan areas with rolling suburbs and increasing congested community towers. I want to pay special tribute to our host for this session, the distinguished majority leader of the United States House of Representatives, your own Congressman, Richard Gephardt. He has been a national leader in the battles to strengthen our competitiveness in the global market place and has brought the same energy, creativity and ability to the fight for our national economy as he has in representing the people in the Third District of Missouri for the past fourteen years.

The St. Louis Metropolitan area is well represented in our Committee on Public Works and Transportation, our new Member, your new Member from St. Louis, Joan Kelly Horn, and, also Bill Emerson, our very distinguished Member from Missouri and two Members from across the river, in Illinois, Glenn Poshard and Jerry Costello. Jerry was with us last night but he couldn't make it here today because of meetings that he is holding in his district.

The problems of the metropolitan areas must be solved through new and innovative solutions and through a comprehensive approach to our problems. The rebuilding of our national transportation system will provide the economic foundation for our nation to complete in the market place of the twenty-first century. We are now in a world economy, and I think that's an important point to know. The majority will speak to that issue this morning. There is no longer an isolated American economy; we are now competing again on the global economy.

It may seem ironic to say that this is middle of the heartland of our country, but the development of a strong transportation system in some ways is even more important here in Missouri, where your industries have the modern transportation network to get your goods to the coast where they can be shipped abroad, such as my State of New Jersey.

The nation must develop a national inter-modal transportation system that will move people and goods in an energy-efficient manner. It is no coincidence that the Nation's rate of productivity growth has declined for the last two decades and that we have not presented and participated, provided the resources, and investment in the interest of our nation. Thirty-five years ago our committee initiated the building of a national interstate highway system, which our chairman has spoken to, which has transformed the face of the nation and promoted the economic development throughout our country. And in the future, as we develop this legislation, we must invest in the rebuilding of the nation's infrastructure so that we can be competitive in the 21st century and so that we can create the new work of our nation.

If I may, Mr. Chairman, and thank you again and all of the members that are here today in this participation, and close on one note. I think the excitement we found here in your great State in our visit last night, and the many leaders we spoke with, is the same we're finding on the east coast is an excitement, and I think the people of our country are coming back and saying, let's—as we look in part to the problems in the middle east, and the rebuilding of the middle I would hope that this decision and these decisions we made here in the Congress of the United States that we'll invest the resources of our country to rebuild our own country, that's where the future's going to be for American to be able to participate in the global economy.

I thank you, Mr. Chairman.

And, I would like to enter into the record at this point the prepared statement of our colleague, Jerry Costello from Illinois.

Mr. MINETA. Without objection, so ordered.

[Mr. Costello's prepared statement follows:]

STATEMENT OF HON. JERRY COSTELLO

As a member of this panel, I want to thank Chairman Mineta and Chairman Roe for holding this hearing on transportation needs in the St. Louis Metropolitan Region. I regret that due to long-scheduled town meetings with my constituents, I could not be with you today.

Our subcommittee is considering the greatest need for this region, that of improving the transportation network. We are currently facing growing traffic congestion in crossing the Mississippi River, congestion that can only be relieved by a new downtown bridge as well as improvements to existing bridges.

Our area is already preparing for the future by constructing a light rail system to connect the two states and serve local commuters. Knowing of our need for greater commercial aviation in the region, it is my hope that light rail will eventually connect St. Louis Lambert Airport with joint-use at Scott Air Force Base. In addition, the Army Corps of Engineers continues to invest in the commercial bounty of the river by constructing the new Mel Price Lock and Dam, an enormous public works asset.

Investing in our infrastructure is a vital first step toward improving economic development in the entire region. As our nation faces stronger economic challenges during the present recession, it is vital that we upgrade our nation's bridges, airports and water resources to supplement business growth and ensure job creation in the 1990's.

Mr. MINETA. I would like to call on our very distinguished Republican ranking Member on the full Committee on Public Works and Transportation. There isn't a gentleman in the House of Representatives, or a person in the House of Representatives, who is more loved or respected in terms of his knowledge of public works and transportation, and I'm privileged to introduce our distinguished friend and colleague from Arkansas, Congressman John Paul Hammerschmidt.

Mr. HAMMERSCHMIDT. Thank you very much, Mr. Chairman. Of course I'm delighted to be here in Crestwood under the auspices of Mayor Kellerman's gracious hospitality. You know certainly the St. Louis metropolitan area and the surrounding region as a vibrant, growing community in the midwest. It is an ideal place for the Surface Transportation Subcommittee to hold this hearing.

We look forward to hearing first hand from our distinguished panel of witnesses about the transportation problems and the challenges facing the heartland of our nation. Your views will provide us with the valuable information as we move forward on landmark legislation this year that will shape the future of our surface transportation programs under the very able leadership of subcommittee Chairman Norm Mineta and the extremely knowledgeable chairman of our full committee, Bob Roe.

I would like to thank my distinguished colleague on the subcommittee, Congressman Bill Emerson for requesting this hearing last year and helping host us here today. I served with Bill in the house for ten years and on the Public Works Committee since 1989. Bill is a great advocate for the interests of Missouri and will be an important player in crafting the new highway and mass transit legislation.

I would also like to thank one of our newest Members to the Committee, Congresswoman Joan Kelly Horn from the Second District of Missouri for also hosting us today. Congresswoman Horn is a fine addition to the House and to our Committee and I look forward to working with her on the many challenging issues that we face.

It is indeed a great honor for us to have the Distinguished Majority Leader of the full House joining us today, Congressman Dick Gephardt. I would like to thank you, Dick, for giving your sincere attention to transportation interests and for allowing us to hold this hearing in your district. You have given the critical issue of public investment in our nation's highways, transit system, airports, waterways a personal boost by testifying before our Committee last year and appearing here again today. And I'm sure that your enthusiasm and leadership will help us come up with innovative and workable transportation solutions to guide our country in the next century.

And, of course, we're pleased to be also with your very fine neighbor from across the river, another fine Committee colleague, Glenn P[illegible]ard. We know his active interests in this matter that we consi[illegible]r in these hearings.

As a f[illegible]l note I would like to say that in our many visits across the cou[illegible]y in the last year, we've learned a great deal about how our dec[illegible]ons in Washington affect the state and local governments which [illegible]ve to implement many federal laws and how people are affecte[illegible]y those decisions. So I believe it is an essential and critical pa[illegible]of our role as responsible legislators to listen to the people we se[illegible] as much as possible to aid us in your efforts.

I co[illegible]gratulate Chairman Norm Mineta for having the energy and fo[illegible]sight to have these hearings all across the country, and of course, our full Committee Chairman, Bob Roe's aid as well. And so that's why we've come to the great State of Missouri, my fine neighbor to the north. Thank you for having us, I'm grateful just to be here.

Mr. MINETA. Thank you very much, Mr. Hammerschmidt. At this time I would like to call on a very fine colleague on the Public Works and Transportation Committee, your own Member from the Eighth Congressional District here in Missouri, Mr. Emerson. Mr. Emerson is one of those folks who was called on to do a lot of important things, so he not only serves on the Public Works and Transportation Committee, but he also serves on the Agriculture Committee, and these are, of course, our two important committees that relate to the needs and the great State of Missouri. So, I'm pleased to introduce at this time Congressman Bill Emerson.

Mr. EMERSON. Thank you, Mr Chairman. I am particularly glad to have the opportunity to welcome you and Chairman Roe and our good friend Ranking Member John Paul Hammerschmidt here today together with our other colleagues, welcome to Missouri. We're delighted to have you here, I think it is going to be a very interesting day in which we will be addressing the infrastructure needs and concerns of eastern and southern Missouri, and I have a lengthy statement that I would like to submit for the record, but I would really prefer to yield most of the time for our witnesses who are there today.

But let me say first of all with our 30 year old Interstate System now 99 percent complete and with year's landmark reauthorization of the Federal Surface Transportation Act, we as Missourians have an opportunity to address some of the very serious transportation challenges with which we're faced. Missourians drove some 35 billion vehicle miles in 1989, and that was the fourth highest in the

nation. Moreover Missouri is one of 19 donor states receiving only 78 cents back from the Federal Government for every dollar that Missouri motorists pay in to the Federal Highway Trust Fund. So it is vital that Missouri be dealt a fair hand with the new act and that we receive our fair share of funding to build new highways, roads and bridges, as well as adequate funding to improve and repair our existing roads.

And I want to say to my fellow Missourians here today I have every confidence that that will happen. We have a very bipartisan spirit of cooperation on this committee and viewing the audience here today I may tell my colleagues that don't hale from this region that we have a very bipartisan group of witnesses before us today all united on the subject of the need to improve our state and this nation's infrastructure.

So once again, welcome to all of my colleagues that have come here today and to all of our witnesses and look forward to hearing the statements of each of you and working diligently on the problems that we have. Actually I view them as opportunities. I think that the reauthorization of the Federal Highway Act gives us an opportunity to put emphasis on infrastructure and I hope the end results of these emphases can meet with as resounding a success as our military has met with in the Persian Gulf in the recent days.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much, Bill. Let me—I see an old colleague of ours in the audience, former member of the House, former member of the Public Works and Transportation Committee who has contributed so much to all of our legislative efforts from the Second Congressional District, Bob Young. Bob, it's good to see you here.

I would also like to, before I proceed with our very distinguished majority leader, is to thank the staff here of the City of Crestwood to the staffs of you, Mr. Leader, Mr. Emerson, Glenn, Jerry, everyone else, Joan, your staffs have been so very hospitable in terms of making the arrangements and doing everything while we hold these public hearings.

At this time I would like to introduce our first witness, a person who really needs no introduction but who deserves one, because he has done an outstanding job, not only as a Member of the Congress having come in the 95th Congress as a result of the 1976 election, but who has distinguished in his job, in his role as the majority leader of the U.S. House of Representatives. All of us are very proud of the job that he does. He does it with dedication, with commitment in the amount of integrity that he brings to this job is second to none.

I have had the privilege of working with Dick as a Member of the Budget Committee as well as other roles and now as a deputy whip, and so it really does give me a great deal of pride and privilege to be in his district here in St. Louis County, as well as well as what we have seen of Jefferson County this morning and the rain which we need in California. But Dick, it's a pleasure to have you here and we yield to you at this point.

## TESTIMONY OF HON. RICHARD A. GEPHARDT, A REPRESENTATIVE IN CONGRESS FROM MISSOURI

Mr. GEPHARDT. Thank you Norm, very much. All of us from the area, Bill Emerson, Joan Kelly Horn, Glenn Poshard, and Jerry Costello, who couldn't be with us, are honored to have this important committee and subcommittee in Missouri today and in the region today to discuss a piece of legislation that I believe may be the most important piece of legislation that this Congress will pass either this year or next.

We are deeply honored that you would take your time from your districts and your work to come to Missouri to hold the first hearing on this bill. For the Missourians behind me and Illinoisans, I want you to know that this committee has been an important part of the history of our country. This committee has through the years made the case to the American people to raise the resources to really build this country. They have done it in a bipartisan way and that has made the committee so very effective through the years.

And so to you Norm, and to the chairman of the full committee, Bob Roe, and to John Paul, we are deeply indebted to you for not only being here today, but the work you have done, tireless work, in trying to write the legislation so that the entire country can have the kind of public works, the new word is infrastructure. I like public works because I'm better able to understand it. The public works that have really built this country as the greatest economic power in the history of the world.

I want you to know that you are in a place, as you saw last night as we stood at the arch, which has clearly been the crossroads of our country, the gateway to the West. You saw a part of our country that really has been involved so heavily in transportation, roads, bridges, we saw three bridges from where we stood at the arch, and of course, railroads. St. Louis having been one of the great rail centers of our country throughout its history.

President Eisenhower, the acknowledged architect of the modern interstate system, singled out, heralded the efforts of the State of Missouri two weeks after the passage of the original Interstate Highway Act. Missouri had submitted expansive programing requests to bring the State's interstate system up to the standards set in that historic legislation.

You're going to hear today from a distinguished panel of witnesses from Missouri, from Illinois, from the region, people who have really made a contribution to build the transportation network here in the State of Missouri, and I think we can together learn from them as we consider this historic legislation that President Bush has presented to the Congress a few weeks ago, and of course through the year you're going to be talking to many people from all over the country, but I think you'll look back to today to the testimony that you're going to hear today to help you put together this important legislation.

Today we Missourians are no less bullish in our desire to keep our roadways and transit systems safe and cost efficient for our citizens than we were back when President Eisenhower and the Congress made the great leap forward. In the next few months as

the committee develops its transportation plan we will work together to improve the president's proposal in order to bring the greatest possible return on Missouri's investment in transportation infrastructure.

The committee's action on this legislation will certainly shape important policy decisions on capital improvements and public investment projects into the next century. I applaud the committee's commitment to hold hearings where those decisions will be made, at the state and local levels. It is important to learn first-hand what unmet investment needs exist. Growth in infrastructure investment must go hand-in-hand with capital investment in our industrial sector. Poor transportation facilities will significantly undermine the profitability of business, and as productivity falls off we're left with lower private investment and lower economic growth.

During a period when both Japan and Western Europe are expanding economically you know that they are increasing their share of capital investment in relation to their overall gross national product. The United States in a period of burgeoning trade deficits is actually reducing our share of capital investment with respect to our overall gross national product. I think you all know that the United States now ranks 55th in the world in capital investment, in infrastructure as a percentage of gross national product.

How can we expect to market our products halfway around the world when we cannot efficiently transport our products around town. We cannot allow this drain on economic capacity to go unchecked. Every American who regularly sits in traffic on their way to and from work should be disturbed by this trend. For most motorists these days rush hour is an oxymoron. The ramifications of these increased incessant snarls are startling. By the year 2005 traffic delays caused by inadequate roads will cost the United States $50 billion in lost wages and wasted gasoline.

Since 1980 St. Louis traffic loads have increased 48 percent. And this is not just an urban problem, Jefferson County which we saw this morning at Highway 21 still has no major east-west highway, which I mentioned as we stood in the rain, which could connect it with Highway 44. As I said, Jefferson County is one of the fastest growing areas in the State of Missouri. Many of the residents in Jefferson County have to get to other parts of St. Louis County or City to work, and the roads are simply inadequate to carry them to their work.

The immediate positive effect of highway investment can best be summarized by its effect on working families. In essence they create jobs. Secretary Skinner, for instance, estimates for every $1 billion spent on highway construction, 30,000 to 50,000 jobs are created. In Missouri, if we are successful in fully funding the state's highway needs up to 8,500 new jobs could be created within this state alone.

There are, of course, the other modes and instruments of transportation in the Surface Transportation Bill, which as far as I'm concerned are in the greatest need of investment. The nation's growing bridge crisis is an area of concern that is worthy of mention. Almost half of the country's bridges are deemed structurally

substandard. Fixing the nation's bridges would require another $53 billion. And I'm alarmed to tell you that in the State of Missouri, almost 70 percent of the bridges are considered substandard to some degree.

And probably the most understated, yet potentially significant aspect of surface transportation policy is mass transit. As demands on transportation systems increase, finding innovative ways of managing them is imperative. Mass transit planning is one of the most effective ways to deal with traffic congestion in urban areas. Not only is there a benefit of reducing strains on roads, mass transit systems produce energy efficiencies and cleaner air, as we all know we passed a very significant clear air bill last year that we going to have to work to try to meet.

Here in St. Louis I'm proud to report, we have a project underway that we have been fortunate enough to receive federal dollars to help construct the Metro Link system. It has been a cost effective system using existing infrastructure to reduce overhead, probably the most cost effective mass transit system that has been built in the United States. The Eads Bridge, which you saw last night, one of the oldest bridges across America will carry the Metro Link from the Illinois side to the St. Louis side, and carry it up to the airport. We hope it can be expanded in the future, and I'm sure it can be. But again its using all existing track, which has been built many years in the past. Some of the tunnels under the city were built in the 1900s and will be used in this new Metro Link system.

And, of course, it will reduce traffic congestion, oil consumption and air pollution. And when it's finished the system is estimated to generate an additional 18,000 permanent jobs in the region and infuse about $400 million into the local economy I'm encouraged by the studies of the cost containment on the project, and look forward to working with and expanding the current scope of Metro Link in the future in both Missouri and Illinois.

An even more innovative project you're going to hear about today is a multi-modal transportation center where several transportation ports would be available in one location. Metro Link, the new mass transit, Amtrak, new station for Amtrak in the same location and both metro and long distance bus service, a heliport and automobile access. And, of course, the Metro Link will go straight to the airport and take passengers there.

Now, while I'm pleased about these ideas fully funding on that need is a full-time job. By some estimates the price tag for repairing and expanding the nation's roadways, which are currently in dire straights, is about $1.5 trillion. Even the administration's own plan, paved as it is with good intentions, and it is a good bill, doesn't quite address all of these needs. As a matter of fact, its spending recommendations are slightly below current standards if adjusted for inflation in the next five years.

Finally, let me say that while there are many significant proposals in the administration's plan. I am concerned about shifting the burden of a national transportation system from the federal level to other levels. I would point to a couple of areas of particular concern: The new state match for urban and rural road projects, reduction in mass transit operating subsidies for some metropolitan areas, and the emphasis on toll road construction.

I have covered a lot of ground and our other witnesses will cover it better than I can. And I don't want to belabor the points that expert witnesses will be addressing. So I will conclude now and ask for any comments from the panel. If there are no questions I want to thank you again for being here today and taking your time to be with us, and I cannot tell you how much I appreciate the work, the hard work that this panel and this committee does to build our country into the kind of economic power and competitive nation that it's been and that we always want it to be.

A great American once said that if America will simply do two things, America will always be number one. Of course one of those things is to educate our children, and the other that great American said, was to build the public works of America. But that's our mission in 1991, with this bill and with this committee. And I want to say to you that the leadership of the Congress will work with you in every way possible. Both Democratic and Republican leadership want to see that your bill hits the floor as soon as it's ready and to put together the votes so that we can pass it, get it to the president, get it signed and get the building to begin.

Thank you very much.

Mr. MINETA. Thank you very much, Mr. Leader. That's an invitation that I can't turn down in terms of what we intend to do. Let me just indicate to you, as you know the president submitted his legislation to the Congress, and we're analyzing that right now, we're hoping to have our bill put together by the middle of April.

And that means that the staff, the Republican and Democratic staff on our committee are putting that legislation together. We hope to have that in subcommittee and full committee mark up by middle June, middle May, and it means we want to get to the floor by the middle of June. So we will be looking to you for a spot on the calendar so that we can take it to the floor by the middle of June, then we will have the opportunity to arm wrestle with the Senate in terms of what they have in their bill, because I am committed to having a bill signed by the president into law by the 30th of September so that we don't have any break from where we are on the present legislation.

So I really do welcome your thoughts about it, your help on this bill. And again I thank you very, very much for your very fine statement this morning.

Mr. GEPHARDT. Thank you.

Mr. MINETA. Are there any questions for the Leader from the Members of the panel?

[No response.]

If not, let me invite you to join us up here.

Mr. GEPHARDT. Wonderful.

Mr. MINETA. And I would like to now recognize our very fine new Member from the Second Congressional District right here in Missouri. And I know with her——

Ms. HORN. Thank you.

Mr. MINETA [continuing]. Dedication to what her new responsibilities are, we will all hear good things about her work in the House of Representatives, and especially on the Committee on Public Works and Transportation. So it's a great deal of pleasure to intro-

duce and welcome to the witness table, Congresswoman Joan Kelly Horn.

Ms. HORN. Thank you, Mr. Chairman, I'm delighted to be here and to welcome you all here. We are now in the Third Congressional District, as we sit we're in this fine municipal building in Dick Gephardt's District and when you visited the arch yesterday you were in our colleague Congressman Clay's District, but when you landed at the airport you were in the second district at Lambert Field, and fortunately we didn't have this weather yesterday or we might still be sitting in Washington because they wouldn't let us off the ground because in this kind of weather we have one runway.

So I am very pleased and excited at the great honor that I have been granted as being Vice Chair to the Aviation Subcommittee, but we're talking about surface, so I will have my remarks there.

Study after study confirms as our distinguished Majority Leader just stated, the very direct and positive relationship between infrastructure improvements and the productivity of our work force. A more productive work force will be a major part of our ability to be more competitive in world markets. In a very real sense our economic security lies in the efficiency of a transportation system.

Our interstate highway system, as Mr. Emerson said, is 99 percent complete. But, it is in great need of maintenance and repair. Meanwhile, in many urban areas and other parts of this region, traffic congestion gridlocks our highways. Instead of being in Jefferson County this morning in the rain, if you had gone west of the airport, where you landed yesterday, to the adjoining county on the west, St. Charles County, part of which is in my district, you would have seen a traffic jam probably to end all traffic jams. Folks in St. Charles County are trying to get to their place of employment in St. Louis County in a very, very congested traffic situation.

St. Charles County is the fastest growing county in the State of Missouri. So while we are gridlocked, we lose work hours, decrease air quality and waste energy. We read about our deteriorated bridges, as Dick said, we have a thousand in this state that are too small, too old or just unsafe.

Our Nation's two great rivers, the Mississippi and Missouri converge near here. They offer a very special challenge as we try to get our workers and consumers back and forth across Missouri River between St. Charles and St. Louis County.

Mr. Chairman, due to the unique geographic location and economic makeup of this area, St. Louis has the potential to become a major midwest transportation hub. The St. Louis region possesses multiple means of transporting both passengers and freight: Trucks, trains, buses, airports, and barges. And I would like to see each of these transportation modes developed to their full capacity, with careful attention given to how they best fit in an overall regionwide transportation plan. A great concern is the connector facilities, and the majority leader mentioned something about that. The means of putting air freight onto trucks, trucks onto rails and quickly moving barge cargo onto its final destination.

To achieve this goal Missouri must invest more in transportation spending. Mr. Chairman, I want to work with you to create a funding formula that will return to Missouri what it is due. We cannot

meet our needs and challenges, and therefore bolster our economy while we remain a donor state, receiving from highway funds fewer dollars than we contribute.

The administration's recent transportation proposal would decrease federal support of mass transit just when an increased emphasis on finding alternatives to our one person, one car habit is needed. We must not quickly forget our latest Persian Gulf reminder of the dangers of dependence on foreign oil. Further, as the United States does not have a comprehensive energy policy presently in operation, any future highway programs that do not deal with mass transit in a progressive and aggressive manner are incomplete.

In addition to decreasing environmental pollution, improving mass transit will ease congestion with less need for new highway construction. We are grateful to this committee for its continued support for a light rail system, Metro Link. This next week we're celebrating a major ground breaking, we're all looking forward to that.

Finally, several operations for improving the efficiency of our existing roads—car pools, van pools, lanes that are set aside for these high occupancy vehicles as well as light rail along existing and planned highway corridors are proven ways of easing highway transportation. We must do more than give them passing mention in the legislation. We really must do more than say these can be done, we must have some real incentives there for states and localities to look at those options.

Easing congestion in St. Charles County is my major priority of what I'm going to try to do on this committee. And I commend the commissions in that county and the many people in St. Charles County are working very hard to move projects forward in that area. Mr. Chairman, it is our responsibility to guide America into the next century with an intelligent and efficient transportation program.

As a member of the Public Works Committee and representing the Second District of Missouri, I pledge my commitment to work with you on doing this and, again, welcome all of you to Missouri to the St. Louis area. We're so pleased you're here and thank you so much for coming and we really do have wonderful guests and witnesses, and I will close there and we will hopefully get on to our witnesses after we hear from Mr. Emerson.

Mr. MINETA. Thank you very much, Joan. We know that the bill you were mentioning to me last night, that at the turn of the century, I believe that Missouri—St. Louis was the third or fourth largest city of the country because of its dominant role as a hub in terms of transportation, and I'm quite sure that that's something that will be recreated in years to come.

Bill, do you have any further remarks that you would like to make?

Mr. EMERSON. If I may, Mr. Chairman, just very briefly here, because there are a number of witnesses here who are to speak on the parochial interests of the southeastern, south central, southeastern Missouri region. I would just say that I think the distinguished majority leader has sounded a very strong key note around

which all of us can rally. I commend you, Dick, for your excellent statement.

Ms. Horn has set out very well the parochial interests of the St. Louis metropolitan region, which, of course, is the major metropolitan region to which south central and southeast Missouri relate, so I'm supportive and I want the subcommittee to know that I'm supportive of the items which she addressed, because a healthy metropolitan area, help feed healthy—create and feed a healthy outlining areas. In my Congressional District in south central and southwest Missouri we have tremendous highway and transportation needs. While we have some good north-south corridors, we're sadly lacking in the east west opportunities. And that's what some of my constituents, witnesses, that are going to be here to talk about today.

The communities in our region have worked very hard to see that these corridors are improved. And this includes such projects as upgrading the Highways 60 and 63, the proposals where Interstate 6, all of these are very significant again to items for us. And I know that this committee and the subcommittee is going to take a balanced view of the transportation needs of the whole country.

I want to say for the benefit of some folks here in the audience, that I think there is a concern the we only look at the needs of the metropolitan areas because that's where the most people are concentrated. But the fact of the matter is each of us here represents the same number of constituents roughly whether we're rural or urban and we all have our respective transportation needs. One can be complimentary to the other, and just hopefully to relieve concern, and knowing that the subcommittee and the full committee, I feel that the concerns that the rural elements may be overpowered. It is probably not a justifiable concern.

I think we are going to approach this whole manner in a very balanced way, balanced transportation and balanced between urban and rural interests.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you, Mr. Emerson.

Mr. Poshard, do you have an opening statement.

Mr. POSHARD. Thank you, Mr. Chairman. As a Member of the committee from the neighboring State of Illinois, my district begins less than ten miles from here, there are a lot of topics here today which affect both Illinois and Missouri.

For me, mass transit between the metro east St. Louis and the city of St. Louis is very important. The proposed four lane development between Carbondale, in my district, and St. Louis is important as is the potential for Scott Air Force Base to become a joint use facility. The proposed Interstate 66 Highway across Missouri in the southernmost part of my district; all of these are topics which are infrastructure needs of southern Illinois and southeastern Missouri, and I'm interested in hearing our witnesses here today speak to those as the hearing goes on.

Thank you.

Mr. MINETA. At this time I would like to call forth our first panel made up of state officials. I would like to call for the Honorable John Ashcroft, as the Governor of the State of Missouri, and the Honorable Mel Carnahan, Lieutenant Governor of the State of Mis-

souri, and Mr. Wayne Muri, chief engineer of the Missouri Highway Department.

So I would like to have you three panelists come forward at this time, please.

Governor, it's great to have you here. We have worked very closely with the Governor's MGA Committee on Commerce and Transportation, with Governors Wallace and Wilkinson, and the vice chair, Governor Keenan. So it is a great pleasure to have you with us today. If you would go ahead and proceed with your statement, sir.

**TESTIMONY OF HON. JOHN ASHCROFT, GOVERNOR, STATE OF MISSOURI; HON. MEL CARNAHAN, LIEUTENANT GOVERNOR, STATE OF MISSOURI; AND WAYNE MURI, CHIEF ENGINEER FOR MISSOURI HIGHWAY DEPARTMENT**

Governor ASHCROFT. Thank you, Mr. Chairman. It's my pleasure to welcome you here and thank not only you but the Majority Leader and the members of the Missouri delegation. I have called upon each of them in respect to this matter, and I can't imagine how I could have received a more cordial and enthusiastic welcome. Chairman Roe indicated there was enthusiasm for this. I want to assure you that there is enthusiasm for this in my office. This is a top priority of mine, and in welcoming you here, I want to extend the hospitality of Missouri, but I also want to welcome the fact that you are concerned about what I believe is essential to the well being of the United States and its economic development in a very important way. Transportation is not a parochial issue, it's not a provincial issue.

If we have poor transportation, it becomes a choke point and that deprives the kind of circulation that a healthy body needs at every extension of the organism. And the United States is a dynamic and organic community that needs good transportation.

Of course, we think the need for good transportation is essential, especially at the heart of the organization. Missouri is the geographic center of the United States, what I call lapland. It's really in Kansas, but it's where Missouri sorts of laps over into Kansas, so we are what we consider to be at the—right close to the center of things.

And, of course, Congressman Hammerschmidt is one of my neighbors. I grew up in southwest Missouri, so he's a legend in the part of the state from which I hale. We have more than 32,000 miles of roadway in Missouri, the 6th largest highway system in the nation, and as Congressman Gephardt mentioned so appropriately, we were the first state to begin construction of the interstate highway system. I'm pleased to say that we completed our responsibilities in the interstate highway system several years ago. I think the interstate highway system demonstrates the kind of therapeutic partnership that can exist when we work together for the development of the environment in which people and industry can grow.

And I'm very grateful for the attention and concern of this committee, and I am deeply grateful for the fact that we are facing an opportunity for a real move forward. I want to mention that there are state legislators who are here today, and there are members of

the Missouri State Highway Commission who are here today because there is this real sense of opportunity, anticipation of the potential of substantial improvement. Even as we finished our responsibilities under the interstate system we learned that our anticipation of traffic needs was inadequate, our vision was not as great as it should have been, and we were finding a demand for highway resources that simply exceeded our capacity. It is difficult enough just to maintain our present roadways, let alone try to expand thousands of miles of two-lane pavement to meet the demands of today and tomorrow.

And to keep Missouri moving ahead, we've tried to improve our position here in Missouri. In 1987 I asked Missouri citizens to approve a special package of highway revenue measures, taxes to fund a $6 billion highway improvement program. I want to commend our highway department for being ahead of time and under budget in providing those improvements. I think the people have welcomed those improvements and have endorsed them. And I believe they are eager to see us continue to make progress.

Now, even with the successful passage of the Missouri Highway Improvement Plan, a detailed study of our bridges and highways reveals that we still need urgently a number of other projects and a number of other maintenance efforts. Now, Missouri is a fiscally prudent state and its economy is healthy, but it alone cannot build the highways that are needed to serve the demands and the opportunities of the coming decades.

As with the interstate highway system, direction and funding from the Federal Government are essential. My distinguished colleague from Kentucky, Governor Wallace Wilkinson, whom you mentioned earlier testified before you last week on behalf of the National Governor's Association—an association on which I serve as vice chairman. He said that the states believe the Federal Government is not keeping the bargain on the fuel tax revenue; as he put it, the money goes in, but it doesn't all come back. We would like to see more and more of the money coming back.

We are aware that the administration's proposal boosts the amount of the money coming back by lifting the cap and moving it upward. That is a phenomenon that we welcome. The cap was $12 billion a couple of years ago, it's at $14.5 now, I believe, in the first year. I'll have to ask for correction from the people that really know their business, but I think under the administration proposal it goes to something like $16.8 billion and above $20 billion, that's movement in the right direction. I really support that.

Wayne Muri, who will be talking to you in a minute, our chief engineer of the Highway and Transportation Department, will tell you about some of the adverse effects that are caused by the withholding of federal funds. He will also point out how the present highway program works in Missouri.

Through the years, our State received everything the Federal formula entitled it to. And as governor, I think I asked the wrong question of my highway department for the first five years of my opportunity to lead this State. I kept saying, are we getting everything we were entitled, and they assured me, yes, we have not left one cent on the table. Missouri is getting everything it was entitled to. Then I learned to my chagrin that we were entitled to far less

than 85 percent of the monies that were being sent back to the States that the states had sent in. As a matter of fact, news reported just two weeks ago that last year we received about 77 percent, and I said this needs to be changed.

That's one of the reasons I'm so enthusiastic in my endorsement of the Bush Administration's recommendations and your consideration of the next Surface Transportation Act. I hope that you can help Missouri get an opportunity to deploy additional resources for the strengthening of the infrastructure of this State.

The president's proposal itself would increase dramatically the flow of federal highway funds into Missouri, increasing by more than $60 million next year. Our total would move to $330 million, and by the fifth and final year of the proposal Missouri's share would grow to $490 million from its current level of about $270 million. Well, a move from $270 to $490 million, including the additional commitments the State would make to match those resources would be a substantial development of infrastructural resource for the country.

I submit, however, that the portion Missouri should receive would even be greater in the initial years of the proposed program. We are essentially being penalized under the president's recommendation for completing our interstate system so quickly. You may wonder why some states have not finished the interstate program, much of the answer concerns expensive interstate segments that may not be cost effective. I recommend that you take a look at that the preferential reimbursement ratios that relate to those that have not been, and if they haven't been completed there may be good reason for their not having been completed at this time.

I suggest that you examine that portion of the proposal carefully, considering the option of making no special provision differentiate interstate construction from other road development that would qualify otherwise under the program. That would result in a fairer distribution of funds. By doing so, Missouri would see 99 percent of its share returned in fiscal year 1992 instead of only 84 if there were a preference left for the completion of those fragments of interstate that people have chosen not to build to date.

Highways are a key to the country's future. I think you all have stated that very clearly. A better highway system clearly benefits more than Missouri. It's international competition as it's intensifying, I believe that it requires us to do a better job at the state and local level. In terms of public infrastructure, investment, and productivity growth among Japan, West Germany, Italy, France, the United Kingdom, Canada, the United States ranks last, and I hope that you are as committed to correcting that as I am.

Studies by David Aushauer, which Governor Wilkinson also cited, show a direct relationship between productivity growth and public investment. And I believe Chairman Roe pointed out in his remarks that our declined rate of productivity growth has paralleled the decline in the rate of our investment in infrastructure. Within the United States, the rate of growth in productivity throughout a 35-year period, in fact, falls and declines with the infrastructure stock of the country.

As a state, the State of Missouri intends to work hard, and I have pledged to my colleagues in the General Assembly, who I be-

lieve have an equally strong interest in this matter, to make the kind of commitment in infrastructure that we need to make, and we want to make Missouri and America a part of a leading team.

We know that transportation is the key to accomplishing that and we are grateful for the kind of commitment that you have. We are aware that substantial improvement in our highway system will require a higher matching rate from the states. There are a number of governors who are deeply concerned about that, and I have some concerns as well, but I would add that if your choose to increase the state's share, we request one thing, and that is you consider the capacity of state's to fund projects.

If you choose to force us to leverage at a greater level, please do not impair our ability to develop those funds by preempting the state from revenue sources such as gas taxes. Most of the state's revenues from roads come from gas taxes, so each time the Federal Government increases any of those taxes, particularly gas taxes, our ability to improve our commitment in that area is impaired.

Thank you very much for coming. I am deeply grateful to you, and I have a feeling of optimism having heard you all express yourselves on this issue. It's inspirational as a governor of a state to know that the leaders at the federal level are committed to improvement. I encourage you to move forward quickly in your consideration of President Bush's proposal. It's a proposal which I think is a very sound one, and your work with it and improvement of it is deeply appreciated.

Mr. MINETA. Well, thank you very, very much, Governor, for your fine and complete statement. Let me ask very quickly about one aspect of the bill. Is your comment in terms of the amounts being increased, and I think that maybe that's the good news. The bad news is that the federal/state share is changed.

Now, to the extent that, let's say, if we increase the amount and keep the federal/state share as it is in present law, what would be the ability of Missouri, for instance, to be able to come up with their share in order to match for the federal funds if—on the other hand if we don't change them and under the Bush Administration program it increases the state's share, what would happen there?

Governor ASHCROFT. Well, I believe that the people of Missouri are adequately committed to the development and understand the investment nature of the development of infrastructure. So in the event that we need additional resources, we will be willing to provide them; and I, as Governor, have publicly stated and assured your colleagues of the Missouri delegation that if it's necessary I'll go back with another highway improvement plan like I did in 1987 and encourage that development.

I think there is a tender idea about whether or not the states can afford to pay higher matching ratios, and that's a judgement you have to reach. In one perspective, the more you ask us to pay in order to attract the federal dollar the more infrastructure we leverage. And in some respects I can think that it would be good policy to leverage more infrastructure because I believe the future of the country is going to be largely dependent on that.

So I indicated that from a policy, and maybe a national policy perspective, but I'll adopt it from Missouri if you require me to find additional resources, I'm going to do my best as the leader of this

state to help the people come to the conclusion those resources would be well spent to generate them and to provide the match.

Mr. MINETA. As shown with your great leadership in 1987 in order to get the $6 billion program through, that those are pretty much committed funds right now under your present program. So that anything that gets done at the federal level, you put that increased load on you in terms of increasing your state share would require you to go back to the voters and say I may need some more in increasing the gasoline tax.

Governor ASHCROFT. That could well be the case. Our understanding is that about 82 percent is now the average federal share versus the state's share, and the administration's proposal was at 75/25, I think. So that's not a great distance, and very frankly if it were all or nothing, I would lunge at the administration's. We would be deeply grateful if the administration bill were to come through as it is. If you make it favorable to the states, that's fine with me, but it will decrease the amount of highways built.

Mr. MINETA. Let me ask about if there is less funding to the state, what do you do, do you make less funding available to the counties and the cities, put the pressures on them?

Governor ASHCROFT. Our program is a ratio of receipts to which the counties and cities are entitled. Part of the reason we have the sixth largest roadway network in the country is that the state is the major maintainer of roads. I think in our state we probably maintain a higher percentage of roadways than most states do.

But the counties and cities are entitled to a certain percentage of our receipts, and we would not prejudice them in an effort to make federal match.

Mr. MINETA. Thank you very much, Governor, for taking time from your very valuable schedule to be here with us today.

Let me at this point turn to Mr. Emerson, if I might.

Mr. EMERSON. No questions, Mr. Chairman. Thank you for your actual statement Governor. Once again I think you really laid it out there for us. The actual statement of where we're coming from and where we want to go. I thank you for being here.

Governor ASHCROFT. Well, part of the excellence is your coaching. You and I have discussed this on two or three occasions, and it's a major goal of both of us to improve these roadways.

Mr. EMERSON. And let's keep that going and with Mr. Muri as well.

Mr. MINETA. We know the difference between a setup and an upset.

The next speaker is chairman of the full committee, Mr. Roe.

The CHAIRMAN. Thank you, Mr. Chairman. I am very impressed with Governor Ashcroft's testimony, because he embodies an enthusiasm that we share on the East Coast. But I'm a little puzzled with your arithmetic. We're analyzing the presentations that have been made to us by the administration. By the way, I happen to think there are a lot of great parts to that proposal. For example, as we talk about increasing the resources that have been made available by raising the cap, but by the same token let them take $1.2 billion away from general revenues. So we get more of the work done out of the revenues that they're proposing by raising the

cap. So it's highly questionable whether we're going to have that much more money available to begin with in the first place.

The second point that occurs to me is that they are reducing fairly substantially the so-called State matching share. I don't know how that affects Missouri, but I've got news for you. In New Jersey, it is a major issue to us, so we are concerned about that. We kind of found that—and the fair plan will be so that the States where the matching share situation is in the division of the programs are better, which is only natural to do. I think several of that, one comes back and says the following, in your testimony, and I read it with the greatest respect and affection. You say that we should be providing more funding from the federal level, and then we need, you know, that will help us move the program ahead. The United States funding network providing for infrastructures is pecuniary at the best. People are talking about spending $50- to $100-billion just to rebuild Kuwait.

Now, the question I would like to ask you: is the committee gutsy enough? Congress went ahead this time and passed a 5 percent increase, two-and-a-half percent was to go to the trust, and that's another point I'm going to interject that for. I think the American people are getting a little fed up being charged more gasoline taxes and not having the money being used where it is supposed to be used. It's being used to shield the financial deficit.

Having said of that and being loquacious with the question—why don't we have the guts to really put the investment into and let it be done? Why should the two and a half cents be held back, if we believe, as you do that as we invest every dollar we're going to get $6 to $10 back in economic productivity. We're going to be creating new wealth. Why wouldn't we invest those resources as they should be done now? And should we increase it to provide for the State to meet the federal level? The most we're going to talk about is twenty cents increase, and don't fall off the chair, on the gasoline tax on a national and set aside legislation that would come back and say, this is the kind of money that should be established, but it must be spent, it must be allocated to the states because it would be required by law to not be held back.

Have you given any thought to that.

Governor ASHCROFT. I guess the answer to your specific question is yes. I've given some thought to it. Now, you've raised a lot of issues. You've asked a lot of questions; I would like to ask you some.

The CHAIRMAN. Please do.

Governor ASHCROFT. Why is it that you take money from the State of Missouri and don't send it back, and why is it that the Congress chooses to shield the federal debt by having a trust fund that offsets it, and why is it that you decided in a watershed decision to take money out of the gas tax revenues to do general revenue expenditures of the Federal Government. None of us governors like that. That may have been forced by necessity, so I agree, if you're questioning those things, I agree with you wholeheartedly, and we want all our money back. We don't like the idea of sending.

When I said we got 77 percent back last year, that was 77 percent of the monies that you decided to send back to the states. The fact of the matter is that you kept this part of the trust fund as a

trust fund, and we, probably in the states, would like to see the interest on the trust funds also come to the states for highway and infrastructure development purposes.

I'm not a big spender when it comes to government, but I think when you're investing in infrastructure, you're providing the basis upon which people can be prosperous, and I'm going to support your efforts to have better infrastructure. Now, the one place where I think I need to distinguish myself from you, I do not today want to endorse your proposal for a twenty cent tax increase on gasoline.

And you're not supposed to fall off the chair either, but I'm willing to try and see what we can do with the money we're already charging our citizens, and we would like to have it back for the purpose of making those investments. And this is a great opportunity, so I want to do everything I can.

The CHAIRMAN. I want to conclude, because I know we have such short time here today. New Jersey is a donor state.

Governor ASHCROFT. Yes.

The CHAIRMAN. We get back about 80 percent of the money we put in. I voted no on the budget because I thought it was wrong. This committee has vigorously opposed—bipartisanly—totally opposed the trust fund money being used for any other purposes that what it's allocated for and it should be allocated for that purpose.

Having said all of that, do we say that the governors of the country would support us to do the following. Everybody runs up to me and says, you've got to balance the budget, you've got to balance the budget. I would like to see us have the courage to say that the trust fund money that is now allocated should be utilized and spent for that purpose. Would you agree with that?

Governor ASHCROFT. Yes, I do.

The CHAIRMAN. And it should not be used to shield the national deficit.

Governor ASHCROFT. No, I think the deficit should be addressed honestly, and I believe that the shielding of the deficit by the maintenance of a trust fund is a shadow and shell game.

The CHAIRMAN. So Missouri would support the committee then if we make such a recommendation?

Governor ASHCROFT. Well, yes I will.

The CHAIRMAN. Thank you.

Mr. MINETA. Thank you very much. Mr. Hammerschmidt.

Mr. HAMMERSCHMIDT. Thank you, Mr. Chairman, thank you Governor Ashcroft for your fine statement. You know Dick Gephardt said that the real leader's job was to educate our children and build public works for America. And I know Governor Ashcroft that the National Governor's Conference, claims to be the education governors, but you were the first education governor, so we give you credit for that.

But now you're the vice chairman of the Transportation Committee in the NGA, so you're working both sides of that problem very well. And you must be doing it well, because I notice you got the largest percentage of votes of any governor in Missouri since the Civil War. Anyway, I want to get on the subject that Bob Roe was on. It has another side to it.

Now, actually, if you look at the long sweep of the highway defense network started in 1956, it is just now being finished. Missouri has gotten back par; you got back dollar for dollar over that long time. New Jersey has gotten back 97 percent, Arkansas has gotten back 98 percent. California has gotten back 89 percent. So you have to look at it in the longer context, but we still have problems. We're a donor state in Arkansas as well. But Congress, not the White House, has put a cap on obligation ceilings because of our process up there. Congress did that, they had to under the Budget Act. They're sent $161 million in obligation authority that you can't spend, and that's done by Congress, and that's another major problem that faces us in our approach to the problem.

The CHAIRMAN. So we're collecting and distributing to you money you can't spend which is another shame. We tried to take that trust fund off budget. We've got a commitment from our Majority Leader, Dick Gephardt, when he testified before us last year that he would support us and we've come close. And it's still a major problem and one we want to solve. The Congress has to solve that problem.

I don't have any questions, but I really appreciate your coming to us.

Mr. MINETA. Mr. Gephardt.

Mr. GEPHARDT. I know we're short on time. I simply want to commend the governor for coming here and spending his time today, and I think it indicates his enthusiasm, sincere enthusiasm for this bill. He's been in all of our offices in Washington, and we met him at the Governor's meeting and I really do admire his willingness to really try to lean on this issue from the State of Missouri's standpoint. I want him to know that we will work with in every way to reach his goal.

Mr. MINETA. Mr. Poshard?

Mr. POSHARD. Thank you, Mr. Chairman.

Governor, just one question and I would like to hear this from your perspective. My Congressional District is a lot like Missouri, it's a rather large rural area, and we have the need, as you have testified in your statement here, to improve a lot of our primary roads to make them four lane roads, but we always get in this chicken and egg controversy about it. We could spend money on these roads to upgrade them so that industry might possibly locate in the towns along the road, but we don't have enough traffic on them to justify the upgrade yet. So how do we handle that, those of us from rural areas, because we never seem to get around to doing the things that need to be done to bring the diversification of industry into the rural areas because we always put off and say the traffic doesn't justify it at this point in time.

From a governor's perspective, what are we going to do about the rural areas of this country to create jobs so our people can live. And infrastructure, as you say, is the basis for the creation of jobs.

Governor ASHCROFT. As I understand the administration proposal the states are given a far broader opportunity to allocate the resources for match and all to secondary road systems. We have been inordinately focused on the interstate system, and that's where obviously all the traffic is on the good roads. People, you know, select the—well, you go fishing where the fish are, you go hunting where

the ducks are, you drive where the good roads are. And there is economic study after economic study which indicates that development is dependent on good roads, and I think this proposal offers the promise.

In Missouri, for instance, I can list the highways that will be—we'll take 36 across north Missouri from Hannibal to St. Joe and that goes all the way on out to Denver. That will be dual laned if this goes through. And we'll take 61—71 from Kansas City down to the Arkansas border and then that will run on down to Fort Smith. That will be dual laned if this program—we've already looked at what we can do, and it's these roads now that are secondary in nature that haven't qualified for the national system, which we believe would qualify under the proposal. And I think it's exactly on point. We would have an opportunity to bring development potential to vast areas, which simply are not part of what had otherwise been interstate, but which can be clearly interstate quality in terms of their accessibility if we embrace this kind of an effort.

Mr. HAMMERSCHMIDT. Will my friend yield?

Mr. POSHARD. Yes, sir.

Mr. HAMMERSCHMIDT. Governor, did the State of Missouri submit your map for highways of national significance? Did you submit a plan for that?

Governor ASHCROFT. Well, actually, one has been prepared by the Federal Highway Administration, but as a state we did not submit.

Mr. HAMMERSCHMIDT. We did not in Arkansas, I just wondered what you had done.

Mr. EMERSON. Will the gentleman yield also just for 30 seconds, I want to say to the governor, that in listing examples of what could be more readily addressed with the——

Governor ASHCROFT. Sixty could be dualed all the way across southern Missouri, and 63. As a matter of fact 63 was one of those area upon which we spoke earlier.

Mr. HAMMERSCHMIDT. What happened to good public policy.

Mr. EMERSON. That's good public policy.

Mr. POSHARD. Well, I agree with you that in many respects these have to be driven from the State Department of Transportation and the Governor's office, if we're going to see those kind of changes.

And let me say parenthetically that I have enjoyed a good working relationship with Mr. Muri of the department.

Governor ASHCROFT. Good.

Mr. POSHARD. He's done an outstanding job in helping us in Southern Illinois to solve some problems between the two states. I thank you for that.

Mr. MINETA. Ms. Horn?

Ms. HORN. Well, in the interest of the hearing, Mr. Muri and Lieutenant Governor Carnahan, I don't have anything, but I do thank the governor for being here.

Mr. MINETA. Thank you very much. At this time I would like to introduce the Honorable Mel Carnahan, Lieutenant Governor of the state of Missouri. And please, your full statement will be made a part of the record, and so if you would go ahead.

Mr. CARNAHAN. Mr. Chairman Mineta, Mr. Chairman of the Full Committee, Mr. Roe, our host in the Third District, Majority

Leader Gephardt, we are delighted that you convened this meeting here. My own Congresswoman, Bill Emerson, and our newest Congresswoman from Missouri, of whom we're very proud, Ms. Horn, and other Members of the committee.

Thank you so much for coming to Missouri and here to the Third District for your hearing. I want to thank you for the opportunity to speak to you on this most important of subjects of transportation. As you probably know Missouri has played a very great role in the transportation history of this country. The first interstate routes were rivers, and we are here at the confluence of the two greatest rivers in North America.

In the mid-19th Century, Missouri became the gateway to the west, the four great trails to the west had their commencement in this state. They were the Oregon Trail, the California Trail, the Mormon Trail, and the Santa Fe Trail. St. Joseph, Missouri was the point from where the Pony Express headed for California providing cross continental U.S. Mail Service connecting New York and Washington to San Francisco and Sacramento.

Much like the wagon trails, the first rails also emanated from Missouri. In 1956, as has been alluded to many times, the first section of the Federal Interstate Highway System was commenced just one county north of here in Congresswoman Horn's District in St. Charles County.

Missouri has played a major historic role in transportation. But I'm here today to say that Missourians are just as concerned with leading the way in transportation in the 21st century as our ancestors were in the 19th century. Now, I realize there's an alliance between the Federal Government in the different states in regard to highway funding. Missouri is concerned, as you will continue to hear about receiving her full share.

And it's Missouri's desire to insure that the money that comes into the Highway Trust Fund is spent for highways, and that the funds held back in previous years released. Missouri highway funding depends heavily on user fees and fuel taxes. The Federal Government's new attempts at deficit reduction by utilizing fuel taxes cripples any potential effort on Missouri's part to address our highway needs. And I would like to ask this committee and the Congress to find other means of deficit reduction other than using the motor fuel tax.

Missouri could more than double its share of federal highway funds if Missouri were to receive her fair share of the funds and if all the monies collected from the fuel taxes were spent on transportation. Missouri's highway needs were outlined by our State Department of Highways and Transportation, a very splendid department, which enjoys a broad bipartisan support in this State, and that study entitled the Ten-Year Need Study outlined many things. But I'm going to focus just on one of the things that I had not heard mentioned here yet today. And that is the necessity for Missouri to address the safety factor.

Missouri leads the midwest in traffic fatalities. The funding of the projects outlined in our need study would reduce the fatalities by two-thirds. Which means that two out of every three people killed on our highways could be saved. Missouri could address that and other needs if we were to receive our fair share of the funding.

As you have already heard, for every fuel tax dollar that Missouri sends to Washington, we get back less than 85 cents. We read and talk of Missouri's crumbling infrastructure and of our inability to address the need to rebuild our roads and bridges. I believe that a nation that can so accurately destroy bridges and highways on the other side of the globe also can rebuild roads and bridges here at home. We have in the last few weeks and months shown that we are the super power of this world. I believe it is now time to extend some of that effort and experience, and yes some of that power right here at home by rebuilding the transportation system and can be once again the envy of the world.

Thank you very much for being here, for your approach. I assure you that we take a bipartisan approach to the support of transportation here in this state and we pledge to work with you as we seek to accomplish our mutual goals. Thank you.

Mr. MINETA. Thank you very much, Lieutenant Governor. Let me ask on your—in your testimony, you refer to the fact that you have a very high fatality record, and yet at the same token you say that in your Ten-Year Need study you would be in a position to reduce that traffic fatalities by two-thirds.

First of all, what accounts for your high level of traffic fatalities, and then secondly what kind of improvements are being planned that will enable you to make kind of dramatic reduction in terms of fatalities.

Mr. CARNAHAN. We have the expert to my left, but in a nutshell it's road condition and lack of divided highways. The implementation of the divided highways which Congressman Poshard referred to would be the largest single factor, I'm told, in reducing those fatalities.

Mr. MINETA. Mr. Emerson.

Mr. EMERSON. No questions. Thank you for your excellent statement. I particularly appreciate the historical context in which you put things. The Majority Leader, in a little tour around St. Louis, was making a number of the same points, and I think its always useful to refresh ourselves as to where we have been so we can better know where we ought to be going.

I thank you for your statement.

Mr. CARNAHAN. Thank you.

Mr. MINETA. I'm not sure that the mail delivery has improved since the first Pony Express out of St. Joe, but in any other respects it's improved.

Mr. Roe.

The CHAIRMAN. No thank you.

Mr. MINETA. Mr. Hammerschmidt

Mr. HAMMERSCHMIDT. No questions, Mr. Chairman. Thank you for your statement, Mr. Carnahan.

Mr. CARNAHAN. Thank you.

Mr. MINETA. Mr. Gephardt.

Mr. GEPHARDT. Mel, we very much appreciate you being here today, your statement is well taken and we look forward to working with you and the Governor and the Commissioner in the days ahead to put this bill together. I really appreciate you taking your time to be here.

Mr. CARNAHAN. Thank you.

Mr. MINETA. Mr. Poshard.

Mr. POSHARD. No questions, Mr. Chairman.

Mr. MINETA. Ms. Horn?

Ms. HORN. No questions, Mr. Chairman.

Mr. MINETA. Again, thank you very, very much Lieutenant Governor Carnahan.

Mr. CARNAHAN. Thank you.

Mr. MINETA. Maybe at this time, you're welcome to stay, and let Wayne Muri continue. Without a doubt you have one of the top professionals in the country as it relates to transportation and highway needs. And we all recognize Mr. Muri as a professional here within the—within the Missouri Highway and Transportation Department, and so it's a real pleasure to have you before us this morning.

Your statement will be made a part of the record, and so if you would proceed in your own fashion.

Mr. MURI. Mr. Chairman, thank you very much, especially for those kind words. First, the more time I spend in Washington I am amazed at the frantic pace that you set there. I'm impressed with you coming here to Missouri today, that's very impressive. I'm very impressed by the rallying call of what I heard this morning.

Someone being in transportation almost all of my life that's quite impressive, and I thank you very much for that. As you mentioned, I have submitted my testimony for the record, to save time I would like to offer some specific comments I might have and also what I think are some very key factors.

I think first, and I think it's been said this morning, it's great to recognize that this is a very, very important time. Almost the most dramatic point in time since going back to the interstate, when we embarked on the interstate program. Congressman Emerson, I think you said, it's a critical time, it's a time of opportunity like we have never seen before. I think sometime we don't recognize just how critical a point of time this really is.

Second, I think it is very important, it has been alluded to this morning, Missouri has a high stake in this. We have completed our need studies here in Missouri, there is about $5.8 billion worth of work desperately needed in the next ten years. What happens with this federal program is very, very crucial here in Missouri, and that will be the trigger to what happens here, we feel very, very strongly.

There are going to be some very tough decisions. They're going to be in your hands and I appreciate offering our views. We do have some very strong views. We have known this is coming now for three years. We've been doing our homework for this moment for three years. So we have a lot of view points and I'll try to keep my view points very, very short.

Over this time I think that you may have noticed a couple of things. We have gained, I think, a broad consensus to work with all fifty states. Second, is we've had a lot of input over these three years, and I think we have a very, very solid recommendation because we've had a lot of input. I think in fairness I better confess here I'm wearing three hats today. Yes, as CAO for Missouri Department of Transportation, I am also Chairman of the AASHTO Committee on Implementation of Transportation Plan. I am also

outgoing Chairman of the Transportation Research Board in Washington, DC, which some of you have been involved in.

I say this, actually, I'm not wearing any hat at all as you might mention. And I say that for a reason, because last year I was asked by the TRB Chairman to go to Europe and evaluate the road systems, the transportation systems, the pavements in Europe and see how we stacked up. Before going over there I made a very foolish statement I regret. I said if they can show us something, if they have better roads and transportation than we do, I'll eat my hat. I did not come back wearing a hat.

As you know Europe is moving goods at less cost, faster, with less damage than we are. You also know, and it has been alluded to this morning, that there is just an overpowering evidence that we're losing our competitive edge. Why? Because of loss of productivity. As you also have seen some of the reports David Ausheur and a lot of others, direct correlation to this loss of productivity with our failure to invest in infrastructure. It is very, very key and very, very pronounced. There is no question, transportation moves a lot more than goods and people, it moves the economy. And I think that is being widely accepted. I say that because several of you mentioned this morning, St. Louis is a good example.

What makes St. Louis? Basically a hub of transportation, a river, the railroads, the airports, the highways, that's what makes St. Louis. We face brutal competition in the future not only to St. Louis, but the State of Missouri is going to depend on the health of our transportation system. There is just no question in our mind about that. Let me just offer five very key, I think vital points, as we look at the future and from our work with the fifty states as we look to the future on a transportation program, and especially as we look at the administration bill proposal.

First, we must, we plead to you to pass a timely bill. Congressman Mineta, I very much appreciated what you had to say this morning about your schedule. We're very, very pleased with that. We must, if we're going to have an orderly planning process, we must have that.

Second is return credibility to the federal trust fund, the federal highway program, and what I am saying is basically and I think I'm quoting like Secretary Skinner has said several times, if it's right to collect those fuel taxes, those monies for a purpose, it is right to spend them for that purpose. I think that is very basic and we need that credibility. The administration program as I understand it, we have evaluated it, it basically says over the next five years a target we can gun for, about an eighteen billion average over the next five years. That's ambitious, but I can tell you from the AASHTO community we have done a lot of work on this and we feel without any additional taxes and spending what's collected and the interest that's involved, that figure could become $21.4 billion, that is tremendous.

We think that must have a priority. As we look at the future, it's going to be brutally competitive, as I mentioned. We must have the best possible transportation strategy for the future. As we look at the administration plan, we think it's a good blueprint. I say that because a lot of the work from all 50 states is a consensus of what

we came up with very, very closely correlates with what the administration has come out with. So we think it is a very good start.

We think the emphasis on a national highway system is in the right direction. I think it makes a lot of sense. I can tell you we—it was alluded to, we have done some needs here in Missouri, some need study, very intensive, and we look at our needs and what it says Missouri should have correlates very closely with this national highway system that's being proposed at the national level. It's a very, very good fit. We think its right for the country, we know its right for Missouri.

Involved in this is a flexible rural-urban program. That's something we've been striving for a long time at the states, give us some flexibility. There's flexibility here, yes, there's some high matching ratios that will be required as proposed, and that I'm sure a lot of debate will happen with that. This also gives us the ability to look at transit. We think even if we had the best highway system in the world, that's not good enough for the future. You must have the right mix of the modes of transportation, and that must happen.

In our proposed program is a bridge program, and I don't think I need to say much about that because it's already been mentioned this morning. We have a bridge problem and that relates to that. The formulas that we've had have not been favorable to Missouri, and I'm not looking at this, I think, parochial, in that they're archaic.

We're talking about using that the basis, formula, allocation of money on post or rural road knowledge that was derived back in the 20s and 30s, and it is still there. That must change. The administration says we ought to take a use of fuel usage as a measure on how to appropriate money. And I think that makes some sense. Fuel usage is a measure of the usage of the system, no question about it. Usage of the system is a measure of the need. If you go to look at something that we can measure and we can verify accurately, fuel usage can be verified and measured accurately, and I think it makes some sense.

As the Governor mentioned, I think we need to look at funding of the remaining interstate. There's a reason why those remaining projects have not been funded. Don't force states to fund some of these things where money could be much more wisely used in other places. Don't force that upon the states.

Last, I think we need to continue to support mass transit from the general fund. That's not included in the administration proposal. It just doesn't make sense to me. If you're going to get where we need to be with transit and you're going to fund that purely out of fuel taxes and out of some other transportation modes user's pocket you'll never get there and it's not fair. It's not fair to do it that way. We think it needs to be looked at.

Mr. Chairman, this is basically my comments. I want to say on behalf of the Transportation Research of AASHTO, you have shown dedication to this. You have been at almost all of the meetings that I've been to, and we're in certainly good hands.

And Congressman Roe, it's great to see you at the helm of this. And Congressman Gephardt, the administration bill last year was about twelve and a half billion that was raised in ninety-one to fourteen and a half. Significant step in the right direction. We ap-

preciate your leadership. And Congressman Emerson and all the rest of you are absolutely great. You have given us time, three times already, and we couldn't ask for more than that.

Thank you very much and please let us be any kind of resource we can be to you.

Mr. MINETA. Thank you very much Mr. Muri for your fine and complete statement. Let me ask, because you talked about the five-year planning process or authorization bill that's so important, and I think we will get a five-year bill because we think five years is important in terms of a planning process. But the thing that sort of bothers me in your statement as well as the Governor's statement is the fact that now we may be talking about those states that haven't finished their interstate. Now, you have been very conscientious in the fact that you, you were one of the first states as I recall to complete its segments of the interstate system in the early 1990s, and now you're saying don't make any special provisions in terms of the apportioning the amount of monies to complete the interstate.

Now, doesn't that sort of fly in the face of a good planning process? Admittedly the portions of the interstates that remain uncompleted today have been the tougher ones to try and complete, tougher because of environmental problems. Tougher because of construction problems. Tougher because of the amount of money it's going to take. So the easy ones have been done, have in the past and now we've got to the point where we have to complete the interstate system, but they are without any question the more costly ones and the tougher ones to do.

So should we be saying to New Jersey, should we be saying to Massachusetts, should we be saying to California, no let's try to cancel those projects and reapportion that money for distribution to the other states?

Mr. MURI. It's a good point. I think there is a good middle ground. I think if the interstate completion monies are separated completely, allocated to the states, that almost completely ties the hands of the states to chase that kind of ninety ten money and will force them to complete projects that somebody ought to take another look. Yes, a lot of the uncompleted projects should be completed, but don't stack the deck. It would almost force states to maybe embark on projects that somebody should take another look at.

Mr. MINETA. What about transferability? Should that exist in terms of two ways that—I guess the concern I have is that the administration's bill permits only 15 percent transferability out of the National Highway System because of the greater amount of the money in the National Highway System, roughly a 70/30 split between the two programs. And I was wondering do you believe that the 15 percent level is appropriate for a two-way transfer?

Mr. MURI. I think it's appropriate, but what I'm a little concerned about is the transferability to me is in the wrong direction. The transferability, I believe, is to be able to transfer from the National Highway System to the rural urban and other programs. If we indeed are going to stress a national highway system, and that's speaking changing two-lane roadways to dual-lane roadways, that's what we need to do. Transferability should be the other way.

That's the only one way, that I disagree with. I think the number is okay.

Mr. MINETA. Now, are you also supporting the lower federal matching ratio on the assumption that the overall federal highway funding level is going to be increased?

Mr. MURI. I think that's a tough one, and I think I would look at it like this, if you look back at how the—for the last number of years the participating ratio has been eighty to eighteen. Why? Basically because of a lot of interstate. I think that was right, and very high federal participating ratio. We would never have built the interstates across the western states if we wouldn't have had that. That's over. It's a different world, and I think it is practical and makes some sense to look at different matching rates. But, again, as the Governor mentioned, I would plead to you if we do that and then use the fuel tax for deficit reduction, you put us in an absolute no win position.

Mr. MINETA. All right. Mr. Emerson?

Mr. EMERSON. No question, Mr. Chairman. I just want to thank Mr. Muri for his statement and say that we from Missouri are well aware of what a real gem and asset we have to have someone like Wayne to work with. He understands the policy and he has technical competence and can explain things to us in lay terms and that means a lot and we thank you for what you do Wayne.

Mr. MURI. Thank you.

Mr. MINETA. Chairman Roe?

The CHAIRMAN. Thank you, Mr. Chairman. I do have some questions. I want to share the comments that have been expressed about Wayne Muri, because I happen to know a lot about him, I know the people in our State think a great deal of him. He has been a great asset to this nation because he has taken the time to understand the program.

You raise the question, so I have to ask it—vis-a-vis the point of view when we go back to page two, and I quote, if I may, "as a result of all the past twenty years Missouri has been a loser under the existing programs since the early 70s," further quoting, "in fact we have lost over $700 million because of the makeup of the current program for funding our nation's entitlements." Can you explain to this Member how you lost the $700 million?

Mr. MURI. Yes, I can, and I would be pleased to do that.

The CHAIRMAN. That's what I want to get on the record.

Mr. MURI. Mr. Hammerschmidt mentioned, touched on this a few minutes ago. Simply to look back from day one, federal program, and from the dollars paid in, plus the interest that's been accrued, and what has been returned to Missouri there is almost a three-quarter billion dollar loss of money that came out from Missouri plus interest earned between what we received. Why? Yes, some of the authorization appropriations were okay, but obligations control were not okay. We weren't permitted to spend those funds, that's how much short we are in Missouri and back until the early 70s Missouri was indeed a winner.

We moved rapidly with the interstate and had a good flow of funds.

The CHAIRMAN. Because you did a good job you were penalized.

Mr. HAMMERSCHMIDT. Will the gentleman yield.

The CHAIRMAN. Of course.

Mr. HAMMERSCHMIDT. On those funds, if you got what we're holding up through an obligational ceiling that still wouldn't bring you back to par, would it? You only turned up $60 million.

Mr. MURI. Yes, but that is a significant number.

Mr. HAMMERSCHMIDT. I know it. But it still wouldn't get you to par, I guess?

Mr. MURI. That's right, that's right.

Mr. HAMMERSCHMIDT. Thank you, gentlemen.

The CHAIRMAN. That's the point. I'm trying to get out of the blue smoke and mirrors and get down to where the real money is, because that's what gets the highways built, not all the other dialogue from my point of view.

So therefore, in effect, what you're saying, if Congress would just get out of its own way and let you people spend the money that we charged you taxes for, then we would be able to take monumental steps forward in the whole program, is that correct?

Mr. MURI. Absolutely.

The CHAIRMAN. Okay. Let me say this out of curiosity. Your state is smaller than New Jersey, but the problems are the same. Some friends tell me if I get flexibility, if I don't have anything in the pot I don't have any flexibility. I intend to raise this nationally.

Mr. MURI. The idea, if we're paying our money into a trust fund that supposed to be inter-modality, and we want to use the money, at least our proportionate share, should we not have the right in our respective states regardless of formulas within reason, to come back and say I want to build this road. Give me my money, even my proportional share and let me do it my way. Because we're willing to raise that money hopefully to be able to achieve that goal rather than have some artificial formula drive you in the direction of what your transportation system should be. If I in New Jersey want to put 25 percent of the money that's coming from my taxpayers to apply to rapid transit, my mass transit program to meet the requirements of the clean air bill, should I not have the flexibility in my State to this with my money.

Do I have to have the Federal Government tell me no, you're going to get this formula or that formula, and therefore in order to get your return on the money, your investment in sending to Washington, you have to build more highways, therefore the question goes as follows. We should when we talk about flexibility give much more latitude to the States, not all of it, but much more latitude to the State to be able to make the decision to be able to meet their five year plan, and their five years of spending that comes from their respective citizens in their States. Is that unreasonable?

The CHAIRMAN. Well, it's not unreasonable, and I think that's the very least we'd expect. What we're looking at as far as the proposal, we see put on the table, is a dramatic breakthrough on that issue.

Mr. MURI. Right.

The CHAIRMAN. We're up to twenty-some categories and probably ten to fifteen or more is what we used—we're down now to three with great flexibility between these three, that is a great move forward on this proposed program.

One more comment, Mr. Muri. This Member's point of view is that the transportation program, wonderful as it was from the Eisenhower assistance to when we got it done, is over. America needs a 21st century transportation system. It's not the same thing. You know, reauthorizing this bill without looking to the transportation system of the future, will never achieve inter-modality unless we bring these whole thoughts together at least sometime into a working vehicle.

When we come back and say in order to finish the interstate we've got to spend "X" amount of dollars, therefore we should allocate, sounds reasonable. Your observation is well, yeah, that's okay, but hey guys, the money you're going to spend on those very extraordinary pieces that we have to complete might readily be more effective today if we use them in other directions. I think that's what you said basically.

Mr. MURI. Yes, sir.

The CHAIRMAN. And I don't fault that in part. The second question I think this raised is that we're talking about a highway transportation system of national significance, that's a wonderful thing for defense purposes, and I hope that the relationship is also for the economic security that Congresswoman Horn mentioned this morning, because that's also a part of it. Now, the question is who decides that?

Now, here we are in Missouri, and let me play the Devil's advocate—you'll probably throw me out—but I'm going to say what I'm thinking anyway, because I think its a national issue. If we determine that the proportionate share should be spent, and you raised that question on the level of income versus the rural area and so forth.

Now, who decides that, that system of national significance? Does Missouri want an input into that? New Jersey wants some input, we don't want Washington to tell us. In my State, you think because you got this many miles, you're a little State and so forth, therefore you allocated a share of what we're going to maintain, and a small State is going to be much, much less, and it's going in California, or it's going in Missouri, in Texas, any vast State.

Should a large bulk of the funding, that is the same people's money, donor States, go into that area without really good closer consultation with the States. Do I make any sense to you?

Mr. MURI. You certainly do, and you can probably suspect what my reply will be. Obviously the States must have a voice in this. I can't believe that we can make the best decisions in Washington at what are the right routes, the right system, the right highways, the right investment in the State of Missouri. That's basically what we're talking about.

The CHAIRMAN. Well, you made the point, and you're a nationally recognized leader in this field. I'm not saying that to be nice, I happen to know its true. But you mentioned that in Missouri offer its presentation to the feds, maybe you did, I don't know. No, it kind of came the other way, we got it back on the federal level.

Mr. MURI. That's right.

The CHAIRMAN. I would think it's the duty and obligation of the committee for all of the 50 States that are involved, to take a very strong look at what's allocated State to State in that particular

system, because that's going to determine the proportionate share that's going to come to the States ultimately once they carve out that big chunk of the highway system of national significance. Is that a fair observation?

Mr. MURI. Yes, it is, and there is very one important factor here. Absolutely you must decouple the flow of that funding to the National Highway System from those miles in the system. You must connect the funding allocations of the national highway system again to the gallons of fuel being used or some such mechanism. Don't couple that as we did with the interstate, and there were reasons for the interstate. Do not couple that funding flow with miles in that system, et cetera.

The CHAIRMAN. Thank you, Mr. Chairman.

Mr. MINETA. Mr. Hammerschmidt, did you have a question?

Mr. HAMMERSCHMIDT. Well, I just wanted to make a statement to Mr. Muri, to thank him for being here and to thank him for being at that other hearing where you were, Mr. Chairman, down at Springdale, Arkansas. We still have that same interest, that highway improvement from Kansas City to Shreveport and beyond. But anyway, mainly from a national standpoint we appreciate very much you're being here because you do have top credentials and all the engineers, for good reason, they made government engineer of the year, so we're just appreciative for your testimony and your knowledge, and I know we will see you again in the course of all this activity.

Thank you very much

Mr. MURI. Thank you.

Mr. MINETA. Mr. Gephardt?

Mr. GEPHARDT. Wayne, I'm glad Missouri stole you from Illinois, even though Glenn's not glad, but we're very happy to have you. It's been a pleasure and an honor to work with you on this legislation. I just have one very quick question. If we increase flexibility between all these purposes, then how can we be assured in Missouri that mass transit, which is coming hopefully into its own both in St. Louis and Kansas City, we'll get a fair shake?

Mr. MURI. I think the decision is made in the right place. It's made back here in Missouri, it's made in areas such as St. Louis, as to what are the trade offs between highways and mass transit. We make those decisions in this kind of arena, we're going to have the right decisions. I still feel, though, not to continue to fund mass transit as it has been for a long, long, time, at least partially out of general revenue is a real mistake.

Mr. GEPHARDT. I totally agree with you. It's a commitment we made to have a mass transit system, as weak as I think it is in the country. I'm sure when you were in Europe you saw a mass transit system along with a road system that is far superior to what we have in the United States, we've got to work toward that end. Thank you very much.

Mr. MINETA. Mr. Poshard.

Mr. POSHARD. Thank you, Mr. Chairman, just a couple of quick questions.

Wayne, southeast Missouri and southern Illinois share something that is second only to California, and that is that we are a major earthquake fault as you know.

Mr. MURI. Yes.

Mr. POSHARD. Does this dramatically increase the cost of new surface transportation infrastructure from an engineer's point of view of complying with the regulations of building public structure?

Mr. MURI. Absolutely.

Mr. POSHARD. Does it have any impact upon additional monies that have to be spent when you build a highway or a bridge in these areas?

Mr. MURI. It certainly does. Obviously we must design and construct as earthquake, maybe not proof, but at least highly resistant to earthquakes. We know alone today just to focus on key routes in southeast Missouri and to make it with modifications we need to keep them open, we're looking at $80 million of retrofit today, just on retrofit.

Mr. POSHARD. On present structures?

Mr. MURI. On present, and that's not counting the things that we're doing on the new structures, which we are doing, which is more expensive.

Mr. POSHARD. So, the dollar is not going to go as far in those areas where we face this earthquake problem?

Mr. MURI. Not nearly as far.

Mr. POSHARD. One other quick thing. I noted in the Governor's testimony he made some reference to increasing the maximum load capacity of trucks on the nation's highways in comparison to Europe, building a 130,000 pound capacity as opposed to our 80,000 and so on. As an engineer, what's the cost benefit ratio of our doing that in this country?

Are you advocating that we build at the specifications to reach that sort of maximum load capacity in our transportation system? Is it worth it to the economy in your judgment?

Mr. MURI. I think it's something we better take a look at and simply learn the lesson from Europe. They invest three or four times as much as we do. They're making terrific investments. Will we ever reach those levels of investments, I doubt it.

But I can tell you what they're getting in return. They're handling loads at 30 to 40 percent heavier than ours. We have run our studies, we know that tremendous benefits, returns from the heavier load if we can do that. They're doing it and their building pavements that are handle——

Mr. POSHARD. How much more is it going to cost just to build to that specification? Is the tradeoff worth it in your judgement?

Mr. MURI. In my judgement to reach what Europe has done, no. To go farther as we have gone as far as designing heavier pavements, you bet we ought to do that.

Mr. MINETA. Ms. Horn.

Ms. HORN. Mr. Muri, thank you. Just to follow up on what Glenn was just saying about the earthquake fault, you're saying we have $80 million right now that should be done along the fault line to prevent disaster. We didn't have an earthquake, but we all know its coming. It's just a matter of time.

Are there special pots of money available somewhere for earthquake preparedness, or would you just have to take it out of whatever pot is available?

Mr. MURI. That's right. We did terrific in 1987, by a vote of the people, the folks of Missouri that that proposition would generate, which took away our flexibility to do these kind of improvements that are so necessary. That's why this federal program is so vital to us. No, we don't have a special pot of money.

Ms. HORN. I think we all have the horror fixed in our minds the picture of San Francisco and the collapsing roadways and we will talk about that when we have more time.

Thank you very much.

Mr. HAMMERSCHMIDT. Well, thank you very, very much, and in following up on this earthquake, as a representative of California we'd be more than happy to trade our earthquakes for your rain. Thank you very much.

Mr. MINETA. Wayne, thank you very, very much.

Mr. MURI. Thank you.

Mr. MINETA. At this time I would to call forward a panel made up of the Honorable Vincent Schoemehl, Mayor of the City of St. Louis; the Mayor of Carbondale, Illinois, Neil Dillard; the Honorable Jay Nixon, Missouri State Senator; and the Honorable Larry Thomason, Missouri State Representative.

Vince, you've exhibit over the years the fact that you are now a third term mayor with the ability to handle the job and you're well known in terms of revitalizing St. Louis, and especially in helping adverse neighborhoods.

And, of course, Mayor Dillard of Carbondale, you have not only a good person in your representative, but former, now a colleague in the senate, a former colleague of ours in the house was Paul Simon. And Paul and I came together in 1974, and Glenn, of course, is not serving that district well

So again, it's a pleasure to have this panel, and Vince, Mayor Schoemehl, your statement will be made part of the record and so if you would go ahead and proceed in your own fashion.

**TESTIMONY OF HON. VINCENT SCHOEMEHL, MAYOR OF ST. LOUIS, MO; HON. NEIL DILLARD, MAYOR OF CARBONDALE, IL; HON. JAY NIXON, MISSOURI STATE SENATOR; AND HON. LARRY THOMASON, MISSOURI STATE REPRESENTATIVE**

Mr. SCHOEMEHL. Mr. Chairman, Members of the committee, thank you very much for the invitation to appear before you today. It is a pleasure to welcome you to St. Louis, and I want to express my appreciation to you and to Congressman Gephardt for arranging this hearing.

I especially want to welcome Congressman Roe and the Missouri delegation, Mr. Emerson, and our newly elected Congresswoman, Ms. Horn, and the other Members of the Committee. St. Louis is already known as the gateway to the west. It is in fact the crossroads for much of the nation's transportation system. Continued reinvestment, renovation and modernization of that system are critical to the economic health of our region and to the nation as a whole. Therefore we are vitally interested in the federal programs and policies related to our surface transportation infrastructure and operations.

While we are still in the process of completing a comprehensive evaluation of the very recent Bush Administration proposal, we already have numerous comments of concern about—based on our work so far. These are included in my written testimony submitted in advance to your committee.

Most I have summarized, however, into several broad categories which I will just take a few minutes to highlight this morning.

We do not believe that the Administration proposal truly provides a quote new vision for the coming generation of service transportation, unquote, as recently stated by Secretary Skinner, or adequate and equitable funding to carry it out. Rather it fosters, and in many cases exacerbates inequities in programing and funding among surface modes and between urban and rural areas.

Further it appears in many instances to be completely inconsistent with national goals recently established under the new Clean Air Act, and with a thoughtful and reasonable national energy policy. Examples include the much vaunted new flexibility in highway and transit programs. While funding for both transit programs and the proposed urban rural program may in theory be allocated for either highway or transit needs. Both programs are under funded. The bulk of federal funding will go to the proposed national highway system, where most funds will not be transferable and where federally financed—where federal financial participation will be significantly higher.

Amtrak's rail passenger system, an increasingly important means of intercity travel in some of the nation's most congested travel corridors will suffer significant funding reductions. Federal participation in Amtrak's popular 403B program would be eliminated altogether at a time when ridership is steadily increasing and costs are steadily diminishing. Without 403B St. Louis will lose train service twice daily to Kansas City and twice daily to Chicago.

At a time when the Persian Gulf crisis has demonstrated to every American the importance of achieving energy independence, this assault on energy efficient environmentally sound rail service seems particularly short sighted.

Public transportation in larger metropolitan areas like St. Louis is once again under attack. Another sample of the programs inequities and inconsistencies with energy and environmental policies. The elimination of federal operating assistance from metropolitan areas of over one million population, the reduction in Federal share for capital projects, especially for new rail starts, and the closing off of general fund revenue for public transportation expenditures are simply unacceptable.

While overall levels of authorization are slightly increased, the thinking behind the planned obsolescence, if you will, of these funding levels at the end of a five year period leaves us deeply troubled about the real nature of the federal commitment to public transportation in urban areas. We hope that you will examine closely the ways in which project priorities will be set and funding allocations made under the proposed urban rule program which will consolidate a number of today's separate categories.

It is difficult to imagine that anything will be gained by pitting a state's urban and rural against one another in a competition for scarce funds. Rather the program should provide a proper frame-

work within which all parties may participate in the development of a comprehensive statewide plan. As part of the program frame work we strongly urge the committee to go beyond the administration's loose language about fair and equitable allocations and establish standards for allocation between rural and urban projects and for substate regional areas.

We further urge the committee to increase the federal share for the urban and rural program to 75 percent and to continue the rail highway crossing safety program. We share Secretary Skinner's conviction that the competitiveness of the U.S. economy in the global market place is linked to the efficiency of our transportation system.

In this regard, however, it appears to us that under the administration proposal our nation will continue to fall behind in providing high speed ground transportation. While the Europeans and Japanese are implementing increasingly fast, efficient, comfortable systems, this legislation provides only minimal research dollars for a single technology, magnetic levitation. We should by all means increase our R and D commitment to MAGLEV.

In addition, however, we should be providing funds for actual applications of high speed ground transportation systems in selected travel corridors across the country. Such a program will address a variety of important national goals, energy efficiency, environmental quality, alleviation of airway and roadway congestion and job creation.

Before I conclude, let me mention just a few of the critically important transportation projects vital to our community over the next five years. You are aware, I'm sure, of our commitment to expand and modernize Lambert St. Louis International Airport at a cost of approximately $1.3 billion. The process to carry out this program is well underway. In order for us to stay on target we need your help with rerouting and depressing Lindberg Boulevard, allowing for a new runway and associated taxi-ways to be located on top.

The cost of this project is twenty million with the federal share at 75 percent of $15 million. Also critical to Lambert's expansion is the relocation of a half mile section of Interstate 70 to make way for the clear zone of the second runway and new terminal facilities. The cost for this relocation will be approximately $28 million with a federal share of $22 million. The airport itself will be covering another $45 million in costs associated with this I–70 relocation.

We have in the St. Louis area a very serious Mississippi River bridge capacity problem. While Missouri and Illinois are not beginning the process to study a new Mississippi River bridge, our most urgent problem at present is the need to resurface the Eads bridge, a national historic landmark. Funding for rehabilitation of the bridge structure and its rail deck is already committed as part of the St. Louis Area Metro Light Rail Transit Project and work will begin late this spring.

Major cost savings in rehabilitating the automobile deck above can be realized if the work can be timed to coincide with the planned light rail construction and if costly future interference with rail transit operations can be avoided. We estimate the cost this important multi-modal project at about $15 million.

Let me comment to you on our proposed multi-modal station project which will provide at long last a permanent home for Amtrack in downtown St. Louis and allow for the first time direct interface among Amtrack, light rail, urban transit and Greyhound intercity bus service. This proposed St. Louis Regional Transportation Center will also allow travelers to access numerous city bus lines, part on the downtown periphery and reach locations in the core by a light rail transit and travel directly to Lambert St. Louis International Airport by light rail transit.

In addition a nearly completed FAA study addressing the need for and feasibility of a downtown heliport has identified the site as an idea for such a purpose. The facility will include a complete range of support concessions as well. We hope that you and your colleagues will agree that this proposal provides an excellent example of the benefits of inter-modalism and that it is worthy of federal support.

Again, my sincere thanks for coming to St. Louis and inviting me to address you today.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you, very much. May we proceed on to Mayor Dillard of Carbondale.

Mr. DILLARD. Mr. Chairman, Members of the Committee, members of the staff, thank you for this opportunity. I would like to present a sort of grass roots approach to highway development, transportation development as we believe it can serve Illinois.

In the spring of 1989 the Southwestern Illinois Team, we've nicknamed that Swift, was organized to develop a regional nonpartisan cooperative effort to work for a major four lane highway to connect deep southwestern Illinois with the St. Louis Metropolitan area. Representatives from Jackson County, where Carbondale is located, Curry County where the world renowned Du Quoin State Grand Circuit Harness Racing is located. St. Clair County immediately east of St. Louis. Randolph County, the home of the first state capital and many many tourism attractions and Monroe County, immediately south of St. Clair County, one of the fastest growing counties in Southern Illinois.

We're all involved in this regional effort. It's long been recognized that we need a major highway between the St. Louis metropolitan area and deep southern Illinois. We're talking about an area that is shown on the map, it's basically one hundred miles southwest of the metropolitan St. Louis area. That is the direction that we are talking about.

Improved access to and from the region is also very critical for tourism development to support the continued viability of existing business and industry, and Congressman Poshard and others have already mentioned the importance of economic development and what the highways could do for economic development in the rural area. The specific location or route, of course, will be determined by future studies, but the representative from this area are now working together in support of the project and regardless of where the specific location of the highway is.

Since it's inception SWIFT has garnered substantial grass roots support in the region. We have resolutions from our county boards, our city councils, our township governments, the chambers of com-

merce and other business development organization plus a large diverse group of our industry and our business organizations. Southern Iilinois University with major campus at Carbondale, 24,000 plus students, 21 Ph.D. programs and Southern Illinois University of Edwardsville just northeast of St. Louis metropolitan area are strong supporters of this project.

Chancellor Peddit has included that in his strategic plan noting the importance of this highway for the future of the university campuses in terms of student, faculty, and staff recruitment and the role of the university in serving the regions of Illinois and to some extent Missouri. The lower Mississippi Development Commission, which many of you are very familiar with, a seven state commission formed by the Federal Government to study and make recommendations regarding economic needs, problems and opportunities in the lower Mississippi Delta region also cited the need for improved transportation access in southern Illinois region.

The SWIFT effort is now being focused on the state and federal levels where financial resources must be provided to finance the design and the construction of the highway. We bring this to your attention today, this paper has been formulated by a volunteer group of people, all volunteers, to bring it to you and with our Congressman Glenn Poshard on the committee we wish him to address this in his own way. We have had briefing with Governor Edgar, the newly elected governor of Illinois. We have met with Illinois State Department of Transportation officials who are supportive of this project, or state representatives, some like Missouri's representatives right here, have met with us and are in strong support of this project.

The need for the four-lane highway will be further heightened if, and we believe should be. Scott's Air Force Base is developed into a joint military civilian air transportation facility as many, many are advocating at this time. We believe that the time has come to push for this long delayed transportation improvement in deep southern Illinois and we would respectfully welcome your support.

And an added point about the grass roots support. The southern anchor of this probably would be somewhere in the Carbondale and Murphy's Borough area on State Route 13, which is a major east west highway at the present across deep southern Illinois. The City of Carbondale has taxed itself as a home rule community 1 percent to increase gasoline tax to spend and provide half of the funding with the Illinois Department of Transportation to fund the study on the south end of this project. That's the kind of grass roots support where we think Illinois and southern Illinois should follow. So we're putting our money where our mouth is.

Thank you very much.

Mr. MINETA. Thank you very much, Mr. Mayor. Let me call on State Senator Jay Nixon at this point.

Senator NIXON. Thank you, Mr. Chairman, Majority Leader, other congress folks here. I have purpose. I have chaired a committee like this. I have held hearings throughout the State, and for that reason I didn't give you a copy of a statement that you could look at while I speak, I want to look you right in the eye and very shortly and quickly say what the Missouri Senate feels and stress

with as strong a position and point as I can how important I think these points are.

President Eisenhower established, the Congress established the interstate system the year I was born. Yesterday as I drove back from the Capital here in Jefferson City, back to my home in Jefferson County it took a long time. Of that 130 mile trip, there was 9 miles of four lane highway, and 80 percent of that trip was traveled on road with no shoulder.

I cross a one lane bridge on a State highway, and in another a bridge should be one lane. I dodged a number of pot holes, a number of cattle, and other things as I moved my way back to see my family for the first time in a week. The issues about transportation as you sit on a committee, the same as I do, and I'll head back to the capital and hear the great idea about mass transportation which we all want to support, the great ideas about the many modern technologies that are out there. You all understand as well as I do that in the budget realities facing the country and the anti-tax sentiment that is running around our country, you are going to be hard pressed to do much of anything dramatic.

What we here in Missouri would like you to do is to give us more money so we can send the checks down to Wayne Muri and he can build more highways. We have asked our people in the past to put more money in that pot. I will do that again, I will take the necessary political risks and the people here will take those risks with us, and we will succeed.

The people of this country want and deserve and should expect the best highways that we can build with the resources that we have in our country. And as most witnesses come from on my committee that I chair, they all have one pet peeve, and I also want to state my pet peeve. And that is, I called up the Highway Department about two months ago and asked them why, and at this time scare resources and why there was trouble with bridges and roads. There were these white posts every two hundred yards down the side of four-lane highways, and it indicated that the Federal Government had indicated that we should spend our money that way.

And some study may have shown you that those are going to save lives somewhere and someone may have convinced someone that those things were necessary to our system, but the money used for that could have been used on the roads in my district where over the last ten years we have suffered more traffic that the County of St. Louis even though it has ten times the population we do. We have suffered more tragic accidents along one ten mile piece of road in a given year, and I want to have—ever had in a war, and more in a given ten year period along one seven mile stretch of road than the United States suffered in our recent war in the Persian Gulf.

Put the money where it belongs, in asphalt and concrete on the roads and the back roads of our country. Thank you very much for coming to Missouri, and the Missouri Senate I think would join resoundingly in my comments.

Thank you.

Mr. MINETA. Thank you very much, Sir. With such a short speech like that we could go back to the old phrase of "Nixon professes."

At this time I'm going to introduce Missouri State Representative Larry Thomason. Your statement will be made part of the record and if you would go ahead and summarize and proceed in your own fashion, sir.

Mr. THOMASON. Thank you, Mr. Chairman, Members of the Committee. I'm actually here in a dual capacity. The Speaker of the House Bob Griffin was unable to be here today, and asked me to bring to you his comments and to enter them into the record of the proceedings, and with your permission I would like to do so after my testimony.

I'm here in kind of an uncomfortable position, frankly. On the State level we deal with projects on a State-wide basis. It is very difficult to entertain parochial interest, and I'm sure on your level, on the national level you have problems with that too. But I think that I can talk to you about a parochial project and do so with my head held high and with good conscience because there are many parochial projects that current formulation of current funding levels do not permit to be addressed. I think this project I would like to talk to you about is just a good example of one of those many projects.

Prior to becoming a State representative I spent six years as a director of the Kennett Chamber of Commerce. In that position my primary responsibility was that of economic developer. I'm here today to bring your attention to highway—our Federal Highway 412. This highway begins in Jackson, Tennessee, crosses the Missouri boot hill and continues on to Walnut Ridge Arkansas. Currently the section in Tennessee has been upgraded to an improved four lane for approximately one-third of this length. The remaining two thirds is either under construction or in the bidding phase.

In Arkansas upgrading to an improved four lane is in planning stage for a section between the Missouri State line and the City of Paragould and in the study stage for the remaining sections. This highway crosses the Mississippi River on a modern four-lane bridge, the first eight miles of this route in Missouri is a four lane section which links Interstate 55. Highway 412 is a major east west link connecting Interstates 40 and 55 and Highways 51 and 30, which are improved four-lane roadways.

Highway 412 is important to our area for many reasons. First it crosses the Mississippi Delta, which has the highest concentration of poverty in the United States. Many in the Delta are working hard to bring new jobs and opportunity to our area, but are hampered in their efforts because of lack of adequate transportational access. Industry, when survey lists access to a four lane highway as the most important criteria in choosing an expansion location. More parochially, existing industry in the boot hill explains that they are more likely to expand their current operations if transportation are improved.

The way to solve the poverty problem in the Delta is not through transfer payments or other government handouts, the way to solve the poverty problem is providing increased job opportunity. Improving Highway 412 would be a major tool in providing those new jobs. There are several other reasons for improving this roadway, but I think I would like to mention to you what I consider the least obvious and possibly the most important.

The boot hill is an area awaiting a disaster, very beneath our fertile soil lies the New Madrid fault. This fault has produced the most destructive earthquake on record in North America. Specialists tell us there is a 50/50 probability that a major quake will happen in the next twenty years. Preparation for this event is vitally important to the residents of the northern Mississippi Delta. Many states have initiated programs to help with earthquake mitigation. Even with all this preparation many lives will be lost and a great many others will be injured and left homeless.

Being able to initiate a rapid response following a major seismic event will save many lives and relieve much suffering. Highway 412 could provide an invaluable artery to speed relief into the area. The bridge spanning the Mississippi was constructed to withstand the most—all but the most violent earthquakes. Improving his route to a four-lane roadway would insure the other bridges and overpasses could survive and allow needed relief to readily gain access into the area.

I urge you to give every consideration to this vital link spanning the Mississippi Delta.

Thank you.

[Hon. Bob Griffin's statement follows:]

STATEMENT OF HON. BOB F. GRIFFIN, SPEAKER OF THE MISSOURI HOUSE OF REPRESENTATIVES

As Speaker of the Missouri House of Representatives, my position dictates that I protect the needs of our State as a whole. Therefore, I am pleased to have the opportunity to address this subcommittee and call its attention to Missouri's transportation needs.

When our 32,354 mile state highway system was first established the system had a life expectancy of fifty years. Now, after seventy years, and a ban aid approach to system problems, we are paying the price.

While we were the first State to begin construction of the interstate system, that system is now carrying loads much heavier than it was designed to bear and is past its prime. In fact, our urban interstates are ranked forty-eighth in the United States and our rural interstates do not compare much more favorable at forty-fifth.

As a State, we fall in last place in national comparisons of bridges. Approximately 60 percent of our 23,000 and 10 bridges are deemed substandard. One third of them are considered structurally or functionally deficient.

And what is our crumbling transportation system costing us? Rough roads are causing increased car and truck maintenance for our citizens. We are paying more for road repairs because by the time we can afford to take on a project, inflation and increased damage over time have both contributed to the cost factor.

We are losing industry to other states with more attractive transportation systems, and that means less tax revenue, employment and investment. Higher process for goods and stifled economic development are being felt by small towns when large trucks cannot enter because of low bridge load limits.

Motorist safety is being compromised. Our highway department predicts we could save eight hundred lives and avoid 16,434 injuries and 53,943 accidents over the next 10 years if we had the funding to meet state needs.

So while Missouri voters approved the $6 billion program, Proposition A, in 1987 to rebuild and repair our transportation system, a recent survey reveals our State needs five point five billion above Proposition A to meet our transportation needs over the next 10 years.

Under the current federal highway program, our state has only been receiving an annual amount of two hundred and fifty million. This portion is drastically less than Missouri's fair share.

For every dollar we are sending to Washington, we are getting less than 85 cents in return. Yet our motorists rank fourth in a national comparison of the amount of miles driven and pay a disproportionate share of deficit reduction.

The present federal formula, based primarily on a state's land area, population, and the mileage of various types of two-lane highways, allows large western States

to get large shares of federal money, in spite of the fact that their road networks are considerably smaller than our State.

Naturally, under these circumstances, we will be glad when the present formula is retired October 1. But we want to ensure that a more equitable method will take its place.

We believe that the new formula should place a higher emphasis upon usage. This could be accomplished by stressing more heavily the total gallons of motor fuel taxed and the public road miles.

This action would place Missouri's share closer to 2.5 percent of the total fund, which approximates what we contribute. According to present predictions of a $21 billion federal highway program for each of the next four years, Missouri would see its current funding level doubled.

Only last week, our chamber sent the Senate a joint resolution asking that the voters be given the opportunity to decide if the State Highway and Transportation commission should be given the power to construct, operate, and maintain toll facilities.

I have appointed a task force this legislative session as part of my "Missourians First" program to assess the transportation needs of our state.

Through the steps we are taking as a state and by placing our partnership with the Federal Government on a more equitable footing, I believe we can avert the crisis which Missouri's transportation system is facing in the next ten years.

I would ask that the subcommittee take the severity of our situation into consideration in planning the new formula.

Mr. MINETA. Very well, thank you very much, Representative Thomason.

If I could direct a question here to Mayor Schoemehl. You're talking about the bridge replacement and rehabilitation program, and I'm wondering would the use of tolls on bridges and encouragement of private sector involvement be an adequate means of reducing the backlog of, let's say, the needs specifically in this area, but maybe as you might have looked at it?

Mr. SCHOEMEHL. Currently toll roads and bridges are unconstitutional in Missouri. But I think that there is a growing consensus that we are going to have to move towards toll roads. The Regional Commerce and Growth Association, which is our local Chamber of Commerce, has recently supported such a proposal, and I support it too. Whether or not we want to move toward tolls on an interstate bridge, it would be something that connected two states would be something that Congress would have to address, but we are going to be moving toward toll roads in Missouri.

Mr. MINETA. Now, the administration's legislative proposal for reauthorization provides for 70 percent of funding for the National Highway System, and 30 percent for the urban rule of flexible program. You made some comment on that on page three of your testimony. I was wondering, what should the future funding allocation ratio be for the national highway system and the urban rule flexible program?

Mr. SCHOEMEHL. Mr. Chairman, I think the concern that I'm expressing here is a reflection of many of the people in the metropolitan area that we see two things in any of the federal legislation. Number one would be a higher proportion of federal mesh, and secondly that we have some sort of an outline, if you will, of how any urban rural program would be divided.

The reason for that is that if we are going to have a strategic transportation system in this nation, a transportation that really serves the strategic needs of the 21st century economy, the Congress is going to have to play at least the role of referee, setting out the rules by which the division will take place between urban and

rural interests. For example, it is a strategic goal of the Congress through the Clear Air Act to clean up the air in urban areas, and so you tell people in urban areas that we have to clean up the air. By definition that means we have to move towards a more thoughtful use of mass transit.

But then to turn around and send back to the states with maximum flexibility the transportation dollars and say, okay, fight about it and it inevitably pits urban interests against rural interests and defeats the strategic purpose that the Congress has already spoken to of trying to clean up the air and the nation. Now, the point that I would make is that I think this committee and Members of the Congress have got to see transportation not as a discreet and independent activity that we undertake, but it is a component in creating an overall strategic approach to the kind of society we want. And to simply say to the states, you guys go sort it out after you establish the funding ratios, I think is a mistake, and you know, I respectfully disagree with some of Senator Nixon's remarks. That I do think that we need more highway construction in Missouri, but I think that it would be very short sighted of this committee and of the Congress and of the state to ignore the fact that transportation is a multi-modal undertaking in Europe and in the Pacific Rim, and we are simply falling further and further and further behind in other modes of transportation as well as highways.

Mr. MINETA. Mayor Dillard and State Representative Thomason, let me—to the extent that we are setting broad public policy as the Mayor indicated, and you're talking about some very specific projects, and as effective as Congressman Emerson is on the committee and in the Congress and as effective as Congressman Poshard is on the committee and the Congress, it is still going to require, it seems to me, you say local public support. But to what extent have these been included in a state, let's say five or ten year capital improvement program to get recognition from that state that yes, these are important projects. These are important for us to take some state monies in order to match federal monies that would be coming in in order to get these projects going.

To what extent have State Representatives or the State Agencies already said, yes, this is important, we ought to put it in a five year CIP and we're willing to put state money into these projects?

Mr. Mayor?

Mr. DILLARD. The Illinois Department of Transportation officials have asked us to include, to talk with them, to include this in their next five year plan. So we are planning that they will——

Mr. MINETA. Until they say, yes, we are going to allocate this as part of our five-year program? You're just input at that point. It isn't a real thing until it comes out in a five-year capital program or whatever vehicle the State of Illinois uses. And I would think the same thing here in Missouri. Unless it's—as much as may have ground swell support for it, until the state says yes, we will include it as part of the five-year capital improvement program, its still a good thought.

Mr. THOMASON. I think, if I might, you are about to address this problem, probably better than even the state can. In Missouri we have to allocate at the limited funds we have for improvements to

highways to the most priority projects and receiving recognition for a project like this is very difficult regardless of the worthiness of it, because a lot of the funds you have to have received the greatest match it requires that they be done on certain types of routes. The state always wants to take advantage of the matched money.

So by increased revenue flowing downward to the state, these projects like this have a much, much greater opportunity of being addressed.

Mr. MINETA. But what you're asking, it sounds like, is that these be included specifically as quote demonstration projection unquote on the federal level. It just seems to me that if it's not important enough in terms of priority at the state level, how do we include this as a demonstration program at the federal level and so to speak, jam it down the state's neck. Unless we also say, well, we'll go ahead and allocate this, but we will take it out of the state's share.

Now, I think Wayne would be right back at us saying, well, what's the big idea of designating this as a state project and then taking it out of my state allocation, that makes no sense. So that's why I'm saying it really is a bottom up process in the sense that yes, there is recognition as there is at the state and county level, there's got to be recognition at the state level to be part of the CIP in order for the feds to say yes, this is something that ought to be recognized.

Mr. DILLARD. Mr. Chairman?

Mr. MINETA. Mr. Mayor.

Mr. DILLARD. We hoped that over a five-year period of time, I think I heard this earlier today, that you would be working on a five-year bill, and I think that's what the State of Illinois, of course, will be doing as well as Missouri, and certainly those of us in Municipalities work on a five-year capital improvement program, and so this is in the planning process.

But if you set the mechanism, the process of the mechanism that these projects can be implemented, that's I guess all we can ask.

Mr. MINETA. Thank you. Mr. Emerson.

Mr. EMERSON. Thank you, Mr. Chairman. I have several comments I would like to make more than questions. First of all, Senator Nixon, I appreciated your statement. I really think that we are trying to do what you urged to do in a certain way. It may not seem that way at times, but I really believe that what we are trying to do is to give you the resources at the state level to do what the state according to its priorities must do. I would as a native of Jefferson County, I would agree with you what a long way it is and what the obstacles are between Festus and Crystal City and Jefferson City, but they don't begin to compare with what Representative Thomason has to go through all the way coming up from Kennett.

So we are, indeed, sympathetic to what you're talking about because you did address some very significant points there.

Also Larry, Representative Thomason raises the question about our being in the earthquake zone, and it occurs to me that the bridge, the highway that he's talking about, that bridge across the river there to Dyersburg is the only one that has been designed, I think, between St. Louis and Memphis with the prospect of earth-

quakes in mind. I think it's the only one that measures up to and seismic standards, and I think that we probably should in the course of our reauthorization here give added emphasis to taking seismic considerations into account in those regions of the country where we have a problem with earthquakes. And you have raised a very, very good point, and it is one that I think and hope that this subcommittee and the full committee can address. It also occurs to me that we have shared jurisdiction with other committees on the subject of pipeline safety, and in addition to examining the bridges we need to look at our natural gas pipe lines all come under the Mississippi region down in the region of New Madrid. And we will be handling some pipeline safety legislation also this year and your comments on the bridges raises that question, something I also think we ought to take into account.

Mayor Dillard and Representative Thomason both have commented on the Delta Commission and its report and many very valuable recommendations that were made by the commission relating to the Mississippi Delta region which transcends many state bounds. The commission, as you know, is at an end, and we have formed a Delta Caucus in the Congress, of which my good friend Mr. Poshard is a very active Member and Chairman Mike Espy of Mississippi, and I am the Vice Chairman, and we have all of the representatives from the Delta regions joined together in a Delta caucus. And I would hope that one of our goals, and I say this to address concerns that you raised with me that the Delta Caucus itself would seek the opportunity in the course of this authorization to focus, to highlight on some of the infrastructure problems of the Delta Region as a region.

We're doing it here, we're getting some good licks in for Missouri and Illinois, but we need to regroup and also come at it from a Delta Region perspective as well. And Mayor, I want to say, I don't say what I'm going to say to argue with you, I understand where you're coming from, but I'm one of those who believes we do best when we send the money to the states to spend according to their priorities. I know what you're talking because you're needs are great in the St. Louis metropolitan area. And we in outstate Missouri want you to succeed in metropolitan St. Louis because your success will help us also to be successful. You're a wonderful market for a lot of our products and what have you.

But you know as we look at the allocation, there's state and federal matching funds that go into the formula here and one of the problems we've had in Missouri has been the difficulty of getting out-state Missouri tax measures that are necessary to come up with the matching funds. And part of the reason for that is that outstate Missourians feel that the State's resources go to meet the needs of Kansas City and St. Louis and the rest of the State doesn't get the proportionate attention because the density of population is in St. Louis and Kansas City. And I would hope that we could work together cooperatively from the federal level and from the state level as well to find the right mix so that out state doesn't feel that it's getting the short end of the stick.

I think we could go a long way to improve urban rural relations if we could find that proper mix as it relates to our infrastructure. Now, I would be glad to work with you.

Mr. DILLARD. I appreciate that.

Mr. EMERSON. We have tried to find the right way of putting that to the people quite frankly.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you. Mr. Roe.

The CHAIRMAN. Well, I want to thank all of the panelists for very thoughtful and excellent testimony. I think it's at the grass roots level where it starts to make a difference, where the action is. I would like to have a little colloquy with Mayor Schoemehl. I think your points are extremely well taken. You talk about the elimination of federal operating assistance for metropolitan areas of over one million population, the reduction in federal share for capital projects, especially for new rail starts, and the closing off of general revenue for public transportation expenditures are simply unacceptable. Give me your view.

Mr. SCHOEMEHL. Well,——

The CHAIRMAN. I mean, we're talking urban rural, and I certainly agree with the distinguished gentleman from Missouri, Mr. Emerson, that there has got to be a balance, and I think you refer to that. What does flexibility mean, what does fair play mean, who determines the fair play? None of us are in a position not to be practical politicians that know where the votes are, that's a little more testy for somebody else to make that statement, but I thought it had to be made.

Mr. SCHOEMEHL. I think the point that I'm trying to make about the urban rural split, there should be some consideration of category and purpose of expenditure. You know, there aren't in the Delta Region many air quality standard problems. There are in Kansas City and in St. Louis. And part of the solution, not just in Missouri but in urban areas across the country, has to do with mass transit solutions.

What the administration's bill proposes first of all is to eliminate general funds for urban mass transit and then it proposes to send back to the states an amount for us to sort out between the urban and rural programs.

The CHAIRMAN. Will the gentleman yield at that point?

Mr. SCHOEMEHL. Yes.

The CHAIRMAN. You have a very telling point, because I agree that the proposal comes back and says basically that communities or cities that would be of a million population, they lose out entirely is what it amounts to?

Mr. SCHOEMEHL. Yes.

The CHAIRMAN. And therefore, how does that fit St. Louis? St. Louis is a million people, isn't it?

Mr. SCHOEMEHL. Well, the metropolitan is 2.5 million, the city itself——

The CHAIRMAN. Well, you lose, don't you?

Mr. SCHOEMEHL. Yes.

The CHAIRMAN. So, in other words, actually, people are talking about it, they call me and say what we should be doing. I'm not faulting the administration, but isn't it basically true right there out on the table before us, St. Louis today, if this proposal goes through you lose.

Mr. SCHOEMEHL. Ten million dollars a year.

The CHAIRMAN. You lose.

Mr. SCHOEMEHL. Ten million dollars a year.

The CHAIRMAN. All right. And then, you know, you come back, that's the point I was trying to make earlier. I don't think I was understood. That's the first point, then we come back and say, well, yes, but we're going to—we're going to take the cap off, and we're going to expand the money so it will be available, it's not going to give us more money. You've taken a billion bucks away from me besides. So it seems to me that one of the things, if I may speak for the City of St. Louis today, enjoying your hospitality and having a chance to see that wonderful arch and so forth. I understand you started that back in the 1930s, they were telling me. I hope we can do better on our mass transit, and it's my State I'm not talking about.

But all that notwithstanding, isn't that on the table though. If the Congress were to say, goes on and goes on and goes on and set from the mount this whole solution and therefore we're going to have it go to transportation, then you lose?

Mr. SCHOEMEHL. Correct.

The CHAIRMAN. Well, so does the State of New Jersey, therefore I'm concerned about that, would that be reasonable?

Mr. SCHOEMEHL. It is to me.

The CHAIRMAN. Let me comment, if I may. It's about what we're trying to do in the more rural areas, smaller cities like Carbondale and so forth, and I think two of you said you'd take advantage of the match.

Mr. DILLARD. Yes.

The CHAIRMAN. And that's only logical because we're politicians; if we don't do that we're going to get drummed out of office. You can't let money drift down the tube. Therefore the premise and the philosophy I'm trying to interject here is that how that match comes together and what the levels are going to be is going to determine the priority of the States, not the reverse. People are coming back and saying, well, it's this. Senator Nixon made the point, it's the reverse that's going to decide that. That isn't true. I know that my State only has a limited amount of money. Some legislatures only meet every two years, and if I've got a five year plan and three years down the line I've got to get my dough up, I've got to go to my people and get the money.

So therefore, whoever is chasing the first instant dollar, what he would have to do as a good politician is place his priority as far as the 5-year State plan, is that only reasonable to say?

Mr. SCHOEMEHL. Very much so.

The CHAIRMAN. So, therefore, some of the other projects that we're talking about that may have the greatest merit in the world haven't got a chance; and it doesn't really mean that you are arguing with rural and urban, those projects can't happen. It's all well and good to say that the States should decide, and that's the point you're making.

You're saying there has to be responsibility that begins to emerge so we start looking at what the needs to meet these other laws are about; and so forth, and start to give the other areas of the State a chance to be heard. I can assure that there is not total agreement on the committee by any stretch, but I have high regard

for our chairman of our transportation committee and one of the great Americans in this field.

This is an argument, why should we in New Jersey subsidize you in Missouri; why should there be demonstration projects? But I'm just wondering should we be talking about a demonstration project as the only way we can get them done. Does that make any sense?

Mr. THOMASON. If I can comment on that, I'll tell you why frankly I think you've hit it exactly on the head. In Missouri because of the competition for funding for projects that we—there's really two great considerations. First, of course, is traffic count, and the loads that the roads bear.

The CHAIRMAN. And if the gentleman would yield.

Mr. THOMASON. Yes.

The CHAIRMAN. The good senator made the comment in his presentation, hey, give me something. You know I drove a 136 miles and it took me four hours to get here. And our Majority Leader speaks of what we're doing on Route 21 because it was death's highway. You made that point, there were more people killed in certain areas around the State than were killed in Desert Shield and Desert Storm. Well, should it only be highway miles that is a determining factor? Should it only be urban rural? Shouldn't there be some determination made on human factors as what's needed in this?

Mr. THOMASON. I firmly believe so. Let me just tell you of a survey that was recently done by industry. Now, in my area we're vitally out trying to get jobs, as I mentioned we have one of the highest poverty concentrations in the United States. We go out and work very hard to get jobs. The transportation is so important. I'm not sure everyone is aware of how important it is for us to get jobs.

Industry was surveyed; a survey that was published in December of last year said that 92.3 percent of the industry said that highways were the most important factor in determining where they were going to locate. As something to throw that against, only 22 percent of them said rail was ever important to them. Highways are vitally important and it's a factor that no—Wayne Muri is never going to consider economic development when he decides what to do with highways, that is not a consideration for his highway department, and I understand his reasoning, I won't argue with that point.

But if you're talking about the reason to do a demonstration project I can think of no better reason beyond that.

The CHAIRMAN. Thank you, Mr. Chairman.

Mr. MINETA. Mr. Hammerschmidt.

Mr. HAMMERSCHMIDT. Thank you, Mr. Chairman. Representative Thomason, you touched on a road that I'm very familiar with, because as 412 goes on west it goes through my home and it goes through Harrison and Springdale and Oklahoma and on west.

Mr. THOMASON. Yes.

Mr. HAMMERSCHMIDT. And on the other end of that highway I have the same interest you have, and there is no doubt that it is very important to economic development on the Delta over on your side of the State, on Bill Emerson's Congressional District. So I want to work with you and with Bill in trying to upgrade that

road. I wonder if the State of Missouri has identified Highway 412 as a priority project. Do you know whether it is a priority project?

Mr. THOMASON. Congressman, I can tell you that we have been lobbying very hard, and frankly I'll explain to you the difficulties we're having. As I mentioned Arkansas is progressing right along with some of their work on Highway 412 as far as upgrading to an improved four lane. The State of Tennessee basically is finished; everything in Tennessee is either being—is constructed. Being constructed or in the bid phase. Yet in Missouri we can't seem to get any recognition for the project. With the committee's indulgence, everybody has their little parochial story, but I had a good friend from the northern end of the State, a colleague, that the only reason why the boot hill is in the State of Missouri is because Iowa sucks.

We sometimes feel like the Highway Department doesn't give us the consideration that we deserve.

Mr. HAMMERSCHMIDT. Well, let me shift over to some remarks, from a segment made by Senator Nixon. You know, Senator Nixon, in your lifetime we've had the largest work project in the history of the world, that's the 42,500 miles of the Interstate. But that's what started the highway trust fund. And during those intervening years, you know, the focus was on the trust fund, and that's what the Federal Government's responsibility was. They spend $115 billion and the States matched that with about another $15 billion, and a ninety ten matching ratio.

The reason I make this point is, we are now in the end of that 35 year period, so we can address those points that you make, because Missouri had 1,177 miles of Interstate, I think, and that's all finished now, but you have about 8,200 miles of primary. Now, when you draw these new lines, or highways of national significance, and decide how we're going to spend that money right at that point is when we begin to address the points you're making because then the Federal Government begins to have a responsibility. Highway 412 would be one of those if you decide within Missouri that that's one of them.

We have to decide that in Arkansas as well, and 412—let me say I don't think has that high a priority in our State decision making, but we're going to try to get it up there just as you are. So we appreciate all your testimony. We appreciate the urban testimony here. We understand the frustrations in dealing with that. And we appreciate your statement.

Thank you, Mr. Chairman.

Mr. GEPHARDT. I'm not going to ask a question, I'm going to make a statement. Which has kind of built up in me as I've listened to this panel. This has been a painful panel for me, to hear my friend Vince. I was on the board of Aldermen with him in the city. He talks eloquently about the needs of the city, and the urban area. He talks about clean air. Listen to my friend from the State Senate talk about the need for rural highways.

This morning we stood in the rain down at Highway 21, where blood alley used to be. And heard my other friends here from Illinois and southern Missouri talk about in one case a very specific need. It is obvious to me that in this country we are not spending enough on these needs. The Chairman talked about the need to

spend the money we have. We didn't have the courage in the budget last year, and I chaired the summit for six months. I've listened to all of those issues, and the reason we didn't make the move we should have on the highway trust fund is because we didn't have the courage as a nation. I don't want to blame anybody in particular, but as a nation, we did not have the courage to either cut other domestic programs or to raise taxes or to see that this trust fund, the money that's been put in it by the taxpayers in the gasoline tax all gets spent year after year on the highway programs of this country.

Now, let me talk about energy policy for a minute. We talked a lot about Japan and Europe here today. There's a good reason they have a better infrastructure than we do. The gasoline costs per gallon in Japan is four bucks as we sit here today. The gasoline price in Europe is $3.60 a gallon on an average. I do not come here today to call for those kind of tax increases, but I am here to tell you that they have had an energy policy in those countries the 30 and 40 years that we have not had.

Now we just lost a hundred people in the desert, that exercise cost of $50 billion, that's four years of the highway trust fund. We were there in part because we are dependent on the middle east for oil. Fifty-five percent of the oil in America today comes from foreign sources. If we don't get an energy policy soon it will be at 70 percent before the century is out.

Now, people talk about gasoline taxes, people talk about oil import fees, which has been my favorite. They are painful things to talk about and frankly in the budget summit we put a nickel on a gallon of gasoline, and I'm here to tell you that in the last six months a gallon of gas has gone from ninety cents to a buck and a half and nobody ever noticed the five cents. Nobody even knew it happened. I was in Saudi Arabia in August and I saw the wealth of the royal family. The royal family has an income of $75 billion a year, and most of that money comes from our people right here in the United States.

Now, it is time, in my humble opinion, that we get next to ourselves, that we face this challenge squarely, that we understand we don't have enough oil in this country and that we get an energy policy in this country worthy of its name so that we can invest in energy and we can invest in our infrastructure and we don't have to sit through hearings like this with everybody saying, you know, don't give it to him, give it to me, because my need is greater than his.

The truth is your needs are both great, all great, and we need to have an infrastructure management policy worthy of the greatness of this country. I'm sorry I had to get that off of my chest. Thank you.

Mr. MINETA. Thank you very much, Dick.

Mr. Poshard.

Mr. POSHARD. Thank you, Mr. Chairman. And in view of what our distinguished colleague just did, I want to get something off my chest, too, in support of my mayor and just perhaps giving a scenario or an example of the combination of a need for an energy policy and the use for a transportation policy that's effective for all of us.

Mayor Dillard is from an area that just recently completed a study in just a few small counties with several cities of 10 to 25,000 people each. We're the fourth largest center of population in the state of Illinois, if you combine those few rural counties together. And yet we have no direct access to the largest metropolitan area to which we are closest, St. Louis.

Now, last year as a larger nation policy the Congress and the President signed a Clean Air Act. I understand the national need for clean air—none of us opposed that. But my district is all high sulfur coal mines. That Clean Air Act, while it's good for the nation, is going to cost my district 10 to 15,000 of the best jobs that we have. And we're all rural and we're all coal miners. Now, our economy is going down and I suffer that same fate with nine other states in this nation which depend upon high sulfur coal to sustain their economy. We have made a national priority of clean air and yet our economy will falter in the coal mining parts of this country.

Now, we need the highway for accessibility to St. Louis in order to diversify to create those jobs. And I will tell you what further complicates this. The President's budget this year took $600 million out of clean coal burning technology research which we have to have to have any chance of implementing the technology so our coal miners can continue to work. It's not going to be in the budget. Why? Because of the national deficit problems which were exacerbated by the war.

So this is a very complicated situation. A sound surface transportation program will eliminate some of the problems that are created by other national priorities such as the Clean Air Act. Whether or not we can ever convince our State, to say this is another issue. I've got a city with four and a half million people on the other end of my State, you know. Probably it's going to be difficult for us to do that.

So if we don't have a chance as a rural area needing accessibility to a metropolitan area, needing the jobs that we're losing, if we don't have a chance to do that through some mechanism we have problems, and we're going to continue to suffer.

The CHAIRMAN. Will the gentleman yield?

Mr. POSHARD. Yes, sir.

The CHAIRMAN. If the gentleman would yield to me, I would like to share in this with everyone. There were Members coming from all over the country. God knows we have our own problems in our system. You, in Missouri, have stimulated us now that we are expanding some of our broader thinking. The gentleman is striking the nail right on the head. Everybody talks—Senator, you talked about competitiveness.

We know in this country right now because we do not have our act together. The administration is Balkanized, the committee is Balkanized we come out now and we're now talking about a transportation act and we're talking about mass transit, that's the argument. We'll work on that and we'll come up with an answer. Over here we work with the airports. We work, and then we have all the hearings and we all get involved and we work on the airports, we get that accomplished.

We go over here and we work on the harbors of America and then we get all of that done. None of the three relate. So if we're going to compete in the global economy, the point you're making, and provide the new wealth that this country needs, the only way you're going to create the resources that you need for education, which we all support, and the idea of health care for our seniors and health care for our nation and so forth, we've got to create new wealth in the global economy. How do we do that?

We do that by having the courage not to spend on transportation. That isn't even the debate today. Do we take our limited resources and do we invest them where we're going to get a return. That is the basic question. Should it be based only on miles traveled or all of these other things thought of, or should it be said that if we invest that money over there we're going to get a return ten to one on that investment? If we invest over there we're going to bring that ten to one. What does that mean? It's bringing in new wealth and giving us new resources to work with so the transportation system of the nation should not be handled as any other thing. It is the biggest—short of military—it is the biggest single investment of the people's capital of this country. It goes into the estate of the people which creates the wealth of the country.

So we've got to get a mindset change in the States. We've got to get a mindset change in the administration. We've got to get a mindset change in Congress. We are not just authorizing a transportation bill, or extending the transportation bill. Not from this member's viewpoint or from the committee's viewpoint. We're coming back and saying we have an enormous opportunity if we use this vehicle wisely and with wisdom to move the nation and to achieve what you're talking about.

So I thank you for indulging. I don't fell like an outsider any more. I look to see if you had a vacancy coming up in your redistricting.

Mr. POSHARD. Thank you, Mr. Chairman.

Mr. MINETA. Ms. Horn.

Ms. HORN. Well, I think this has been very instructive to the committee members. I think you're hearing a whole lot of how Missouri works and doesn't work.

In this state we have rural and urban concerns. But the main point is, of course, what Mr. Gephardt and Mr. Roe just stated. Our national transportation policy should fit hand in glove with our national energy policy and we don't have either one. We will be debating both of those as the weeks go on. We have, many of us, been very disappointed in what has come from the administration in both of these areas.

States and regions deal with overall transportation plans. At the moment, there are disincentives in the way we give back money to the states. There are disincentives in the response to formulas in that the formula encourages large road and highway projects where you get a higher federal share; and this hurts the rural areas. So those are some of the kinds of problems we need to fix. I also know our mayor has a problem, he has an unpronounceable last name, which is Schoemehl, but he does not fault anyone who does not know how to pronounce that.

Mayor Schoemehl brought up a very good point that when the Federal Government sets an energy policy, it must have a transportation policy that gives incentives to the states to follow what fits with the overall policy. And without the expensive markers you mentioned beside the road, well, that doesn't fit. Safety, including earthquakes—special kinds of conditions—special economic development issues, these all should be taken into consideration.

So another thing to keep in mind is how little we're willing to tax ourselves in Missouri. On this side of the river our gasoline state tax is eleven cents, isn't that right, Bill? In Illinois I believe it's twenty-two cents. So right there we are—our neighbors in Illinois are already, taxed up at the state level twice what we are in Missouri for highway improvement. On the other hand I found out the other day that the way Germany is paying their $3 billion tab of desert storm and Japan will be paying their $9 billion because they're adding it straight on to the price of gasoline at the pump. Their people are going to know why that war was fought.

Our people may soon forget. We should continue to remind them. If we began to pay at the pump the real cost of gasoline, a lot of the things we're talking about here today would not be problems. If we could include, somehow, the military, the health, and the environmental cost, in that pump cost, which is now around a dollar from a dollar fifty, we not forget again so quickly. If nothing else, those of us in leadership position, and I will do my part, let us not forget.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much. Let me thank the panel very much for your being here today and appreciate your testimony.

At this time in furtherance of local government, let me call on Mr. Buzz Westfall, the County Executive of St. Louis County, Ms. Elizabeth Faulkenberry, Presiding Commissioner, Jefferson County, and Mr. Eugene Schwendemann, presiding commissioner for St. Charles County. It's great to have all of you here and you're statements will be made a part of the record.

So, Mr. Westfall, if you would go ahead and proceed.

**TESTIMONY OF BUZZ WESTFALL, COUNTY EXECUTIVE, ST. LOUIS COUNTY; ELIZABETH FAULKENBERRY, PRESIDING COMMISSIONER, JEFFERSON COUNTY; AND EUGENE SCHWENDEMANN, PRESIDING COMMISSIONER, ST. CHARLES COUNTY, MO**

Mr. WESTFALL. Mr. Chairman, Members of the Committee, thank you for the opportunity. If you will forgive me if I read a statement I will have to depart, I'm running late and I appreciate the fact that you gave us this opportunity.

None of you at the table—well, that's not true. All but a few of you at the table don't know my background or do know it. For the last twelve years I've been the prosecuting attorney for St. Louis County, which is the equivalent of your district attorney in other states. So my familiarity with highways for the past twelve years for the most part was prosecuting speeders on those highways. Now I find myself in a considerably different position.

So let me briefly outline my concerns about the policy recently suggested by the National Administration and the impact it will

have on St. Louis County and the St. Louis region in general, and I might say that I agreed with just about everything that Mayor Schoemehl said. The county I represent has a population of approximately one million people and covers five hundred square miles. Obviously a jurisdiction of that size and population has significant transportation needs. In the past we have met those needs in large part because of the partnership between local, state, and Federal Government. That partnership has enabled us to build roads and bridges and allow our citizens to move about the county which has incurred invaluable economic development for us too.

I am concerned that reducing federal participation on rural and urban highways from 75 percent to 60 percent places a new financial burden on local government at a time when we simply do not have the resources to make up for the loss. If this policy is implemented some road and bridge needs in my county will go unmet, which will compound the problems we already face aging infrastructure.

In short, St. Louis County would suffer if the Federal Government retreats from its commitment to local transportation needs. I would speculate that in St. Louis County alone we perhaps have close to about a billion dollars in infrastructure needs over the next five years. While I have no quarrel with the idea of addressing the needs of the national highway system, I believe that local, urban and suburban transportation needs must not be abandoned at the federal level.

For example, in south St. Louis County, which is represented by your colleague Dick Gephardt, Interstate 255 has helped development and dramatic population growth has occurred. Consequently the strain on our county road system has also increased dramatically as well as the state road system, particularly at I-255 and Telegraph Road. Shouldn't the Federal Government assist us in dealing with this problem directly related to the federal interstate highway? My fear is that the reduction in federal participation today may be a signalling of federal abandoning of local needs in the next few years. The consequences for St. Louis County and the region would be terrible.

St. Louis County and other areas governments have designed their future road and bridge plans based on a consistent federal commitment. As you know it is difficult enough to address critical transportation needs now by reducing the federal role will make it worse. Along those same lines I am concerned that local government is given a place at the decision making table. We need to have a voice in determining transportation priorities. I would respectfully request that as you work on this legislation as your work proceeds you maintain a consistency of federal policy in this area.

Another concern of mine has to do with mass transit. I'm sure you will hear from others about our regional efforts to establish Metro Link. Any retreat on the part of the Federal Government area will hinder our efforts at the establishment and successful operation of our regional light rail system. Our political business and civil has worked diligently to see the success of this project. The citizens of the region are enthusiastic in their support for light rail. I would as that you do all you can to insure stable and continuing federal operating funds for mass transit. In short, as you formulate

the policy decisions this bill will establish please treat local transportation needs with equity and fairness. Make room for our voices to be heard in the process.

We have participated in and benefited from the federal and local partnership in years past. Our partnership has been productive and positive. St. Louis County, our region wants to see that partnership maintained. If given a fair shake we can continue to do a good job for our people and for our economy.

That's the statement that I'm sure is into the record, and I read it for my own benefit as well as yours, and unless you have something you want to ask specifically, I will beg the indulgence of my comrades at the and you to depart at this time.

Mr. MINETA. Let me very quickly just ask one question before you get away, Mr. Westfall, and that is, what's the status of the feasibility study of extending the Metro Link light rail project into Jefferson County?

Mr. WESTFALL. Well, right now there are a number of—the feasibility study is in progress. I don't know, you'll—there are people here that can tell you the target date for when that will be completed. Right now we are going, as you would know, from Illinois up through St. Louis up to North County, St. Charles County wants to become involved. South County wants to become involved. At some point West County. If this is successful we look at this to be the transportation for the 25th century, and that's why I'm very hopeful that no money diminishes or disappears. Everybody is excited about the light rail situation and we look forward to the ground breaking of it this year, but there are some experts here in that field that can tell you exactly what the time table is.

Mr. MINETA. Any other Members who would like to ask Mr. Westfall any questions before he gets away.

Mr. GEPHARDT. I just thank you, Buzz, for your coming and waiting so long. We really appreciate you taking the time to be here today and we certainly appreciate your testimony and want to work with you in writing this bill.

Mr. WESTFALL. I appreciate that, Dick. I might add one other thing, Vince Schoemehl asked me an hour before I came up what I was going to say about in my address, but Interstate 170 is one of the greatest highways probably in the entire country. I can't tell you what's that done for the St. Louis community both the city and the county. South County would dearly love to have it extended to South County which is sort of a forgotten area by way of that particular highway.

At the present time there is no money, there are no real plans on the drawing table. But Congressman, your former colleague, Congressman Young was here earlier and he, to a large extent, is the one responsible for that great highway. So at some point in the future we may be hoping, asking for your help in that regard.

Mr. MINETA. Very well, any other comments. Again, thank you very, very much, Mr. Westfall.

Mr. WESTFALL. Thank you.

Mr. MINETA. Ms. Faulkenberry, welcome, and we were in Jefferson County earlier this morning, so nice to have you here.

Ms. FAULKENBERRY. Thank you, Mr. Chairman.

Mr. MINETA. Why don't you slide on over there to your right and take center stage.

Ms. FAULKENBERRY. Thank you, Mr. Chairman and Members of the Committee. I want to thank you for the opportunity to appear before you and testify on behalf of Jefferson County and its needs. Jefferson County has made great efforts to become self sufficient over the past twelve years, and it's become one of the most progressive counties in Missouri. It has gained voter approval on six major tax issues in twelve years. These include the County General Revenue Sales Tax of one half cent, a bridge bond issue which has replaced forty-three deficient and dangerous bridges.

A County Capital Improvement Sales Tax of one half cents for reconstructing seven hundred miles of County Roads. A County Law Enforcement Sales Tax of one half cent, a County Library Tax of 20 cents per $100 valuation. And most recently an emergency telephone or 911 system.

The voters have adopted planning and zoning. The County Commission has adopted its first solid waste ordinance, which has cleaned up 2,000 illegal dump sites, and has built a new jail due to be completed June 1, 1991. We feel that in spite of this praiseworthy local effort Jefferson County has faced problems, whose solutions are too expensive to achieve without your help. I want to apologize to you, I was called from Washington, I believe from Congressman Gephardt's office, and I misunderstood the thrust of the committee in the sense that I thought you also wanted to hear about infrastructure needs, and my testimony that you have reflects that.

I won't go over those unless you particularly want me to. I'll just talk about the roads. And I want to tell you that we very much appreciate the fact that you visited our County this morning. It was our pleasure to play a small part in arranging that visit. I did give instructions for it not to rain, unfortunately that was not followed.

We have been very fortunate within the past few years since the passage of Proposition A to have a lot of new state highways coming into our county. Highway 21, which you saw this morning is an outstanding example of that. At the same time Highway 21—I mean Highway 30 has been extended four lane, dual lane highway to Cedar Hill. This is very important. But one thing we don't have and one trip I hoped you might be able to take, and you didn't—you couldn't because of time, was to cross on Highway MM, which is our major east west arterial road along with M and Highway W.

And it's quite thrilling on a rainy morning, the curves are quite sharp, the traffic is very heavy. It's a place of a lot of accidents. I think if Horace Greeley had lived in Jefferson he would have not said "go west young man", he would have said, "go north until you find a way west", because we don't have any way to go east and west except by the most rudimentary roads.

These highway projects are very vital to Jefferson's County's future, both economically and in every other way in safety. And the complete lack of an adequate east west highway is very detrimental to our county. However, the cost of such a road is far beyond the county's ability to achieve. And we must rely on the

Missouri Highway Department, in turn they must rely on federal highway trust fund money.

I have been surprised, I guess I would say, not to hear any complaints this morning about the proposed increase in local share. We really see that as disaster, and I will tell you why. At the present time, believe me, we've made a lot of contacts with the state highway department to request that we have an east west highway, it's been a need, and a priority identified by east west gateway study many years ago. But at this point nothing has happened. And each time that we talk with them they explain to us that there is no possible way that we can build an east west highway until we have an additional gasoline tax passed in the state of Missouri.

And when I add that fact up with the increased local share, this arithmetic does not bring joy to Jefferson County. Because I can't imagine how they're going to meet their commitments with increased local share when they can't do any roads that they haven't already got plans for right now without an additional Missouri gas tax. Believe me, Jefferson County voted in favor of the last gasoline tax very heavily, it was carried with a great majority, we all worked for it. And we would be willing to do so again, but we do not think that increasing the local share to the State Highway Department could in any way help them, and that's a very basic look from a county, a rural county, that's going to a suburban county.

I do want to mention that the counties in the State of Missouri are pleased. I am the president of the Missouri Association of Counties, and we have talked about this in our meetings. That we're pleased that there is not any increase in the local share proposed in the off system Bridge funding at this time by the new federal proposal. Missouri counties own and maintain over 50 percent of all the bridges in the State of Missouri and of that 50 percent, seventy-five percent of those bridges are deficient with a sufficiency rating of less than 50 out of 100 points.

So I think I could fairly say that the county bridges in the state are not good. That is not a situation that has improved much, although counties try very hard to meet the federal and state highway requirements for siting a new bridge, it's very difficult. Often it is hard for them to come up with their local share. And so over the past few years not a great deal of progress has been made in that respect.

Jefferson County is very interested in another aspect of transportation, is very interested in light rail mass transit. Over 60 percent of our workers in Jefferson County travel into St. Louis and St. Louis County every day to work. With our population at 170,000, according to our last census, we believe this represents a large ridership. And if you go into St. Louis in the morning on the highways you see how really congested they are with that many people trying to make their way into St. Louis.

Jefferson County wants very much to be a part of Metro Link and we are working now, we have a committee formed, we would like very much to have a study on the feasibility of extending Metro Link into our county if it would be economically feasible.

With that I would thank you again for having me here and I would be willing to answer any questions that I can from the Jefferson County or counties viewpoint.

Mr. MINETA. All right. Thank you very much. Let me have Mr. Schwendeman present his testimony first, then we'll get into some general questions.

Mr. SCHWENDEMANN. Mr. Chairman, committee Members, committee staff, my name is Eugene Schwendemann, I have some——

Mr. MINETA. I think for the purposes of the microphone and the cable, I would like to ask you to come up here.

Mr. SCHWENDEMANN. I'm presiding commissioner of St. Charles County, Missouri. St. Charles County is located approximately twenty-five miles west of St. Louis and has a population of approximately 212,000 residents. St. Charles County has over the past 10 years experienced some unprecedented growth and is one of the fastest growing counties in the nation.

Today many of the American cities are experiencing rapid growth and most welcome the prosperity and the opportunities and challenges that accompany an explosion in population growth. Along with the growth in the business sector. We believe the quality of life in St. Charles County will benefit as the result of the growth presently being experienced. However, we also believe that particular consideration should be given to the developing of a post interstate surface transportation assistance act that will address the needs of the states with rapidly growing area such as St. Charles County.

Specifically rapid growing areas such as St. Charles County would benefit from a program that would address the need to relieve the grid lock traffic conditions. Traffic relief would provide for enhanced quality of life for our residents and would allow economic development activity in the community to continue. We believe that the interstate rivers must be a priority in the new act. Furthermore states with rapidly growing areas such as St. Charles County would benefit from a bridge program that no only allows for bridge replacements, but that also would allow for construction of new bridges.

Particular consideration, we believe, should also be given to the rural bridge program. We would like to urge that such a program be adequately funded and the federal requirements be less stringent. Although we are not strong advocates of the federal aid toll authorization, we believe that with the limited resources that may be available to the states perhaps this should be an option. We firmly believe that there must be spin down on the surplus in the Highway Trust Fund. We are convinced that utilization of trust fund would go a long way towards addressing infrastructure, needs of the state and communities with various needs.

Continuation of the revolving fund loan program we are convinced is critically important to our growth area seeking to preserve corridors from development for future proposed highways. The State of Missouri has taken advantage of this program on behalf of St. Charles County. We believe the interest free program should be continued.

I understand that others will speak on the need of properly funded regional mass transit studies, capital expenditure of regional mass transit systems and operations of subsidies for regional mass transit systems. St. Charles County is seeking to advance alternate analysis of light rail feasibility study. If feasible, who

would expect to participate as a local sponsor. However, without adequate federal assistance advance in such projects would be difficult.

Finally, we would like to urge that Missouri receive its fair share of federal highway funds. Under the present formula Missouri receives only 85 cents back for every dollar sent to Washington, DC. We would also like to urge that any future proposals to increase federal gasoline tax allow for such funds to be utilized for transportation only rather than for the deficit reduction, that there be a greater flexibility in transportation programs.

Thank you, Mr. Chairman, for the opportunity to provide testimony on behalf of the program which states such as Missouri and high growth areas such as St. Charles County with its transportation needs. Thank you very much.

Mr. MINETA. Thank you very much, Mr. Schwendemann. Let me ask Ms. Faulkenberry, Jefferson County, you indicated, has taken the initiative to tax its own residents to generate revenues for addressing its infrastructure needs.

Ms. FAULKENBERRY. Yes.

Mr. MINETA. I'm wondering, do you think local governments are better able to generate funding for infrastructure needs than the Federal Government?

Ms. FAULKENBERRY. Well, it's been our feeling that local governments should do their best to address funding needs. There does come a point beyond which local funding just can't take us and I think that's what I pointed out in this, in spite of all of our efforts to improve ourselves and taxing ourselves to do so, we still have problems that we can't address and we cannot raise enough money to address on the local level.

Mr. MINETA. Mr. Schwendemann, you prefer to have the continuation of the revolving loan program for the advance acquisition of right-of-ways. I wonder, has NECOR or anyone done any kind of study that would show what the cost savings might be from having this advance right-of-way program versus the cost of whatever interest payments that would have to be made on buying the property now, holding it for some time in the future where you have the rights-of-way available?

Mr. SCHWENDEMANN. I don't believe there was a study done yet, but St. Charles County has guaranteed that they will buy the—or will guarantee the monies or the funding of the advance purchasing of the Page Highway, the second leg.

Mr. MINETA. And those are done on an interest free basis?

Mr. SCHWENDEMANN. I'm not sure on that sir.

Mr. MINETA. Thank you very much. Mr. Emerson?

Mr. EMERSON. No questions, Mr. Chairman. Thank you both.

Mr. MINETA. Mr. Gephardt.

Mr. GEPHARDT. I thank both of these witnesses for being here and really appreciate their help. Elizabeth is known to me because of my representation of Jefferson County. The county really has done a wonderful job trying to build itself. The infrastructure is one of the fastest growing areas, and I'm sure St. Charles has as well. We will certainly work with you in trying to construct this legislation. Thank you.

Mr. MINETA. Mr. Hammerschmidt.

Mr. HAMMERSCHMIDT. I have no questions, Mr. Chairman, but I want to thank our witnesses very much for their good statements.

Mr. MINETA. Mr. Roe.

The CHAIRMAN. No questions.

Mr. MINETA. Ms. Horn.

Ms. HORN. No questions, but thank you both for coming and for your patience. And of course, and all of you, you're down the line and a lot of it has been said already, but we will be paying very close attention to you. Thank you both for being here.

The CHAIRMAN. Thank you very much for being here.

Mr. MINETA. At this point I think for a variety of reasons, I think we ought to take a break, and let's reconvene at 2:00 o'clock. And at that time we will start up with a panel headed up by Mr. Josh Bill and Mr. Walt Wildman and Mr. Laurel Thompson.

[Recess.]

Mr. MINETA. The Surface Transportation Hearing at this point is in session.

Our next panel is Mr. Josh Bill, Chairman of the Highway 60 Committee. Mr. Walt Wildman, the Associate Director of the Interstate 66 Project, Incorporated, and Mr. Laurel Thompson, Chairman of the Presentation Committee of Highway 63 Committee.

Gentlemen, thank you for joining us and we'll begin with Mr. Bill.

**TESTIMONY OF JOSH BILL, CHAIRMAN, HIGHWAY 60 COMMITTEE; WALT WILDMAN, ASSOCIATE DIRECTOR OF INTERSTATE 66 PROJECT, INC., ACCOMPANIED BY LONNIE HAEFNER, PROFESSIONAL TRANSPORTATION PLANNER AND TRAFFIC ENGINEER; AND LAUREL THOMPSON, CHAIRMAN, TRANSPORTATION AND ECONOMIC DEVELOPMENT COMMITTEE, GREATER WEST PLAINS AREA CHAMBER OF COMMERCE**

Mr. BILL. Thank you Mr. Chairman. It is indeed an honor and privilege for me to appear before your subcommittee today. As you well know, your panel will cast the die to shape our highway program for decades into the future. I would like to make a positive contribution to your effort and I'm deeply grateful for the opportunity.

Mr. Chairman, I believe the Interstate Highway System is truly one of the wonders of the world. It's a tribute to the vision of our political leadership in both parties and for the past 35 years. This is the circulatory system of our great nation. Isn't that why we speak of highway arteries? Just as blood cells carry life-giving oxygen, these concrete ribbons bring commercial life to communities along their path. I think we take many of these assumptions for granted.

But for those not served by these commercial arteries there can be little hope because there is little future. When discussing Allied plans for the Iraqi Army in Kuwait, General Colin Powell recently said "First we're going to cut if off then we're going to kill it." It seems to me, as the results of the past several prove, that once you cut it off you've gone a long way towards killing it.

But what works for an Army applies equally as well to a region of towns and cities. If they are cut off from the circulation of com-

merce they simply die. Mr. Chairman, you and your colleagues are well aware that the transportation network across this great nation is not complete even though we have determined that the interstate system is nearly complete.

I come before you representing a number of communities in southern Missouri who are still waiting for a viable highway access to the rest of the country. We've been working to expand the existing Highway 60 to a four lane divided corridor across southern Missouri. It's a project that was planned and promised 30 years ago when Interstate 57 was terminated in southeast Missouri. That was many promises ago.

If completed, Mr. Chairman, this corridor would serve the largest area in the eastern two-thirds of the United States not presently traversing an interstate highway. And it is important to clarify. This area of south central Missouri and north central Arkansas has no four lane highway of any kind crossing through it.

Mr. Chairman, this area includes what we know as the Ozarks. And while, like many caricatures, the Ozark hillbilly is more a remnant than a reality, it is true that the Ozarks have not enjoyed the flow of people and commerce that come only with a viable highway corridor. The communities in this region have a great handicap in getting and keeping jobs. Few employers will move to areas cut off from the nation's arteries of commerce and successful employers frequently chose to expand or relocate where transportation access is not a problem.

But beyond what some might consider to be merely a local interest, I believe the expansion of this highway would serve a national goal. It would provide a western outlet to the second largest inland port in the United States of Cairo, Illinois, and a highway connection at the confluence of the two largest rivers of North America. Of course in St. Louis as we've heard before, we're at the confluence of two great rivers, but these are the two largest rivers.

If there is truly to be a commitment to inter-modal transportation. I don't see how Congress can stay silent while this great national resource remains in a surface transportation backwater. I fully realize that the administration intends to turn many of these questions over to the states, but I hope that if and when you agree to do that you will pay very careful attention to the impact of the formula changes they propose.

Mr. Chairman, Missouri is the only state in the country that requires a vote of the people for every increase in taxes devoted to transportation. Increasing local matching requirements, therefore, is a matter of utmost concern to those of us still waiting our term. This is particularly true when there is such a discussion of a twenty-five cent a gallon federal gas tax not for transportation but for deficit reduction.

It seems to me that this notion finds most favor with those in areas of the country that may have already gotten theirs. Such a move would cripple our ability and our hopes to raise revenue through a referendum at the same time it increases the amount of local revenue we must contribute just to stay even.

Whatever the outcome I implore those of you who will write the initial legislation to prevent this "one-two punch" for Missouri. It will destroy our ability to complete our network of highways. As a

minimum allocation state, we get back only 85 cents for each dollar we contribute. But if these proposals are adopted we have been told by our state leaders that that number will go far lower and at that point our hopes for a corridor across southern Missouri and the growth for the Missouri and Arkansas Ozarks will be lost for many years to come.

Thank you.

Mr. MINETA. Thank you, Mr. Bill, for your testimony. We are going to hear from the other members of the panel first and then move to the committee for questions. Mr. Wildman.

Mr. WILDMAN. Thank you. I would like to first express my appreciation to this committee for the opportunity to appear here today. I am Walt Wildman, I represent the Cape Girardeau Regional Commerce and Growth Association as its executive director and also I represent the I-66 Project, incorporated as it's associate director. I wish to speak to you today about a coast to coast highway project known as I-66. I would first give the committee a brief history and then an update and then request your support for this project as it progresses through the feasibility study.

A little over three years ago the highway and transportation committee, of the RCGA was studying ways to connect the cities of Paducah, Kentucky and Cape Girardeau, Missouri. These efforts resulted in a subsequent agreement between the states of Illinois, Kentucky and Missouri to develop a corridor study for the connective highway. At a later date the City of Springfield, Missouri was added to the concept. The project continued to grow with additions of more and more and cities and now spans over twenty-four hundred miles coast to coast.

Because the present interstate system was scheduled to be completed in this year and we were hearing a policy shift from Washington concerning the emphasis for the future, the prospects for a project such as I-66 appeared to be timely. Thus in April of 1989 a meeting of citizens, cities, and states along the proposed corridor was held in St. Louis, Missouri. The result of that meeting was the formation of the I-66 Project, Incorporated.

The stated purpose of this group was to pursue funding for the feasibility study. The I-66 group approached Congressman Emerson with the concept who in turn presented it to the Federal Highway Administration in the summer of 1989. Later that summer the services of L.E. Haefner and Associates were sought. The associates included Real Estate Analysts Limited of St. Louis and Horner & Shifrin, Inc. All firms are nationally known for their work on such projects.

In November of that same year a preapplication or working paper was used as a centerpiece in the lobbying that was to take place over the next year. Officials from the RCGA and the I-66 Project traveled to Wichita, Kansas in December of 1989 to seek that city's support as a full partner in pursuant of funding for the feasibility study. The fact that Wichita is one of the largest cities along the proposed corridor and that they had expressed an interest in the project resulted in a Kansas, Missouri partnership. This partnership led to the formation then of a bipartisan coalition in the House of Representatives between Congressman Bill Emerson of Missouri and Congressman Dan Glickman of Kansas.

Their bipartisan effort joined by many more Congressmen and U.S. Senators provided the needed leadership to guide this proposed funding of the feasibility study through Congress in the fall of 1990. It is our belief that the above-described process presents the best possible use of the democratic system available to us in this great nation.

A group of citizens had an idea that had merit not only locally but nationally. That idea was presented to an elected official, representatives, and to the federal highway administration. The resulting bipartisan support backed by broad based grass roots organization resulted in funding for a feasibility study. The combination of states, transportation, Federal Highway Administration, and this grass roots organization can provide this project with the team approach that would carry the concept through the feasibility study and on into the next phase of the project.

Congressman Robert A. Roe, Democrat in New Jersey, Chairman of the House Committee on Public Works and Transportation and in a recent news release stated the challenge before us, that we feel very well. I quote from that new release. Through this national inter-modal transportation policy we must seek to provide the economic underpinning of the 21st century in the same way that the interstate highway system fueled economic growth over the last 35 years.

To maintain our strong competitive position we must no longer develop separate transportation systems that exist in isolation. To compete on a world-wide basis we must have an integrated multimodal transportation system. The challenge of the next generation is making our separate transportation systems function as a state of the art unified network and that will give our country the competitive edge in competing on a world-wide economic basis. The mission we are embarking on is to rebuild America to meet the challenge of competition in the 21st century global marketplace.

We feel Congressman Roe has a very visionary and exciting view of the job before us. Our group, both the RCGA and the I-66 Project, Incorporated, is awaiting the assignment of specific duties as they relate to the feasibility study. This is presently being discussed between the Federal Highway Administration and the respective state departments of transportation. We are offering to be an integral part to this feasibility study in roles such as collecting matching funds beyond the required 20 percent, which we feel will further indicate the support of such a project.

We felt this type of public private partnership will be a good demonstration of the cooperation that will be required to carry this nation into the 21st century. I would like to Dr. Haefner to give some comments in behalf of this project also.

Dr. HAEFNER. Thank you and good afternoon. I am pleased to have the opportunity to testify today at your field hearings in St. Louis with respect to forthcoming national transportation policy and highway reauthorization legislation.

My name is Dr. Lonnie Haefner. I am a professional transportation planner and traffic engineer. I have been the technical-advisor to the I-66 steering committee and the Southeast Missouri Regional Commerce and Growth Association with respect to the referenced I-66 project during the last two years. The project encom-

passes some fourteen states and offers them the opportunity to work together in overlapping achievement of common regional economic and international trade goals.

This 2,400 mile transportation corridor can be conceived as multi-modal in nature while incorporating forthcoming high technology components of intelligent vehicle highway systems to achieve maximum safety and fuel efficiency. The cross section associated with the alignment is that of high type design standards which include a 200 to 300 foot right-of-way and local service frontage roads. The design speed is conceived at 70 miles per hour with grades and curves within acceptable standards. Originally conceived as two lanes in each direction, it may be developed as three lanes in each direction with one lane dedicated as an exclusive truck lane. Subgrade, subbase, pavement and related geometrics would allow the accommodation of heavy weight trucks sanctioned in the 1982 Surface Transportation Assistance Act. The economic benefits of such operation have been thoroughly documented.

In keeping with the potential for increased performance from our highways, the above cross section may be moved to four hundred feet in width with three lanes at fourteen foot per width, with an exclusive truck lane and design speeds in the range of eighty to one hundred miles per hour. This is possible, though costly, to yield an "autobahn" type of performance level on some of our future highways. Much will depend on design standards foreseen by FHWA for post-interstate systems conceived to have major impact on national economic development.

That American Association of State Highway and Transportation Officials has predicted a doubling of national travel demand by the year 2020. The presence of I-66 will reduce traffic on I-40 and I-70 east to west by approximately one third and yield a longer life of useful traffic flow for these facilities, in addition to reducing accident rates. Transcontinental travel time by truckers will be reduced by an equivalent of two to three days per month, yielding an annual savings per individual truck tractor unit of $7,000 per year.

The direct linkage of east west deep water ports to midwest railroads and gulf coast ports will allow this system to truly act as a land bridge which will increase tonnage across west coast deep water ports and allow the U.S. to become a true international trade clearing house, while maximizing its infrastructure usage in a global resource sense.

Projections by our development economists indicate significant domestic economic impact resulting from the construction of this facility. Preliminary multiplier analysis indicates a positive impact of some $350 billion annually, which are new dollars into the economy due to the presence of this facility. This is truly a significant gain, and illustrates the benefit of adequate highway and transportation corridors to GNP. We would propose the corridor be open to all possibilities for public-private partnership planning and financial participation, including toll roads, mixed public-private investment and usage of new block grant and altered match ratio funding ultimately emanating from the 1992 Reauthorization Act.

We argue that this facility is truly a corridor of national significance and propose it be included in the network developed in the 1992 Reauthorization Act and be conceived as a unique example of

international trade, economic development, high technology, and public private partnership concepts developed in this legislation.

Let me depart from the formal testimony for a moment and speak to a few issues that have been raised this morning. As an individual who has done transportation studies for some 31 years and trained and taught traffic engineers for the last 18, I want to make two points that are particularly relevant: One, transportation is uniquely a lever for growth, two, we have talked earlier today about return on dollars of investment in highway systems through the economy. Numbers that range from $3.50 to $6.00 return per dollar expended have been alluded to. In many cases when we go to inter-modal systems, that return is actually higher, because of often taking dormant land uses and putting them into production, as in the case of a port or railyard with induced industrial developments. Further, we have some numbers from the maritime administration and other international trade and GATT data which indicate that for every one hundred tons that cross a dock, a significant number of jobs are created.

It is important in current national transportation policy to synthesis the issues, of inter-modalism, domestic economic development, and international trade relationships. An accurate understanding of the return on a dollar spent in the transportation system today is necessary in light of where America is in its relative position of international competitiveness.

Thank you.

Mr. MINETA. Thank you, Dr. Haefner. May I ask that you provide the committee with a copy of your formal remarks since we did not have you down for speaking to the committee.

At this point in time we will hear from Mr. Thompson.

Mr. THOMPSON. Thank you very much. I might also add that I'm gratified the name tag said Mister. About half my mail comes to Ms. Laurel Thompson all the time, and I appreciate the gender being right.

I am sorry that the Honorable Congressman wasn't here. At first I would like to know if he is related to our Preacher Roe of Dodger Baseball fame, and secondly I had, I would like to deviate from the material I handed in, most of it is data that I think a lot of it has already been said anyway. But I think in our particular case—excuse me—on who should designate a nationally significant highway. I think in our area on Highway 63 the truckers have already done that. We're seeing tremendously heavy truck traffic, basically Kansas City and areas north and west through Springfield, West Plains, to Memphis, Birmingham and points south and east. Even though major portions of that route are dual laned—are not dualed laned and are terrible inconsistent with the type of road that these truckers really need to use.

But the decision has been made and that we see that heavy truck traffic really contributing to some of our major problems. Maybe it would be appropriate and identify West Plains. We're in the very south central part of Missouri, only eighteen miles from Arkansas, about midway east west across the bottom of the state. We're a town of 9,000. We have no dual lane highways, no natural gas, yet we're the fifth fastest growing city in the State of Missouri. And we are on U.S. Highway 63. We're a hundred miles south of Raleigh

and I-44, a hundred miles southeast of Springfield and I-44, a hundred miles northwest of Jonesburg and the nearest dual lane highway to the southeast that direction.

And I might also add that we're a little over two hundred miles from this particular room and as I started up this morning at a little after 5:00 o'clock and driving from West Plains to Willow Springs, that route or portion of Route 63 of we're most concerned, as I pulled out on the Highway 63 I was behind an eighteen and no opportunity to change that position for the next twenty minutes.

And it's gotten to the point that it's almost standard in people commuting to and from West Plains that that 20 miles supposedly at 55 miles an hour takes 45 minutes to traverse. I was really gratified to hear many of todays comments from this distinguished that I address, particularly relating to rural needs. I think that in our particular area we felt that for over 30 years we've been bypassed and ignored by the Federal Highway System, and I think that it is no coincidence that bypassing also has contributed major, major amounts of problems relating to low incomes, high unemployment in the area, but I'm also very, very happy to say in the greater West Plains area through a lot of hard work on the part of a lot of people, and the fact that we are strategically located so far from most other people.

We reversed that trend. In fact in the data that I submitted during this past summer we got down to an unemployment of only 4.9 percent. In January of this year it was only 6.1 percent. But this tremendous growth in our community has really compounded the problems of Highway 6 in our immediate area. Highway 63 north of us to Highway 60 was designed for a maximum traffic load of 5,000 vehicles a day. Just north of West Plains the latest Missouri Department of Transportation numbers are in excess of 16,000 vehicles per day.

So I think that would probably answer the question why so many accidents on so many of these roads. They are so substandard for the load that they are now carrying. I think the lowest traffic count on that twenty mile stretch is something in excess of either thousand vehicles per day, and on that particular road, also in submitted data, 38 school buses are on or across that section of highway every day during the school year. Average 30 or 40 kids per bus, that is just tragedy just waiting to happen. A lot of these buses have to stop in places that really are not safe for anyone to stop, particularly a bus load of kids.

And talking about the growth that has developed in the greater West Plains area. We have created hundreds and hundreds of new jobs over the last three or four years through very aggressive industrial development. Ozark's Medical Center in West Plains shows tremendous growth, it's become a regional health center attracting patients from in excess of sixty miles most ever direction.

Bruce Hardwood Flooring now has in excess of two hundred employees. Two years ago there were four employees. Southwest Mobil Systems, a defense contractor, and by the way supplier of those scud buster canisters that you saw on television for the Patriot Missiles has expanded from three hundred or three and fifty jobs up to about nine hundred at the present time.

Safeway Charcoal is a relatively new entity, $6.5 million company expanding to the tune of a $2 million expansion during the next year. Ozark Regional Stockyards representing a major part of our local economy is transferring in and out about 4,000 cattle every week just north of West Plains. We have a campus of Southwest Missouri University in Springfield at West Plains. That enrollment went up 27 percent in the fall semester over just a year ago. The spring semester showed about a similar growth.

Retail sales reflect the rapid expansion and growth in our area from 1986 to 1988 we increased at a whopping 15 percent in retail sales. In 1989 we saw an increase of 9.6 percent and in 1990 an increase of 11.5 percent in retail sales in West Plains. So you can see our problem is considerable different that one that I think you described Congressman Poshard. Our problem is not low traffic count. Our problem is a road that is over grossed, we are out of sight. The Highway Department of Missouri is working very closely with us, they have moved two sections of this highway area into the funded area. But we're still looking at five or six years down the road, of course.

But part of that, at least ten miles of Highway 63 in our immediate area is in the unfunded study program. I certainly appreciate the efforts of this committee in bringing about the new highway bill. I really believe that some of the provisions, most of those of which I'm familiar will be a tremendous boon to rural Missouri and rural America. In addition to those positive proposals, I really believe getting the highway trust fund off budget and some congressional dedication to addressing the federal deficit without using highway users funds will solve a big percentage of those problems that we've been talking about today.

I thank you very much.

Mr. MINETA. Thank you very much, Mr. Thompson, for your testimony.

Mr. Wildman, if I could begin with you, sir. Do you anticipate in building I-66 a very aggressive project, as everyone is aware, that we would need to build this to interstate standards, or would we talking about basically linking up a number of four lane roads across the midwest?

Mr. WILDMAN. From the beginning I think our comments have always been cased in a air of flexibility. Our working paper obviously does, as Dr. Haefner has described, call for a very high design of highway systems, a very advanced design, possibly using the present system as a basis.

Mr. MINETA. Dr. Haefner, do you have any comments about that?

Dr. HAEFNER. I would be happy to respond to this question. First of all, there is some of the inventory in the current system in Kentucky and West Virginia that you could use. We're not talking totally new alignment from east to west. Approximately one third of the system is in existence in some format. Ironically, that one third goes through areas of the highest unemployment that exist in the 14 states. We have a complete database on four hundred counties in the corridor relating to economic, impact relationships, and there is no question that the infrastructure in the above referenced subareas need upgrading to create economic growth.

Further, in taking a look at the direction we are headed in terms of inter-modalism, and the opportunity to achieve the most from what we have already passed legislatively in terms of heavy truck relationships, it is much to our benefit to expend the dollars to develop a high type pavement and cross section to yield the capability to move heavy trucks in a national inter-modal network. In other words, appropriate highway connectivity to ports, railyards and multimodal terminals.

To do so, from the viewpoint of classic highway design and engineering specifications, requires standards we currently associate with the interstate level. I am well aware that this particular legislative act will truncate the semantics of the Interstate System and move a series of Highways of National Significance. Within the professional societies, ASSHTO, and the Transportation Research Board, we are seeing a lot of discussion with respect to the exact labels for this emerging 1992 legislated system.

Call the system what you will, you are still going to have to build some high-type facilities to be able to achieve your accessibility, economic and international trade goods.

Mr. MINETA. What has been the response of the state department of transportation along the proposed route at this point in time?

Mr. WILDMAN. Last week on the 21st of February, the first meeting was held with federal highway administration with state DOT representatives. I talked with the folks who attended that meeting. What they tell me, I haven't got this in writing yet, but the response from the states that were in attendance, ten states were in attendance, was extremely positive for the concept and a verbal commitment has been given for the matching funds by the states.

So their excitement, as I understand it, was generated by the vision of the 21st century concept, inter-modal concept, international trade. That's what the state department of transportation official said they liked about the project. So there's meetings going on now, as indicated in my testimony, but that presently is being started.

Mr. MINETA. Thank you. Mr. Hammerschmidt.

Mr. HAMMERSCHMIDT. Thank you, Mr. Chairman.

The Route I-66, this envisioned project, I may have missed this in your testimony. But is that mostly a new corridor or would it follow other right-of-ways?

Mr. WILDMAN. About one third of it we indicated is presently in force to the eastern part of the United States. It would depend upon the design structure it takes how much of it will be considered new and how much of it would be considered there.

Mr. HAMMERSCHMIDT. You know as they develop this 150,000 mile route system, which I guess Missouri would roughly get 3,500 miles, the key to developing that will be made more at the state than it will be on our level, but we certainly have a voice in it. Let me say the reason that we're here today is that Bill Emerson asked for these hearings last year. I am delighted to be here to hear your case.

Let me say, also, just because Chairman Mineta and Chairman Roe aren't here doesn't mean they don't have the same interest, they had to go on to meetings, but all of this will go on the record.

We very much appreciate all the input and I have no further questions.

Mr. POSHARD [presiding]. Thank you, Mr. Hammerschmidt.

Mr. Gephardt.

Mr. GEPHARDT. Thank you, Mr. Chairman. I don't have a specific question, but I think your testimony has been very valuable. I was not well aware of this particular project that you're talking about. To hear your views on it and what it means to your region, and we will certainly keep your views in mind as we work on this bill. Thank you very much for taking the time to come here today.

Mr. POSHARD. Mr. Emerson.

Mr. EMERSON. Thank you, Mr. Chairman. Well, I want to thank all of you for your very fine statement, and Walt and Lonnie in particular for that great update on the status of where we are. You know I might point out the feasibility study is going to be, it is in the process of being undertaken, particularly for the purpose of answering a lot of questions to which we currently don't have answers.

You know it's interesting to note in our committees, we're particularly prone to get these kind of questions. When we come home people say, well, we need this highway built here and over there, and sometimes I get the impression people think we get in a room up in Washington and take a map of the country and draw a line and say that's where the highway's going to go.

That's why feasibility studies are so important, and I'm absolutely delighted that we're doing one on this, what appears to be as you look at the map a missing link in the interstate system that very well may hopefully may not be a missing like as we look to the future. I think, Laurel, your statement, everything that you said fits very well into the transportation proposal that's on the table. I think also it is particularly interesting to note that you referred to Southwest Mobile Systems and the fact that they make the casing for the Patriot Missile.

It's hard to image that anything that's going on in the Kuwait and Iraqi theatre of the past six months would not involve in Southwest Mobile Systems in West Plains. We've very proud of the contribution that they have made. They make rocket pad launchers, and trucks for the Army, and these casings for the Patriot Missile, and they make a very, very significant contribution.

Also I wanted to say that your comments, Laurel, about the growth of the West Plains area. Leaving down there at 5:30 this morning he got in a traffic jam between West Plains and Willow Springs. I was going in there about ten days ago myself. At noon I was trying to get to a luncheon meeting and I got in a traffic jam going in the opposite and there wasn't anything you could do for about a twenty mile stretch. This stretch between Willow Springs is just a vital needed link and I hope that we can get it resolved with the State Highway Department, but if we pass a bill with parameters of which has been set out by the president, and which will be refined by this committee and by the Congress, we can hasten the time table for getting done what you and I want to get done down there.

Josh, particularly I think, since I'm sitting here next to my friend Mr. Poshard, I want to ask you about improving Highway 60

and providing a western highway outlet from Port of Cairo, Illinois. How do products move westerly from the port now and what kind of shipments would you envision moving westerly over this route in the future assuming we can get the Highway 60 job done?

Mr. BILL. The best way I can respond to that is to relate an answer that I think was given at a meeting that you helped us get started where we were discussing the highway and transportation problems in our area. We had a number of major truckers, truckers witn a hundred and fifty, two hundred trucks who were based in our area who told us that, particularly during the winter time, but ever during the rest of the year, based in Sikeston, based in our area of the state, they will not put trucks on the road headed west. They will drive those trucks two and a half hours north to St. Louis to then come southwest on I–44 or they will drive two and a half hours south to Memphis to head west towards Little Rock.

I haven't done any studies on this, but I think common sense tells you that is a significant barrier to the kind of inter-modal transportation that's going to enhance the viability of the Cairo Port as a point of destination or departure. There simply is no access west. In spite of that Cairo is the second largest inland port in the country because of its prime location.

You could even take a look to the east as far as Cairo is concerned. Congressman, I'm not going to tell you about it, I know you all have looked at it many, many times. But it seems to me just as you look at the interstate map, if someone wanted to design a program of interstates that was going to cut Cairo, Illinois out, they couldn't have done a much better job than what happened. Interstate 24, as you well know, heads from Nashville northwest to Paducah, Kentucky, and then rather than crossing the river and coming over to Cairo, heads straight north to a point in your district, sir as you know. It is a junction, with Highway 57, but not at point of commerce. Cairo is bypassed by every road except 57.

Cargo that comes off that port can only go one way on an interstate and that's northeast on 57. And I've got to believe that if we enhance that with a western access and eastern access it would improve the entire region's economy.

Mr. EMERSON. I have no further questions, Mr. Chairman, but I do want to say that I think these hearings have been structured in just a beautiful way today commencing with a statement by the Chairman of the full committee and the subcommittee and the great keynote statement by the distinguished majority leader of the house and then we heard all different levels of government from the Governor of Missouri down to local government and how they all have a role to play and now we're here talking to the community and regional people who are the people who are on the scene every day for whom all of these services are indeed to be provided telling us how it helps them or hurts them.

I think it is a great thing, a great tribute to our system that we can move all the way from the federal hierarchy to the most grass roots involved people here today and get a good overview of how it all fits. I know we have still have some witnesses to come. I want to thank these witnesses in particular and everyone who is here the full committee that is here today for making all of this possible. I think it's been a very, very constructive hearing.

Mr. THOMPSON. Mr. Chairman, if I might add one other thing, it's already been a long day. But the Chamber of Commerce and me needs to point out that West Plains has for thirteen consecutive years had the boys cross country team in the state finals of Missouri and has won the championship many of those years. The girls now, we started a girls program, they're doing the same thing. I really believe the reason is cross country is the easiest way to get out of West Plains.

Mr. POSHARD. Thank you, sir. Thank you very much. Ms. Horn.

Ms. HORN. Well, thank you for that tone of levity. I do appreciate you all being here. I think your testimony really points out what we've heard all day—the need for just a bigger pie. The next panel is going to be telling us about the great needs for mass transit. We shouldn't pit our needs against your needs. The many private organizations growing out of projects such as Hwy. 63 and 66, that's all new to me. I think that shows the incredible need throughout the country. So thank you for coming and thank you for your testimony.

Mr. POSHARD. Thank you Representative Horn. Thank you for participating today on the panel and we thank you very much for coming.

We will now hear from the next panel, which is comprised of Mr. Les Sterman, executive director of the East West Gateway Coordinating Counsel, Mr. Jack Leary, the executive director of the Bi-State Development, and Mr. Thomas R. Shrout, Jr., executive director of the Citizens for Modern Transit. If you gentlemen would come forward and we will begin with Mr. Sterman.

## TESTIMONY OF LES STERMAN, EXECUTIVE DIRECTOR, EAST WEST GATEWAY COORDINATING COUNSEL; JACK LEARY, EXECUTIVE DIRECTOR, BI-STATE DEVELOPMENT; AND THOMAS R. SHROUT, JR., EXECUTIVE DIRECTOR, CITIZENS FOR MODERN TRANSIT

Mr. STERMAN. Mr. Chairman and Members of the committee my name is Les Sterman. I'm the executive director of the East West Gateway Coordinating Counsel. East West Gateway is the Council of Governments and Metropolitan Planning Corporation of the St. Louis, Missouri Illinois Metropolitan Region. And I should add that one of your colleagues, Jerry Costello, Congressman Costello was our chairman until we sent him to Washington, and I guess our loss is your gain.

As the region known as the "Gateway to the West" and one of the nation's primary transportation hubs, federal transportation policy is critical importance to the St. Louis economy. As a region faced with growing traffic congestion, increase in travel cost, substandard air quality and declining mobility for the poor, elderly and handicapped were typical of many major metropolitan regions across the country.

The issues raised in my testimony will likely be echoed in some form in urban areas across the nation. The economic health of the country's economic area is not a purely local matter. The Federal Government should be a reliable partner in providing both adequate financial resources and consistent policies which will lead to

cost effective transportation investments and rational economic growth in metropolitan areas.

We feel that the administration's national transportation policy and the recently proposed surface transportation reauthorization bill, while striking many of the right themes and offering the hope of greater funding effectively diminish the federal commitment to the nation's large metropolitan regions.

We favor a federal transportation program which implicitly recognizes the critical role of metropolitan regions and allows local government full and meaningful participation in decision making and an equitable share of available funds. The administration's proposed transportation reauthorization bill falls considerably short of this goal in our opinion. The consolidation of urban and rural programs, the increased local cost shares, the lack of substate funding allocations, the elimination of transit operating funds and the diminished role of local officials in decision making, all conspire to put large urban areas at great disadvantage.

The non-uniform matching ratios will perpetuate or exaggerate the biases and inequities in existing transportation programs. Further, the policies implied by this proposed legislation are inconsistent with sound energy policy and rational approaches to the increasing problems of urban traffic congestion, mobility and clean air.

The bill does not promote balance between modes nor equity in the federal state local partnership. It represents a disinvestment in the nation's transit systems at a time when transit will be increasingly important in meeting critical national and local goals and it relegates local officials to the sideline when they are being asked to shoulder a greater share of the financial burden of building highways and operating transit systems.

As the committee reviews the administration bill and develops its own proposal, we have a number of specific provisions which we hope that you would consider and will submit those as part of our written testimony. Even with increased funding, federal transportation programs will fall far short of meeting accelerating local needs. Local officials are under great pressure as you've heard today to accommodate growing highway congestion, tightening transit operating budgets, an increased number of national policies and local interests with fewer dollars to spend. As the committee crafts this legislation we can only ask that all programs be subject to tests of balance, equity and consistency.

We ask that there be balance among modes and programs, equity among the states, rural and metropolitan areas and consistency among policies and programs.

Thank you, Mr. Chairman, for allowing us these views.

Mr. POSHARD. Thank you, Mr. Sterman. We'll go now to Mr. Leary.

Mr. LEARY. Mr. Chairman, members of the committee, my name is Jack Leary. I am the executive director of the Bi-state Development Agency, the transit system operator here in the St. Louis Metropolitan Area. On behalf of the Bi-state board of commissioners I would to welcome the committee to St. Louis and thank you for the opportunity to speak about our perspectives concerning the

administration's proposed bill reauthorizing the surface transportation assistance act.

With a $93 million budget the Bi-state Bus System provides almost 45 million passenger trips each year in the St. Louis Metropolitan Area. And we currently have under construction Metro Link, the region's new eighteen mile light rail system scheduled to begin revenue operation of July of 1993. A $288 million dollar investment which St. Louisianans believe will play a key role in strengthening the growth and development of our region.

Because Bi-state currently derives about 12 percent of its operating revenue from federal sources and because capital assistance for new equipment and construction of Metro Link project is vital to our overall program we have an overriding interest in seeing the federal commitment to public transportation not just maintained but strengthened. The proposed bill reauthorizing the Surface Transportation Assistance Act represents sweeping changes in the way in which transit and highway programs are funded.

Some of these changes we view as positive. Many, unfortunately, we believe will be harmful in the long run to our nation's efforts to meet the mobility needs of our urban areas. And more specifically harmful to public mass transit. One positive aspect of the bill is the apparent end to a decade long effort on the part of the administration to reduce investment in mass transit. Under the proposed bill, the mass transportation's administration budget would actually increase slightly next year over the current level. For this we lend our support.

Such a proposal is welcome news. Particularly in this time of general concern with the economy both nationally and in St. Louis. Since 1985 Bi-state has seen a decline in federal operating assistance and capital assistance of 35 percent. Stability in funding and a true partnership between local and federal interests is what we seek. However, while we applaud these moves many of the provisions of the proposed legislative reauthorization bill concern us greatly and will have a substantial negative effect on our ability to maintain the present level and quality of service required to meet the needs of the citizens of St. Louis.

One aspect of the administration's bill we most vigorously oppose is the immediate elimination of operating assistance to areas of more than one million in population. Bi-state derives almost 15 percent of its operating income, or $10 million from federal assistance. This loss in funding will certainly create a severe hardship for those in our community who are most dependent on public transportation.

Because we largely depend on sales tax revenues for income the general economic downturn has already had a significant effect on our budget. This year the economy and the fuel price increase caused by the instability in the middle east has created a $3 million shortfall for Bi-state. And next year we do not find additional sources of revenue, we are projecting a budget shortfall of approximately $8 million.

With the loss of federal operating assistance as proposed our projected deficit for fiscal year 1992 increases to a devastating $18 million. Federal transportation policy which proposes to eliminate operating assistance for larger regions like St. Louis, but allows

smaller regions to retain funding we believe is a blatant inconsistency in policy and discriminatory in practice. The loss of operating funds is not our only concern.

Under the proposed bill the Federal Government's share of funding for capital grants decreases from the present 80 percent to 60 percent. This has the effect of doubling the local transit dollars required for purchase of needed capital equipment and vehicles at a time when transit agencies find themselves faced with serious budget deficits brought on by the recession and previous cuts in federal aid.

Bi-state's program to replace our aging ten-year old fleet with newer vehicles will be significantly reduced with this new capital grant matching requirement. This current budget year we purchased a hundred and nineteen new buses. And next year we would order sixty-nine additional vehicles. This level of capital acquisition will have to be reduced under the new program if we have no additional source of capital funding effecting significantly the quality of service we are able to provide for our customers.

St. Louis is one of three regions with full funding agreements receiving discretionary monies if and when the new rail starts. Because of this the reauthorization bill changes with regard to new start funding, our grave concern to us also. To complete construction on Metro Link's initial line Bi-state needs $41 million yet to be appropriated. Sixteen million dollars remaining on our full funding contract and $25 million additional for an improved multi-modal airport connection.

Finishing the job on the initial segment and any future of Metro Link would be much more difficult and expensive to accomplish. The doubling of local matching funds required from 25 percent to 50 percent. This essentially means that the St. Louis region will be unable to continue its shift away from the dependence on the energy consuming automobile to a more energy efficient mass transit option.

We believe the reauthorization bill as it stands will seriously damage Bi-state's ability to continue to provide the services required to meet even the basic public transportation needs of the people of the St. Louis Metropolitan region. With the elimination of operating assistance and the increased local capital dollar requirements, our ability to expand the role of transit in our area is severely undercut. The new Surface Transportation Assistance Act as proposed changes transit.

Under the bill the imbalance between highways and transit is perpetuated with a 40 percent increase in federal highway spending and a no-growth policy for mass transit. The growth budget and more favorable matching ratios for highway programs is an indication that the administration has yet to come to grips with putting together an integrated balanced multi-modal transportation assistance program which rationally reflects a sensible national transportation policy.

National and local concerns with the need for energy conservation, congestion relief and improved air quality in our urban areas can all be address by increased emphasis on public transportation. However, the future viability of our nation's transit programs is put in jeopardy with the provisions of the reauthorization bill as

they stand. The bill sends a clear signal as to the priorities of the Federal Government and that signal heralds an abandonment of our urban and metropolitan areas.

Secretary Skinner in his letter to House Speaker Thomas Foley transmitting the reauthorization bill spoke about the biggest challenge for transportation in the coming decade being the provision of adequate resources to maintain and improve national infrastructure. In St. Louis we believe that transit is a key component of that infrastructure. Unfortunately under the provisions of the Surface Transportation Assistance Act as proposed by the administration we foresee serious difficulty maintaining and improving our public transportation system.

What we need is not a no growth approach, but a bold expanded federal emphasis on public transit. This reauthorization bill will set the course for national transportation policy into the 21st century. There have been tremendous successes in many cities around the nation with the strengthening of public transportation, but the job is not finished. Let's learn from and build on the successes to date and not abandon our program unfinished.

Thank you, Mr. Chairman for the opportunity to provide this testimony on behalf of this most important issue.

Mr. POSHARD. Thank you, Mr. Leary. We'll hear now from Mr. Shrout, please.

Mr. SHROUT. Thank you, Mr. Chairman, my name is Tom Shrout, I'm the executive director of Citizens for Modern Transit, an organization of about 1,000 businesses, labor unions, educators and concerned citizens who have worked for the establishment of the light rail system in St. Louis. Since our formation in 1985 we have done a number of things, including organizing for our membership and community leaders tours of other cities with light rail. I would like to recall our 1987 visit to San Jose, and I would like to congratulate Chairman Mineta on the fine light rail system that's in place in San Jose.

Our trip there and other trips to Portland and San Diego were instrumental in educating the citizens of St. Louis about the benefits light rail offers our city. We have our first eighteen mile light rail line under construction and we have identified seven additional lines that would give this two state metropolitan region of two point five million people a badly needed first class system that would be impossible to duplicate with unbridled road building.

Mr. Chairman, the public is wanting a balanced transportation system in this country and I fear the president's proposal is behind the curve in the thinking of the American people. Just as an aside, we don't do polling, but those people that do when that they ask about light rail in St. Louis, the polls are showing about 72 to 75 percent favorable on behalf of the citizens and we don't even have it up and running yet.

Americans have demonstrated their willingness to ride a modern rail transit system, yet the president's bill discourages the building and expansion of these systems. Americans want clear air, less dependency on foreign oil, the rebirth of her cities, reduced congestion, contained urban sprawl, all benefits offered by rail transit, yet this bill promotes highway building and discourages energy efficient Amtrak and transit.

It is imperative that the Federal Government maintain operating assistance for transit. We support the testimony by the Bi-state development agency concerning operating assistance. I would like to briefly mention Missouri's participation in the 403B program for our support of two daily Amtrak trains between Kansas City and St. Louis. Since 1985 increased ridership and reduced Amtrak operating costs resulted in a reduced state and federal subsidy of this service each year.

At a time when we feel an additional train between Kansas City and St. Louis should be added and could result in an exponential increase in patronage and a further reduction in subsidy, the president's proposing to reduce the federal share in the 403B programs, jeopardizing the current program plus killing any chance of expanding this clean efficient form of transportation.

On another topic the department of transportation has formed an inter-modal task force, but there appears to be nothing in the act that assists local and state government in implementing this worthwhile strategy. I will submit separate testimony which outlines a plan, a plan for a St. Louis Inter-modal Transportation Center that will combine a new station on our new light rail line, a sorely needed Amtrak facility, and intercity bus depot, a parking garage peripheral to downtown, a heliport, taxi stand and city bus stop all in one facility. The center would be strategically located near two interstate highways.

The inter-modal transportation center is an excellent candidate for a demonstration project. The center would promote ridership among all the affected modes and be a model for other cities to emulate. Other examples for inter-modal cooperation should be considered at the federal level include the building of a new bridge across the Missouri River between St. Charles and St. Louis Counties. Federal matching funds should encourage the Page Avenue be Bridge to light rail ready to accommodate the inevitable extension of light rail into that suburban community.

Likewise federal support of highway capacity increases in the region should provide for both highway and future light rail right-of-way acquisition. In closing we would hope that the congress would substantially rewrite this bill and in doing so embrace a set of principals about which we believe there is broad agreement in this country, those being reduced dependency on foreign oil, increased support for transportation modes that help cities achieve clean air goals, reduced congestion and an enhanced quality of life through increased access to jobs, housing, safety and community and neighborhood revitalization.

Thank you very much, Mr. Chairman.

Mr. POSHARD. Thank you, Mr. Shrout. I appreciate your testimony. Let me ask you. What are the chief impediments to the construction of the inter-modal facilities in the county and in particular in the center that you propose for St. Louis.

Mr. SHROUT. Well, I think the chief one is figuring out how to finance it, and certainly we think there's a role for the Federal Government. The City of St. Louis has pledged the ground on which this facility would sit. The state highway transportation department is interested in it and has requested some funding from

the state legislature, however the governor took it out of his budget.

We also believe there is a possibility some force in private enterprise in terms of restaurant leasing, car rental agencies and those types of activity taking place in the facility.

Mr. POSHARD. Do you have any cost figures on this?

Mr. SHROUT. About $36 million.

Mr. POSHARD. Depending on the debate of our committee that might be too big for a demonstration project or too little today.

Mr. Leary, taking into account the bus capital needs of the St. Louis region, the current of your transit capital funds from section 9, how much would we need to increase federal funding for the transit programs to insure that St. Louis' needs are met, in your judgment.

Mr. LEARY. Mr. Chairman, what has happened to transit in the last few years, as you know, is it has been on a steady decline in the St. Louis Metropolitan Area to regain where we were just ten years ago would be a doubling of the size of the transit system as it exists today. Ten years ago in this region we moved eighty million people every year. Today we move close to forty-five million. We have an asset base of about three quarters of a billion dollars.

It's hard to put an exact dollar number on it, but certainly we would be looking at without expansion nearly double what exists today just on capital reinvestment of the infrastructure of the basic system.

Mr. POSHARD. Doubling of the federal share?

Mr. LEARY. Doubling of the federal share.

Mr. POSHARD. To get back to the same level that you were ten years ago in terms of ridership?

Mr. LEARY. I believe that that's a range that is fairly accurate.

Mr. POSHARD. Mr. Shrout, let me ask you a question if I may. Would you describe for us the mix of the non-federal sources of revenue that your system uses now to match federal funds, and are we doing enough in Missouri and Illinois in terms of general non-federal sources of revenue. Do we need to look at the increased at state taxes or dedicating local sales tax revenues or whatever, in support to make up for those matching funds?

Mr. SHROUT. Well, I think if you look at our transportation systems in this metropolitan area we've got every form of local revenue source being devoted right now, sales taxes both in Missouri and Illinois, we've got state support in Illinois. We've got all sorts of other revenue sources that are going into these systems and, of course, we're always looking as well to up that share as the federal portion of the funds decline. The implications of the bill are that federal share will decline further, hence we're going to be looking at increased gas taxes in both states, for example increased sale tax contributions for the public transit system that Mr. Leary runs.

So we're really looking at the whole range of options here.

Mr. POSHARD. Well, speaking for Congressman Costello and myself on our side of the river, we certainly want to do everything we can to work with Dick and Joan and Bill and others because all of this the light rail and the rapid transit system for St Louis is imperative. We are all in this area so I just want to put in my two cents worth for Jerry there.

Mr. SHROUT. We appreciate it.

Mr. POSHARD. Mr. Emerson.

Mr. EMERSON. I just want to say that the problems you're describing are not problems to which I am exposed on an everyday basis. They don't effect my area very much, but I'm very sympathetic to what you're talking about. There are problems there that do need to be solved. And I have found this very educational, your testimony, and will be interested to work with my colleagues of this subcommittee and the full committee in trying to be of assistance.

Mr. SHROUT. Thank you.

Mr. POSHARD. Thank you, Mr. Emerson. Mr. Gephardt.

Mr. GEPHARDT. I simply want to thank you for being here. I obviously have been a long time supporter of the Metro Link project. I look forward to it being completed or the first part of it being completed in 1993, and certainly understand your views about the operating subsidy program and about the capital requirements of the system. And I also obviously believe that if we're to have both an energy and a transportation program in this country, it is going to have to include mass transit so we will be certainly holding your views in our minds as we try to write this important legislation.

Thank you very much for taking the time to be here today.

Mr. POSHARD. Representative Hammerschmidt.

Mr. HAMMERSCHMIDT. Thank you, Mr. Chairman. Gentlemen, we appreciate having hands on transit people here to give us firsthand knowledge of your view points. It's very helpful to our record and we appreciate it. We appreciate your patience too of being one of the last witnesses.

Mr. SHROUT. Thank you.

Mr. POSHARD. Thank you sir. Representative Horn.

Ms. HORN. Well, again, I hear about all of your issues and in my previous life spent a lot in doing a lot of research that Tom referred to about public opinion polls and trying to figure why tristate's ridership was down, and you have to raise the fares and then you lose more riders. Of course the economy is down. And none of us have mentioned it, and it bears mentioning, we serve a lot of people who don't have cars. We talked a lot today about this "one person one car", I think I used that phrase. There are a lot of people if they get to work at all don't have cars to do it. And we must not forget that either. But thank you very much gentlemen for coming in. We will work very hard to see that all of our needs are met.

Mr. POSHARD. Joan, thank you for your testimony. We will certainly keep all of this in mind,-we appreciate it.

Our next panel consists of one person, Mr. Bob Swearingen, vice chairman for transportation in the Regional Commerce and Growth Association.

Thank you for being with us today, Mr Swearingen, you may begin.

**TESTIMONY OF BOB SWEARINGEN, VICE CHAIRMAN FOR TRANSPORTATION, REGIONAL COMMERCE AND GROWTH ASSOCIATION**

Mr. SWEARINGEN. Mr. Chairman, committee members, ladies and gentlemen, my name is Bob Swearingen, I'm president of Maritz Travel Company here in St. Louis, and I'm here on behalf of the St. Louis Regional Commerce and Growth Association known as the RCGA.

The RCGA is a non-for-profit membership organization representing the St. Louis Metropolitan region, the City of St. Louis, The Missouri counties of St. Louis, St. Charles, Franklin and Jefferson and Illinois counties of St. Clair, Madison, Monroe, Clinton and Jersey. The RCGA promotes the economic welfare and quality of life for the community. The membership consists of 4,700 members which include labor and businesses large and small and through cooperation seeks more jobs and increased prosperity for the regions two point four million residents. Obviously all forms of transportation are a vital element to the success of our regional economy.

I would personally like to thank all of you for coming to St. Louis and giving us the opportunity to discuss what we feel are important issues concerning the transportation needs for the St. Louis region. My comments will not only be directed towards the St. Louis region, but also probably apply to other metropolitan areas of our size across the country.

I commend the administration for its efforts in redefining the needs of surface translation. Our country's need concerning transportation have changed over the last five years and will continue to change, as roads deteriorate, bridges are not safe to travel over and congestion in urban areas causes more pollution and traffic delays.

Transportation is a vital element to not only our regional economy but our nation's economy. The State of Missouri is unique because of its location directly in the middle of our great country. What this means is that if you're using surface transportation going from east to west or vice versa, there is a good likelihood that you may travel through our St. Louis area. Likewise if you are a midwesterner and going from the north to the south or vice versa you may also travel through St. Louis.

Maintenance of our highways and bridges is of vital importance to our nation. Unfortunately the current funding formula does not reflect Missouri's needs, in fact Missouri has been a loser for quite a few years, as Wayne Muri testified in his statements. For every dollar we send to Washington we get less than 85 cents back, the RCGA commends and supports the Federal Highway Administration's proposed new formula, which bases funds distribution on the following: 10 percent for land area, 20 percent for public roads, and 70 percent for numbers of gallons of motor fuel taxed.

The new formula does and must consider the amount of miles driven or likewise the number of gallons of motor fuel taxed within that state. Missouri ranks fourth nationally in the amount of miles driven on, within the state and yet under the current formula we are a minimal allocation state. The State of Missouri has been a

loser and it's time for our Federal Government to make a commitment to maintain our current infrastructure.

Again, the RCGA commends the administration commends the administration's proposed new funding formula and we would encourage this committee to support it. It is important that Missouri and Illinois receive its fair share.

The RCGA would also like to see the continuation of the use of funding from the general fund for transportation needs. The user's taxes is really great in theory, but everyone benefits from a good transportation system, not just those individuals who drive cars or who use surface transportation. After all most of our goods and services use surface transportation, even the U.S. Mail, which everybody participates in.

The RCGA encourages the committee's support to leave the flexibility of using the general fund. The RCGA also has some serious concerns over the administration's proposed reduction of the federal share on new starts, rail projects, and the reduction of the federal share toward capital projects. The RCGA agrees with the Secretary Skinner's comment in his letter dated February 13 to Vice President Dan Quale concerning the draft of this bill. Secretary Skinner says:

> The biggest challenges for transportation in the coming decade is to provide adequate resources to maintain and improve national infrastructure and to expand those resources for maximum benefit.

Secretary Skinner goes on to say we must provide flexibility in our federal transportation program to allow state and local governments to make more efficient use of scarce resources and make an environmentally sound transportation decision.

Reducing the Federal Government's financial support on capital projects and new start rail projects inhibits the state's flexibility and could cause the proposed projects to be financially not feasible. The St. Louis region desperately needs a new bridge over the Mississippi River for transportation to and from Missouri and Illinois. This new bridge would help alleviate congestion problems and traffic delays and would be a environmentally sound transportation decision.

The RCGA is also developing another environmental sound program, St. Louisans want clean air, and to be less dependent on foreign oil we are fortunate to have begun, it's been discussed, the development of our first eighteen miles of light rail. Unfortunately the proposed matching ratio for any new extension to light rail would be a 50 percent match.

The Missouri Highway and Transportation Departments 10-year unfunded Need Study has outline, as you heard, $5.8 billion in highway works that needs to be done for which there is no money. With these unfunded highway needs and a proposed 50 percent match for the Federal Government for the new start rail projects, light rail and public transit may be doomed before we reach the next century.

Public transit has played a vital role in transportation for urban areas and will continue to play an even more essential role as communities try to deal with congestion, lack of parking space and pollution. The administration's proposal to eliminate operating assistance for populations over one million would have a negative effect

on public transit in St. Louis. The RCGA encourages this committee to look favorably upon continued operating assistance for all public transportation.

We further agree, and this is not in the written testimony, with Buzz Westfall and Mayor Schoemehl on the rest of the needs outlined in their testimony for expansion of our airport, for the multimodal transit center, again for rapid transit.

Mr. Chairman, Members of the committee you have been very kind in giving the RCGA the opportunity to express our feeling on surface transportation. You all have a very important responsibility ahead of you. The United States successes economically are a direct result of our good transportation system. I wish you well as you prepare for us for the next century. If anyone has any questions we would be happy to address them. Thank you very much for coming.

Mr. POSHARD. Thank you, Mr. Swearingen, for being here. Let me ask you a couple of questions if I may.

Mr. SWEARINGEN. As a layman, I hope that I can answer them.

Mr. POSHARD. As you know it's been stated here many times today that Missouri is a donor state. In any restructuring of the new program what would be an acceptable level of your judgment of return on the state's investment, Missouri gets 85 cents back on the dollar. Obviously we have national priorities with the national highway system and the interstate system and so on. How much should a state get back in your view as a member of the business community?

Mr. SWEARINGEN. I think we ought to get our fair share back, which would be at least 100 percent.

Mr. POSHARD. Well, okay.

Mr. SWEARINGEN. I think we ought to get our fair share back. Quite frankly I have several reservations. I'm on the aviation committee also and I think that we ought to tap the aviation fund. I understand that's going to be done, but I think it's ridiculous that we hold these monies when we have such great airport needs.

Mr. POSHARD. Well, I agree with you on that. Let me play out another question here. Seventy percent of the portion that now goes for the highway funding system is based on motor fuel usage. Doesn't that encourage consumption in highway use as opposed to use mass transit and some of the other overwhelming needs that the cities have in this country?

Mr. SWEARINGEN. Well, I think as we stated, we do need mass transit for urban areas. I think it has to be very diversified and it shouldn't all be put into highways.

Mr. POSHARD. Representative Emerson.

Mr. EMERSON. No questions. Thank you very much for your statement.

Mr. POSHARD. Mr. Leader.

Mr. GEPHARDT. Bob, we appreciate you being here. RCGA has been a major force in our community here, for progress, for standing up for the things that we need. I think your support for what the mayors said and what the county executives have said are very, very important statements. I think our—as we've said many times, our problem here is trying to make more money out of less, and we have tremendous needs all over the country. You just listen

to this hearing today and you see how great the needs are, and everybody has a good claim to this fund. And my hope is that somehow we can figure out how to expand the amount of money that we're able to use for transportation over the next five years either by giving more money out of the trust fund, which is already there and could be spent but it is being used to shield the deficit.

Or we decide to raise more funds through some kind of energy fee in order to do that. My hope is that this five year attempt which only comes every so often will not be passed by without doing that. I think if we just spend some more on transportation, St. Louis will be much better off.

Mr. SWEARINGEN. Thank you.

Mr. GEPHARDT. Thank you, very much.

Mr. SWEARINGEN. Thank you.

Mr. POSHARD. Mr. Minority Leader.

Mr. HAMMERSCHMIDT. Mr. Swearingen, we thank you for your testimony and for your patience.

Mr. SWEARINGEN. Thank you.

Mr. HAMMERSCHMIDT. God bless you.

Mr. POSHARD. I'm sorry, I skipped a gentlewoman over here, Representative Horn.

Ms. HORN. I think I would be remiss if I didn't give you the opportunity, since RCGA is really our Chamber of Commerce and since you're with travel, Maritz Travel, no one has mentioned the reality of the potential for this region as a tourist and convention and the incredible need for the safer airport and light rail and the multi-modal transit. I wanted to give you an opportunity for just a half a minute if you care to do that in your dual role.

Mr. SWEARINGEN. Well, I did touch on the airport. I think it's absolutely vital that we expand our airport. I think St. Louis has a very unique opportunity and we are actually from a transportation standpoint one of the most centrally located areas in the country. We have very good weather and if we can expand that we will save actually on fuel costs over Chicago and or Dallas/Forth Worth on our direct flights east west, so I think it's absolutely essential that we continue the expansion of our airport facilities here.

Ms. HORN. And our baseball team back and forth.

Mr. SWEARINGEN. That's true.

Mr. POSHARD. Thank you, Mr. Swearingen for your testimony today.

Our last witness before the committee, certainly not least, is Mr. Roger Pryor with the coalition for the environment. Is Mr. Pryor here.

## TESTIMONY OF R. ROGER PRYOR, EXECUTIVE DIRECTOR, MISSOURI COALITION FOR THE ENVIRONMENT

Mr. PRYOR. Thank you. I was afraid I would start being assessed taxes here in Crestwood if I stayed too much longer. Thank you very much, and I appreciate your patience.

Members of the committee, I appreciate the opportunity to appear before you today to comment on our nation's highway and transit priorities, and I also want to thank Congressman Dick Gep-

hardt for extending his personal invitation for me to address you today.

My name is Roger Pryor, I live in the City of St. Louis. It is my privilege to serve as the executive director of Missouri Coalition for the Environment, 28,000 member state-wide citizen's group that was founded back in 1969. We were all relieved that the war in the Persian Gulf appears to be winding down. And while many issues confront that part of the world and have been contributory to that conflict, no one can deny that the United States dependence on middle east oil has been a major factor.

Our surface transportation policy which has been dominated by the private automobile since World War II is, of course, a root cause of the dependence. As sad as this war has been we ought to use this occasion to rethink our national transportation and energy policies, the recent tragedies and sacrifices made by Americans and many other people in other parts of the world in this conflict will all be rendered meaningless.

Incredibly the priorities of the Bush Administration for transportation and energy seem to have been time warped from the 1950's reflecting none of the understanding that our nation has gained about the environment, energy use, traffic grid lock or suburban sprawl in the last two decades. Recently, this last winter, in the Washington Post was a very long article about grid lock, and I won't—I included part of that in my comments here. I'll just use the first paragraph right now.

He asks the question, when did our driving a car turn into such an indignity, such an ordeal? When did we first notice that half the traffic jams you crawl through had no apparent cause whatsoever? When you start asking over and over again where the hell are all of these people going. Well, Allen goes on to write about what he calls the QK curve that traffic engineers use to describe traffic jams which seem to happen with no visible reason. I don't know if you've ever seen one of these curves, looks like a bullet. You plot your time travel against your number of cars and as you increase the number of cars the time travel slows down. That's acceptable, because you're gaining volume.

When you get to a certain critical point, the bullet turns back on itself, not only do you lose time you also start losing volume. It's a very interesting part of fluid dynamics, which I don't understand, but engineers do. In other words too many cars are trying to go to the same destination at the same time. With enough automobiles in our country to provide one per adult, no amount of new road construction, that is no increased capacity will ever keep pace for long.

Highway engineers have instead resorted to building for excess capacity. Redesigning our existing highways to carry load for which they were never intended, we see this everywhere, shoulders turn into lanes, bridges with no shoulders at all anymore. Route 270, Interstate 270 in West St. Louis County was originally designed as the westernmost circumferential highway from this area. Now it's merely a north/south distributor route, twice as many lanes that it originally had. There are as many cars going the opposite direction in the rush hour as there were coming into St. Louis

nowadays. Totally exceeded everyone's design, original design specification.

The only sound way to design for excess capacity is to look inside our automobiles not outside. The average car carries during rush hour one point two people. If that number were raised just one point seven people per car most of the grid lock traffic jams would be history, not to mention the resultant reduction in pollution emissions, fuel savings and traffic accidents. Incentives for car and van pools must be found, they can run the gambit from reduced parking charges for pool vehicles, to tax incentives for employer provided free parking only for pool vehicles to highway design features such as high occupancy vehicle, or HOV lanes.

Now just consider pollution effects, and I have included some data in my written comments here from the American Public Transit Association showing the amount of emissions per hundred passenger miles comparing van pools, single occupant cars, rapid rail, light rail and buses. And without going into the data it is pretty obvious that the emissions for single occupant cars skyrocket compared to the other modes. As environmentalists we support mass transit as an ever better way to handle excess capacity than vehicle pooling. Public transport has the additional advantage of not requiring dedication of so much land for parking lots and garages.

Of course mass transit is a tough way to go, primarily because of the very nature of our sprawling metropolitan areas. The nature of commuting has changed as well. Many more people now commute between suburbs than between suburbs and central cities. Researchers down in Australia where they have done a lot of lead work on this, Murdock University, have demonstrated a rather sad irony, namely that those cities with the least sprawl are best able to promote alternatives to driving. They looked at 32 cities worldwide and they found that lower, cities with lower densities, and that's measured by number of people and jobs per acre of land and all the dependents generally go hand in hand, therefore the lower the urban density the greater dependent you are on your private automobile.

Public subsidies on mass transit often come under criticism. Our local Bi-state Bus System certainly gets its share. And the cost of providing transport is understandably the overriding factor in government's decision when picking from transportation options. Marsha Low in her studies Alternatives to the Automobile Transport for Cities, published by the World Watch Institute, points out the comparison of cost for providing train and bus service to those of private automobile travel is a complex task. To be fair the comparison must include the full cost of both systems, including the environmental and the social consequences.

She says drivers would find public transit more attractive if they kept the full cost of automobile transport in mind. Few U.S. drivers realize that including fuel, maintenance, insurance, depreciation, finance charges on their cars they pay an average of $34 for every 100 miles of driving. On the yearly basis it cost the average solo commuter nearly $1,700 just to get to work.

By contrast the average transport fair is about $14 dollars per 100 miles. If we are ever able to break out of the current transpor-

tation mess, a policy overhaul will be needed. Low suggests that the surest way to lessen over dependence on cars is to force drivers to bear more of the true cost of driving. She said so long as automobile owners are showered with inducements, such as free parking and government subsidized roads they will stay in their cars leaving trains and buses and bike paths empty. This is a vicious cycle, since planners are unlikely to invest in transport alternatives when existing systems are under utilized, and we just heard our Representative Horn refer to this cycle and the fares go up, the ridership goes down, as the ridership goes down you need to raise the fares.

Well, here are a few suggestions and I offer the humble opinion that would be helpful in overhauling our policy. Now, I think that's the important thing that this community needs to do is look at our policy from a national perspective, and I was glad to hear several members of this committee and other people testify, notably Mayor Schoemehl, comment that you can't look at this in a vacuum, it has to be looked at in terms of an energy policy, environmental policy, other policies. These things cannot be taken apart and treated as if they are in a vacuum.

One thing environmentalists learn is that everything is connected to everything else, and it is certainly when it comes to our government.

Number one, is we need to bring to light the hidden cost of driving, such as air pollution, municipal service, much of our police and ambulance service in this country are actually geared to the fact that we're so auto dependent, and road traffic. A large share of those costs are related to that and that alone. Road construction and repair and employer provided free parking, these are often what I consider as cost. We talk about construction cost, but various other things are not included.

Two, the environmental community generally has supported, and I think without exception, supports an increase in the gasoline tax and it has been suggested as much as a dollar a gallon, making drivers pay more of the cost they impose on society. Increased taxing on new cars, the taxes on new cars and registration fees also makes sense, especially if those taxes and fees are based on such things as emissions in our fuel efficiency. Some of these revenues should be dedicated to public transport, cycling and even pedestrian facilities.

I was interested in hearing Wayne Muri's comments about his surprise at the European system. Well, in many European countries they do charge one to two dollars tax on gasoline. Based on that system they also in Germany they have a fee on automobiles based on emissions. Europe is doing a lot of stuff including mass transit and they are ahead of us in their funding mechanism as well.

And three, effective land use planning is a key to a viable new transportation system. We need to find cooperative approaches between municipalities and private land developers that can be made to work for public transit, just as it's been made to work against it so well in the past. So many financial incentives can be used to cluster homes, jobs and services along public transport corridors.

The biggest obstacle to rethink our transportation is overcoming the powerful road lobbies made up of the oil companies, the car makers, the highway builders, the land developers and other interests that pressure government to favor the automobile. That power is no more—is no place more evident than with the proposed highway extension and new bridge to carry Page Avenue from Western St. Louis County across the river in St. Charles County.

Just a couple of comments about this project, because I think it's a classic situation. It is a microcosm that this committee could study. It's a classic highway planning boon doggle in a way. It's being offered as a solution to rush hour grid lock. Traffic trying to move through these two counties. Yet the State Highway Department admits in the study it did last summer, that traffic levels in the new route will quickly exceed capacity without abating the jams in the two existing major roads.

With the new census figures that came in St. Louis SMSA has essentially the same population today as it did twenty years ago, except now it's sprawled out to the very edges of the metro area. We have heard about Jefferson County and St. Charles County as record growth areas. So now we're being asked to subsidize more and more infrastructure for the same number of people, while services to the central city and older suburbs continue to deteriorate. St. Charles County has at this time no public transport, and I think they are unlikely to ever get any as long as state taxes continues to support dependence on the automobile.

Our state highway department has so far refused to seriously look at such things as HOV lanes on present bridges and roads. This Page Avenue project will have serious social consequences and tremendous environmental impacts. It will bisect a county part developed with federal funds, destroy directly or indirectly valuable wet lands, lead to loss of prime farm land and development of float plans contribute to air pollution in the St. Louis area, which is a non attainment area for ozone and only stimulate more traffic congestion.

It should not surprise you to learn that this project in its present alignment is opposed by both the U.S. Department of Interior and the Missouri Department of Resources. Every environmental group in the St. Louis area have spoken out against the project and most are already committed to exhaust every remedy available to us to stop it. From a national point of view, Page Avenue is just one of many such projects designed by planning mentality that is decades behind in its thinking funded by a government locked into an out moded transportation policy and spurred on by the road lobby.

This subcommittee wants to exam our transportation priorities in a microcosm no better, better bad example could be found than the Page Avenue project.

Thank you for this opportunity.

Mr. POSHARD. Thank you, Mr. Pryor. I appreciate you being here today. Let me ask you, why do you think the State Missouri Department of Transportation opposes HOV lanes for instance?

Mr. PRYOR. Well, I don't know, I think it's just largely mind set. It's—we've asked them that very question about—for example you look at Interstate 70 which crosses into St. Charles County, it's an example of the bridges now where you have no shoulder, every-

thing has been converted to lanes, and that's an obvious place where an HOV lane, I think, would have a great impact.

And they comment on—well, they mention a lot of things, but frankly none of them really speak to anything on the fact, it's just a different kind of mind set than they've been used to working with. And I think they're gradually coming around, but to this point they have proposed nothing. And I've heard recently that they have some plans to offer some suggestions along these lines regarding Page because of objections that groups like mine have raised, but I haven't seen those yet.

Mr. POSHARD. What is your group doing specifically? I mean even if we get a larger federal share of monies for surface transportation, we're still going to require local matching funds and so on. You propose a dollar a gallon increase of taxes on gasoline, which would create a huge pot of money for sure. What can you do locally in terms of your group's efforts to spur contributions to the local matching funds even if we get more federal funds.

What kinds of things does your group support?

Mr. PRYOR. Well, we've been—we are supporting things like Metro Link project. We have advocated and supported such things as regular use of park and ride facilities and express buses. We're, you know, try to be basic supporters of Bi-state. It's tough because I think that government infrastructure is weighted us and weighted those entities. It's as, you know, our group, it's often said environmentalists are opposed to things, and it's often to oppose things than it is to oppose good solutions, new solutions end up invariably cost money or make you change your way of thinking or something. That's always hard, we're all—we're all stubborn about changing the way we think about things.

Mr. POSHARD. Yes. Much of what you say makes a lot of sense from a conservation and an environmental point of view. I think a lot of what you advocate is a public informational educational campaign also.

Mr. PRYOR. Right.

Mr. POSHARD. And I think, you know, it's like recycling and all of these other things that would be wonderful for our country, but we can't quite get our people to buy into to them in terms of conservation efforts.

Mr. PRYOR. Well, I say I disagree with you there. I think the people have bought into it.

Mr. POSHARD. Well——

Mr. PRYOR. And I think the people are actually ahead of the government on, say, recycling. And I think they are actually ahead of the government in a lot of other things too if given a chance. Frankly if I fault anybody it's not Congress, I say, the administration and not just this administration, any administration has the responsibility of providing leadership and providing the education and saying wait a minute, we need to stop and think about our priorities and how we're doing this.

I mean, you're partly locked in, you have to do the nuts and bolts of keeping the country working, keeping the money flowing, and all of those things you have to do, but it's the administration's responsibility to say let's look at how we thinking about these things and see what improvements we can make and let's get people from

public works in town, talking with the environment committee, talking to people, the energy people, and making this work.

I think you—I think frankly the deck of cards you have been dealt is a very hard one to play out any way other than the way you've been playing it.

Mr. POSHARD. Mr. Emerson?

Mr. EMERSON. No questions, Mr. Chairman. I just want to thank Mr. Pryor for his intellectually provocative statement and I've enjoyed hearing what you've had to say.

Mr. PRYOR. Thank you, Congressman.

Mr. POSHARD. Mr. Gephardt?

Mr. GEPHARDT. Roger, thanks for being here. You've been a clear, consistent voice for the environment for as long as I can remember going back to 1976.

Mr. PRYOR. We're both getting older, sir.

Mr. GEPHARDT. Yeah, we sure are. When you were speaking out on the Merrimack Dam, which I remember very clearly—it's an issue most people in the room probably don't remember, but you were there then and you've been there ever since. I think that your ideas are well taken. I think it is a matter of trying to think about these ideas and putting them in front of people. I know in other cities, for instance, HOV lanes are successful, are thought about, are put in place and are used.

And clearly mass transit is one of the clear answers to our problems in both energy and environment and the transportation area. So I think if we could put our mind to these things, put them in front of people they will use them, people are logical. And they'll do some things that are important to their quality of life as well.

So I urge you to keep saying these things because they are very, very important and helpful and we will keep your views in our work as we go through this bill.

Mr. POSHARD. Mr. Hammerschmidt?

Mr. HAMMERSCHMIDT. Mr. Pryor, you're probably talking to a panel that's going just headlong the opposite direction of maybe the views you expose here with the exception of maybe part of the urban mass transit program. But we very much appreciate your well thought out and well presented statement. And as was indicated here by my colleagues I think it is important that we get the other side of the coin as part of the record. It isn't a very balanced record, but at least you have made your points well. We appreciate you being here.

Mr. PRYOR. Thank you.

Mr. POSHARD. Congresswoman Horn?

Ms. HORN. Thank you. The other day, Mr. Pryor, on one of my other committees we heard the Secretary of Energy, Mr. Admiral Watkins presenting the national energy strategies, and I couldn't help but think as I heard him and a couple of his colleagues working their way through this policy how out of sync they are with the general public, and I think you're right on with that, I think that America is definitely headed that way.

I think they are ready. I think they need a little leadership. They need help, but they really are ready. And just to update that I have looked at public opinion polls for many years from all over the

country, as well as from this metropolitan area and the state. The people really are ready for the leadership to take us that way.

And I will reiterate what I said earlier—how important for us to keep our national energy strategy in mind as we're pursuing this transportation, how very, very vital it is for the future of this country to make sure they make sense and to work together, and thank you so much for being here.

Mr. PRYOR. Thank you.

Mr. POSHARD. Thank you Representative Horn. Mr. Pryor, thank you. Those of us in government, individually and collectively, struggle with knowing how much of our job is educational and informational and how we balance that against tightening the screws to force compliance, and we'll always be struggling with that and thank you for your suggestions here today.

Mr. PRYOR. Thank you for your patience in waiting around all afternoon.

Mr. POSHARD. Thank you. This will conclude the Subcommittee on Surface Transportation's Hearing. Thank all of your for being with us today and, on behalf of Chairman Mineta and Chairman Roe, we thank the Members of the committee.

[Whereupon, the hearing was adjourned.]

PREPARED STATEMENTS OF WITNESSES

**STATEMENT BEFORE THE**

**SUBCOMMITTEE ON SURFACE TRANSPORTATION**

**OF THE**

**HOUSE PUBLIC WORKS AND TRANSPORTATION COMMITTEE**

**by**

**GOVERNOR JOHN ASHCROFT**

**MISSOURI**

**March 1, 1991**

Missouri, because it is a major crossroads of America, is well aware of the role of highways. Missouri's state highway system, which includes more than 32,000 miles of roads, is the sixth-largest in the nation. That system is a major asset for Missouri because it ties us into the national system on which the nation's economy moves. Missouri is at a disadvantage, however, because of its distance from the coasts. The interstate highway system has shortened that somewhat, but Missouri still is at a relative disadvantage.

Missouri was the first state to begin construction of the interstate highway system. That first segment is near here, just west of the Missouri River at St. Charles on I-70. Missouri completed its interstate roads last year with the opening of the Jefferson Barracks bridge, which is just south of St. Louis.

That was done in a tremendously successful partnership with the federal government, which made the interstate system possible by sharing fuel tax revenue.

Our completion of the interstate system in Missouri is bittersweet, however. The achievement is diminished because we knew even as the interstate segment was being finished that its traffic capacity was insufficient to meet the needs of commerce and the public. The achievement is diminished because parts of the system, which have been pushed far beyond their 20-year design life, are crumbling beneath our wheels. The achievement is diminished because while the interstate system is a superb network of roadways, much remains to be done to make many miles of two-lane pavement adequate to meet the demands of today and tomorrow.

To keep Missouri moving, I asked our citizens to approve an increase in fuel taxes in 1987 to fund a $6 billion highway improvement program. Beyond the scope of that program remains other vital highway projects determined through a detailed study of Missouri's bridge and highway needs. Those needs include converting major two-lane roads to dual-lane highways.

Missouri is a fiscally prudent state, and its economy is healthy, but it cannot alone build the highways needed to serve demands of the coming decades. As with the interstate highway system, direction from the federal

government and funding from the federal government are essential.

My distinguished colleague from Kentucky, Gov. Wallace Wilkinson, testified before you last week on behalf of the National Governors Association, of which I am vice chairman. Gov. Wilkinson, who is chairman of the association's Committee on Transportation, Commerce and Communications, reminded you that the states believe the federal government is not keeping its share of the bargain on fuel tax revenue.

As he put it, "The money goes in, but it doesn't all come back."

Wayne Muri, chief engineer of the Missouri Highway and Transportation Department, will tell you later some of the adverse effects caused by withholding federal funds. He also will point out how the present highway program works to Missouri's disadvantage.

Through the years, Missouri has made sure it received all federal highway money for which it qualified. Some apparently have become complacent as a result, thinking that Missouri was getting its fair share of federal highway money. We now know that is wrong. Missouri has qualified for less than 85 cents of each dollar its citizens have paid in federal fuel taxes. That's not a fair share, and that formula should not be allowed to continue.

The important point is that change is at hand, and the change could work greatly to Missouri's advantage.

I'm pleased to be able to tell you that President Bush's recommendations for the next Surface Transportation Act can help Missouri a great deal.

The President's proposal would increase dramatically the flow of federal highway funds into Missouri. The total for Missouri would increase by more than $60 million next year, from $268 million to $330 million. Missouri's share would grow to $490 million in the fifth and final year of the proposal.

Those are substantial increases in funding for Missouri. I submit, however, that the portion for Missouri should be even greater in the initial years of the proposed program. It is less than it could be, because Missouri finished its interstate system so quickly. The proposed bill computes Missouri's share on a lower level, because interstate funds are set aside.

You may wonder why, after 30 years, some states still have not finished the interstate. Much of the answer concerns expensive interstate segments that may not be cost-effective. I suggest you examine this portion of the proposal carefully and consider making no special provision for interstate construction. That would result in a fairer distribution of the funds. By doing so, Missouri would receive 99 percent of its share returned in Fiscal Year 1992 as opposed to only 84 percent under the current proposal.

Interstate highways are important but so are the primary roads -- many of which will be designated highways of national significance. This will include many of the two-lane roads in Missouri that we know must be improved to dual-lane highways.

Much has been made of Americans' love affair with the automobile. Americans may love their automobiles, but they are growing disillusioned with their highways.

Highways are the key to this country's future. The health of our economy and the vitality of our highway system are closely linked. When people cannot easily travel from city to city and move goods efficiently, regional economies suffer. If business and industry in Missouri cannot reach customers in other states and other countries, our state economy obviously will suffer as well.

President Bush's proposal will allow us to improve our highways at a faster pace, and Missourians will enjoy the improvements in mobility and in our economy. There will be more jobs directly related to construction of highways, and later, more jobs to accomplish the tasks generated by a more robust economy.

But a better highway system clearly benefits more than Missouri. As international competition intensifies, we must ensure that American transportation helps rather than hinders our efforts. How can we compete against European countries whose roads carry trucks thousands of pounds

heavier than ours? How can we compete against countries that are committed to investing much more in infrastructure?

For example, trucks in Europe routinely operate at gross weight of 130,000 pounds -- almost 40,000 pounds more than the normal maximum in America. Imagine what that means in terms of competitiveness and transportation efficiency. While our roads are collapsing under 80,000-pound loads, European roads are built to withstand 130,000-pound loads and last longer to boot. Containerized shipping is increasingly common, but we are ill-prepared to handle the loads to which European shippers are accustomed. How then, can we expect to compete against a united European economy?

During the past two decades, America has turned its back on highway needs. In the 1950s and 1960s, capital investment in highways kept pace with the increase in the number of miles traveled by motorists. In the late 1960s, as travel continued to increase, the investment in highways began decreasing. Investment began to increase in the early 1980s, but it is far behind the growth in highway use.

Some of the consequences of this neglect have been obvious. Any motorist can tell you. There are other effects, however, that are less obvious. Studies by David Aschauer, which Governor Wilkinson also cited, show a direct relation between productivity growth and public investment in highways and other portions of the infrastructure.

In terms of public infrastructure investment and productivity growth among Japan, West Germany, Italy, France, the United Kingdom and Canada, the United States ranks last. Within the United States, the rate of growth in productivity throughout a 35-year period closely follows -- and declines with -- the infrastructure stock.

Missouri intends to do everything it can to turn around the economic slide and make America a leader again. Missouri knows transportation is a key to accomplishing that. We in Missouri are aware that substantial improvements in our highway system might require a higher matching rate from the states. While many governors have significant concerns about that increase, I would add that if you choose to increase the state share, we request that you consider the capacity of the states to fund the projects. Most of our revenues for roads come directly from gas taxes, so each time the federal government increases taxes, particularly gas taxes, our ability to improve our own funding is diminished significantly. Thank you for your interest and concern. I encourage you to move forward quickly in your consideration of President Bush's proposal so we can improve America's transportation system.

STATEMENT

OF

JOSH BILL

CHAIRMAN, HIGHWAY 60 COMMITTEE

BEFORE

THE

SUBCOMMITTEE ON SURFACE TRANSPORTATION

OF THE

COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

St. Louis, Missouri

March 1, 1991

Thank you Mr. Chairman. It is indeed an honor and privilege for me to appear before the Subcommittee today. This year your panel will cast the die to shape our highway program for decades into the future. I'd like to make a positive contribution to your effort, and I'm deeply grateful for the opportunity.

Mr. Chairman, I believe the Interstate Highway system in truly one of the "Wonders of the World". It's a tribute to the vision of our political leadership in both parties and for the past 35 years.

This is the circulatory system of our great nation. Isn't that why we speak of highway "arteries"? Just as blood cells carry life-giving oxygen, these concrete ribbons bring commercial life to communities along their path.

I think we take many of these assumptions for granted. But, for those not served by these commercial arteries, there can be little hope and little future.

When discussing allied plans for the Iraqi Army in Kuwait, General Colin Powell said "First we're going to cut it off, then we're going to kill it." It seems to me the results of the past several days prove that once you've cut it off, you've gone a long way toward killing it.

What works for an army applies equally to a region of towns and cities. If they are cut off from the cirulation of commerce, they simply die.

Mr. Chairman, you and your colleagues are well aware that the transportation network across this great nation is not complete. I come before you representing a number of communities in southern Missouri who are still waiting for viable highway access to the rest of the country.

We've been working to expand the existing Highway 60 to a four lane divided highway corridor across southern Missouri. It's a project that was planned and promised 30 years ago when Interstate 57 was terminated in southeast Missouri. That was many promises ago.

If completed, Mr. Chairman, this corridor would serve the largest area in the Eastern two-thirds of the United States not presently traversed by an Interstate Highway. And it's important to clarify, this area of south-central Missouri and north-central Arkansas has no four-lane highway of any kind crossing through it.

Mr. Chairman, this region includes the Ozarks. And while, like most caricatures, the Ozark Hillbilly is more a remnant than a reality; it is true the Ozarks have not enjoyed the flow of people and commerce that comes with a viable highway corridor.

The communities in this region have a great handicap in getting and keeping jobs. Few employers will move to areas cut off from the nation's arteries of commerce, and successful employers frequently choose to expand or relocate where transportation access is not a problem.

But beyond what some might consider a local interest, I believe the expansion of this highway would serve a national goal. It would provide a western outlet to the second largest inland port in the United States at Cairo, Illinois, and a highway connection at the confluence of the two largest rivers of North America.

If there truly is to be a commitment to intermodal transportation, I don't see how Congress can stay silent while this great national resource remains in a surface transportation backwater.

I fully realize that the Administration intends to turn many more of these questions over to the states. But I hope that if and when you agree to do that, you will pay very careful attention to the impact of the formula changes they propose.

Missouri is the only state in the country that requires a vote of the people for every increase in the taxes devoted to transportation. Increasing the local matching requirement, therefore, is a matter of utmost concern to those of us still waiting our turn.

This is particularly true when there is so much discussion of a $.25 federal gas tax for deficit reduction. It seems to me this notion finds most favor with those who have already got theirs.

Such a move would cripple our ability to raise revenue through referendum, at the same time it increased the amount of local revenue we must contribute just to stay even.

Whatever, the outcome, I implore you who will write the initial legislation to prevent this "one-two punch". It will destroy Missouri's ability to complete our network of highways.

As a minimum allocation state, we already get back only $.85 for every dollar we send to the Highway Trust Fund. If these proposals are adopted, that number will go far lower. At that point, our hopes for a corridor across southern Missouri, and growth for the Missouri and Arkansas Ozarks, will be lost for many years to come.

Once again, thank you for the privilege of appearing here today.

MO — vote of the people for every increase

MEL CARNAHAN
LIEUTENANT GOVERNOR
STATE OF MISSOURI

**REMARKS OF LIEUTENANT GOVERNOR MEL CARNAHAN
BEFORE THE HOUSE COMMITTEE
ON PUBLIC WORKS AND TRANSPORTATION,
SUBCOMMITTEE ON SURFACE TRANSPORTATION**
CHAIRMAN: REP. NORMAN Y. MINETA (D., CA)

I WOULD LIKE TO BEGIN MY TESTIMONY BY THANKING THE HOUSE PUBLIC WORKS AND TRANSPORTATION COMMITTEE FOR THE OPPORTUNITY TO TESTIFY BEFORE YOU TODAY ON THIS MOST IMPORTANT SUBJECT . . . TRANSPORTATION. AS YOU SURELY KNOW, MISSOURI HAS PLAYED AN EXTRAORDINARY ROLE IN THE TRANSPORTATION HISTORY OF THE UNITED STATES.

THE FIRST INTERSTATE ROUTES IN OUR NATION'S HISTORY WERE RIVERS. WE MEET TODAY JUST MILES FROM THE CONFLUENCE OF THE TWO GREAT RIVERS OF THE NORTH AMERICAN CONTINENT.

IN THE MID 19TH CENTURY, MISSOURI BECAME THE GATEWAY TO THE WEST. THE FOUR TRAILS TO THE PACIFIC HAD THEIR COMMENCEMENT FROM THE SHOW-ME STATE, BEING THE OREGON, CALIFORNIA, MORMON AND SANTE FE TRAILS. SUCH FRONTIER MISSOURI VILLAGES AS INDEPENDENCE, FRANKLIN, LIBERTY,

STATE CAPITOL
P.O. BOX 563, JEFFERSON CITY, MO 65102

WESTPORT AND BOONVILLE BECAME THE LAST SIGHT OF CIVILIZATION THAT THESE TRAIL BLAZERS EXPERIENCED.

ST. JOSEPH, MISSOURI, WAS THE POINT WHERE THE PONY EXPRESS HEADED FOR CALIFORNIA, PROVIDING A FASTER CROSS CONTINENTAL U. S. MAIL SERVICE, CONNECTING NEW YORK AND WASHINGTON TO SAN FRANSISCO AND SACRAMENTO.

MUCH LIKE THE WAGON TRAILS, THE FIRST RAIL LINES HEADING WEST WENT THROUGH KANSAS CITY, ST. JOSEPH AND JOPLIN. 20 YEARS BEFORE THE GOLDEN SPIKE WAS DRIVEN THE MISSOURI LEGISLATURE CHARTERED THE PACIFIC RAILROAD.

A ST. LOUIS BASED AVIATOR WITH THE FINANCIAL BACKING OF ST. LOUIS BUSINESSMEN FLEW HIS PLANE "THE SPIRIT OF ST. LOUIS" ACROSS THE ATLANTIC, MAKING CHARLES LINDBERGH THE FIRST PERSON TO FLY SOLO ACROSS THE ATLANTIC.

AND IN 1956 THE FIRST SECTION OF THE FEDERAL INTERSTATE HIGHWAY SYSTEM WAS COMMENCED ONE COUNTY NORTH OF WHERE WE MEET TODAY. THE GREATEST HIGHWAY SYSTEM IN THE WORLD WAS FIRST BEGUN IN ST. CHARLES COUNTY, MISSOURI.

MISSOURI HAS PLAYED A MAJOR HISTORICAL ROLE IN TRANSPORTATION IN THIS NATION. I AM HERE TODAY TO SAY THAT MISSOURIANS ARE JUST AS CONCERNED WITH LEADING THE WAY IN

TRANSPORTATION AS WE APPROACH THE 21ST CENTURY, AS OUR ANCESTORS WERE IN THE 19TH CENTURY.

I REALIZE THAT THERE IS AN ALLIANCE BETWEEN THE FEDERAL GOVERNMENT AND THE DIFFERENT STATES IN REGARD TO HIGHWAY FUNDING. MISSOURI IS CONCERNED THAT SHE RECEIVE HER FAIR SHARE OF ADDITIONAL FEDERAL HIGHWAY FUNDS. IT IS MISSOURI'S DESIRE TO ENSURE THE MONEY THAT COMES INTO THE HIGHWAY TRUST FUND IS SPENT FOR HIGHWAYS AND THE FUNDS HELD BACK IN PREVIOUS YEARS ARE RELEASED.

MISSOURI'S HIGHWAY FUNDING DEPENDS HEAVILY ON USERFEES AND FUEL TAXES. THE FEDERAL GOVERNMENT'S NEW ATTEMPTS AT DEFICIT REDUCTION BY UTILIZING FUEL TAXES CRIPPLES ANY POTENTIAL EFFORT ON MISSOURI'S PART TO ADDRESS OUR HIGHWAY NEEDS. I WOULD LIKE TO ASK THE COMMITTEE TO FIND OTHER MEANS OF DEFICIT REDUCTION OTHER THAN ADDITIONAL MOTOR FUEL TAXES.

MISSOURI COULD MORE THAN DOUBLE ITS SHARE OF FEDERAL HIGHWAY FUNDS IF MISSOURI WERE TO RECEIVE HER FAIR SHARE OF THE FUNDS AND IF ALL THE MONEY COLLECTED FROM THE FUEL TAXES WERE SPENT ON TRANSPORTATION.

MISSOURI'S HIGHWAY NEEDS WERE OUTLINED BY OUR STATE DEPARTMENT OF HIGHWAYS AND TRANSPORTATION LAST YEAR IN WHAT THEY TITLED "THE TEN YEAR NEEDS STUDY." THIS NEEDS

STUDY OUTLINED THE NECESSITY FOR MISSOURI TO ADDRESS THE SAFETY FACTOR. MISSOURI LEADS THE MIDWEST IN TRAFFIC FATALITIES. THE FUNDING OF THE PROJECTS OUTLINED IN THE NEEDS STUDY WOULD REDUCE THE FATALITIES BY TWO-THIRDS, WHICH MEANS TWO OUT OF THREE PEOPLE KILLED ON OUR HIGHWAYS WOULD BE SAVED.

MISSOURI COULD ADDRESS THIS NEED IF IT WERE TO RECEIVE HER FAIR SHARE OF FEDERAL FUNDING. AS YOU HAVE ALREADY HEARD FOR EVERY FUEL TAX DOLLAR MISSOURI SENDS TO WASHINGTON, WE GET LESS THAN 85 CENTS BACK.

WE READ OF AMERICA'S CRUMBLING INFRASTRUCTURE AND OUR INABILITY TO ADDRESS THE NEED TO REBUILD OUR ROADS AND BRIDGES. I BELIEVE THAT A NATION THAT CAN SO ACCURATELY DESTROY BRIDGES AND HIGHWAYS ON THE OTHER SIDE OF THE GLOBE ALSO CAN REBUILD ROADS AND BRIDGES AT HOME.

WE HAVE SHOWN THE WORLD THAT WE ARE "THE" SUPERPOWER. I BELIEVE IT IS NOW TIME TO EXPEND SOME OF THAT EFFORT AND EXPERIENCE AT HOME BY REBUILDING THE TRANSPORTATION SYSTEM WHICH WAS, AND CAN BE ONCE AGAIN, THE ENVY OF THE WORLD.

THANK YOU.

Neil Dillard, Mayor
City of Carbondale
P.O. Box 2047
Carbondale, IL 62902
(618) 549-5302

Member of the Southwestern Illinois Freeway Team (SWIFT)

# SOUTHWESTERN ILLINOIS FREEWAY TEAM (SWIFT)
# BACKGROUND PAPER

In the Spring of 1989, the Southwestern Illinois Freeway Team (SWIFT) was organized to develop a regional, non-partisan, cooperative effort to work for a major four lane highway to connect Southern Illinois with the St. Louis Metropolitan Area. Representatives from Jackson, Perry, St. Clair, Randolph, and Monroe Counties are involved in this regional effort.

The need for improved highway access between Southern Illinois and the St. Louis area has long been recognized. The lack of a four lane highway linking the two areas is a major detriment to economic development efforts throughout the region. Improved access to and from the region is also critical for tourism development and to support the continued viability of existing business and industry.

The specific location or route for the new highway will be determined by future studies. At this time, representatives from the five county area have agreed to work together in support of the project, regardless of the specific location of the highway.

Since its inception, SWIFT has garnered substantial support in the region. Resolutions of support for the project have been adopted by County Boards, City Councils, Townships, Chambers of Commerce and other Business Development Organizations, and a large and diverse group of private organizations. Southern Illinois University at Carbondale is also a strong supporter of the proposed highway. The University's Strategic Plan notes the importance of

improved highway access to the University in terms of student, faculty, and staff recruitment and the role of the University in the region.

The Lower Mississippi Delta Development Commission, a seven state commission formed by the Federal government to study and make recommendations regarding economic needs, problems, and opportunities in the Lower Mississippi Delta region, also cited the need for improved transportation access in the Southern Illinois region.

The SWIFT effort is now being focused on the State and Federal levels where financial resources must be provided to finance the design and construction of the highway. It is hoped that the Federal Government will include this project in the reauthorization of the Federal Highway Program. Congressman Glenn Poshard, who represents much of Southern Illinois, has been briefed on the project, and it is hoped that he can help secure funding through his membership on the House of Representatives' Public Works Committee. Briefings have also been held with Governor Edgar and State Transportation Department representatives. Our State Representatives and Senators are fully supportive of the project.

The need for a four lane highway will be further heightened if Scott Air Force Base is developed into a joint military/civilian air transportation facility as many are now advocating.

We believe that the time has come to push for this long delayed transportation improvement and would welcome your support.

TESTIMONY OF

PRESIDING COMMISSIONER ELIZABETH FAULKENBERRY

JEFFERSON COUNTY

BEFORE THE

HOUSE COMMITTEE

ON

PUBLIC WORKS AND TRANSPORTATION

MARCH 1, 1991

MR. CHAIRMAN, MEMBERS OF THE COMMITTEE,

I WANT TO THANK YOU FOR THE OPPORTUNITY TO APPEAR HERE BEFORE YOU AND TESTIFY ON BEHALF OF JEFFERSON COUNTY'S INFRASTRUCTURE NEEDS NOW AND IN THE NEXT TEN YEARS.

JEFFERSON COUNTY HAS BECOME ONE OF THE MOST PROGRESSIVE COUNTIES IN MISSOURI, GAINING VOTER APPROVAL ON SIX MAJOR TAX ISSUES IN THE LAST TWELVE YEARS. THESE INCLUDE A COUNTY GENERAL REVENUE SALES TAX OF ONE-HALF CENT, A BRIDGE BOND ISSUE WHICH HAS REPLACED FORTY-THREE DEFICIENT AND DANGEROUS BRIDGES, A COUNTY CAPITAL IMPROVEMENT SALES TAX OF ONE-HALF CENT FOR RECONSTRUCTING 700 MILES OF COUNTY ROADS, A COUNTY LAW ENFORCEMENT SALES TAX OF ONE-HALF CENT, A COUNTY LIBRARY TAX LEVY OF TWENTY CENTS PER HUNDRED DOLLARS VALUATION, AND MOST RECENTLY AN EMERGENCY TELEPHONE OR 9-1-1 SYSTEM WITH A ONE DOLLAR AND

TWENTY CENTS CHARGE PER MONTH PER PHONE LINE. DURING THE SAME TIME PERIOD, THE VOTERS HAVE ADOPTED PLANNING AND ZONING, THE COUNTY COMMISSION HAS ADOPTED ITS FIRST SOLID WASTE ORDINANCE WHICH HAS CLEANED UP TWO THOUSAND ILLEGAL DUMPS AND HAS BUILT A NEW JAIL DUE TO BE COMPLETED JUNE 1, 1991.

HOWEVER, IN SPITE OF THIS PRAISEWORTHY LOCAL EFFORT, LADIES AND GENTLEMEN, JEFFERSON COUNTIANS FACE PROBLEMS WHOSE SOLUTIONS ARE TOO EXPENSIVE TO ACHIEVE WITHOUT FEDERAL HELP.

THESE PROBLEMS FALL ROUGHLY INTO THREE CATEGORIES: TRANSPORTATION, SEWERS AND SOLID WASTE. ALL OF THESE PROBLEMS ARE NEGATIVELY AFFECTED BY PROPOSED OR EXISTING FEDERAL ADMINISTRATION BUDGET POLICIES.

**TRANSPORTATION**

JEFFERSON COUNTY HAS BEEN FORTUNATE TO HAVE CONSIDERABLE IMPROVEMENT IN ITS NORTH-SOUTH FEDERAL AND STATE HIGHWAYS SINCE THE PASSAGE OF PROPOSITION "A". THE SINGLE MOST PRESSING HIGHWAY NEED THAT WE HAVE AT PRESENT IS:

1. AN EAST-WEST ARTERIAL HIGHWAY, PREFERABLY A NORTHERN JEFFERSON COUNTY OUTER BELT, FROM HIGHWAY 55 TO HIGHWAY 109.
2. ALSO NEEDED FOR THE FUTURE IS AN EAST-WEST ARTERIAL HIGHWAY FROM HIGHWAY "A" TO HIGHWAY 44.

THESE HIGHWAY PRIORITIES ARE VITAL TO JEFFERSON COUNTY'S FUTURE. THE COMPLETE LACK OF AN EAST-WEST HIGHWAY IS VERY DETRIMENTAL TO OUR COUNTY, HOWEVER THE COST OF SUCH A HIGHWAY IS FAR BEYOND OUR COUNTY'S FINANCIAL CAPABILITY TO CONSTRUCT. WE MUST RELY ON THE MISSOURI HIGHWAY DEPARTMENT. IN TURN, THEY MUST RELY ON FEDERAL HIGHWAY TRUST FUND MONEY. I SEE THE ADMINISTRATION PROPOSAL TO DOUBLE MISSOURI'S LOCAL SHARE TO FORTY PERCENT AS A DISASTER PROPOSAL. THE MISSOURI HIGHWAY DEPARTMENT CAN BARELY MEET THEIR COMMITMENTS NOW. FURTHER, MISSOURIANS SHOULD RECEIVE AT LEAST 2.5 PERCENT OF THE TRUST FUND MONEY WHICH IS ABOUT WHAT WE CONTRIBUTE, ACCORDING TO THE MISSOURI HIGHWAY DEPARTMENT. THIS WOULD DOUBLE OUR CURRENT FUNDING LEVEL.

ANOTHER ASPECT OF TRANSPORTATION IN WHICH JEFFERSON COUNTY IS VERY INTERESTED IS LIGHT RAIL/MASS TRANSIT. OVER SIXTY PERCENT OF OUR WORKERS TRAVEL TO ST. LOUIS COUNTY AND CITY EVERYDAY TO WORK. WITH OUR POPULATION AT ONE HUNDRED SEVENTY THOUSAND, ACCORDING TO THE 1990 CENSUS, THIS REPRESENTS A LARGE POTENTIAL RIDERSHIP. JEFFERSON COUNTY NEEDS A STUDY ON THE FEASIBILITY OF EXTENDING THE METRO LINK INTO OUR COUNTY.

-5-

**SANITARY SEWERS**

ONE OF JEFFERSON COUNTY'S MAJOR PROBLEMS IS PROVIDING SEWER TRUNK AND COLLECTOR LINES AND SEWAGE TREATMENT FOR A RAPIDLY GROWING POPULATION. (THE 1970 CENSUS REPORTED A POPULATION OF 110,000. BY 1990, THE POPULATION WAS 170,000).

COMMON SEWER DISTRICTS WERE CREATED BY THE JEFFERSON COUNTY COMMISSION IN 1979 IN NORTH JEFFERSON COUNTY WHERE THE POPULATION GROWTH ; GREATEST. UTILIZING THE SEWER GRANTS PROGRAM, THESE DISTRICTS WERE ABLE TO GROW AND BEGIN SERVING CUSTOMERS. BOTH DISTRICTS HAVE PASSED BOND ISSUES. EACH CHARGES A SEVEN HUNDRED DOLLAR TAP-ON FEE AND MONTHLY SERVICE FEES OF TWENTY TO TWENTY FOUR DOLLARS PLUS CONNECTION COSTS TO REACH DISTRICT LINES. BECAUSE OF THE TOPOGRAPHY OF JEFFERSON COUNTY (HILLS AND ROCKS), LAYING SEWER PIPES AND BUILDING LIFT STATIONS IS VERY EXPENSIVE.

SEWAGE TREATMENT COSTS CONTINUE TO CLIMB AND POPULATION GROWTH MAKES IT IMPOSSIBLE TO CATCH UP WITHOUT A CONTINUING SEWER GRANTS PROGRAM. PLEASE REAUTHORIZE THAT PROGRAM. I DON'T BELIEVE WE CAN CONTINUE TO SO DRAMITCALLY INCREASE CHARGES TO USERS AND WE CAN'T PROVIDE SEWAGE TREATMENT WITHOUT FUNDS. JEFFERSON COUNTY HAS PERHAPS THE MOST SERIOUS PROBLEMS WITH SEWERS IN THE STATE. IN FACT, AT ONE TIME IT WAS SO IDENTIFIED BY THE

Last, let me commend to you our proposed multi-modal station project, which will provide at long last a permanent home for Amtrak in downtown St. Louis and allow, for the first time, direct interface among Amtrak, light rail urban transit, and Greyhound intercity bus service. This proposed St. Louis Regional Transportation Center will also allow travelers to access numerous city bus lines, park on the downtown periphery and reach locations in the core via light rail transit, and travel directly to Lambert-St. Louis International Airport by light rail transit. In addition, a nearly-completed FAA study assessing the need for and feasibility of a downtown heliport has identified the site as ideal for such a purpose. The facility will include a complete range of support concessions as well. We hope that you and your colleagues will agree that this proposal provides an excellent example of the benefits of intermodalism and that it is worthy of federal support.

Again, my sincere thanks for coming to St. Louis and inviting me to address you today.

-7-

SOLID WASTE DISPOSAL

ALONG WITH THE REST OF THE ST. LOUIS METROPOLITAN AREA, JEFFERSON COUNTY IS FACING A CRISIS IN SOLID WASTE DISPOSAL. LANDFILLS ARE NEARING COMPLETION WITH NO NEW ONES BEING SITED. WHILE CITIZEN AWARENESS OF THE PROBLEM IS GROWING, ALONG WITH LOCAL AND STATE EFFORTS TO ENCOURAGE RECYCLING, VERY LITTLE IS BEING DONE TO ADDRESS THE VERY REAL PROBLEM OF WHAT WE ARE TO DO WITH THE SIXTY TO EIGHTY PERCENT OF SOLID WASTE THAT CAN'T BE RECYCLED.

JEFFERSON COUNTY DOESN'T HAVE A LANDFILL AND HAS GEOLOGY PROHIBITIVE OF SITING A LANDFILL. WE PRODUCE APPROXIMATELY FOUR HUNDRED TONS OF TRASH PER DAY WHICH GOES TO LANDFILLS IN NEIGHBORING COUNTIES. WE SEE THE TRAIN OF CRISIS COMING DOWN THE TRACK BUT WE HAVEN'T ANY ANSWERS. IF OUR NEIGHBORS CLOSE THEIR LANDFILLS TO US TO SAVE SPACE FOR THEMSELVES, WHAT ARE WE TO DO?

IF PRIVATE BUSINESS COULD DEVELOP TECHNOLOGY FOR DISPOSING OF THE WASTE IN AN ENVIRONMENTALLY SAFE ECONOMICAL AND PROFITABLE WAY, IT WOULD BE IDEAL AND WORTHY OF SOME TYPE OF FEDERAL INCENTIVE. IF, AS I SUSPECT, IT IS GOING TO BE UP TO THE LOCAL ENTITIES TO DEAL WITH THIS PROBLEM, WE NEED HELP.

IS THERE SUCH AN ANIMAL AS A STANDARDIZED MODULAR DESIGN OF A WASTE BURNING PLANT WHICH WOULD GENERATE ELECTRICITY AND WOULD NOT COST DOUBLE DIGIT MILLIONS OF

DOLLARS TO CONSTRUCT? COULD FEDERAL DOLLARS BE USED TO DEVELOP SUCH A DESIGN?

COULD A SOLID WASTE GRANTS PROGRAM BE DESIGNED AND FUNDED TO PROVIDE HELP TO METROPOLITAN AREAS WHICH MAY SOON OTHERWISE BE BURIED UNDER THEIR OWN TRASH?

COULD JEFFERSON COUNTY BE FUNDED FOR A STUDY TO DETERMINE THE FEASIBILITY OF SITING A WASTE TO ENERGY PLANT COMBINING SEVERAL APPROACHES TO WASTE DISPOSAL? FEDERAL HELP IS NEEDED BECAUSE THE PROBLEM IS SO GREAT AND THE SOLUTIONS SO COSTLY.

ON BEHALF OF THE PEOPLE OF JEFFERSON COUNTY, I WANT TO THANK THE MEMBERS OF THIS COMMITTEE AND THEIR COLLEAGUES IN CONGRESS FOR THE WATER STUDY NOW BEING DONE FOR JEFFERSON COUNTY BY THE UNITED STATES CORPS OF ENGINEERS. THANK YOU FOR YOUR HELP.

THESE ARE OUR MAJOR NEEDS. ANY HELP THAT YOU CAN PROVIDE WILL BE GREATLY APPRECIATED BY OUR PEOPLE.

I AM WILLING TO ANSWER ANY QUESTIONS YOU MIGHT HAVE.

TESTIMONY

SUBCOMMITTEE ON SURFACE TRANSPORTATION

COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

U.S. HOUSE OF REPRESENTATIVES

# Impacts of the Proposed I-66 Corridor

Dr. Lonnie E. Haefner

March 1, 1991

45-155 O—91——5

I am pleased to have the opportunity to testify today at your field hearings in St. Louis with respect to forthcoming national transportation policy and highway reauthorization legislation. My name is Dr. Lonnie E. Haefner, and I am a professional transportation planner and traffic engineer. I have been the Technical Advisor to the I-66 Steering Committee and the Southeast Missouri Regional Commercce & Growth Association with respect to the referenced I-66 project during the last two years.

The project encompasses some fourteen states and offers them the opportunity to work together in overlapping achievement of common regional economic and international trade goals. This twenty-four hundred mile transportation corridor can be conceived as multi-modal in nature, while incorporating forthcoming high technology components of Intelligent Vehicle Highway Systems (IVHS) to achieve maximum safety and flow efficiency. The cross-section associated with the alignment is that of high-type design standards which include a 200-300 foot right-of-way and local service frontage roads. The design speed is conceived at 70 miles per hour with grades and curves within acceptable standards. Originally conceived as two lanes in each direction, it may be developed as three lanes in each direction with one lane dedicated as an exclusive truck lane. Subgrade, subbase, pavements and related geometrics would be of design and depth to accommodate heavy weight trucks sanctioned in the 1992 Surface Transportation Assistance Act. The economic benefits of such operation have been thoroughly documented. In keeping with the potential for increased performance from our highways, the above cross-section may be moved to 400 feet in width with three lanes at 14 feet per lane, with an exclusive truck lane and design speeds in the 80 to 100 miles per hour range. This is

possible, though costly, to yield an "autobahn" performance level on some of our future highways. Much will depend on design standards foreseen by FHWA for post-interstate systems conceived to have major impact on national economic development.

AASHTO has predicted a doubling of national travel demand by year 2020. The presence of I-66 will reduce traffic on I-40 and I-70 by approximately one-third and yield a longer life of useful traffic flow for those facilities, in addition to reducing accident rates. Transcontinental travel time by truckers will be reduced by an equivalent of two to three days per month, yielding an annual savings for truck tractor unit of $7,000 per year. The direct linkage of east-west deep water ports to midwest railroads and gulf coast ports will allow this system to truly act as a "land bridge" which will increase tonnage across west coast deep water ports and allow the U.S. to become a true international trade clearinghouse, maximizing its infrastructure usage in a global resource sense.

Projections by our development economist indicate significant domestic economic impact resulting from the construction of this facility. Multiplier analysis indicates a positive impact of 346-367 billion dollars annually, due to the presence of this facility. This is truly a significant gain, and illustrates the benefit of adequate highway corridors to GNP.

We would propose the corridor be open to all possibilities for public-private partnership planning and financial participation, including toll roads, mixed public-private investment, and usage of new block grant and altered match ratio funding ultimately emanating from the 1992 Reauthorization Act. We argue that this facility is truly a corridor of National Significance, and propose it be included in the

network proposed by the 1992 Reauthorization Act and be conceived as a unique example of international trade, economic development, high technology and public-private partnership concepts developed in this legislation.

Testimony

of

John K. Leary Jr.
Executive Director
Bi-State Development Agency

before

Subcommittee on Surface Transportation
Public Works and Transportation Committee
U.S. House of Representatives

March 1, 1991

City of Crestwood, Missouri
City Hall

Statement of
Bi-State Development Agency

St. Louis, Missouri 63102-2595
(314) 982-1588

---

Hearing on the Surface Transportation
Assistance Act of 1991

---

Mister Chairman, my name is Jack Leary and I am the Executive Director of the Bi-State Development Agency in St. Louis. On behalf of the Bi-State Board of Commissioners, I would like to welcome the Committee to St. Louis and thank you for the opportunity to speak about our perspectives concerning the Administration's proposed bill reauthorizing the Surface Transportation Assistance Act.

With a $93 million budget, the Bi-State bus system provides almost 45 million passenger trips a year in the St. Louis metropolitan area. And, we currently have under construction Metro Link, the region's new 18 mile light rail system scheduled to begin revenue service in July, 1993 -- a $288 million investment which St. Louisans believe will play a key role in strengthening the growth and development of our region.

Because Bi-State currently derives about 12% of its operating revenue from federal sources, and because capital assistance for new equipment and construction of the Metro Link project are vital to our overall program, we have an overriding interest in seeing the federal commitment to public transportation not just maintained, but strengthened.

The proposed bill reauthorizing the Surface Transportation Assistance Act represents sweeping changes in the way in which transit and highway programs are funded. Some of these changes we view as positive. Many, unfortunately, we believe will be harmful in the long run to our nation's efforts meet the mobility needs of our urban areas and, more specifically, harmful to the public mass transit industry.

One positive aspect of the bill is the apparent end to a decade long effort on the part of the federal government to reduce investment in mass transit. Under the proposed bill, the Mass Transportation Administration's budget would actually increase slightly next year over the current level. For this, we lend our support.

Such a proposal is welcome news, particularly in this time of general concern with the economy, both nationally and in St. Louis. Since 1985, Bi-State has seen a decline in federal operating and capital assistance of 35%. Stability in funding and a true partnership between local and federal interests is what we seek.

However, while we applaud these moves, many of the provisions of the proposed legislative reauthorization bill concern us greatly and will have a substantial negative effect on our ability to maintain the present level and quality of service required to meet the needs of the citizens of St. Louis.

One aspect of the administration's bill we most vigorously oppose is the immediate elimination of operating assistance to areas of more than one million in population. Bi-State derives almost 15% of its operating income, or $10 million, from federal assistance. This loss in funding will certainly create a severe hardship for those in our community who are most dependent on public transportation.

Because we largely depend on tax revenues for income, the general economic downturn has already had a significant effect on our budget. This year, the economy and the fuel price increase caused by the instability in the Middle East has created a $3 million shortfall for Bi-State. And, next year, if we do not find additional sources of revenue, we are projecting a budget shortfall of approximately $8 million.

With the loss of federal operating assistance as proposed, our projected deficit for FY 1992 increases to a devastating $18 million.

Federal transportation policy which proposes to eliminate operating assistance for larger regions, like St. Louis, but allows smaller regions to retain funding is a blatant inconsistency in policy and discriminatory in practice.

The loss of operating funds is not our only concern, however. Under the proposed bill, the federal government's share of funding for capital grants decreases from the present 80 percent to 60 percent. This has the effect of doubling the local transit dollars required for purchase of needed capital equipment and vehicles at a time when transit agencies find themselves faced with serious budget deficits brought on by recession and previous cuts in federal aid.

Bi-State's program to replace our aging 10 year old fleet with newer vehicles will be significantly reduced with this new capital grant matching requirement. This current budget year we purchased 119 new buses, and next year we would order 69 additional vehicles. This level of capital acquisition will necessarily have to be reduced under the new program if we have no additional source of capital funding, affecting significantly the quality of service we are able to provide to our customers.

St. Louis is one of three regions with full-funding agreements receiving discretionary monies earmarked for new rail starts. Because of this, the reauthorization bill's changes with regard to new start funding are of grave concern to us also.

To complete construction on Metro Link's initial line, Bi-State needs $41 million dollars yet to be appropriated-- $16 million remaining on our full-funding contract and $25 million additional for an improved airport connection. Finishing the job on the initial segment and any future expansion of Metro Link will be much more difficult and expensive to accomplish given the doubling of local matching funds required from 25 percent to 50 percent.

This essentially means that the St. Louis region will be unable to continue its shift away from dependence on the energy consuming automobile to a more energy efficient mass transit option.

We believe the reauthorization bill, as it stands, will seriously damage Bi-State's ability to continue to provide services required to meet even the basic public transportation needs of the people of the St. Louis metropolitan region. With the elimination of operating assistance and the increased local capital dollar requirements, our ability to expand the role of transit in our area is severely undercut.

The new Surface Transportation Assistance Act, as proposed, shortchanges transit. Under the bill, the imbalance between highways and transit is perpetuated with a 40 percent increase in federal highway spending and a no-growth policy for mass transit.

The growth budget and more favorable matching ratios for highway programs is an indication that the federal government has yet to come to grips with putting together an integrated, balanced, multi-modal transportation assistance program which rationally reflects a sensible, national transportation policy.

National and local concerns with the need for energy conservation, congestion relief and improved air quality in our urban areas can all be addressed by an increased emphasis on public transportation. However, the future viability of our nation's transit programs is put in jeopardy with the provisions of the reauthorization bill as they stand. The bill sends a clear signal as to the priorities of the federal government-- and that signal heralds an abandonment of our urban and metropolitan areas.

Secretary Skinner, in his letter to House Speaker Thomas Foley transmitting the reauthorization bill, spoke about the biggest challenge for transportation in the coming decade being the provision of adequate resources to maintain and improve the national infrastructure.

In St. Louis, we believe that transit is a key component of that infrastructure. Unfortunately, under the provisions of the Surface Transportation Assistance Act, as proposed by the administration, we forsee serious difficulty maintaining and improving our public transportation system.

What we need is not a no-growth approach, but a bold, expanded federal emphasis on public transit. This reauthorization bill will set the course for national transportation policy into the 21st century.

There have been tremendous successes in many cities around the nation with the strengthening of public transportation-- but the job is not finished. Let's learn from and build on the successes to date and not abandon our program unfinished.

Thank you, Mr. Chairman, for the opportunity to provide this testimony on behalf of this most important issue.

**STATEMENT BEFORE THE**

**SUBCOMMITTEE ON SURFACE TRANSPORTATION**

**OF THE**

**HOUSE PUBLIC WORKS AND TRANSPORTATION COMMITTEE**

**by**

**WAYNE MURI**
**Chief Engineer**
**Missouri Highway and Transportation Department**

**March 1, 1991**

Mr. Chairman, my name is Wayne Muri, and I am the Chief Engineer of the Missouri Highway and Transportation Department. This is the most critical point in time in over twenty-five years for transportation in this country. This also is a period of great opportunity for the State of Missouri. For more than three years, we have been deeply involved in preparing for this chance to revise federal highway funding. Thanks for asking our opinion.

To be able to make a dramatic difference in Missouri's highway program is the opportunity of a generation. It is the first significant opportunity since the program began in the late 1950's under President Eisenhower. The new program will set the mold for many years in the future and absolutely dictates what happens in Missouri.

The existing program was based on building an interstate system for our country to enhance our military mobility. Today's efforts in the Middle East points out the importance

of that strategy. Over the years, the program has been very successful and our interstate has virtually been completed. We must maintain and enhance that system but that era is over, and we must move forward with a new strategy. That new strategy has been proposed as a result of over three years of intense effort and we are pleased that the administration has generally embraced the American Association of State Highway and Transportation Officials recommendations.

As Governor Ashcroft pointed out, Missouri was the first to begin construction of the interstate highway system and one of the first to complete our interstate system. As a result, over the past 20 years Missouri has been a loser under the existing program since the early 70s. In fact, we have lost over $700 million because of the makeup of the current formula for funding our nation's highways.

To make the new program more equitable two things must happen. Each state must receive a fair share of the highway monies, and the trust fund balances must be spent.

In Fiscal Year 1991, Congress increased highway spending to $14.5 billion. We commend you for this. However, balances are still accruing in the trust fund without authority being given to spend them. Trust fund dollars are paid in as a user fee and should be spent for their intended purpose -- our transportation system. As Governor Ashcroft pointed out, this can create more jobs and boost our lagging economy. Transportation moves more than people, it moves the economy.

Our own research shows if the funding formula is changed so each state receives a fair share of what it contributes to the trust fund, Missouri could stand to gain $100 million per year. If the formula is changed and the money in the highway trust fund is spent, Missouri could gain an additional $200 million per year. If the formula is changed, the money in the trust fund is spent and a portion of the recent five-cent fuel tax increase is applied to the highway trust fund, Missouri could gain an additional $300 million per year.

These dollars would take us a long way to meeting the $550 million per year in needs we have identified in our "10-Year Unfunded Needs Study" but cannot afford. It would also improve our deficient bridges and interstate pavements, which Missouri has more of than most states. This $550 million need is a bare bones analysis of our existing system and where we believe a $4 return can be realized on every $1 invested in needed improvements.

As you are well aware, Secretary Sam Skinner of the U.S. Department of Transportation released a plan for a new transportation program on February 13. I would like to address my comments now to that plan.

A key element of the plan is that it sets up a five year program. This is important to allow states to plan future transportation projects. The plan also increases the level of funding for the program although not to levels we had hoped or feel are achievable.

The structure of the program contains two components - a categorical program and flexible program. The categorical program includes a new system of highways called the "National Highway System." We believe this is important to complete a coordinated, interconnecting system of highways across the country. This also addresses the area of greatest need in Missouri and which is an extreme concern of your constituents.

The flexible program allows state and local governments to determine the best use of the federal funds. We applaud this change, for each state can then determine its own needs and how to best meet those needs.

The funding formula in the adminstration's plan is based on land area, public roads miles and the gallons of fuel taxed in a state. For a state such as Missouri, which has been receiving less than 85 cents for every $1 it has contributed to the trust fund, this formula is more equitable. Missouri is a crossroads of the nation, and our roads are used to connect the east to the west. The higher traffic volumes on our system require more funds to maintain our roads. Fuel consumption is the most accurate and verifiable way to measure the system use. Missouri ranks fourth among states in the amount of fuel used per vehicle. This new formula would allow Missouri to receive more of its share to maintain that system.

With a change in the program, for the first time in two decades Missouri will receive more of what it contributes to the trust fund. Governor Ashcroft points out that the administration's plan would increase the total federal funds

received in Missouri by $60 million next year. At the proposed Fiscal Year 1996 funding level of $20 billion in the administration's plan, federal funds coming to Missouri would be about $470 million, or $200 million more than the present share.

We will go along with the change in the matching ratios of federal and state dollars if federal fuel tax revenue is used for transportation. If the federal fuel tax is used for deficit reduction it would mean disaster for Missouri. If the federal government requires more state funds and then takes away the method of raising those funds, we would be left holding the bag.

We strongly feel the proposed administration takedown of the trust fund to complete the interstate should be opposed. The administration's proposed program would cost Missouri $60 million per year for the next five years. Any completions should be part of the standard apportionments for the National Highway System. The incomplete interstate segments remain for a reason. They are very costly and of marginal benefit when compared to costs. Expenditure of these funds at the option of the states on other non-interstate highways would produce much greater benefits.

We also object to inclusion in the formula of a low population density factor in the apportionment for the National Highway System. This is a double dipping issue because a land factor is already included.

We also object to the inability to transfer funds from the urban/rural program to the National Highway System. This is contradictory policy because it allows transfer in the opposite direction. This is not consistent with the national interest in a national system of highways nor with the states' interest in connecting with other states.

Also the next surface transportation act proposal changes funding for transit systems. The administration's plan proposes eliminating general fund support for mass transit. Although the plan's flexibility allows spending money on highways or mass transit or both, general fund support of transit systems must be continued in the next surface transportation act. We must have the proper mix of transportation modes and that can never happen if funds can be taken from the pockets of our transportation users and put in another pocket.

A new surface transportation program is the key to the future of transportation in America and to future economic growth. To insure a smooth transition from our current transportation program to a new transportation program, it is imperative that Congress act quickly to pass a new act before the September 30 deadline. Without direction from Congress, states will be unable to plan for the future of their transportation programs.

Our future is in your hands because transportation is the key to our economic survival. There is no rationale for Missouri to receive less federal help. Missouri cannot meet its needs if we don't receive a share of federal dollars that approaches the amount Missourians send to Washington.

Testimony before the
**Subcommittee on Surface Transportation**
**March 1, 1991**
Saint Louis, Missouri
By
**R. Roger Pryor**
**Executive Director**
**Missouri Coalition for the Environment**
6267 Delmar, St. Louis, MO 63130

Chairman Mineta and members of the Subcommittee on Surface Transportation, I appreciate this opportunity to appear before you today to comment on our nation's highway and transit priorities. I also want to thank Congressman Dick Gephardt for extending his personal invitation to me to address you today.

My name is Roger Pryor and I live in the City of St. Louis. It is my privilege to serve as executive director for the Missouri Coalition for the Environment, a 28,000-member, statewide citizens group founded in 1969. In the brief time we have today, I want to address what I believe to be the major problems facing our national surface transportation policies, and I want to illustrate these problems by commenting on the proposed Page Avenue bridge and highway project.

We are all relieved that the war in the Persian Gulf appears to be winding down; and while many issues confront that part of the world and have been contributory to the conflict, no one can deny that United States' dependence on Middle East oil has been a major factor. Our surface transportation policy which has been dominated since the end of World War II by the private automobile is, of course, a root cause of that dependence. As sad as this war has been, if we do not use this occasion to rethink our national transportation and energy policies, the recent tragedies and sacrifices will only be rendered more meaningless. Incredibly, the priorities of the Bush Administration for transportation and energy seem to have been time-warped from the 1950s, reflecting none of the understanding that our nation has gained about the environment, energy use, traffic gridlock, and suburban sprawl in the last two decades.

Our transportation morass was summed up well by Henry Allen of the Washinton Post:

"When did driving a car turn into such an indignity, such an ordeal? When did you first notice that half the traffic jams you crawled through had no apparent cause whatsoever? When did you start asking, over and over: 'Where the hell are all these people going?'

"What was the first Saturday you decided to drive to that new mall 30 miles down the interstate and buy a bookcase, and the road was jammed, the wise guys weaving in and out, trucks moaning and slobbering 11 feet behind you, a feeling that you were not so much driving as being driven, trapped and out of control at the same time, like having a heart attack in the middle of a prison riot?

- more -

"When did you start getting out of the car with an adrenalin hangover, a kind of smoggy tingle in your body that lingers for hours?

"When did you start looking at your suburban dream of a house and wondering if it was worth the driving you have to do?

"Something has changed."

[Washington Post National Weekly Edition, Dec. 31, 1990 - Jan. 6, 1991]

Allen goes on to write about the so-called Q/K curve that traffic engineers use to describe traffic jams which seem to happen **for no visible reason**. In other words -- too many cars trying to go to the same destination at the same time! With enough automobiles in our country to provide one per adult, no amount of new road construction (i.e. increase capacity) will keep pace for long. Highway engineers have, instead, resorted to building for excess capacity -- redesigning our existing highways to carry loads for which they were never intended. Interstate 270 in western St. Louis County is a good example. Originally designed as our metro area's westernmost circumferential highway of four lanes, it now serves as a north-south conveyor of 8 lanes or more with nearly as many rush-hour trips moving east-west as there are moving west-east.

The only sound way to design for excess capacity is to look inside our automobiles, not outside. The average car carries 1.2 people. If that number were raised to just 1.7 people per car, most of our gridlock traffic jams would be history. Not to mention the resulting reduction in pollution emissions, fuel savings and traffic accidents. Incentives for car and van pools must be found: they can run the gamut from reduced parking charges for pool vehicles to tax incentives for employer-provided free parking only for pool vehicles to highway design features such as High Occupancy Vehicle (HOV) lanes.

Just consider pollution effects. In data released by the American Public Transit Association, emissions per 100 passenger miles for van pools, car pools and single-occupant cars were compared along with several forms of public transport:

**Pollution Emitted from Urban Transport Modes, for Typical Work Commutes, United States**

| Mode | Hydrocarbons | Carbon Monoxide | Nitrogen Oxides |
|---|---|---|---|
| | (grams per 100 passenger miles) | | |
| Rapid Rail | 0.3 | 2 | 49 |
| Light Rail | 0.4 | 3 | 69 |
| Transit Bus | 20 | 305 | 154 |
| Van Pool | 36 | 242 | 38 |
| Car Pool | 70 | 502 | 69 |
| Auto (one occupant) | 209 | 1,506 | 206 |

[Source: "Mass Transit: The Clean Air Alternative," 1989, APTA]

As environmentalists, we support mass transit as an even better way to handle excess capacity than vehicle pooling. Public transport has the additional advantage of not requiring the dedication of so much land for parking lots and garages. Of course, mass transit has a tough way to go -- primarily because of the very nature of our sprawling metropolitan areas. And the nature of commuting has changed as well. Many more people now commute between suburbs than between suburbs and central cities. Researchers at Australia's Murdoch University have demonstrated a sad irony; namely, that those cities with the least sprawl are best able to promote alternatives to driving. Looking at 32 cities worldwide, they found that low urban densities (measured by the number of people and jobs per acre of land) and auto dependence generally go hand-in-hand.

Public subsidies of mass transit often come under criticism -- our local Bi-State bus system certainly gets its share, and the cost of providing public transport is, understandably, the overriding factor in a government's decision when picking from transportation options.

Marcia Lowe, in her study Alternatives to the Automobile: Transport for Livable Cities [Worldwatch Paper 98], points out that comparison of costs of providing train and bus service to those for private automobile travel is a complex task. To be fair, the comparison must include the full costs of both systems -- including environmental costs and the social consequences. "Drivers would find public transit more attractive if they kept the full costs of automobile transport in mind. Few U.S. drivers realize that, including fuel, maintenance, insurance, depreciation and finance charges on their cars, they pay $34 for every 100 miles of driving. On a yearly basis, it costs the average solo commuter nearly $1,700 just to get to work. By contrast, the average public transport fare is $14 per 100 miles."

If we are to ever break out of the current transportation mess, a policy overhaul will be needed. Lowe suggests that the surest way to lessen over-dependence on cars is to force drivers to bear more of the true costs of driving: "So long as automobile owners are showered with inducemrents, such as free parking and government-subsidized roads, they will stay in their cars, leaving trains, buses and bike paths empty. This is a vicious cycle, since planners are unlikely to invest in transport alternatives when existing systems are underutilized."

Here are a few suggestions that would help overhaul our current policy:

1. Bring to light the hidden costs of driving -- such as air pollution, municipal services (such as police and ambulance services), road construction and repair, and employer-provided free parking (a tax-free fringe benefit).

2. Increase the gasoline tax at least $1 per gallon, making drivers pay more of the costs they impose on society. Increasing taxes on new cars and annual registration fees also makes sense, especially if these taxes and fees are based on such things as emissions and/or fuel efficiency. Some of these revenues should be dedicated to public transport, cycling and even pedestrian facilities.

- more -

3. Effective land-use planning is a key to a viable new transportation system. Cooperative approaches between municipalities and private land developers could be made to work for public transit just as it has been made to work against it. Zoning and financial incentives can be used to cluster homes, jobs, and services along public transport corridors.

The biggest obstacle to rethinking our transportation is overcoming the powerful road lobbies made up of the oil companies, car makers, highway builders, land developers and other interests that pressure government to favor the automobile. That power is no place more evident than with the proposed highway extension and new bridge to carry Page Avenue in western St. Louis County across the Missouri River into St. Charles County.

You have probably already heard about this project from some of the elected officials appearing before you today. It is a classic highway planning boondoggle -- it is being offered as a solution to the rush hour gridlock of traffic trying to move between these two counties. Yet, even the state highway department admits in the DEIS issued last summer that traffic levels on the new route will quickly exceed capacity without abating the jams on the existing two major commute routes (Interstates 64 and 70) or another new bridge further north (Route 115).

With the new census figures in, the St. Louis SMSA has essentially the same population it did 20 years ago -- except now it has sprawled out to the edges of the metro area with St. Charles County experiencing the most rapid growth. So, we are now being asked to subsidize more and more infrastructure for the same number of people while services in the central city and older suburbs continue to deteriorate. St. Charles County has no public transport, nor will they ever get any as long as federal and state taxes continue to support its dependence on the automobile. Our state highway department refuses to seriously look at such things as HOV lanes on the present bridges and roads.

This Page Avenue project will have serious social consequences and tremendous environmental impacts. It will bisect a major county park developed with federal funds, it will destroy directly or indirectly valuable wetlands, lead to the loss of prime farm land and development of floodplains, contribute to the air pollution of a non-attainment area -- and only stimulate more traffic congestion. It should not surprise you to learn that this project (in its present alignment) is opposed by both the U. S. Department of the Interior and the Missouri Department of Natural Resources. Every environmental group in the St. Louis area has spoken out against this project, and most are already committed to exhaust every remedy available to us stop this absurdity.

From a national point of view, Page Avenue is just one of many such projects -- designed by a planning mentality that is decades behind in its thinking, funded by a government locked into an outmoded transportation policy, and spurred on by a rapacious road lobby. But, if this Subcommittee wants to examine our transportation priorities in a microcosm, no better bad example could be found.

Thank you for the opportunity to address you toady.

STATEMENT BY
HON. VINCENT C. SCHOEMEHL, JR.
BEFORE THE
HOUSE PUBLIC WORKS SURFACE TRANSPORTATION SUBCOMMITTEE
MARCH 1, 1991

Mr. Chairman, members of the Committee, thank you very much for the invitation to appear before you today. It is a pleasure to welcome you to St. Louis, and I want to express my appreciation to you and to Congressman Gephardt for arranging this field hearing. St. Louis, already well-known as the Gateway to the West, is in fact the crossroads for much of the nation's transportation system. Continued reinvestment, renewal and modernization of that system are critical to the economic health of our region and to the nation as a whole.

Therefore, we are vitally interested in the federal programs and policies relating to our surface transportation infrastructure and operations. While we are still in the process of completing a comprehensive evaluation of the very recently released Bush Administration proposal, we already have numerous comments and concerns about it based on our work so far. These are included in my written testimony, submitted in advance to your Committee. Most may be summarized, however, into several broad categories, which I will take just a few minutes to highlight this morning.

We do not believe that the Administration proposal truly provides either a "new vision for the coming generation of surface transportation" (as stated recently by Secretary Skinner) or

adequate and equitable funding to carry it out. Rather, it fosters and in many cases exacerbates inequities in programming and funding among surface modes and between urban and rural areas. Further, it appears in many instances to be completely inconsistent with national goals recently established under the new Clean Air Act and with a thoughtful and reasonable national energy policy.

Examples include the much-vaunted new "flexibility" in highway and transit programs. While funding for both transit programs and the proposed Urban/Rural program may in theory be allocated for either highway or transit needs, both programs are underfunded. The bulk of federal funding will go to the proposed "National Highway System", where most funds will not be transferable and where federal financial participation will be significantly higher. Amtrak's rail passenger system, an increasingly important means of intercity travel in some of the nation's most congested travel corridors, will suffer significant funding reductions. Federal participation in Amtrak's popular 403(b) program would be eliminated altogether, at a time when ridership is steadily increasing and costs are steadily diminishing. Without 403(b), St. Louis will lose train service twice daily to Kansas City and twice daily to Chicago. At a time when the Persian Gulf crisis has demonstrated to every American the importance of achieving energy independence, this assault on energy-efficient, environmentally-sound rail service seems particularly short-sighted.

Public transportation in larger metropolitan areas like St. Louis is once again under attack--another example of the program's inequities and inconsistencies with energy and environmental policies. The elimination of federal operating assistance for metropolitan areas of over one million population, the reduction in federal share for capital projects--especially for new rail starts--and the closing off of general revenue for public transportation expenditures are simply unacceptable. While overall levels of authorization are slightly increased, the thinking behind the "planned obsolescence", if you will, of these funding levels at the end of five years leaves us deeply troubled about the real nature of the federal commitment to public transportation in urban areas.

We hope that you will examine closely the ways in which project priorities will be set and funding allocations made under the proposed Urban/Rural program, which will consolidate a number of today's separate categories. It is difficult to imagine that anything will be gained by pitting a state's urban and rural areas against one another in a competition for scarce funds. Rather, the program should provide a proper framework within which all parties may participate in the development of comprehensive state-wide plans. As part of the program framework, we strongly urge the Committee to go beyond the Administration's loose language about "fair and equitable" allocations and establish standards for allocation between rural

and urban projects and for substate/regional areas. We further urge the Committee to increase the federal share for the Urban/Rural program to 75% and to continue the rail/highway crossing safety program.

We share Secretary Skinner's conviction that the competitiveness of the U.S. economy in the global marketplace is linked to the efficiency of our transportation system. In this regard, however, it appears to us that under the Administration proposal, our nation will continue to fall behind in providing for high-speed ground transportation. While the Europeans and Japanese are implementing increasingly fast, efficient, comfortable systems, this legislation provides only minimal research dollars for a single technology, magnetic levitation. We should by all means increase our R & D commitment to maglev. In addition, however, we should be providing funds for actual applications of high-speed ground transportation systems in selected travel corridors across the country. Such a program will address a variety of important national goals--energy efficiency, environmental quality, alleviation of airway and roadway congestion, and job creation.

Before I conclude, let me mention just a few of the critically important transportation projects vital to our community over the next five years. You are aware, I am sure, of our commitment to expand and modernize Lambert-St. Louis

International Airport, at a cost of approximately $1.3 billion. The process to carry out this program is well underway. In order for us to stay on target, we need your help with rerouting and depressing Lindbergh Boulevard, allowing for a new runway and associated taxi-ways to be located on top. The cost for this project is $20 million, with a federal share estimated at 75%, or $15 million. Also critical to Lambert's expansion is the relocation of a half-mile section of Interstate 70 to make room for the clear zone of a second runway and new terminal facilities. The cost for this relocation will be approximately $28 million, with a federal share of $22 million. The airport itself will be covering another $45 million in costs associated with this I-70 relocation.

I mentioned our very serious Mississippi River Bridge capacity problems earlier in my testimony. Most urgent for us at present is the need to resurface the Eads Bridge, a National Historic Landmark. Funding for rehabilitation of the bridge structure and its rail deck is already committed as part of the St. Louis Area Metro Link light rail transit project, and work will begin late this spring. Major cost savings in rehabilitating the automobile deck above can be realized if the work can be timed to coincide with the planned light rail construction, and costly future interference with rail transit operations can be avoided. We estimate the cost of this important multi-modal project at about $15 million.

Last, let me commend to you our proposed multi-modal station project, which will provide at long last a permanent home for Amtrak in downtown St. Louis and allow, for the first time, direct interface among Amtrak, light rail urban transit, and Greyhound intercity bus service. This proposed St. Louis Regional Transportation Center will also allow travelers to access numerous city bus lines, park on the downtown periphery and reach locations in the core via light rail transit, and travel directly to Lambert-St. Louis International Airport by light rail transit. In addition, a nearly-completed FAA study assessing the need for and feasibility of a downtown heliport has identified the site as ideal for such a purpose. The facility will include a complete range of support concessions as well. We hope that you and your colleagues will agree that this proposal provides an excellent example of the benefits of intermodalism and that it is worthy of federal support.

Again, my sincere thanks for coming to St. Louis and inviting me to address you today.

ADDITIONAL COMMENTS

The following items are, in some cases, further elaboration of issues raised in my oral testimony. In other instances, they deal with issues omitted from my oral testimony solely in the interest of time.

1. Bridge Program

We strongly support the continuation of the bridge program, both formula and discretionary. As you may be aware, our bridges here in the State of Missouri are rated worst in the nation. In general we agree with the intent of the Administration proposal to place a higher priority on bridge replacement and rehabilitation. Especially because our bridges are so poorly rated, however, there are a number of instances where new bridge construction, especially in urban areas, is absolutely required, and we would like to see such projects made eligible under this program.

2. National Highway System

As may be inferred from my oral testimony, we are very concerned about the dearth of National Highway System mileage allocated to the City of Saint Louis. Not only additional Mississippi River bridges, but several high-capacity routes within the City limits should qualify as of national significance. The funding focus on the National System makes additions for the City all the more important.

Modal funding flexibility should be a part of the National Highway System program. A progressive approach to providing capacity in the nation's densely traveled corridors should include and encourage the option of instituting or expanding rail service, whether conventional or high-speed. Additional incentives should be provided for transportation systems management applications, such as high-occupancy vehicle lanes, on those portions of the system serving a large volume of urban/suburban commuters.

3. Mass Transportation

Local shares for capital grants should be held at today's levels. Urban transit authorities are reeling under the impact of recent drastic diesel fuel price increases. The recently-enacted Americans with Disabilities Act is resulting in cost increases for transit operators. Clean Air Act requirements and sound energy policies will dictate the need to stabilize and promote our urban public transportation networks. Now is hardly the time to reduce federal support for capital investment in public transportation.

New rail starts should be promoted as part of the nation's effort to harmonize our mobility, energy and environmental goals. There is no justification for singling out new rail starts for lower levels of federal investment.

Federal operating assistance, far from being decreased, should at a minimum be held constant, and a strong case can be made for its increase. Many of the factors contributing to increased public transit operating costs may be easily traced the growing number of requirements imposed by federal law, mandating that transit operators assume increased responsibility in meeting the social and environmental goals of our society. We support these goals, but we believe that those asked to shoulder them should be given the funds they need to carry out the mission.

4. Funding Formula Allocations

We are pleased to learn that it is likely the State of Missouri will fare better on distribution of transportation tax dollars under the proposed new allocation formula. At the same time, however, we must express some reservation with the underlying "consumption" basis for it. A formula that rewards states for consuming more fuel is yet another example of how the Administration proposal is not consistent with federal law and national goals in the areas of conservation and environmental equality. As has been noted by a number of commentators, states that take steps through higher gasoline taxes, improved vehicle occupancies, improved public transportation systems, or better land use planning to reduce fuel consumption will be penalized through the loss of highway funding.

---

Hearing on Reauthorization of the Post-Interstate
Surface Transportation Programs

---

Eugene C. Schwendemann
Presiding Commissioner

---

March 1, 1991

---

Mr. Chairman, Committee members, Committee staff, my name is Eugene C. Schwendemann. I am the Presiding Commissioner of St. Charles County, Missouri. St. Charles County is located

approximately 25 miles west of St. Louis, and has a population of approximately 212,000 residents. St. Charles County has, over the past ten years, experienced unprecedented growth and is one of the fastest growing counties in the nation.

Today many of America's cities are experiencing rapid growth, and most welcome the prosperity and the opportunities and challenges that accompany an explosion in population growth along with growth in the business sector. We believe the quality of life in St. Charles County will benefit as a result of the growth presently being experienced. However, we also believe that particular consideration should be given to developing a Post-Interstate Surface Transportation Assistance Act that will address the needs of states with rapidly growing areas, such as St. Charles County.

Specifically, rapidly growing areas such as St. Charles County would benefit from a program that would address the need to relieve gridlock traffic conditions. Traffic relief would provide for an enhanced quality of life for our residents, and would allow economic development activity in the community to continue. We believe that Interstate relievers must be a priority in the new Act.

(2)

45-155 O—91——6

Furthermore, states with rapidly growing areas such as St. Charles County would benefit from a bridge program that not only allows for bridge replacements but that also would allow for the construction of new bridges.

Particular consideration, we believe, should also be given to a rural bridge program. We would like to urge that such a program be adequately funded and that Federal requirements be less stringent.

Although we are not strong advocates of Federal-aid toll authorization, we believe with the limited resources that may be available to the states, perhaps this should be an option.

We firmly believe that there must be a spend down of the surplus in the Highway Trust Fund. We are convinced that utilization of trust funds would go a long way toward addressing infrastructure needs of states and communities with various needs.

The continuation of the Revolving Fund Loan Program, we are convinced, is critically important to high growth areas seeking

to preserve corridors from development for future proposed highways. The State of Missouri has taken advantage of this program on behalf of St. Charles County. We believe the interest free program should be continued.

I understand that others will speak on the need to properly fund regional mass transit studies, capital expenditure of regional mass transit systems and operating subsidies for regional mass transit systems. St. Charles County is seeking to advance an Alternatives Analysis Light Rail Feasibility Study. If feasible, we would expect to participate as a local sponsor. However, without adequate Federal assistance advancing such a project would be difficult.

Finally, we would like to urge that Missouri receive its fair share of Federal highway funds. Under the present formula Missouri receives only approximately 85 cents back for every dollar sent to Washington, DC. We would also like to urge that any future proposals to increase the Federal gasoline tax allow for such funds to be utilized for transportation only, rather than for deficit reduction, and that there be greater flexibility in the transportation programs.

Thank you, Mr. Chairman, for the opportunity to provide testimony on behalf of programs which we are convinced will assist states such as Missouri, and high growth areas such as St. Charles County with its transportation needs.

Testimony

Citizens for Modern Transit
Thomas R. Shrout, Jr.
Executive Director

House Subcommittee for Surface Transportation
Chairman Norman Mineta

March 1, 1991

Mr. Chairman, members of the committee: my name is Thomas R. Shrout and I am the executive director of Citizens for Modern Transit, an organization of about 1,000 businesses, labor unions, educators, and concerned citizens who have worked for the establishment of a light rail system in St. Louis.

Since our formation in 1985, we have done a number of things including organizing for our membership and community leaders, tours of other cities with light rail. Mr. Chairman, among the cities we visited was San Jose' in 1987. I would like to congratulate you on the fine light rail system in San Jose'. Our trip to San Jose'--and other trips to Portland and San Diego--were instrumental in educating the citizens of St. Louis about the benefits light rail offers our city.

We have our first 18-mile light rail line under construction. And, we have identified seven additional lines that would give this two-state metropolitan region of 2.5 million people a badly needed, first class transit system that would be impossible to duplicate with unbridled road building.

Mr. Chairman, the public is wanting a balanced transportation system in this country and I fear the President's budget is behind the curve in the thinking of the American people.

Americans have demonstrated their willingness to ride modern rail transit systems, yet the President's bill discourages the building and expansion of these systems. Americans want clean air, less dependency on foreign oil, a rebirth of her cities, reduced congestion, contained urban sprawl--all benefits offered by rail transit--yet this bill promotes highway building and discourages energy-efficient Amtrak and transit.

It is imperative that the federal government maintain operating assistance for transit. We support the testimony by the Bi-State Development Agency concerning operating assistance.

I would like to briefly mention Missouri's participation in the 403 (b) program for our support of our two daily Amtrak trains between Kansas City and St. Louis. Since 1985, increased ridership and reduced AMTRAK operating costs have resulted in a reduced state subsidy of this service each year. At a time when we feel an additional train between Kansas City and St. Louis should be added and could result in an exponential increase in patronage and a further reduction in subsidy, the President is proposing to reduce the federal share in 403 (b) programs, jeopardizing the current program plus killing any chance of expanding this clean, efficient form of transportation.

On another topic, the Department of Transportation has formed and inter-modal task force, but there appears to be nothing in the act to assist local and state government in implementing this worthwhile strategy. I will submit separate testimony which outlines a plan for a St. Louis Inter-Modal Transportation Center that would combine a new station on our new light rail line, a sorely needed Amtrak facility, an inter-city bus depot, a parking garage peripheral to downtown, a heliport, taxi stand and city bus stop all in one facility. The center would be strategically located near two interstate highways.

The Inter-Modal Transportation Center is an excellent candidate for a demonstration project. The Center would promote ridership among all the affected modes and be a model for other cities to emulate.

Other examples where inter-modal cooperation should be considered at the federal level include the building of a new bridge across the Missouri River between St. Charles and St. Louis Counties. Federal matching funds should encourage the Page Avenue Bridge to be light rail ready to accommodate the inevitable extension of light rail into that suburban community. Likewise, federal support of highway capacity increases in the region should provide for both highway and future light rail right-of-way acquisition.

In closing we would hope that the Congress would substantially rewrite this bill and in doing so embrace a set of principals about which we believe there is broad agreement in this country. Those principles are: reduced dependency on foreign oil; increased support for transportation modes that help cities achieve clean air goals; reduced congestion; and an enhanced quality of life through increased access to jobs, housing, safety, and community and neighborhood revitalization.

Thank you, Mr. Chairman for this opportunity to share these thoughts.

United States House of Representatives

March 1, 1991

St. Louis, Missouri

TESTIMONY OF LES STERMAN,
EXECUTIVE DIRECTOR, EAST-WEST GATEWAY COORDINATING COUNCIL

BEFORE THE HOUSE PUBLIC WORKS COMMITTEE
SURFACE TRANSPORTATION SUBCOMMITTEE

ST. LOUIS, MISSOURI
MARCH 1, 1991

Mr. Chairman and members of the committee. My name is Les Sterman. I am Executive Director of the East-West Gateway Coordinating Council. East-West Gateway is the Council of Governments and Metropolitan Planning Organization for the St. Louis, Missouri-Illinois Metropolitan Region.

As a region known as the "Gateway to the West" and one of the nation's primary transportation hubs, federal transportation policy is of critical importance to the St. Louis economy. As a region faced with growing traffic congestion, increasing travel costs, substandard air quality and declining mobility for the poor, elderly and handicapped we are typical of many major metropolitan regions. The issues raised in my testimony will likely be echoed in some form in urban areas across the nation.

The importance of the metropolitan regions to the nation's economy has been well documented. Fully 77 percent of the country's population and 79 percent of all jobs are located in metropolitan areas. The health of the U.S. economy is directly related to the prosperity of these urban centers.

The economic health of the country's urban areas is not a purely local matter. The federal government should be a reliable partner in providing both adequate financial resources and consistent policies which will lead to cost-effective transportation investments and rational economic growth in metropolitan areas. We feel that the Administration's National Transportation Policy and the recently proposed surface transportation reauthorization bill, while striking many of the right themes and offering the hope of greater funding, effectively diminish the federal commitment to the nation's large metropolitan regions. While the increases in funding for the program are significant -- nearly 40% -- over five years, the vast majority of those

funds will be spent on a national highway system that is focused on inter-urban, intra-state and interstate travel.

We favor a federal transportation program which implicitly recognizes the critical role of metropolitan regions and allows local governments full and meaningful participation in decision-making and an equitable share of available funds. The Administration's proposed transportation reauthorization bill falls considerably short of this goal. The consolidation of urban and rural programs, the increased local cost shares, the lack of substate funding allocations, the elimination of transit operating funds, and the diminished role of local officials in decision-making, all conspire to put large urban areas at great disadvantage. The non-uniform matching ratios will perpetuate or exaggerate the biases and inequities in existing transportation programs. Further, the policies implied by this proposed legislation are inconsistent with sound energy policy and rational approaches to the increasing problems of urban traffic congestion, mobility and clean air.

The bill does not promote balance between modes, nor equity in the federal-state-local partnership. It represents a disinvestment in the nation's transit systems at a time when transit will be increasingly important in meeting critical national and local goals and it relegates local officials to the sidelines when they are being asked to shoulder a greater share of the financial burden of building highways and operating transit systems.

As the Committee reviews the Administration bill and develops its own proposal, we would ask that the following provisions be considered:

1. Allocations of highway funds between states should be equitable but not based on consumption factors such as vehicle-miles of travel. We particularly support the efforts of the state of Missouri to increase its allocation, but this should be done in a way which does not penalize energy conservation efforts.

2. Provide separate, non-competing, urban and rural highway programs.

3. Consolidate existing categorical highway programs into four formula programs: Interstate Preservation; Strategic Metropolitan Program; Rural/Interregional

Program; and Bridge Program (including both repair and new bridges for congestion relief).

4. Provide equitable allocation of funds to metropolitan areas through a formula or through assured, equitable, substate distributions.

5. Other than for the Interstate System, equalize the local share requirement across all highway and transit capital programs to encourage balance among modes, between geographic areas and across program types.

6. Plans developed at the metropolitan level and adopted by local officials acting through a Metropolitan Planning Organization (such as a "Congestion Management Plan," or transportation control measures to improve air quality) should drive project initiation and funding decisions.

7. Provide for the continuation of transit operating assistance, bus capital assistance and new-start rail projects. Because the transit program will contribute to meeting other national goals such as clean air, it should not be entirely trust fund financed.

8. Provide equivalent crossmodal funding capability to both the highway and transit programs.

We fully understand the need for this legislation to address many competing interests and needs. Even with increased funding, federal transportation programs will fall far short of meeting accelerating local needs. Local officials are under great pressure to accommodate growing highway congestion, tightening transit operating budgets, an increasing number of national policies and local interests with fewer dollars to spend. As the Committee crafts this legislation, we can only ask that all programs be subject to tests of balance, equity and consistency. We ask that there be balance among modes and programs, equity among states, rural and metropolitan areas, and consistency among policies and programs.

Thank you, Mr. Chairman, for allowing us to offer these views.

**STATEMENT**
**ON**
**SURFACE TRANSPORTATION ASSISTANCE ACT OF 1991**
**BEFORE THE**
**SUBCOMMITTEE ON SURFACE TRANSPORTATION**
**BY**
**BOB SWEARINGEN**
**VICE CHAIRMAN, TRANSPORTATION**
**ST. LOUIS REGIONAL COMMERCE AND GROWTH ASSOCIATION**

March 1, 1991

Mr. Chairman, committee members, ladies and gentlemen, my name is Bob Swearingen, President of Maritz Travel and I am here on behalf of the St. Louis Regional Commerce and Growth Association, also known as the RCGA.

The RCGA is a not-for-profit membership organization representing the St. Louis Metropolitan region: The City of St. Louis, The Missouri counties of St. Louis, St. Charles, Franklin and Jefferson and the Illinois counties of St. Clair, Madison, Monroe, Clinton and Jersey. The RCGA promotes the economic welfare and quality of life of its community. The RCGA membership consists of 4,700 members, which includes labor and businesses, small and large, and through cooperation seeks more jobs and increased prosperity for the region's 2.4 million residents. Transportation is a vital element to the success of our region's economy.

I would personally like to thank all of you for coming to St. Louis and giving us the opportunity to discuss what we feel are important factors concerning transportation for the St. Louis region. My comments will not only be directed towards the St. Louis region but will also be aimed at other metropolitan areas across the country.

I commend the Administration for its efforts in redefining the needs of surface transportation. Our country's needs concerning transportation have changed over the last five years and will continue to change, as roads continue to deteriorate; bridges are not safe to travel over and congestion in urban areas causes more pollution and traffic delays.

Transportation is a vital element to not only our region's economy but our nation's economy. The State of Missouri is unique because of its location directly in the middle of our great country. What this means though, is if you are using surface transportation going from the west to the east or vice versa, there is a good likelihood that you may travel through St. Louis. Likewise, if you are going from the north to the south or vice versa, you will also travel through St. Louis. Maintenance of our highways and bridges is of vital importance to our nation. Unfortunately, the current funding formula does not reflect Missouri's needs. In fact, Missouri has been a loser for quite a few years. For every dollar we send to Washington, we get less than 85 cents back. The RCGA commends and supports the Federal Highway Administration's proposed new formula, which bases fund distribution on the following points: 10 percent for land area; 20 percent for public roads; and 70 percent for number of gallons of motor fuel taxed. The new formula does and must consider the amount of miles driven or likewise, the number of gallons of motor fuel taxed within that state. Missouri ranks 4th nationally in the

amount of miles driven within the state and yet under the current formula, we are a minimal allocation state. The State of Missouri has been a loser and it is time now for our federal government to make a committment to maintain our current infrastructure. Again, the RCGA commends the Administration's proposed new funding formula and we would encourage this committee's support. It is important that Missouri and Illinois receive its fair share.

The RCGA would like to see the continuation of the use of funding from the general fund for transportation needs. The user's tax is great in theory but everyone benefits from a good transportation system, not just those individuals who use surface transportation. After all, the United States mail system is a direct result of a good surface transportation system. The RCGA encourages the committee's support to leave the flexibility of using the general fund upon all elected officials in Congress.

The RCGA has some serious concerns over the Administration's proposed reduction of the federal share on "new start" rail projects and the reduction of the federal share towards capital projects. The RCGA agrees with Secretary Skinner's comments in his letter dated February 13, 1991, to Vice President Dan Quayle concerning the draft of this bill. Secretary Skinner says "The biggest challenge for transportation in the

coming decade is to provide adequate resources to maintain and improve national infrastructure and to expend these resources for maximum benefit." Secretary Skinner goes on to say " We must provide flexibility in our Federal Transportation programs to allow State and local governments to make more efficient use of scarce resources and make environmentally sound transportation decisions." Reducing the federal governments financial support on capitol projects and "new start" rail projects inhibits the states flexibility and could cause the proposed project to be financially not feasible. The St. Louis region desperately needs a new bridge over the Mississippi River for transportation to and from Missouri and Illinois. This new bridge would help alieviate congestion problems and traffic delays and would be a very environmentally sound transportation decision. The RCGA is also developing other environmentally sound programs. St. Louisians want clean air, and to be less dependent on foreign oil. We are fortunate to have begun the development of our first 18 miles of light rail. Unfortunately, the proposed matching ratio for any new extension to light rail would be a 50 percent match.

The Missouri Highway and Transportation Department's 10-year Unfunded Needs Study has outlined $5.8 billion in highway work that needs to be done, but for which there is no money. With these unfunded highway needs and a proposed 50 percent match by the federal government for "new start"

rail projects.... light rail and public transit will be doomed before we reach the next century.

Public transit has played a vital role in transportation for urban areas and will continue to play even a more essential role as communities try to deal with congestion, lack of parking spaces, and pollution. The Administration's proposal to eliminate operating assistance for populations over 1 million would have a negative affect on public transit in St. Louis. The RCGA encourages this committee to look favorably upon continue operating assistance for all public transit.

Mr. Chairman, members of the committee, you have been very kind in giving the RCGA the opportunity to express our feelings on surface transportation. You all have a very important responsibility ahead of you. The United States successes economically, are a direct result of our good transportation system you have provided us. I wish you well as you prepare us for the next century. If anyone has any questions, I would be happy to address them. Again, thank you very much.

1178G

Missouri State Representative Larry Thomason, 163rd District representing parts of Dunklin and Butler Counties.

Prior to becoming a state representative I spent six years as a director of the Kennett Chamber of Commerce. In that position my primary responsibility was as an economic developer for the area.

I am here today to bring to your attention Federal Highway 412. This highway begins in Jackson, Tennessee, crosses the Missouri Bootheel and continues to Walnut Ridge, Arkansas. Currently the section in Tennessee has been upgraded to an improved four-lane for approximately one-third of its length. The remaining two-thirds is either under construction or in the bidding phase. In Arkansas, upgrading to improved four-lane is in the planning stage for the section between the Missouri state line and the city of Paragould. The upgrading of the remaing portion is in the study phase.

This highway crosses the Mississippi River on a modern, four-lane bridge. The first eight miles of this route is a four-lane section, which links with Interstate 55. Highway 412 is the major East-West link connecting Interstates 40 and 55 and Highways 51 and 30 which are improved four-lane highways.

Highway 412 is important to the area for many reasons.

First, it crosses the Mississippi Delta which has the highest concentration of poverty in the United States. Many in the Delta are working hard to bring new jobs and opportunity to the area but are hampered in their efforts because of lack of adequate transportation access. Industry, when surveyed, list access to a four-lane highway as the most important criteria in choosing an expansion location. More parochially, existing industry in the Bootheel explain they are more likely to expand their current operations if transportation were improved. The way to solve the poverty problem in the Delta is not through transfer payments or other

government handouts. The way to solve the poverty problem is through providing increased job opportunities. Improving Highway 412 would be a major tool in providing new jobs.

There are several other reasons for improving this roadway, but I would like to mention what I consider to be the least obvious but possibly the most important. The Bootheel is an area awaiting a disaster. Buried beneath our fertile soil lies the New Madrid Fault. This fault has produced the most destructive earthquakes on record in North America. Specialists tell us there is a 50/50 probability of a major quake in the next 20 years. Preparation for this event is vitally important to the residents of the Northern Mississippi Delta. Many states have initiated programs to help with earthquake mitigation. Even with all this preparation many lives will be lost and a great many others will be injured or left homeless. Being able to initiate a rapid response following a seismic event will save many lives and relieve much suffering. Highway 412 could provide an invaluable artery to speed relief into the area. The bridge spanning the Mississippi was constructed to withstand all but the most violent of earthquakes. Improving this route to a four-lane roadway would ensure the other bridges and overpasses would survive and allow needed relief to readily gain access to the area.

I urge you to give every consideration to this vital link spanning the Northern Mississippi Delta.

EMERSON

MOTOR DIVISION

February 27, 1991

To Whom It May Concern:

The Emerson Motor Plant of Emerson Electric Company, Kennett, Missouri, is very much interested and in favor of the proposed improvements of Highway 412 through our area.

Many Emerson Motor facilities, along with a Motor Distribution Center, are located near Highway 412 and Emerson truck traffic tends to be very heavy on this route on a daily basis. These trucks move raw material and completed motors from plant to plant and to the distribution center located in Kennett.

We believe any improvements in accessibility to these locations will enhance customer delivery and reduce many forms of traffic cost which is so vital to companies like Emerson Electric who are competing in a tough global market.

Gary Scranton
Plant Manager

UARCO

Business Forms

Gentlemen:

UARCO is a major shipper of freight in the Northeast. As a major shipper, any improvement in highway conditions, accessability to the plant, or better traffic patterns would benefit our operation.

Our business generates:

- Over 1800 full truckload shipments annually (72 million pounds of freight)
- Over 430 LTL shipments annually (19 million pounds of freight)
- 30,000 lbs. per month to UPS (we are told we are the largest customer for UPS in the Northeast)

All transportation costs are influenced by better fuel mileage, fewer stops, tire costs, etc.; which would lower operating costs with a 4 lane road improvement.

That would allow UARCO to lower its transportation costs by leveraging carriers to lower their freight rates.

Quite often we have difficulty getting freight carriers to come to Kennett because of factors like poor accessability to Kennett.

Many of our customers have their own freight system. To come to Kennett to pick up freight they must pay Missouri use tax. We hear complaints about the poor conditions of the two lane roads to Kennett.

Yours very truly,

Larry A. Stanton
Plant Manager

Parker Automotive

Mr. Larry Thomason
State Representative
State Capital
Room 412-C
Jefferson City, MO 65101

Dear Larry,

I would like to add my support to the efforts being made to upgrade Highway 412 to four lanes.

Our Plant and Division operations are 100% automotive industry related and all of our materials are received by truck and all finished products are shipped by truck. We have excellent north/south distribution by Interstate 55 and a similar east/west capability would be a big help to us. In addition, this area is strategically located to be a major player as an automotive industry supplier center.

This could be a dramatic opportunity for industrial development for this entire region of the state.

Again, I support your efforts, and if I can be of further help, please do not hesitate to call.

L. G. Granger
Plant Manager

LGG/tb

SUBCOMMITTEE ON SURFACE TRANSPORTATION

REGIONAL FIELD HEARING, CRESTWOOD, MISSOURI, MARCH 1, 1991

REAUTHORIZATION OF THE POST-INTERSTATE SURFACE TRANSPORTATION PROGRAM

Testimony submitted by Laurel R. Thompson

Immediate past president, West Plains, Missouri Industrial Development Corporation
Chairman, Transportation and Economic Development Committee, Greater West Plains Area Chamber of Commerce
Vice-President and Manager, KWPM, Inc., operating radio stations KWPM (AM) and KSPQ (FM), West Plains, Missouri, and KGAR (FM), Willow Springs, Missouri

We welcome the opportunity to present testimony to this subcommittee in support of current proposals relating to the reauthorization of federal post-interstate surface transportation program. We particularly support the conception that now is the time to address the urgent needs of segments of our highway system referred to as "nationally significant" routes. From the first interstate legislation to the present time, the Heart of the Ozarks of south central Missouri and north-central Arkansas has been completely bypassed by the system. It probably is no mere coincidence that our area has, during that same period, struggled with high unemployment and depressingly low family income. However, even without a modern dual lane highway within the area, the Greater West Plains Community has managed to break out of the "depressed" mold with unprecedented growth and development, particularly during the past decade.

A major factor has been one of those "nationally significant" routes. U. S. Highway 63 has continued to serve as a major part of the truckers route of choice between Kansas City and areas north and west, to Memphis, Birmingham and points south and east. Even though this northwest-southeast corridor has long been talked about, and the affected states have attempted to treat the most urgent needs, needed federal priorities, coordination and planning have not been present. Even so, only two major areas still need to upgrade to four lanes to accomplish this important diagonal link-up of at least four major north-south and east-west interstates. Parts of Highway 7, from Harrisonville, Missouri, to Clinton, and much of Highway 13, Clinton to Bolivar, need the upgrade, as does U. S. 63 from Willow Springs, Missouri, to Jonesboro, Arkansas.

We feel the much faster-than-predicted growth of traffic loads along this entire route, as inadequate as some of it is, is well documented by Missouri traffic studies. Likewise, the mushrooming of tourist travel and rapid proliferation and development of a variety of light to medium industry in South-Central Missouri and North Arkansas is adding greatly to already dangerous traffic overload problems. These overloads are particularly explosive and dangerous along a twenty mile portion of U. S. 63 between Willow Springs and West Plains in Howell County, Missouri. We have studied this situation very closely over the past 3 or 4 years, and our problems continue to escalate far beyond the most liberal predictions. The combination of unexpected heavy traffic loads, traffic types, terrain and topography provide a dangerous combination of factors not really present in any other two-lane highways we have found. Twenty-eight percent of vehicles are heavy trucks; thirty-four percent of Highway 63 between Willow Springs and West Plains is yellow-striped no-passing zones; and in much of the area where passing is legal, the short distance available, traffic load and congestion, prohibit it. This results in dangerously "stacked traffic", with locals realizing that passing attempts are chancy, at best, and nonproductive; but drivers from out of the area become impatient and problems result. While tourism is increasing and does contribute a share of the load, the overwhelming bulk is consistent work-a-day traffic. Area industry has shown explosive growth during the past four years, health care traffic is growing even faster with Ozarks Medical Center at West Plains seeing utilization growth as high as thirty-seven percent during just one of those years; rapid expansion of several area wood products industries, including Bruce Hardwood Flooring with more than two hundred new jobs, has increased heavy, slow traffic immensely; Southwest Mobile Systems, a defense contractor is into two major expansions - two huge defense contracts involving a lot of heavy truck movements and 550, or more, new jobs; Safeway Charcoal, south of West Plains, reports that the present Burlington Northern piggyback policy has greatly increased the number of Safeway trucks to Springfield; every Tuesday, the Ozarks Regional Stockyards north of West Plains sees an average of four thousand cattle coming into and out of the yards, many utilizing 63 North - all in heavy, slow moving trucks and trailers, both coming and going. We are also seeing the probability of major expansion in poultry processing in West Plains, that almost certainly will have a tremendous impact on ag traffic over a thirty-five mile radius within two to five years.

The Farm Bureau has recognized the tremendous new pressures on agriculture related transport created by the Highway 63 bottle-neck between Willow Springs and West Plains, and urges expeditious planning for four lane development of that entire twenty mile section of Highway 63. The hazardous results of mixing farm equipment movements with the current traffic load are obvious.

Another compounding factor, major new development at the ODC Industrial Park area north of Pomona, about midway between West Plains and Willow Springs, appear likely. Pepsi Cola has moved their area distribution center to the park near the airport with all their trucks headquartered there. Discussions are on-going with two high tech firms interested in moving in our direction. The two companies are involved with converting wood waste to energy, alternate fuels, and systems to improve our ecology. They are interested in up to a total of three hundred acres north of Pomona with projected new employment of up to three hundred people and good highway access a major prerequisite.

Local retail sales reflect the rapid expansion of travel in this area with sales increases from 1986 to 1988 of over fifteen percent; 1989 saw an increase of 9.6 percent over 1988, and 1990 increasing at a whopping 11.5 percent over 1989's booming growth. Area employment is at an all time high with unemployment at new lows.

During last summer, our unemployment rate dropped to as low as 4.9 percent, and still was only 6.1 percent in January of this year. We are seeing people regularly driving to West Plains to shop and daily commuters to work from more than a fifty mile radius -- all on single lane roads. Fall enrollment at Southwest Missouri State University - West Plains Campus was up twenty-seven percent over 1989's record high. Spring enrollment showed similar growth. This is a totally mobile commuting student body, driving to West Plains from every direction. Even more growth is indicated in various Vo-Tech and nursing programs in West Plains, as the various training programs attempt to keep up with job growth opportunities.

We, of course, welcome this healthy growth, but recent traffic accident information provided this week by the Missouri State Highway Patrol paints a frightening scenario. While very recently, we have been fortunate as far as fatalities on this particular stretch of highway are concerned, emergency medical people tell us the accidents on Highway 63 between Willow Springs and West Plains generally produce major trauma - much worse than average - because they all involve highway speeds. The Highway Patrol report shows that we had twenty-five percent more personal injury accidents in 1989 than we saw in 1988. And, at least two recent accidents involved school busses, either of which could have been a major disaster of intolerable proportions. Our area emergency vehicles have had a great deal of difficulty with traffic congestion from Highway 60 south to West Plains, and the heavy utilization of this highway by a number of the CMC medical staff, often in emergency situations, has generated great concern within the medical community.

This year, the schools along this portion of U. S. 63 have a total of thirty-eight busses moving on or across U. S. 63 twice each day. Willow Springs' thirteen busses include one route that crosses U. S. 63 five times each morning and five times each afternoon.

Another of their busses, twice daily, crosses an intersection where a Missouri State Trooper was killed a few years ago making a turn on U. S. 63 while visibility was partially restricted. Richards Rural Elementary School has eight busses working along and across U. S. 63 north of West Plains, and the West Plains R-7 District busses cross this congested highway seventeen times, twice daily. Assuming an average of thirty to forty students per bus, these movements constitute an unacceptable risk factor for tragedy.

We understand that statistics show that dual lane roads are eight times safer than two-way traffic, and we feel the topography on this twenty mile stretch of Highway 63 could well make that ratio even more lop sided. By 1988, traffic loads had mushroomed to far exceed all design standards for the entire twenty-plus miles. Now, the Missouri Highway Department traffic count numbers indicate a ten to twelve percent increase in traffic between Willow Springs and West Plains between 1988 and 1989; and all indications are that growth is still exploding. The lowest twenty-four hour traffic count along that route in 1990 was 6224, and ranges up to a high of 16,179 movements per day just north of West Plains. Missouri has plans to address the most urgent needs just north of West Plains, but at least half of the twenty plus miles, plus a critical railroad crossing problem at Pomona, is all in the "unfunded ten year study".

Clearly, our states must come up with additional revenues simply to hope to keep up with our deteriorating intrastructure, but to help our U. S. 63 immediate needs and other badly needed upgrades, we would hope that we might find some faster, even immediate federal help with the new surface transportation program and more equitable distribution of funds back to Missouri.

The people in our area have worked very hard to pull our area out of the "economically depressed" column, only to have their efforts and resultant success threatened by the stifling effect of twenty miles of outdated, horribly overloaded and dangerous highway. Our needs and growth figures are not speculative -- the area growth has already pushed highway usage on U. S. 63 between Willow Springs and West Plains to at least 165 percent of maximum planned capacity at points of lightest traffic, and at the heaviest point, to more than 323 percent of planned maximum capacity. We're perched on a powder keg with a short fuse, and plead for help in our search for ways to avert disaster.

We must generate funds. We must re-think some priorities. Dollars are expendable, but the tragic potentials in LOST human lives and suffering must be addressed.

In addition to the positive proposals for the new federal program, getting the Highway Trust Fund off budget and some congressional dedication to addressing the federal deficit without using highway users' taxes, would go a long way toward meeting our nation's major transportation needs.

We thank you for the opportunity to present testimony to this subcommittee, and will be happy to answer any questions you may have.

THIS IS PAGE 1 OF 3

DRAFT REMARKS BY BUZZ WESTFALL ON HIGHWAY AND TRANSIT REAUTHORIZATION

Mr. Chairman, members of the Committee. My name is Buzz Westfall. I am County Executive for St. Louis County. I want to thank you for holding this hearing in our region and for giving us the chance to express our views as you consider the current transportation reauthorization bill.

I will briefly outline my concerns about the policy recently suggested by the national administration and the impact it will have on St. Louis County and the St. Louis region in general.

The county I represent has a population of approximately one million and covers 500 square miles. Obviously, a jurisdiction of that size and population has significant transportation needs. In the past, we have met those needs in large part because of the partnership between local, state and federal government. That partnership has enabled us to build roads and bridges which not only allow our citizens to move about the county, but it has spurred invaluable economic development for us too.

I am concerned that reducing federal participation on rural and

urban highways from 75% to 60% places a new financial burden on local government at a time when we simply do not have the resources to make up for the loss. If this policy is implemented some road and bridge needs in my county will go unmet which will compound the problems we already face with aging infrastructure. In short, St. Louis County would suffer if the federal government retreats from its commitment to local transportation needs.

While I have no quarrel with the idea of addressing the needs of the national highway system, I believe that local urban and suburban transportation needs must not be abandoned at the federal level. For example, in south St. Louis County, which is represented by your colleague Dick Gephardt, Interstate 255 has helped development and dramatic population growth has occurred. Consequently, the strain on our county road system has also increased dramatically; particularly at I-255 and Telegraph Road. Shouldn't the federal government assist us in dealing with this problem directly related to the federal interstate highway?

My fear is that the reduction in federal participation today may be signaling federal abandonment of local needs in the next few years. The consequences for St. Louis County and the region would be terrible. St. Louis County and other area governments have designed their future road and bridge plans based on a consistent federal commitment. As you know, it is difficult enough to address critical transportation needs now, but reducing the federal role will make it worse. Along those same lines, I am also concerned

that local government is given a place at the decision-making table. We need to have a voice in determining transportation priorities. I would respectfully request that as your work on this legislation proceeds you maintain the consistency of federal policy in this area.

Another concern of mine has to do with mass transit. I'm sure you will hear from others about our regional efforts to establish metro-link. Any retreat on the part of the federal government in this area will hinder our efforts at the establishment and successful operation of our regional light rail system. Our political, business and civic leadership has worked diligently to see the success of this project. The citizens of the region are enthusiastic in their support for light rail. I would ask that you do all you can to ensure stable and continuing federal operating funds for mass transit.

In short, as you formulate the policy decisions this bill will establish, please treat local transportation needs with equity and fairness. Make room for our voices to be heard in the process. We have participated in and benefitted from the federal/local partnership in years past. Our partnership has been productive and positive. St. Louis County and our region wants to see that partnership maintained. If given a fair shake, we can continue to do a good job for our people and our economy.

**INTERSTATE 66 PROJECT, INC.**

Walter Wildman, Associate Director
(314) 334-4142

I would first like to express my appreciation to this committee for the opportunity to appear before you today. I am Walter Wildman and represent the Cape Girardeau Regional Commerce and Growth Association as it's Executive Director as well as the I-66 Project, Inc. as it's Associates Director.

I wish to speak to you today about a coast to coast highway project known as I-66. I want to first give the committee a brief history, an update, and then request your support for this project as it progresses through the process of the Feasibility Study.

A little over a three years ago the Highway and Transportation Committee of the R.C.G.A. was studying ways to connect the cities of Paducah, Kentucky, and Cape Girardeau, Missouri. These efforts resulted in a subsequent agreement between the states of Illinois, Kentucky, and Missouri to develop a corridor study for the connecting highway. At a later date the city of Springfield, Missouri was added to the project. The project continued to grow with the addition of more and more cities and it now spans over 2,400 miles from coast to coast.

Because the present interstate system was scheduled to be completed in 1991, and we were hearing of policy shifts in Washington concerning a new emphasis for the future, the prospects for a project, such as I-66, appeared to be timely. Thus, in April 1989, a meeting of cities and states along the proposed corridor was held in St. Louis, Missouri. The result of this meeting was the formation of the I-66 Project, Inc. The stated purpose of this group was to pursue funding for a Feasibility Study. The I-66 group approached Congressman Bill Emerson with the concept, who in turned introduced it to the Federal Highway Administration in the summer of 1989. Later that summer the services of L.E. Haefner and Associates were sought. The associates included Real Estate Analysts Limited of St. Louis and Horner & Shifrin, Inc. Both firms are nationally known for their work on such projects. In November of that same year a pre-application or working paper was produced by L.E. Haefner and Associates that was used as a centerpiece in the lobbying efforts over the next year.

Official from the R.C.G.A. and the I-66 Project, Inc. traveled to Wichita, Kansas in December of 1989 to seek that cities support as a full partner in the pursuit of funding for the Feasibility Study.

The fact that Wichita was one on the largest cities along the proposed corridor and that they had expressed an interest in this project resulted in the Kansas-Missouri partnership. This partnership lead to the formation of a Bi-Partisan Coalition in the U.S. House of Representatives between Congressman Bill Emerson (R-MO) and Congressman Dan Glickman (D-KS). Their Bi-Partisan effort, joined by many more congressmen and U.S. Senators, provided the needed leadership that guided the proposed funding of the Feasibility Study thru congress in the fall of 1990.

It is our belief that the above described process presents the best possible use of the democratic system available to us in this great nation. A group of citizens has an idea that had merit, not only locally, but nationally. It was presented to elected representatives and to the Federal Highway Administration. The resulting Bi-Partisan support, backed by a board based grass roots organization resulted in funding for a Feasibility Study. The combination of State Departments of Transportation, the Federal Highway Administration, and this grass roots organization can provide this project with a team approached that would carry the concept through the Feasibility Study and on into the next phase of the project.

Congressman Robert E. Roe, (D-NJ) Chairman of the House Committee on Public Works and Transportation in a recent news release stated the challenge before us very well. I quote from that news release, "Through this national intermodel transportation policy, we must seek to provide the economic under pinning for the 21st century in the same way the Interstate Highway System fueled the economic growth of the last 35 years. To maintain our strong competitive position, we must no longer develop separate transportation systems that exist in isolation. To compete on a worldwide basis, we must have an intergrated, multi-model transportation system."

"The challenge of the next generation is making our separate transportation systems function as a state-of-the-art unified networks and that will give our country a competitive edge in competing on a world-wide economic basis. The mission we are embarking on is to rebuild America to meet the challenge of competition in the 21st century global market place."

We feel Congressman Roe has a very visionary and exciting view of the job before us. Our group, both the R.C.G.A. and the I-66 Project, Inc. is awaiting the assignment of specific duties as they relate to the Feasibility Study. This is presently being discussed between the Federal Highway Administration and effected State Departments of Transportation. We are offering to be an intrigal part of the Feasibility Study in rolls such as

collecting matching funds beyond the required 20%, which we feel would further indicate the support of such a project. We feel this type of public-private partnership will be a good demonstration of the cooperation that will be required to carry this nation into the 21st century.

ADDITIONS TO THE RECORD

**Testimony of**

**Peter M. Brown**

**President, Four Seasons Group, Inc.**

**Presented to the**

**House Committee on Public Works and Transportation**

**Hearing on**

**Reauthorization of Federal Surface Transportation Program**

Mr. Chairman, my name is Peter Brown. I am President of Four Seasons Group, Inc. which is the developer and manager of Four Seasons Lakesites and Chase Resorts. Our company is headquartered in Lake Ozark, Missouri, and we serve the family vacation industry in our beautiful Lake Ozark region.

In behalf of Four Seasons Group, Inc., our thousands of vacation guests, and the many small businesses located in and near our resorts, I am pleased to present our views on reauthorization of the Federal Surface Transportation Program.

We are specifically concerned with four aspects of your hearings.

First, we strongly support the legislation introduced and referred to the Committee which includes authority for construction of toll facilities with a 35% federal matching share. For many

communities and states such as ours, toll facilities appear to be a cost-effective means of solving transportation needs.

Around Lake Ozark, families which work in the region and those which come for vacations have encountered serious traffic headaches which need to be alleviated. Neither the local nor state governments alone have the funds to solve the problem. Nor are private dollars available to meet the cost. However, a combination of local, state, federal and private funding, in concert with user fees -- tolls -- would make it possible for us to begin addressing the road and bridge needs of the Lake Ozark area.

Second, we strongly support the provisions of pending legislation which give greater flexibility to states and communities to shift allocated funds to and between categories of projects. Under conditions outlined in S. 883, introduced by our Senator Bond and in S.965, introduced by Senator Moynihan, there appears to be the appropriate flexibility for such projects to be undertaken within the discretion of the states.

We need a bridge over Lake Ozark, Mr. Chairman. It is a long-standing need and within the near future, we must address that need or the economic development of the region is going to be seriously limited. Our interest in urging greater flexibility to shift funds based on state and local decisions is based on the strong belief that this will facilitate the planning and construction of a bridge.

Third, as we are located in a growth state which has already constructed our part of the interstate system and now must maintain it and also try to catch up on our non-interstate highway transportation needs, we endorse the position of our state's Highway and Transportation Department regarding the formula under which transportation funds are allocated.

This is a delicate subject, of course, because we are dealing with a fixed amount of funds, the allocation of which affects every state in the nation. I do not pretend to know precisely where the "best" formula lies, but went to urge the Committee to seriously look at whether our state ought to receive a higher percentage of the funds we send to Washington.

On March 1 this year, Wayne Muri, our Chief Engineer, testified before the House Public Works and Transportation Committee's Subcommittee on Surface Transportation concerning the impact on Missouri of a different formula.

He pointed out that we in Missouri have unmet transportation needs over the next decade totaling more than $550 Million. A new formula which returned to states a fair share of what they sent to Washington would generate $100 Million in additional funding for Missouri annually. We cannot afford the cost of our unmet transportation needs, Mr. Muri testified, but an increase in funding which represents a recognition of the share of funds coming OUT of Missouri would surely help.

Senator Moynihan has offered an insightful comment on the direction which should be taken in reauthorizing the nation's transportation program. "Productivity in the transportation sector has been flat," Senator Moynihan stated, adding that the new direction of the program (now that the interstate system is virtually complete) "must generate transportation productivity" just as productivity is generated by the manufacturing and other sectors of the economy.

Mr. Chairman, I agree with Senator Moynihan. Economic studies in our state indicate that for each additional dollar of transportation spending, we can generate four dollars in economic return. THAT is productivity that Missouri needs badly. Any movement away from the present situation, in which we lose 15 cents out of every dollar in taxes, is a move in the right direction, and we urge the Committee to reconsider the present formula.

Finally, we would look to the Committee to write a bill which authorizes greater spending overall from the Highway trust Fund. As we know, much of the Fund is presently used to offset the federal budget deficit, a worthy purpose but not the reason the taxes were collected in the first place.

If we had highways and bridges to spare, few would argue with reserving some portion of the Fund to help with the deficit, but as you know better than we, there are Billions of Dollars in unmet transportation construction needs in America, and on top of that our

existing roads, highways and bridges are in serious need of repair.

In short, Mr. Chairman, the Americans who paid the taxes into the Highway Trust Fund need those dollars back in their communities, and across the nation, to build a safe, productive transportation system. (We also need a balanced budget, but we stand a better chance of getting one if we stop masking the deficit with Highway Trust Fund, Social Security, and other fund surpluses.)

I want to close by quoting Mr. Muri: "Our future is in your hands because transportation is the key to our economic survival." That is a true statement, Mr. Chairman, and I want to thank you for the work which the Committee has done so far, and to urge your consideration of this testimony as you continue the process of reauthorizing the Federal Surface Transportation Program.

# COALITION FOR HIGHWAY SAFETY

c/o Tina Hamilton
6337 Old Lemay Ferry - Imperial Mo. 63052
Area Code 314 942-3718

Oct 6 1, 1991

TO: PUBLIC WORKS AND TRANSPORTATION COMMITTEE

At the request of Congressman Gephardt's office, we have briefly documented over seven years of effort put forth by the Coalition to obtain better roads for Jefferson County.

We have also summarized our views on what we feel needs to be done for the roads, not only in our county, but as well as throughout the State of Missouri.

We are a "grassroots organization" which has survived over the years because of it's honesty, determination, and trust of the citizens and have gained the respect of many because of our dedication and results over the years.

We would glad to be of any assistance in the future should you have any questions.

Sincerely,

Tina Hamilton, Bill Mckenna, Marge Schulte, Larry Steinkamp, and Sharon Tricamo - Members, Coalition for Highway Safety

OUR GOAL IS SAFER ROADS

March 1, 1991

TO: PUBLIC WORKS AND TRANSPORTATION COMMITTEE

FROM: THE COALITION FOR HIGHWAY SAFETY-JEFFERSON COUNTY, MO.

Attached you will find a history of the Coalition for Highway Safety's efforts in obtaining much needed highway construction in Jefferson County. It has been 7 years of hard work which has shown many that it is very hard work dealing with government but yet many united and waged hard battles that show eventually things do come together. However, the sad part in the whole situation is that these battles should not have had to take place. Many lives were lost, body's broken and mangled, loss of personal property, financial losses due to the accidents, economic losses, and undue emotional stress. Why? The state government did not have enough money to fund these projects and the federal government did not allot enough money for such primary and secondary roads such as Highway 21 and Highway M that were in dire need of being replaced. The citizens of Missouri did pass a gas tax in 1987 to help the situation somewhat; however, more federal funds are needed for these primary and secondary roads.

With the near completion of the interstate system we feel more money should be directed to these arterial roads. Money is still needed for the interstates in Missouri since our state was among the first having the interstate system. For example, Interstate 55 in Jefferson County has a total of four lanes. It is in dire need of more lanes because of population expansion and this is the case throughout Missouri. We bring the travelers down these interstates but when they exit they usually exit onto outdated arterial roads which is the case in Jefferson County. Highway M is a perfect example of an outdated arterial. It is a two lane, narrow winding road. It's companions Highways MM & W are in the same shape and this what has to be used as an East-West Corridor in Jefferson County. Jefferson County lacks an East-West Corridor. There are plans underway to make an East-West Corridor along the aforementioned routes but, again, there is no money. Two new lanes for Highway M were allotted under Proposition A but that is all.

The Coalition does not address economic growth. We address safety issues such as the old outdated roads. Highway M was a farm to market and still is basically the same as when it was originally constructed. There have been a few safety modifications recently. Highway 21 was built over 40 years ago as a route for the city dwellers to take a leisurely scenic drive on a weekend. It is now a heavily traveled, arterial, with lots of curves, two lanes, and gravel shoulders. Part of it has been replaced but much more still needs to be done.

Most citizens of Jefferson County travel over 30 miles one way to work. This means they buy a large amount of gas thus contributing heavily to the highway funds. With that amount of contribution they would like to see a return of that money to their state and county. We do not have bus service or light rail systems to take us to our places of work. We need and deserve better roads. By putting some of that money back into our state it will help save lives, help prevent accidents by having safer roads, save people from financial loss, emotional stress, and it does help the economy. Better roads attract economic growth. People don't want to move to areas with bad roads, or shop in areas with bad roads, companies looking for places to relocate also want a good road system.

It is the Coalition's feeling that even though everyone is looking for ways to cut the Federal budget, highway funding is not something that should be cut. Highway construction brings many benefits both safety wise and economically to communities. If this budget is cut you will be putting more lives in jeopardy, you will be putting more people out of work (the construction industry is already hard hit), the St. Louis area has already been hit hard by losses of jobs in the defense industry, automobile industry.

Page 3...

Confidence in the federal government's spending practices is low; let's not further erode it by taking away something that our motorists invest heavily in. The State Highway Commission worked hard to gain back the support of the citizens by promising projects under Proposition A. The citizens are seeing results and are more confident, we certainly don't need to take away money because that will just defeat any future efforts in the state to gain extra revenue because the citizens will not see any results.

We will not bore you with statistics, we're sure you heard them all and we have file drawers full of data to back up the years of work. We invite you to drive some of these roads, you will then see why we feel so strongly.

Respectfully submitted by: Tina Hamilton, Member
Coalition for Highway Safety-
Jefferson County, Mo.

## IMPORTANT DATES FOR CAMPAIGN FOR "NEW HWY. M"

| | |
|---|---|
| October, 1983 | Our friend and neighbor is killed on Highway M. |
| December, 1983 | Representative McKenna contacts the State Highway Patrol for statistics. |
| January 16, 1984 | Disc jockey dies on Hwy. M which creates media attention to the dangers of Hwy. M. |
| January 29, 1984 | First meeting held (standing room only), petition drive begins. |
| March 9, 1984 | Coalition members travel to Jefferson City to present the case to the State Highway Commission. Members request a New Highway but request some temporary safety measures until a new highway can be built. |
| April, 1984 | Speed limit reduced. |
| May 10, 1984 | Meeting held to announce results of appearance before the Highway Commission. Good news, bad news - the Commission agrees that a new highway is definitely needed but until funds can become available all they can give us are some temporary safety measures. The representative from the highway department tells us it will be 5 to 7 years before a new highway can be constructed. |
| November 1, 1984 | First Public Hearing is held at Saint Luke's Church. |
| Spring of 1985 | First improvements begin. |
| Febuary, 1987 | Proposal for Proposition A to appear on April ballot. A new Highway M is listed as a project that will completed if the proposition passes. |
| April 7, 1987 | Proposition A passes. |

| | |
|---|---|
| September 27, 1988 | Second Hearing held. This is a design hearing. |
| January 13, 1989 | State Highway Commission approves plan with some changes. |
| August 14, 1990 | The Highway Department holds a special preview meeting. This is the first time this has ever been done. |
| August 20, 1990 | Third and final public hearing held at St. Luke's Church (standing room only crowd - Hwy. Dept. stops counting at 240 people.) Not a single person speaks out against the need for a new highway. Everyone who spoke emphasized the need for a new highway. Several speakers requested possible changes of alignment due to the close proximity of the highway to their property. Several people spoke up as to how they were willing for the highway to come through their property if it would save just one life. |
| December 7, 1990 | Commission gives final approval for the new Highway M. Date given for beginning construction varies anywhere between 4 to 7 years, again depending on financing availability. Money is allotted to begin hardship buyouts and buy right-of-way over the next several years. |

THE STATE HIGHWAY DEPARTMENT IS HOPING TO MAKE THE NEW HIGHWAY M PART OF A FUTURE OUTERBELT SHOULD FUNDING BECOME AVAILABLE. THE COALITION AGREES THIS IS DEFINITELY NEEDED BECAUSE JEFFERSON COUNTY LACKS AN EAST-WEST CORRIDOR.

## IMPORTANT DATES FOR CAMPAIGN FOR "NEW HWY. 21"

| | |
|---|---|
| September, 1966 | Proposal submitted for New Highway 21. |
| November, 1967 | Tentative Approval given to new highway. Shortly thereafter approval is given and right-of-way is purchased. |
| November 1984 | Coalition writes letters to highway officials concerning need for new highway. Promises made that it would come. |
| August, 1985 | Article appears in St. Louis Post Dispatch stating that construction would begin in Spring of 1986. |
| February 10, 1986 | Water District receives letter stating construction would soon be starting; therefore, pre-construction meetings needed to be held with the utilities. |
| May, 1986 | Coalition members hear that there will be no construction. They contact Representative McKenna. |
| June 1, 1986 | Highway officials state because of lack of federal funding, the Graham - Rudman bill, etc., there will not be a new highway as promised. |
| July 3, 1986 | The Coalition appears before the State Highway Commission to plead the case for the new highway that **HAD BEEN PROMISED ALMOST 20 YEARS AGO.** |
| July 9, 1986 | State announces that they are cancelling all road projects scheduled for letting in August and probably September's also. The reason given was "they ran out of federal funds." |
| July 10, 1986 | Coalition receives a "thank you for coming....but no money" letter from the State Highway Commission. |
| | Tie a Yellow Ribbon Campaign begins. Residents were asked to tie yellow ribbons if they supported a new "21", so much support shown that news media picks up the story. |

| | |
|---|---|
| July 28, 1986 | Public meeting held to discuss what the public feels should be done. (Standing Room only crowd - over 250 people in attendance.) |
| August 8, 1986 | Official word comes from the State Highway Commission. Sorry no money! |
| September 5, 1986 | Another packed public meeting is held. Citizens were told there was no money but the highway department would give us some temporary safety features. Everyone agreed that the safety features were nice but what was really needed was the new highway.<br><br>A letter writing campaign is begun.<br><br>Citizens decide to print bumper stickers and to erect signs. The nine mile stretch of Highway 21 is now dubbed "BLOOD ALLEY".<br><br>Signs are erected stating "DANGER YOU ARE DRIVING BLOOD ALLEY - HWY. 21".<br><br>Bumper stickers are made stating:<br>"I'M TRYING TO SURVIVE...HWY. 21"<br>or<br>"HWY. 21 - A MATTER OF LIFE & DEATH."<br>These stickers were available in local stores and the people could have them and if they chose to make a small donation to cover the cost of printing.<br><br>Media attention is heavy for meetings, signs, letters, and bumper stickers. |
| October 1, 1986 | Citizens decide to take cause to Governor at this meeting. |
| Fall, 1986 | Congress adjourns without passing new Federal Highway Bill. |

| | |
|---|---|
| November 12, 1986 | Coalition members and over 60 other people travel to Jefferson City to speak with Governor Ashcroft about the situation. The presentation of data and the show of support was very impressive. However, nothing can be done for lack of funds. |
| December 10, 1986 | Fatal accident - Car involved has bumper sticker "I'M TRYING TO SURVIVE ...HWY.21." Heavy television coverage zeroing in on bumper sticker and media stating "and this man didn't." |
| January 3, 1987 | Coalition sends a letter with a photo enclosed taken by volunteer firemen of a fatal accident on December 10, 1986. This was the 7th fatality that year on Hwy. 21 (62 fatalities over a 10 year period). The car that hit a tractor trailer bore one of the bumper stickers, "I'M TRYING TO SURVIVE...HWY. 21". Photo showed auto with sticker and the covered body next to it. |
| February, 1987 | Coalition writes federal officials chiding them for not passing Federal Highway Bill. |
| February, 1987 | Coalition member Tina Hamilton joins Governor's Committee for Passage of Proposition A which will raise the gas tax to help build roads. Certain projects are promised under this Proposition (Hwy. 21 is included). Proposition will appear on April ballot. |
| April 7, 1987 | Proposition A passes. Along the Hwy. 21 and Hwy. M corridors it passes from anywhere from 59% to 73% of the yes vote. |

| | |
|---|---|
| July 2, 1987 | Groundbreaking is held for the first section. |
| July, 1989 | A 4.3 mile section is opened. |
| October 1, 1990 | Another 2 mile section is opened and construction begins on another section. |

THE ABOVE TEXT COVERS THE "BLOOD ALLEY" SECTION"; HOWEVER, A 7 MILE SECTION STILL IS AWAITING A SECOND & THIRD HEARING. COMPLETION OF THIS SECTION IS AT LEAST 10 YEARS AWAY. THIS SECTION ONLY GOES TO HILLSBORO. ADDITIONAL FUNDING IS NEEDED TO TAKE IT TO DESOTO AND BEYOND.

6-J Sun., Sept. 25, 1966 ST. LOUIS POST-DISPATCH

NOTE

# Improvement of Highway 21 Urged as Regional Benefit

Missouri Highway 21 could be the most beautiful highway in the St. Louis area if it was redesigned and designated a state scenic route.

This is the view of Walter L. Eschbach, Jefferson county planning director, who has prepared a 100-page brochure pointing out why the State Highway Commission should improve the road to provide better access to recreational facilities in Jefferson county and southeast Missouri. The booklet, which contains maps and photographs, will be presented this week to the highway commission.

Under Eschbach's plan, Highway 21 would be either widened to four lanes or made a dual route, between the Meramec river and Washington State Park, a distance of about 35 miles. Landscape adjacent to the highway would be unchanged and zoning restrictions would be enacted to assure orderly development. Roadside parks would be constructed at several points between the Meramec and the state park.

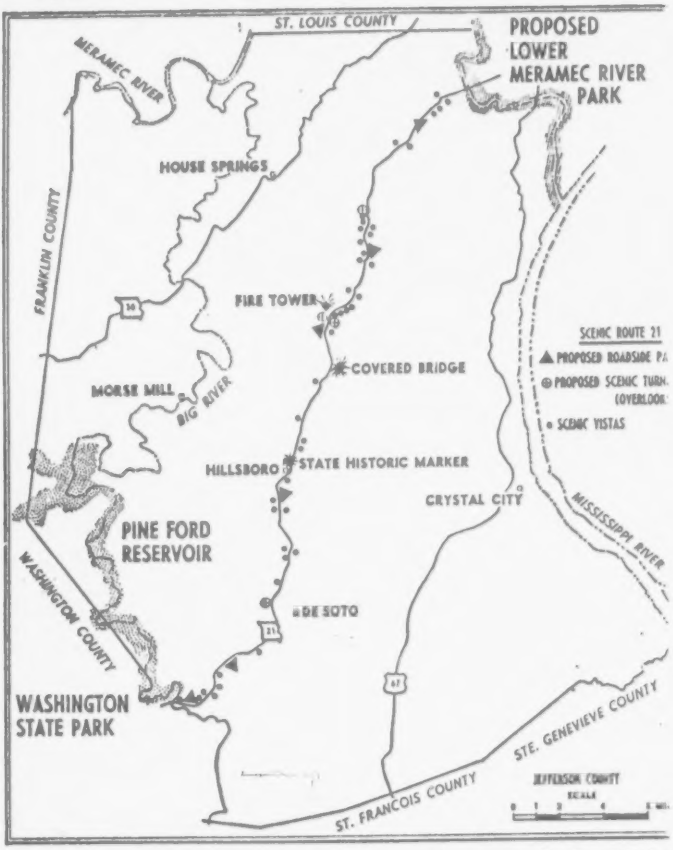
### Noted As Primary Route

In his report, Eschbach noted that Highway 21 was the primary route for St. Louisans to reach eight state parks, six state forests, five state wildlife areas, two federal forests and 10 other points of interest south of Jefferson county.

In addition, the highway will become the major route to the proposed Pine Ford Reservoir, which is expected to be completed under the Meramec Basin Program in about 10 years. Pine Ford, when completed, will be on the Big river in the southwest part of Jefferson county and northwest part of Washington county.

Eschbach said that Route 21 would also lead tourists to the Ozark National Scenic Riverways, a national park being developed along the Current and Jack Fork rivers. The national park will include about 88,000 acres in Carter, Dent, Shannon and Texas counties.

Highway 21 is relatively unspoiled, Eschbach noted, although 11,250 feet of roadside development in Jefferson county is classified as disorderly and deteriorated. However, 295,565 feet of roadside frontage is undeveloped and of that, 190,000 feet is forested, the planning director said.



By Joseph Crouch, a Post-Dispatch staff a

## Proposed Scenic Route

The route of Missouri Highway 21 through Jefferson county, which is proposed as state scenic route. Points of interest along the highway have been marked on th map.

### Factor in Growth

"Although the extent of blight and decay is small along Highway 21, the growth of Jefferson County could be retarded by the presence of these misused areas" Eschbach asserted. "Furthermore, the economic base of the county could be weakened by declining property values and unattractiveness to investment. As physical environment becomes less desirable, social deterioration is inevitable."

In his report, Eschbach pointed out that improvements should not be aimed at retaining and improving the scenic value of the route alone. Highway commissioners should redesign the road to permit orderly and speedy movement of traffic.

Eschbach's brochure warns:

"When the citizens of this county drive to work 5 or 10 years from now there will be either pleasant vistas and attractive roadside scenes or they will see endless miles of neon, junk, grime, dirt, ruined landscapes, and places of refuse rather than refuge."

Thursday, November 9, 1967 NOTE "THE NORTHWEST BOOSTER"—Hillsb

## Tentative Approval . . . .

# For Relocation of Route 21

JEFFERSON CITY - Approval for an approximate ten mile relocation to an eventual dual-lane facility of Missouri Route 21, in Jefferson County, was given by the Missouri State Highway Commission at its October meeting in Jefferson City.

The action was taken after extensive studies had been made along the route to determine the highway needs in the immediate area.

The tentatively approved relocation of Missouri Route 21 would begin at the west end of a previously approved interchange with Route 141 (J), near Paulina Hills.

It proceeds in a southwesterly direction all on relocation on the southeast side of present Route 21. It crosses the present facility about a mile and a half southwest of Paulina Hills where a full diamond-type interchange will be built.

Continuing on southwesterly on the northwest side of present Route 21 it would again cross to the southeast side just north of Rock Creek. The proposed location would cross Rock Creek on new bridges approximately 300 feet downstream from the existing crossing.

The proposed routing continues on southwesterly still on the southeast side of the present route and crosses present Route 21 again at a point about three miles north of Otto where a diamond-type interchange will be constructed.

From here southerly the new relocation will be located on the west side of present Route 21 crossing Supplementary Route MM, west of Otto, where a diamond-type interchange is proposed.

The new routing terminates on present Route 21 with a diamond-type interchange approximately two miles south of Route MM.

Approval of this Route 21 relocation has been given at this time both as an economy measure and as an aid to local area residents. By planning the route at an early date and acquiring the necessary right of way it will be easier for residential and commercial developments to be fitted into the highway pattern.

The Honorable Governor John Ashcroft:
Mr. John C. Cozad:
Ms. Helen Schnare:
Mr. William F. Schierholz:
Mr. C. R. Johnston:
Mr. Paul L. Ebaugh:
Mr. Don Walsworth:
Mr. Wayne Muri:

The enclosed pictures were taken by the firemen and paramedics who worked the seventh fatal accident on Hwy. 21 in 1986. The emergency personnel told us they were supposed to have an extrication training class that evening. Unfortunately they had 45 minutes of "hands on" experience on December 10, 1986. We do not enjoy sending these photos but we felt it necessary.

Ironically the man's car bore the bumper sticker "I'm Trying to Survive Hwy. 21" - he didn't! Imagine the impact this had when the TV stations flashed a picture of the trunk of this car bearing that sticker on the news. It still gives everyone chills.

We sincerely hope and pray when the federal funds come some will be allotted to Hwy. 21 so these types of accidents will be minimized.

Sincerely,

Tina Hamilton

# Traffic signals, left-turn bays and resurfacing approved for Hwy. 21

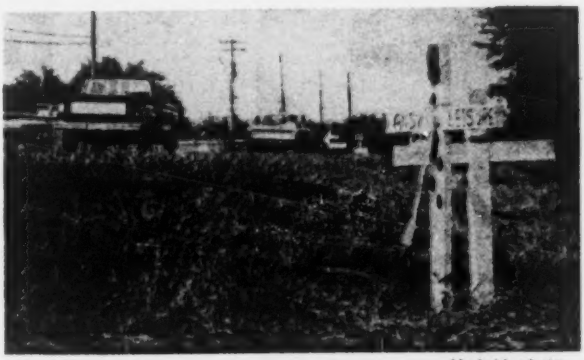
By Sam Schapiro
News Democrat staff writer

The state Highway and Transportation Commission has approved the installation of traffic signals or left-turn bays — or both — at seven junctions on Hwy. 21 in Jefferson County. The improvements and the locations were announced in a letter from Commission Chairman John C. Cozad to state Rep. William McKenna (D-Barnhart).

Work on most of the signals and bays will begin this year, and in 1987 the department will begin resurfacing all of Hwy. 21 in the county, County Commissioner Howard Wagner said he has been informed.

Jefferson County legislators, county officials and citizens appeared before the commission in July urging improvements on Hwy. 21. As a result of that appearance, Cozad said, a study was made to determine what steps might be taken to improve safety and traffic flow until long-planned permanent improvements — for which money is not available now — can be made.

He said the commission has approved construction of traffic signals with left-turn bays at these locations: East and West Rock Creek Road; Hwy. M, at Otto; Hwy. A, north of Hillsboro (southbound left turn bay only); Hwy. BB, in Hillsboro; and Hwys. N and H, at De Soto.



Marie Liu photo

**Two white crosses mark the scene of a double fatality on Hwy. 21 near Hillsboro**

Left-turn bays also were approved on Four Ridge Road, north of Otto; Hwy. MM, at Otto; and at Jefferson College, north of Hillsboro (northbound only).

Wagner said that he was told by state Rep. William (Bud) Lewis (D-De Soto) that all of the bay and signal work north of Hillsboro would begin this year, and that resurfacing of Hwy. 21 would begin next year, some to be done by the state highway department's own employees and some by contractors.

Cozad said that the department also plans to cut brush at Lions Den Road and Four Ridge Road to improve sight distances.

Earlier this week, highway department district engineer Frank Kriz announced that $400,000 in state funds have been designated for use in improved signalization along Hwy. 21, but the sites were not included in that announcement. "Because we have been advised that the funds are not there for all the improvements some residents are seeking, we wanted to do at least this," Kriz said.

Marie Liu photo

# Highway to heaven?

Hwy. 21 travelers are asked by the sign above to take their appeal for a four-lane highway to a higher authority than state or federal legislators. Many signs have been placed along the highway to draw attention to the residents' pleas. Jefferson Heights First Baptist Church is at Hwy. 21 and Four Ridge Road.

MISSOURI - KANSAS RAIL PASSENGER COALITION

P.O. BOX 411192 • KANSAS CITY, MISSOURI 64141

February 26, 1991

The Honorable Richard Gephardt
9959 Gravois
St. Louis, Mo 63123

Dear Congressman Gephardt:

I learned of Representative Norman Mineta's hearing in St. Louis concerning reauthorization of the Surface Transportation Act too late to make arrangements to attend. I have enclosed testimony that I would like to make available to Congressman Mineta and other members of the subcommittee. I would greatly appreciate it if you would be so kind as to forward my testimony to the appropriate parties.

For your information, I have also included some material concerning our organization and the National Association of Railroad Passengers, with whom we are affiliated.

Sincerely,

Wayne Copple

MISSOURI - KANSAS RAIL PASSENGER COALITION

P.O. BOX 411192 • KANSAS CITY, MISSOURI 64141

Testimony of Wayne Copple, legislative Coordinator,
Missouri Kansas Rail Passenger Coalition
on the reauthorization of the
Surface Transportation Act.

St. Louis, Missouri
March 1, 1991

Dear Chairman Mineta and Surface Transportation Subcommittee members:

The Missouri-Kansas Rail Passenger Coalition is a consumer oriented, non-profit organization established to work for the development of a balanced transportation network that recognizes the benefits of modern intercity rail transportation and urban mass transit.

We are encouraged that the Bush Administration's proposed FY 1992 budget grants a small increase in funding for the first time in 10 years to the Urban Mass Transit Administration and funds for Amtrak after seven straight years of proposed zero budgets. Although these are positive steps much more will needed. Surface transportation reauthorization offers a chance to redress past imbalances and create a transportation system that utilizes all modes to best advantage.

Elements of a balanced transportation policy should include:

1. An increase in the federal gasoline tax dedicated to intercity rail passenger service and mass transit. A one cent-per-gallon gasoline tax would fund all Amtrak service, allow for additional equipment and many new services. There is great demand for Amtrak service; trains are often sold out weeks--sometimes months--in advance. The primary factor restraining Amtrak from achieving faster growth and increased efficiencies is the lack of capital for expansion.

Five cents-per-gallon should be allocated to mass transit, in addition to the present funding. This would bring mass transit funding to approximately $8 billion annually, only slightly higher when adjusted for inflation than the FY 1981 funding of $4.1 billion. Good mass transit provides substantial energy, safety, environmental, and other social advantages. There should be significantly increased funding for new rail starts. Rail rapid transit, especially light rail--the modern streetcar, has proven itself as an attractive and efficient public transportation mode. It is also an important tool in directing urban growth and the redevelopment of urban core areas. These advantages have been

recognized in other modern nations to a much greater extent than in the U.S.

2. Provide equality in federal matching funds for transportation projects. We need to create a level playing field. There has been much talk of flexibility in future transportation policy. To provide true flexibility rail and transit projects must be able to receive the same federal match as highway projects. We propose that state and local intercity rail and mass transit projects be eligible for a 80%-20% federal/local match along with all other surface transportation capital projects.

There can be no justification to require a higher share of local funding for transit capital programs than for road projects. Indeed, in terms of the benefits to be derived from improved urban public transportation, it could be reasonable argued that past bias should be reversed and a higher federal match provided for transit as opposed to road programs.

For intercity rail programs there this virtually no federal money available, state and local government must go it alone, a severe disincentive for investment in rail projects. Under section 403(b) of the law establishing Amtrak, states can request that Amtrak operate additional services not in the basic system. States must pay 65 percent of any operating subsidies. Despite the high local share required many states are interested in additional Amtrak services but Amtrak has no equipment for new trains and is now requiring states to provide for 100 percent of such equipment requirements. Gasoline tax funds should also be available for intercity rail capital projects on an 80%-20% federal/local basis.

3. Steps should be taken to reduce or eliminate the hidden subsidies for motor carriers and waterway carriers. State and federal studies have shown that heavy trucks underpay their true costs responsibilities by one-third to one-half, with the largest trucks receiving the highest subsidy. The U.S. DOT claims that domestic waterway carriers pay only ten percent of their share of inland navigation system costs.

I hope that these proposals will be considered in light of the need to conserve energy, clean up our environment, reduce congestion, and focus urban development. Our organization strongly supports the recent transportation developments in St. Louis, the building of the Metro Link light rail system and the proposed Jefferson Avenue multi-modal transportation center. These are exactly the type of projects that any new transportation policy should encourage.

If the U.S. is to adequately address these concerns and if we are to have a truly modern transportation system, one that can compete effectively with foreign systems, it will be crucial that fundamental changes be made in our transportation policies. We can no longer afford business as usual.

MOKSRAIL NEWS

January/February 1991

MISSOURI-KANSAS RAIL PASSENGER COALITION
WORKING FOR A MORE BALANCED TRANSPORTATION SYSTEM

## Legislative update...
## Rails hit with fuel tax, water carriers escape

The issues of transit and Amtrak funding were reported in the November newsletter. There are some additional transportation provisions in the 1990 Omnibus budget Reconciliation Act, on which we have received information.

Railroads are now paying federal fuel taxes for the first time, 2.5 cents-per-gallon of the five cent increase. These funds are supposed to be for deficit reduction. The trucking industry pushed hard for the tax on railroads. Railroads have been exempt from fuel taxes since these were supposed to be highway user fees, the railroads build, own and maintain all of their infra-structure. The tax will cost the rail industry--including Amtrak--about $80 million annually. Railroads will also be charged as to cover the cost of Federal Railroad Admin.stration safety programs, cost: $170 million in the next five years.

Domestic water carriers got off the hook entirely, no increased fuel taxes at all. This, despite the fact that the U.S. DOT says the inland water carriers' user fees cover only 10 percent of federal expenditures for their operations, mostly through the Army Corps of Engineers. Key players on the Senate Finance Committee have large home state waterway lobbies.

The aviation industry was subject to several tax increases. The main one is the ticket tax: it increases from eight percent to ten percent. All increases go to deficit reduction. In return, the industry received more lenient rules on noise pollution than they would have been likely to get otherwise.

There is $10 million for maglev/high speed rail research and development, $3.85 million more than Bush wanted. The Army Corps of Engineers gets $2 for the same purpose in a separate bill.

There were several changes made in the machinery of the Graham-Rudman law. On the one hand, numerous new factors are added that will make it easier for Congress to meet the targets for deficit reduction. On the other hand, there are changes that will effectively give more control over discretionary spending (this includes Amtrak and over half of the transit spending) to the White House and the Office of Management and Budget. The OMB has already indicated that it wants to slash transit and Amtrak funds in FY 1992.

### Deadline nears for possible rail strike

A presidential emergency board was established last year in an attempt to solve longstanding differences between the rail carriers and eleven unions representing rail labor. One of the major conflicts concerned proposals by the railroads that would have passed part of the costs of rapidly escalating health benefits to their employees.

The board made its recommendations January 15. In addition to health and welfare issues, the board's 120 page report covers wages and work rules. Both sides expressed dissatisfaction with the board's recommendations. Neither side has to accept the board's findings, they are meant to be a basis for negotiation. Under the Railway Labor Act there is now a 30-day cooling off period, after which the carriers are allowed to impose unilateral wage and rule changes and the unions are free to strike.

A strike could occur as early as February 15. Two of the major unions involved, the United Transportation Union and the Brotherhood of Locomotive Engineers, said they would not strike while the nation was at war. Dick Kilroy, president of the Transportation Communication International Union, recently sent a memo to other union officials indicating that the TCIU was prepared to strike.

### Truckers adopt anti-rail campaign

A leaked internal memo from the American Trucking Association details plans to increase railroad expenses and obstruct operations by encouraging restrictive state legislation. The truckers would attempt to limit rail transportation of hazardous material, enforce truck weight limits on piggyback traffic, reduce speed limits, require fencing of all rights-of-way, encourage increased railroad property taxes, and advocate the retention of labor laws and other statutes unique to the rail industry that drive up costs.

**ANNUAL MEETING OF REGION NINE OF THE NATIONAL ASSOCIATION OF RAILROAD PASSENGERS, SATURDAY, MARCH 16, 1991, ST. LOUIS, MO.**

This year's meeting will be held in the Drury Inn at St. Louis Union Station. The meeting will begin at 8:30 am. The Drury Inn is in the former railroad YMCA building behind Union Station. It can be reached at 1-800-325-8300 or 314-231-8300. Please specify that you want the Union Station location; ask for the NARP group rate. If you have other questions or would like to discuss the agenda contact Jim Hurtle at 314-335-1527.

## Truckers, continued

The campaign is in reaction to rail industry efforts to block the spread of double and triple trucking rigs. The memo indicated that the ATA had asked the Internal Revenue Service to investigate the funding of Citizens for Reliable and Safe Highways (CRASH), one of the groups that is opposed to longer and heavier trucks.

An ATA spokesperson said they would stop the campaign if the railroads would "call off the dogs." on the anti-truck campaign. A rail industry official said that it was important that the public know just exactly what they will be facing on the highways, that there will be economic, environmental, and safety consequences of longer and heavier trucks. Of the truckers anti-rail campaign, the spokesperson said, "You don't see us going around trying to close down truck stops because they are centers for drug dealing."

It was recently learned that one anti-rail effort in Missouri has already been attempted. Several obstructionist amendments were placed on a bill dealing with Bi-State transit in St. Louis. The effort failed.

A study by a leading academic expert on transportation has concluded that bigger trucks could cripple the rail industry. Gerard McCullough, deputy director of the Massachusetts Institute of Technology's Center for Transportation Studies, estimated that longer combination vehicles (LCVs) could reduce net rail operating revenues by up to 50 percent and total revenues by 13 percent. The study found that LCVs would take some of the rail industry's most lucrative traffic, such as motor vehicles, paper, and chemicals. It also claimed the railroads could lose up to 25 percent of their intermodal business, their fastest growing traffic.

## Urban transportation and environment coalition working on state/local issues

Members of MOKSRail have been working with environmental activists and other interested groups in behalf of better public transportation and urban planning in the Greater Kansas City area. Other coalition members include representatives from the Sierra Club, the Coalition for the Environment, Burroughs Audubon Society, Greater Kansas City Greens, the Kansas City Bicycle Club and neighborhood activists. Much of the work of the coalition has been carried out through a newly formed Urban Environment Committee of the Thomas Hart Benton Group of the Sierra Club.

This urban transportation and environment coalition was formed last fall in response to Mid America Regional Council's plan to release the "street and highway element" of its long-range transportation plan. Based on a single set of "trend" projections of population and employment, the plan called for over a billion dollars of additional road building by the year 2010.

Coalition members feared that the plan would further accelerate the decline of the area's urban core while encouraging further suburban sprawl. This type of "doughnut" development, an urban hole surrounded by suburbs, is difficult to serve with good public transit. The low density, auto oriented outer development, coupled with the draining of the traditional transit and pedestrian oriented neighborhoods of the central city, also make it difficult to justify the building of light rail lines.

Members of the coalition reached a compromise solution with the newly appointed director of MARC, David Warm. The road element was released as an interim plan with the promise that a transit plan will be completed in 1991. MARC also decided to establish an Urban Core Growth Strategies Committee to investigate ways to stem or reverse the decline of the central city.

There is a great deal of interest among those in the coalition in speeding up the building of a light rail system in the Kansas City area. One of the priorities of the group is obtaining a dedicated source of state funding for light rail transit and other non-highway transportation alternatives. Missouri is currently one of only 14 states that provides no funding for urban mass transit.

MOKSRail and the Sierra Club's Urban Environment Committee, along with Citizens for Modern Transit in St. Louis, have been working on the gas tax issue in Jefferson City. Highway interests want some form of increased funding for roads. MOKSRail and the other coalition members will insist that any transportation tax include significant funding for non-highway transportation. Non-highway programs would include mass transit and Amtrak service but also cover assistance for the retention of rural rail freight service, expanded rural public transportation, intermodal projects, and bike and pedestrian trails.

This will not be an easy task. Governor Ashcroft has already indicated that he will not advocate any measures for increased state revenues. However, House Speaker Bob Griffin has announced that he will appoint eight task forces this year, one of which will cover transportation. This should offer additional opportunities to gain support for a comprehensive transportation program.

## Former FRA chief to speak at Illinois Rail meeting

John H. Riley, former Federal Railroad Administrator, will be the featured speaker at the annual Illinois Rail meeting, February 2 in Chicago. Riley developed a reputation as a strong rail advocate during his term at the FRA. Illinois Rail President Ken Bird said, "John Riley is a dynamic and inspiring speaker whose strong support for rail passenger service is well known. We are extremely pleased and fortunate that he is able to come to Chicago for this important meeting."

Riley was recently appointed to the post of transportation commissioner in Minnesota. Numerous transportation issues have been in the news in Minnesota, including light rail and high speed rail. Minnesota Governor Carlsen said "We simply cannot do business the way we have done in the past." Carlsen said "We were pleased to be able to reach 1,000 miles and get someone of this guy's caliber."

Riley stressed that "We are going to bring about a multimodal department. It's going to be a balanced department, dealing with all forms of transportation."

## MOKSRail reorganization Board nominees sought

MOKSRail is in the process of restructuring itself to meet the requirements for 501(c)(3) non-profit status. Obtaining this status would offer the organization substantial savings in postage and other benefits. A committee has been formed to rewrite the MOKSRail by-laws in an appropriate form.

One of the requirements for a 501(c)(3) organization is that it be governed by a board of directors. If you are interested in serving on the board please submit a short resume (100 words or less) for consideration by the nominating committee. Please state why you would like to be on the board and list any special skills or experience that you feel might be useful. All board members must have been members in good standing for at least one year. Send resumes to MOKSRail, P.O. Box 411192, Kansas City, Mo, 64141, before February 13.

There will be a minimum of three board meetings yearly. If possible, one of these meetings will be held in conjunction with the annual Region Nine meeting of the National Association of Railroad Passengers. Most of the other meetings will probably be held in the Kansas City area.

## Local news

**ASHCROFT CUTS RAIL FUNDING...** Missouri Governor Ashcroft eliminated unspent FY 1991 discretionary funding for the state's rail program. There was $50,000 in the fund, approximately $39,000 had to be returned. This is the only funding for rail passenger service in the state other than the subsidy payments made to Amtrak for operation of the Kansas City-St. Louis trains. In past years these funds have been used for local advertising of the service and some minor station repairs. The Governor has already indicated that he will veto these funds for FY 1992 also.

**BAD RAIL SLOWS SERVICE...** The Southern Pacific has placed a 30 mph restriction on 26 miles of newly installed welded rail on the Chicago-St. Louis route after it was found to be defective. The restriction has forced Amtrak to add 10-40 minutes of running time to its trains using this route. This occurred a little over a month after Amtrak reduced running times due rehabilitation progress on the route. The SP is engaged in a $36 million upgrade of track on this route. SP is suing the manufacturer of the rail, the Bethlehem Steel Company.

**RIVER ROUTE AMTRAK SERVICE SOUGHT...** Civic leaders from the communities of Quincy, Il, Hannibal and Louisiana, Mo are seeking the extension of Amtrak's Chicago-Quincy service to St. Louis via the Burlington Northern's route along the Missouri side of the Mississippi River. Amtrak has indicated that they cannot consider their request without a state commitment for the additional equipment required and for any operating deficit. Promoters of the plan met in the Quincy Chamber of Commerce offices on Jan. 11. This latest proposal is part of a growing national demand for additional Amtrak services.

**OVERWHELMING SUPPORT FOR METRO LINK...** The St. Louis Airport Authority recently released a study that puts Metro Link, the light rail project, at the top of the list of regional projects in terms of public support. Area residents gave a 72.1 percent approval rating for Metro Link and 31.9 percent said it was the most important project in the area, also higher than any other project. A study in St Clair and Madison Counties in Illinois showed that 75.6 percent of those polled favored extending light rail to Scott Field in Belleville.

Interest in light rail continues to grow in the St. Louis area. St. Charles County has appropriated $151,000 for the local share of a feasibility study of an extension of Metro Link. Jefferson County recently formed a committee to study transportation alternatives including the extension of Metro Link and express bus service.

**INDEPENDENCE STILL WAITING FOR DEPOT...** The City of Independence, MO is still waiting to receive final approval from the Union Pacific Railroad before it can take title to the former Missouri Pacific depot. The railroad is donating the property to the city.

## Amtrak news

**NEW ENGINES ORDERED...** Amtrak announced in late December that it had signed a letter of intent with General Electric for the purchase of 52 locomotives. The contract is valued at over $100 million. The order includes 20 3200 HP units tha. will be similar to GE's B30CW freight units, 22 4000 HP units, and 10 dual mode diesels that will be capable of operating from electric third rail into New York City.

The 20 3200 HP units are scheduled to begin arriving in early 1992. The other locomotives are scheduled for delivery beginning in early 1993. The latter two types of locomotives will have a new, more streamlined body style, similar to the German ICE trains.

Additional locomotives have be critically needed by Amtrak for some time. Amtrak has been able to purchase only a relative handful of units in the last decade, mostly used locomotives. The mainstays of the fleet, the F-40's are now 16 years old. Locomotive failures have been a major factor in the decline of Amtrak's time keeping.

continued next page

Amtrak news, continued

**NEW FARES AVAILABLE...** Amtrak and United Airlines have arranged reduced fares for rail/air travel. The package fare are designed for travelers that would like to use rail one way and air the other, or fly to gateways such as Chicago, New York, Denver, etc., use Amtrak for travel in the region and then return by air to their place of origin. The new ticketing arrangements allow users considerably saving over the purchase of one-way tickets or separate air and rail tariffs.

Amtrak says they expect to attract a lot of travelers that do not have the time to use the train for their entire journey but had been put off by high one-way fares for air/rail combinations. Early reports are that response to the new fares have been very good.

Amtrak has also announced year-round discounts for disabled travelers. The discount is 25 percent of regular one-way fares. Travelers must be able to document their disability through a government agency, a letter from a physician, or with a identification card from a group such as the Foundation for the Blind.

**BOISE BYPASS PROPOSED...** Amtrak has proposed to end rail passenger service to the largest city in Idaho by operating the Pioneer on a route that bypasses the city. Amtrak claims it could save 45 minutes by serving the city via a connecting bus from Nampa. The National Association of Railroad Passengers is opposing the move.

**NEW YORK CITY CONSOLIDATION...** Effective April 1 Amtrak will operate all of its trains serving New York City from Penn Station. All of Amtrak's Empire Service trains, operating to Albany and points west to Chicago, presently serve Grand Central. The long awaited West Side Connection, consisting of some new trackage and a rehabilitated former New York Central freight line, will allow Amtrak to divert these trains to Penn Station. This will be the first time that all intercity passenger trains have served the same New York terminal. Amtrak expects increased revenues due to convenient connections that formerly required a cab or subway transfer. It also will save money by eliminating rent payments to Metro North, the commuter rail agency that owns Grand Central.

**NORTH CAROLINA BUYS CARS...** Five former Kansas City Southern coaches have been purchased by the State of North Carolina for use on a second Charlotte-Raleigh Amtrak round-trip. The state paid the Chicago Northwestern Railroad $230,000 for the cars. The North Carolina DOT hopes to award a contract for rebuilding the cars within the next 60 days. The state hopes to have the cars in service by late 1991 or early 1992.

**MORE I.C. PROBLEMS...** The Illinois Central route continues its precipitous decline. Amtrak uses the railroad between Chicago and New Orleans and has had continual difficulty with the poor service provided. The railroad is removing all double track, leaving two mile passing tracks an average of 14 miles apart. Amtrak had asked the railroad to leave five mile sections of double track interspersed with ten mile single track segments. Used welded rail from the removed track is being sold rather than used to upgrade remaining track. The railroad is reported to be doing no maintenance on the Memphis-Jackson (MS) passenger line used by Amtrak. There are also reports of increasingly rough track on the Illinois section of the mainline.

## Transit update

**$125 MILLION FOR PORTLAND LIGHT RAIL...** Portland residents passed a ballot measure that provides up to $125 million for a west side extension, toward Beaverton, of the highly successful MAX line rail line. Part of the funding will also be used for short link that will reach the Portland Airport.

**SAN DIEGO EXPANDS LRT FLEET...** San Diego's Metropolitan Transit Development Board expects to place orders for 100 additional light rail vehicles, to be delivered over a period of several years. The first cars are scheduled for delivery in 1992. The current LRT fleet consists of 71 cars.

**SP SELLS MORE ROUTES FOR TRANSIT USE...** The Southern Pacific Railroad has agreed to sell 72 miles of right-of-way in California to a Joint Powers Board of San Francisco, San Mateo and Santa Clara Counties. The sale price is $268 million, most of which was for the purchase of the San Francisco-San Jose commuter rail line. There is a five year option in the contract for the purchase of additional trackage and/or operating rights in the area.

In Texas, the Cotton Belt, an SP subsidiary, has sold 54 miles of line between Fort Worth and Wylie to the Dallas Area Rapid Transit agency for $21.5 million. DART has no immediate plans for transit service on the line but said the "acquisition preserves another critical east/west railroad corridor for future use."

**FIRST L.A. COMMUTER RAIL CARS ORDERED...** The Los Angeles County Transportation Commission has ordered 40 bi-level commuter cars from UTDC, a Canadian firm. The cars will cost approximately $52 million and take 18 months to complete. There is an option for an additional 40 cars. The cars will be the first rail equipment ever built specifically for commuter operations in southern California. The cars will be used on new services to be instituted on lines radiating from Los Angeles Union Station.

**MIAMI ADDS SERVICE...** Miami's Tri Rail commuter service to West Palm Beach has added Saturday service to its schedule. Tri Rail is leasing a sixth locomotive for the service from Toronto's GO Transit. Orlando and Tampa rail authorities are talking to Tri-Rail officials about operating both commuter and intercity services.

**DENVER STUDIES COMMUTER RAIL...** Denver is considering commuter rail service utilizing a 10.6 mile freight line to the suburb of Arvada. The route is part of Burlington Northern line to the Coors plant at Golden. Costs for the service is estimated at $10 million. Service could begin by 1992.

**NO FREE PARKING...** The Metropolitan Transportation Commission in San Francisco has recommended that businesses and shopping malls be required to charge 60 cents per hour for parking as a way to curb auto use. The MTC is also opposing the expansion of I-80 in the Eastbay, saying it will increase congestion and air pollution.

**TRANSIT MAIL...** Due to congestion and traffic delays on I-880 the U.S. Postal Service is now transporting overnight Express Mail on Bay Area Rapid Transit trains.

# Financing Transportation - American Style

**By Joseph Vranich**

Reprinted with permission, from the June, 1990, issue of Speedlines, a publication of the High Speed Rail Association.

*(At the Seventh International Conference on High Speed Rail, Joseph Vranich, director of the Association's Washington office, presented historical perspective as well as research on transport subsidies. His remarks follow. -- Editor)*

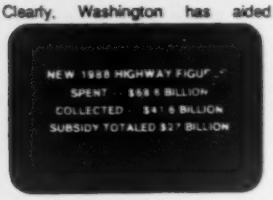
It's time to talk about money from Washington. Let's take a quick flashback to past political leaders and federal policies.

Republicans have believed in bringing about new transport facilities that

allowed America to grow. Abraham Lincoln, in an 1832 campaign for the Illinois General Assembly, was in favor of "the opening of good roads." Theodore Roosevelt built the Panama Canal, and President Eisenhower brought the Interstate Highway System to reality.

The Democrats have helped mobility, too. In the Great Depression, President Franklin Roosevelt put workers to the tasks of building roads. President Lyndon Johnson signed legislation that got the Northeast Corridor rail project moving. And President John Kennedy, in launching the NASA Apollo program, sparked technological developments that have helped America's aerospace and aviation industries.

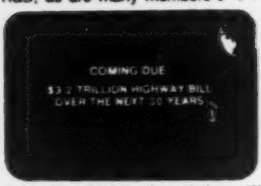
Clearly, Washington has aided



transportation in one form or another. Washington today encourages privatization and joint public-private financing initiatives, as reflected in Mr. Skinner's National Transportation Policy.

That policy encourages "future development of rail passenger service in high-volume corridors, including introduction of high-speed rail or maglev service." It also would "provide seed money for research on new transportation systems and technologies."

Now we have a federal initiative to help U.S. industry develop a new maglev technology. For fiscal year 1991, President Bush has recommended a $9.7 million program; some in Congress want to raise the amount. This is wonderful news if you're a company into high-tech R&D, as are many members of



dividuals of this Association. We spend billions on aviation R&D in this country. I don't see why we can't do that for ground systems as well.

Having said that, the Administration's policy specifically does not call for direct federal investment in intercity high-speed ground transport systems. It said "private investment" will be the main component in building systems.

That means intercity high-speed systems financed by private investors will have to compete with heavily subsidized trips on the road and in the air.

The Congressional Budget Office has issued a report that shows "private-sector users of the aviation system, including airlines, have received more in capital and operating spending than they have paid in taxes." A lot more. So much more that if the airlines were paying for their true costs, we would have airline tickets at twice the price they are today. If you doubt that, consider this statement by DOT's Assistant Secretary for the Budget, Kate L. Moore:

"In 1990, the government expects to collect about $3.9 billion in aviation

taxes. Total aviation funding will be $7.1 billion, far exceeding the taxes collected." Yet the Air Transport Association says the net profit for the industry last year was about $900 million. The costs of the government-provided services far exceed the combined net profit of the entire industry. Why is it that many expect high-speed rail to pay all of its costs -- including infrastructure -- yet we ignore the airline industry's repeated failure to do that very thing?

Perhaps we should heed the comments in the Argonne National Laboratory study that recommends using funds from the aviation trust fund to help build the new high-speed lines. After all, the new lines will relieve airport congestion without the need to build new airports.

The highway picture also presents a

remarkable story. Figures just released by the Federal Highway Administration show that all levels of government spent $68.6 billion on highways and streets in 1988 alone.

Where did that money come from? About $41.6 billion came from the user fees such as gasoline taxes, vehicle taxes and tolls. About $27 billion, however, came from other sources: the federal and state general funds, property taxes, bond issue proceeds, and so forth.

So, if you're going to run a high-speed service, you will compete with subsidized automobile travel. Maybe, as Congress spends all of 1990 and much of 1991 discussing the new highway bill, we should make a pitch for access to the

Highway Trust Fund.

Former Federal Ra Administrator John Riley, w speaking before this very group in 1987, said, "I think we need to seriously consider the use of highway funds, not to build the high-speed systems, but to build the grade separations that are going to be required to make any-speed rail system work. That maintains the basic principle of using highway funds only to build highways, but it does it in a way that also promotes high-speed rail."

That might be a tough sell, for the same reasons that Washington will find tough going in trying to off load more highway spending onto the states -- and that reason is that we're facing a $3.2 *trillion* bill over the next 30 years to repair our highways and bridges.

These subsidy policies will continue to put high-speed train proposals in the back rooms of many state departments of transportation. And that is a truth. That is a truth if you want to build a steel-wheel system or if you want to build a maglev system. That is a truth if you want to import technology from Sweden or

France or Japan or anywhere else or if you want to put into service a U.S.-designed maglev system.

I say that because the total dollars available from Washington and other tax sources are what count. Let's take a look at that, based on the latest figures out of the Office of Management and Budget and the Congressional Budget Office.

I've expressed the subsidies in terms of a Dallas-Houston trip.

Let's assume that national subsidy averages apply to a trip between those two cities. Calculations show that based on how much of each cost dollar is subsidized by the tax-payers -- now I'm talking operating as well as capital dollars here -- each trip between Dallas and Houston in the aviation system has 50 cents of each public dollar paid from the trust fund and 50 cents in subsidies.

This, by the way, shows that when Southwest Airlines opposes high-speed rail in Texas -- and claims their airline does not benefit from subsidies -- that Southwest Airlines is seriously misleading the public. There is no way that Southwest Airlines even begins to pay its share of the costs of the aviation system.

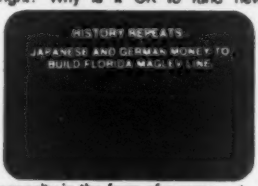
How about highways between Dallas and Houston? Well, for each dollar

spent by public agencies, 39 cents came from taxpayers. Again, that does not include the highway trust fund monies.

Let's look at the much-criticized subsidy for Amtrak. For each dollar of costs last year, Amtrak received a subsidy of 28 cents. Poor Amtrak. It's criticized in the press for its subsidy, yet by this standard it actually does quite well.

Southwest Airlines thinks the Texas high-speed trains should get zero in government help. In other words, Southwest Airlines can benefit from a subsidized infrastructure, but you are supposed to stay meek and not ask for any government help whatsoever, from anyone, anywhere, any time.

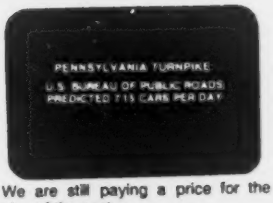
More often than not, government officials agree with that imbalance. I must ask: By what logic? By what right? Why is it OK to fund new



capacity in the form of a runway, but not OK to fund new capacity in the form of a track or guideway? Why is it OK for the federal government to facilitate construction of a new airport -- which is environmentally destructive of the very urban area it is intended to serve -- and not OK for the federal government to directly fund environmentally benign high-speed trains?

For the record, the High Speed Rail Association does not oppose subsidies to other modes. And we are not asking the federal government for subsidies to operate high-speed trains. My position is, however, that the federal government has to take a more serious look at ways to help build these systems.

Just two months ago, the director of transportation in California, Robert Best, told Don Phillips, a *Washington Post* reporter, that he has urged the federal government to do away with the disparity in matching funds. He said it's unfortunate that "if you want a freeway, you get public money, but if you want a rail system, you're on your own."



We are still paying a price for the sins of the past.

This "Let's not help the trains" approach stems from the anti-railroad sentiment generated during the Populist and Progressive eras. We should not take our ancestor's attitudes about selfish railroad barons in the last century as justification to make life exceedingly difficult for the super-speed, high-tech train builders of the future. In school, every American child learns about the wrongdoing of the railroads in the last century.

But, do we teach a child going to Disney World that the Orlando Airport is a former Air Force Base for B-52s? That the airport was converted to civilian use? Aviation is subsidized and has received sweetheart deals over the years. But we don't bother with that in our schools.

Those who want to build systems today using foreign funds will find some solace in knowing that America has a heritage of privately financing its railroads – that goes back to the 1830s. Then, private money from Great Britain went into our first common carrier – the

Baltimore & Ohio Railroad.

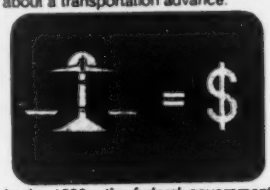
History is being repeated today as Sam Tabuchi, president of Maglev Transit Inc. in Florida, plans to build that Florida maglev line with private funds, this time from Germany and Japan. Overseas funding is available for an HSST maglev transit line proposed for the City of Las Vegas.

And I think we'll be hearing about such funding for other states.

There are American dollars, too. We could learn from Redding Stevenson, president of the Florida High Speed Rail Corporation, who is relying, partially, on real-estate development rights to help pay for the train system. "It is a long-term investment," he said. "It is not a project for the faint-hearted."

And Paul Taylor of the California-Nevada Commission talks about raising construction financing possibly through tax-exempt industrial revenue bonds.

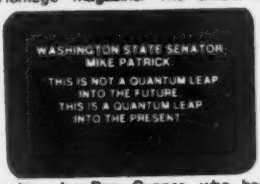
In other words, don't go to Washington for money to build such systems, at least not yet. Let's look back to another time that Washington was less than optimistic about a transportation advance.



In the 1930s, the federal government looked down on an Pennsylvania's effort to build its turnpike – the nation's first superhighway. The Federal Bureau of Public Roads believed two-lane intercity highways were adequate and scoffed at the idea of four-lane, limited-access, toll roads. The BPR said the turnpike would carry only 715 cars per day. Note that the turnpike was having trouble selling its bonds, and this view from Washington didn't help matters any.

But President Roosevelt, fearing an economic slump in 1938, decided to put more people to work, and he did that by supporting Pennsylvania's program. He purchased $40.8 million in turnpike bonds and gave the state a $29.25 million grant. The bonds were repaid, but of course a grant is a grant and was not repaid. Remember that estimate of 715 cars per day? Not long after it opened, the turnpike actually served nearly 10,000 cars per day. Last year, 270,000 vehicles a day used the Pennsylvania Turnpike.

I recommend an excellent story about the 50th anniversary of the Pennsylvania Turnpike in the May/June 1990 issue of *American Heritage* magazine. The article is



written by Dan Cupper, who has been a long and faithful member of this Association. His story points out that the first chairman of the turnpike commission, a Walter Jones of Pittsburgh, had a difficult time raising funds for the innovative project.

I see many parallels between Washington's early view of superhighways and its views today of high-speed trains.

Balance in transportation. Doesn't that mean balance in funding? Doesn't that mean a level playing field? I think that, just like [illegible] velt and the Pennsylvania Tur[illegible]pike will be some way, som[illegible]hat Washington will help [illegible] high-speed ground transportation systems.

That day is coming. Putting it in the words of a Senator from Washington State, Mike Patrick: "This is not a quantum leap into the future; this is a quantum leap into the present."

The federal government is becoming less pessimistic about high-speed trains. For that, we have many to thank. John Riley. Gil Carmichael. Senator Daniel Moynihan. Senators Lloyd Bentsen and former Senator Lawton Chiles. Vendors of steel-wheel equipment. Proponents of maglev. Labor organizations. And the High Speed Rail Association.

But Washington is not yet ready to help pay to build the new systems. Subsidies are reserved for others. So listen well to those who have alternative financing schemes, because that's the way the first systems will be built.

# Congress Hits Railroads . . .

## *Amtrak Honors Sam Stokes, Tireless 'Ampenny' Advocate*

—Photo by Scott Leonard

**NARP Dir. Samuel E. Stokes Jr. receives first Amtrak Consumer Advocate Award from Amtrak President and Chairman W. Graham Claytor Jr.**

Amtrak gave its first Consumer Advocate Award to longtime NARP Dir. Samuel E. Stokes of Alstead, NH, at a ceremony at Amtrak's corporate headquarters in Washington's Union Station at the close of the Amtrak Board of Directors' Oct. 24 meeting.

The award reads in part: "Sam Stokes has persistently and tirelessly championed the benefits of rail passenger service as an energy-efficient alternative to the private automobile. His letters to newspaper and magazine editors, state and federal officials, and others have helped raise awareness and support for improved rail passenger service [ed.: See Aug. '89 *News*]. Mr. Stokes has been a constructive critic, strong supporter and influential proponent of Amtrak service improvements. Mr. Stokes was among the first to advocate the allocation of one cent per gallon of the gasoline tax to fund rail service capital improvements."

Claytor said, "Sam's voice of reason and common sense on transportation policy issues has been heard. Sam's work has been featured . . . in many publications nationwide. Amtrak's

*(Continued on page 4)*

## *. . . But Heavily Subsidized Water Carriers Escape Unharmed*

### *Long-Term Hope for Stable Amtrak Funding . . . Near-Term Uncertainty as OMB Gains Clout*

The Omnibus Budget Reconciliation Act of 1990 (Public Law 101-508, enacted Nov. 5) supposedly sets a framework for deficit reduction over the next five years. The law includes the first-ever federal fuel tax on railroads—2.5 cents a gallon, the same as that portion of the new highway fuel tax which goes to general revenues ("deficit reduction")—and the first-ever railroad payments for federal safety inspection.

The railroad tax resulted from furious lobbying by the ubiquitous truckers and will cost the railroad industry $400 million over five years, including about $32 million paid by Amtrak, but not including several million dollars commuter railroads would have to pay if Congress fails to correct a drafting error. (The correction is expected to pass.)

This cloud may have a silver lining. Getting railroads—especially Amtrak—to pay a federal fuel tax could prove to be the first step toward getting Amtrak a predictable and adequate funding source. Now that railroads are paying a fuel tax, the next step could be earmarking the proceeds for energy-efficient transportation. (A variation of this was floated during the reconciliation process, to no avail. See intermodal fund box on page 2.)

#### Water Carriers Escape Untaxed

Unfortunately, Congress had no stomach for increasing the small fuel tax on domestic water carriers, although 90% of their infrastructure costs are taxpayer funded (primarily the Army Corps of Engineers) while the federal government saddles freight railroads (and their 99% privately funded infrastructure) with a complex web of antiquated laws that unfairly inflate rail costs. The water-carrier tax proposed by some rail lobbyists got nowhere, probably because key Senate Finance

members have big home-state water-carrier constituencies.

The new law therefore is bad news for railroads that parallel major waterways—notably the Illinois Central, which is already in bad shape and doing a poor job of handling Amtrak's "City of New Orleans." Amtrak knows there are alternative Chicago-New Orleans routes—such as via Evansville, Nashville, and Birmingham—but is focussing efforts on improving service on the existing Illinois Central route through Memphis, Jackson—and Batesville, MS, in the district of House Appropriations Chairman Jamie L. Whitten.

The bill did include new aviation tax increases earmarked for deficit reduction, a sound move since the public interest demands that users of this energy-intensive and environmentally destructive form of travel pay a greater share of the mode's true costs and not simply contribute to a fund that builds more aviation facilities. (The aviation industry did not walk away empty-handed. See airport noise box.)

**Please urge your legislators to work for inclusion in the next tax bill of a rail passenger service trust fund such as the "highway-trust-fund-penny-for-Amtrak" highlighted in July *News* and our current article on Sam Stokes.**

**Please thank your legislators for the aviation tax increases in the reconciliation bill, but tell your legislators you oppose the bill's inequitable treatment of railroads and water carriers and urge them to work to correct this in the next tax bill.**

### The New Taxes

The new federal transportation taxes, which—unless otherwise noted—took effect Dec. 1, are outlined below.

**Railroads** pay a 2.5 cents/gallon fuel tax, which will go to the Treasury for deficit reduction. This was not in the original budget summit agreement. Railroads did not pay fuel taxes before because they maintain their own roadbeds. PACCAR, builder of Kenworth and Peterbilt trucks, is in the district of House Ways & Means Member Rod Chandler (R-WA), who proposed the tax.

**Railroads** also will be charged for the first time for federal railroad safety inspection. This takes effect Mar. 1 and is expected to cost $170 million over the budget plan's five-year life, costing railroads about $38 million per full year. The secretary of transportation must decide how to divide costs among the railroads; he may not use proportion of industry revenues as a basis.

The secretary also must report annually on the cost of federal safety activities for other modes and how much user-fee revenue, if any, is paid for those activities. The reports are due within 90 days of the end of fiscal years in which rail safety fees are collected. Thus the first report is due Dec. 31, 1991.

Within 90 days of the report, the secretary must submit legislation to correct "any significant difference in the burden of federal user fees borne by the railroad industry and those applicable to competing modes of transportation."

(Heavy lobbying by railroads and rail labor killed the budget summit's increase in their railroad retirement taxes.)

**Highway user** fuel taxes rose five cents/gallon (gasoline from 9 to 14 cents; diesel from 15 to 20 cents; transit buses, other state and local vehicles, and off-road vehicles remain exempt). Half of the increase (2.5 cents) goes to the highway trust fund and half to deficit reduction. Transit gets 20% of the increase going to the trust fund (one half cent). Truckers played a key role in getting the summit's 12 cents reduced to zero in the House-passed version, to 9½ cents in the Senate-passed bill. Other opposition to a fuel tax increase reportedly came from Members of Congress with rural or suburban constituencies. States will still get back at least 85% of taxes they pay into the trust fund, rather than the 95% proposed on new taxes in the budget summit agreement.

Congress exempted the airline, intercity bus industry from

### THE INTERMODAL FUND IDEA

While the reconciliation law was being developed, the House Energy & Commerce Committee staff proposed that, instead of going to general funds, new transportation fuel taxes not going to the Highway Trust Fund would go to an "intermodal transportation trust fund" for "transit, railroad (including Amtrak) and aviation (including air traffic control) programs that are currently financed by general revenue appropriations."

The idea was to maintain the principle that transportation taxes would fund only transportation. At the same time, the new trust fund would preserve the "deficit-reduction" benefits envisioned by those who originally proposed the tax increases, since the above-named programs' claims on general revenues would be reduced by whatever amounts the programs got from the new intermodal trust fund.

Unfortunately, big-railroad lobbyists got this plan killed before it was ever brought officially before the committee. The railroads' argument was that some of the money would go to small freight railroads that compete for some traffic with the big railroads. Rail labor also opposed the concept because many of those small freight lines are non-union or have contracts with unions other than the major rail unions.

Perhaps railroads' fuel tax payments should be earmarked to cover federally-mandated Amtrak costs, including retention-toilet conversion, Americans with Disabilities Act compliance, and safety and environmental needs!

### MORE AIRPORT MONEY; NATIONAL NOISE POLICY

**The new budget law (lead story) gives Transportation Secretary Samuel K. Skinner one of his top priorities—new airport-expansion funds—and gives airlines what looks like a fairly lenient national noise policy.**

**Skinner and airport operators wanted airports to be able to levy "passenger facility charges" (head taxes) to finance rapid capacity expansion. Current law prohibits such taxes and prohibits use of federal airport grants for underwriting bonds and for certain improvements such as gates.**

**Most of the top 40-50 U.S. airports are likely to impose the tax, whose revenues will further distort the air/rail funding imbalance. Airports will leverage the new revenue into "really big bucks" by pledging the head taxes to pay off long-term bonds.**

**The law allows airports to assess a $3 per ticket head tax; a passenger on a round-trip would pay up to $12 (where the one-way trip involves one or more transfers).**

**Under the noise policy, noisy "stage 2" planes must be phased out by Dec. 31, 1999, but DOT could allow some such planes for another four years if the owning airline converts 85% of its fleet to quiet "stage 3" planes by July 31, 1999. Also, federal officials may disapprove *new* airport restrictions (such as limits on nighttime operation) on stage 3 planes. And, before imposing *new* restrictions on stage 2 planes, an airport must analyze the rules' economic impact, give six months' notice, and receive public comments.**

paying the increase, so their diesel fuel tax remains 3 cents a gallon, where it has been since 1984. (Before that, intercity buses had been exempt from the fuel tax since 1978.)

**Aviation.** The airline ticket tax rises from 8% to 10%, the domestic cargo tax rises from 5% to 6.25%, the non-commercial jet fuel (kerosene) tax from 14 to 17.5 cents/gallon and the non-commerical aviation gasoline tax from 12 to 15 cents/gallon. All of these increases—totalling over $18 billion over five years—go to deficit reduction. Airlines accepted this and new airport taxes because airlines also got a national noise policy (see box).

### Spending in Future Years

The reconciliation bill abandons the setting of meaningful government deficit targets. The new targets will be adjusted for so many factors—economic downturns, unexpected increases in "entitlement" program costs, exclusion of Persian Gulf military costs—"that it will be almost impossible for Congress to miss" the targets.

But the law does contain strong limits on *new* government spending programs. Rep. Jim Leach (R-IA) says these limits give the White House more power than would the line-item veto that President Bush sought and failed to get. The limits could also boomerang against existing current programs.

The law sets three separate targets for each of the years FY '91-93 for defense, foreign aid, and "discretionary" domestic programs (i.e., including Amtrak and transit, excluding Social Security and other "entitlement" programs). The targets generally assume maintenance of FY '91 "service levels" in the "out years," that is, spending would grow to keep pace with inflation.

If Congress exceeds the target in one category, however, the administration must do an across-the-board cut of other programs within that category to meet the target. The cut is based on *estimates* of what programs will cost—and the Office of Management and Budget makes the estimates. (Although benefit programs are excluded from across-the-board cuts, such cuts could be *triggered* on 15 days' notice if OMB finds such programs are costing more than projected.)

**"The Bush Administration has begun the biggest zero-sum game to hit Washington in years. . . . It isn't clear where Mr. Bush would cut spending to make room for [his new] initiatives. Federal Amtrak subsidies, a perennial target, are likely to be targeted again in some fashion."**

—*The Wall Street Journal*, Dec. 14 news story

This means, to cite an example that could affect Amtrak and transit, the White House "will have the last word on how much of the Coast Guard budget is military and how much is civilian transportation"—something worked out heretofore among appropriations subcommittee chairmen (above quotes from "Congress is Shifting More Power Over Spending to the President," *The Wall Street Journal*, Oct. 29).

In FY '94-'95, the rules change so that, unless the White House wants to keep the three categories separate, they would be abolished. Then, military or foreign aid overspending could produce an across-the-board cut that affects transport.

It is good that intercity rail passenger spending rose significantly in FY '91 as the "last budget train left the station." But it is disquieting that all government programs are vulnerable to unexpected future across-the-board cuts, with OMB in the driver's seat. ■

### NEW AMTRAK CALENDAR

**Amtrak's 1991 year-at-a-glance wall calendar features a color photo by railroad photographer Richard Steinheimer of one of Amtrak's "San Joaquin" trains running along San Pablo Bay. $5 per calendar. Discounts for quantities sent to same address: 2 for $9, 3 for $12, 4 for $14, 5 for $15, 6 for $17, 7 for $19, 8 for $21, 9 for $23, 10 for $25; 11-25 cost $2.25 each and 26-50 cost $2 each. Calendars for years 1979-1990 are available, 1-5 for $2 each, 6-25 for $1.50 each, 26-50 for $1 each. Send a money order or check payable to Amtrak Calendar to P.O. Box 7717; Itasca, IL 60143; allow two weeks for delivery.**

### TRAVELERS' ADVISORY

**On Jan. 27 Amtrak will expand Washington-Atlantic City service from one to 2 daily round-trips and give Harrisburg, PA its first through Amtrak train to Atlantic City. On Jan. 8 Amtrak will discontinue service to Philadelphia International Airport due to Midway Airlines' drastic reduction of operations there. (Midway generated most of Amtrak's passengers there under special arrangements with Amtrak. Travelers' Advisory, April *News*.) Amtrak is also discontinuing Club Service cars on Atlantic City trains "since they are lightly used and could be put to more profitable use on other routes."**

**Amtrak issued a new Chicago-St. Louis schedule Dec. 1. Some trains had 10-40 minutes added to their running time because of 24 miles of 30 mph speed limits south of Springfield, where Southern Pacific has been laying new welded rail that proved defective. SP and Bethlehem Steel are arguing over who is at fault.**

**Also Dec. 1 Amtrak discontinued its Galesburg-Peoria-Springfield bus, which had been established primarily to protect "Zephyr"/"Eagle" connecting passengers who are now guaranteed direct connections between those trains in Chicago.**

**A dispute between Amtrak and Santa Fe over northbound service at Irvine, CA has resulted in the following correct times of service, effective Nov. 6: #569 at 6:12a, #573 at 7:58a. #771 skips Irvine. Also, the timetable incorrectly shows checked baggage service on new Santa Barbara trains #771 and #784.**

**Changes to round-trip excursion fare time restrictions on the Northeast Corridor took effect Oct. 28. Those restrictions were eliminated—except on holidays—between all Corridor points and Baltimore/BWI/New Carrollton/Washington. They were also eliminated for Philadelphia-New England travel. New round-trip excursion fares took effect for Boston/Springfield-New York, blacked out for 1-8p Friday/Sunday/holiday departures. Remaining time restrictions for Springfield/Albany to New York/Philadelphia are now cut to 1-8p Friday/Sunday/holiday departures. Remaining time restrictions for Springfield/Albany to New York/Philadelphia are now cut to 1-8p Friday/Sundays.**

**Under a provision tucked away in a new federal law, Amtrak must run its Chicago-Valparaiso commuter train, "Cirkvest," through May 3, 1991. Rep. Peter J. Visclosky (D-IN) played the key role here.**

**WATCH OUT: #5/25/35 serves Provo, UT at 9:30p—NOT 9:50p as Amtrak's Oct. 28 timetable incorrectly states.**

# *Amtrak Releases Chicago-Florida Report*

"A Chicago-Florida route would fill an important gap . . . in Amtrak's current route system and tap potentially important business and discretionary travel markets," said Amtrak in the conclusion of its congressionally mandated Chicago-Florida route study released December 3.

The route Amtrak picked as a basis for its facility-cost estimates and schedules—and the route most observers think has the best chance of getting service—runs via Danville, IL; Evansville, IN; Nashville and Chattanooga, TN; and Macon, Cordele, and Waycross, GA.

Amtrak projected capital costs of about $52 million for facilities and right-of-way improvements and $150-175 million for rolling stock. *Initial* operating subsidies would be about $19 million a year but this should decline as traffic builds.

The next step in the route campaign is for states to approve enough funding to encourage Congress to come up with the balance.

*(Amtrak's 29-page report is available from Amtrak Public Affairs, 60 Mass. Ave., NE, Washington, DC 20002. Send NARP an s.a.s.e. for Sen. Wyche Fowler's (D-GA) news release and/or NARP Dir. Alan Yorker's excellent letter from the December 17 Atlanta Constitution.)* ■

—Amtrak photo by Paul Woodring

**A nice crowd at Akron, OH, greets the Nov. 7 ceremonial train heralding the reroute of Amtrak's "Broadway Ltd." The station is ideally located downtown at the Quaker Square Hilton Inn that was converted from the Quaker Oats Company's grain silos. NARP Region 6 members will meet here March 23.**

### Amtrak to Buy 52 New Locomotives

**Amtrak announced December 26 that it signed a letter of intent with General Electric's Transportation Division to purchase 52 new diesel-electric passenger locomotives worth more than $100 million. All will have head end power. The first 20 will be 3200 HP and similar to the F40 mainstay of Amtrak's current diesel fleet. The new units, however, will outwardly resemble GE's B30CW freight locomotives. Deliveries begin in early 1992.**

**The second group of 22 locomotives will be 4000 HP and delivery is to begin the first quarter of 1993. The last group of 10 are 3200 HP dual mode locomotives with 3rd rail capability which will replace the aging FL9 fleet used for service into New York City from the Empire Corridor.**

**Amtrak says the last 2 groups will have "a new body structure based on the German ICE passenger locomotive, departing from the boxy appearance of past eras and providing a modern steamlined appearance."**

### NARP REGIONAL MEETINGS

**(Some meetings require RSVP and registration fee; more on other regions next issue. Phone numbers shown are home, except for region 1.)**

*Region 1 (CT, ME, MA, NH, RI,VT):* **Sat. Mar. 2, Portland, 1p-5p (lunch 11:30 am), Holiday Inn (downtown). Details Wayne Davis, 207/879-7245**

*Region 2 (NY):* **Sat., Feb. 23, Albany, 11:30a-4p, Empire State Plaza Conference Center (part of state capitol complex). Speaker: Paul Reistrup, former Amtrak pres./ former chmn. High Speed Rail Assn. Details: Don MacLean, 518/377-4390.**

*Region 4 (DC, MD, VA, WV):* **Sat., Mar. 16, Washington, 9a-3p, Capitol Hill Club (adjacent to Capitol South Metro). Details: Jim Churchill, 703/751-8427.**

*Region 5 (AL, FL, GA, KY, LA, MS, NC, SC, TN):* **Sat., Mar. 23, Decatur, GA, 9:45a-4p, Holiday Inn. Dinner train option available in eve., RSVP early. Details: Terry Hall, 404/455-3157.**

*Region 6 (IN, MI, OH):* **Sat., Mar. 23, Akron, 10a-4p, Quaker Square Hilton (adjacent to Amtrak). Speaker: NARP's Harriet Parcells. Details: Howard Harding, 216/ 867-5507.**

*Region 7 (IL, MN, ND, WI):* **Sat., Feb. 2, Chicago, 8:30a-4p, Midland Hotel (4 blks. east of Union Sta.), RSVP by Jan. 14. Speaker: Former FRA chief John Riley. Details: Pierre Loomis, 309/734-7202.**

*Region 8 (AK, ID, MT, OR, WA):* **Sat., Apr. 27, Shelby, MT, approx. 11a-5p (between train times), Deli Shop (downtown). Speaker: Amtrak Dir. of Corporate Communications-West Art Lloyd. Details: Barry Green 406/365-8056.**

*Region 12 (CA, HI, NV):* **Sat., Feb. 23, San Diego, 9:30a-4:30p, Embassy Suites Hotel (downtown). Speakers: James R. Mills, chmn., San Diego Metropolitan Transit Development Board; Sharon Greene, exec. dir., LOSSAN Rail Corridor Agency. Details: Ed or Mary Lee Von Nordeck, 714/787-8403.**

## Amtrak Honors NARP's Sam Stokes (continued from page 1)

support in Congress, as well as in individual states, is due in part to Sam, and others like him, bringing rail passenger issues to the public agenda."

In accepting the award, Sam urged Republican members of the Amtrak Board to ask President Bush to support earmarking a penny of the federal gasoline tax for Amtrak. Sam said he hoped that the U.S would not become mesmerized by maglev and would get on with the building of high-speed steel-wheel trains, noting how much France's similar efforts benefitted the French steel industry. Finally, he expressed the hope that Wisconsin Gov. Tommy Thompson, an Amtrak board member, would work for restoration of Chicago-Madison passenger train service.

Amtrak's superb four-page advance news release on the award and ceremony quoted Sam's arguments for the Amtrak gasoline-tax penny:

"1. The United States is the richest country in the world with the cheapest gasoline in the world. We can afford this penny.

"2. With this one cent tax, Amtrak dependence on federal funds would vanish immediately and help reduce the deficit.

"3. All existing trains could run daily and increase both ridership and revenue.

"4. Major gaps in the current system could be closed.

"5. Increased frequencies and eventually an expanded system serving millions of additional people would become possible."

*(Send NARP a S.A.S.E. for a copy of Amtrak's release.)* ■

# Our Message is Getting Out!

## *"Smart Highways" vs. Smart Policy*

While many NARP members challenge the notion that high-speed rail efforts should be abandoned in favor of magnetic levitation vehicles (*NARP News*, Mar.), high tech highway "solutions" are also coming under attack from environmentalists.

"Some believe that 'smart highways' will solve the congestion problem by safely squeezing more cars onto the same roadspace through computer guidance systems," says Michael Replogle of the Institute for Transportation and Development, in a Sep. presentation at Sao Paulo, Brazil, to the Conference on the Development and Planning of Urban Transport in Developing Countries.

"However," continues Replogle, "the extremely high degree of reliability required for such a system to significantly expand road capacity appears to pose cost and technical feasibility problems comparable to the 'Star Wars' Strategic Defense Initiative, which is now quietly being put on hold after billions of dollars of research. 'Smart Highways' would require expensive retrofitting of miles of new infrastructure elements on highways. It is unlikely that the US (can afford) such investment."

Arlee Reno of the Urban Institute (Washington, DC) is critical of another "high tech" road concept: "systems that display alternative routes to motorists stuck in traffic jams. In almost all cases, there are no alternative routes that will not be experiencing the same congestion difficulties; only a few cars have to switch from a clogged freeway to any parallel arterial to assure that the arterial also will be completely congested.

"The problem is not that stupid motorists fail to consider alternative routes. In major metropolitan areas, radio traffic reporters already provide for free whatever benefits could possibly accrue from high-tech electronic map displays in autos" (*Journal of Commerce*, Sep. 21).

Devoting more resources to policies that encourage people not to get in their cars would make far more sense than spending money on "smart highways" or "smart cars." ■

## *Worldwatch Institute Paper Joins Environmental Parade Endorsing Transit, Amtrak*

*"In my travels and speaking engagements, I sense a greater interest by people in rethinking their relationship with the automobile. This is partly due to congestion but health is also a big factor."*

—Lester R. Brown, Director, Worldwatch Institute, at Oct 11 news conference unveiling Worldwatch Paper 98

*"Public transport plays a central role in any efficient urban transport system. In developing countries, where at least 16 cities will have more than 12 million people each by the year 2000, failing to give priority to public transport would be disastrous.*

*"But neither the exploding Cairos and Delhis nor the relatively stabilized New Yorks and Londons can sustain future growth in automobile use. As the nineties began, a new oil crisis, mounting pollution and congestion, and global warming all call for a greater commitment to public transport."*

—Marcia D. Lowe, in *Worldwatch Paper 98*, "Alternatives to the Automobile: Transport for Livable Cities"

It has long been clear that the effort to reduce U.S. dependence on the auto and increase reliance on public transport would benefit greatly if endorsed and actively supported by the many environmental organizations whose agendas—like ours—would be advanced by dramatic changes in U.S. transportation. That was the philosophy behind our establishment of the Campaign for New Transportation Priorities (*May News*; box on page 3).

Now a number of well-known environmental groups have gone a step further, giving prominence to the transportation crisis in well-written newsletter articles.

One of the most respected organizations to do this is the Washington-based Worldwatch Institute which publishes occasional papers "for a worldwide audience of decision makers, scholars, and the general public." Its papers are heavily footnoted—especially useful to those who want more

information—and published in many languages.

Marcia Lowe is a Worldwatch Senior Researcher specializing in agriculture and transportation. Her new paper, quoted above, is a superb 49-page work building on Papers 84 ("Rethinking the Role of the Automobile," by Michael Renner) and 90 ("The Bicycle: Vehicle for a Small Planet," also by Lowe).

The Institute unveiled Paper 98 at an Oct. 11 news conference well-attended by reporters from both U.S. and foreign publications. WI Director Lester Brown, who introduced the author, said Paper 98 was funded by a foundation which had specialized in hospital-related research but came to feel it was dealing with symptoms and should start dealing with causes—an obvious reference to the severe health costs of auto-related air pollution and accidents.

Among the key points Lowe made:

- The 4 keys to balanced transportation: improve mass transit; promote use of the bicycle; orient future land use around transit, bicycling, and walking; and make auto users pay their full costs.
- In the Netherlands, the bicycle handles 30% of all work trips and 60% of school trips.
- Between 10 and 55% of rail travelers in Western Europe bike to the rail station. (From the paper: "Guarded bicycle parking [is] common in many Asian countries, including China and Vietnam, and at rail stations in industrial countries, including Japan, the Netherlands, West Germany, and Denmark.")
- Less than 10% of U.S. workers pay for their parking.

### Bad for Business!: Too Many Auto Parking Spaces

Public policy generally requires employers and developers in the U.S. to provide on-site parking. The belief that such parking is "good for business" is widely held. Yet "Geneva *prohibits car parking at workplaces in the central city*, motivating commuters to use the city's excellent public transport system" (emphasis added).

Lowe notes research in "10 major West German cities" showing that "too much parking can even hurt business by creating an atmosphere unfriendly to pedestrians. . . . Paris Mayor Jacques Chirac, apparently impressed by the reduced traffic resulting from temporary parking restrictions for France's 1989 bicentennial, announced plans to permanently remove more than 100,000 street parking spaces in central Paris to make space for public transport and pedestrians . . .

"Copenhagen's city council has . . . banned all on-street parking in the core, replacing parking space in public squares with landscaping, and increasing the amount of bicycle parking at commuter train stations. . . ."

### The Ideal City

"The heart of a city would be reserved for people on foot and passengers arriving by metro or trolley. Beyond the core, pedestrians, cyclists, trolleys, and buses would share the streets equitably with slow car traffic. Express public transport routes would link outlying areas to each other and to downtown. People would make most short trips by foot or bike, and longer trips by walking or biking to public transport stops. Cars would be reserved for trips for which the alternatives are inconvenient."

### USSR and Eastern Europe

The least hopeful aspect of Lowe's paper relates to the one bad result from recent political developments in the Com-

**ATTENTION: HOUSTON, PHOENIX, DENVER!!!**

**"It is not too late for well-established cities to change their auto-oriented land-use patterns. . . . Instead of further catering to autos, cities can step off the road building treadmill by changing land use patterns to reduce the need for driving. . . . In much of Europe, development of private land is guided by zoning, tax incentives, bans on low-density projects. . . . Urban planners try to position new developments within cycling or walking distance of public transport stops.**

**"Although the term 'high density' evokes images of towering apartment buildings and little open space, dense developments are pleasant and livable if well planned. A more compact urban form, far from precluding green spaces and stuctures on a human scale, can actually facilitate them. The planned Mission Bay development in San Francisco, for example, will combine homes and offices with ample open space at a total density higher than many large Western European cities—all with no buildings higher than 8 stories.**

**"According to a study done for the U.S. Environmental Protection Agency, a compact development can mix 2- to 6-story apartments and town houses with clustered single-family homes, and still leave 30% of the developed area for open space and parks. In a typical low-density sprawl community, according to the study, only 9% of the land is devoted to open space."**

*—Marcia D. Lowe, in Worldwatch Paper 98*

**WE NEED SENSIBLE GROWTH, NOT "NO-GROWTH"!!!**

**"Even cities in Australia and the U.S. are beginning to rethink their inefficient use of land. Portland, OR, decided to use some federal road building funds to build a light rail system instead, and worked out plans to intensify development along the rail corridor . . . .**

**"The time may be ripe for more careful development in other parts of the U.S. . . . However, many popular no-growth initiatives actually undermine the goals of mixing land use and concentrating higher densities near public transport, by trying to stop growth altogether. This just diverts inevitable development to areas where the controls are looser, leading to further sprawl. The issue is not whether to reject or accept growth, but rather how best to use it to reduce automobile dependence and make communities more livable."**

*—Marcia D. Lowe, in Worldwatch Paper 98*

**Energy Intensity of Urban Transport Modes, United States**

| Mode | Number of Passengers | Energy Intensity |
|---|---|---|
| | | *(Btu per passenger-km)* |
| Intercity rail | 80 | 442 |
| Intercity bus | 40 | 477 |
| Light rail | 55 | 639 |
| City bus | 45 | 691 |
| Rapid rail | 60 | 752 |
| Car pool | 4 | 1144 |
| Automobile | 1 | 4576 |

**Sources:** Worldwatch Institute estimates, based on Mary C. Holcomb et al., *Transportation Energy Data Book: Edition 9* (Oak Ridge, Tenn.: Oak Ridge National Laboratory, 1987); Vukan R. Vuchic, *Urban Public Transportation Systems and Technology* (Englewood Cliffs, N.J.: Prentice-Hall, 1981).

—Worldwatch Paper 98

munist world: auto dependence is likely to skyrocket in countries which today have an unusually high dependence on transit, boasting 180 of the world's roughly 300 streetcar and trolley systems. These countries cannot afford to add massive auto pollution to their industrial pollution that is already among the worst in the world.

**Other Environmental Transit Coverage**

- E MAGAZINE's ("The Environmental Magazine") Sep./Oct. cover story, "Rethinking Our Transportation Future," twice mentions our Campaign for New Transportation Priorities, quotes NARP's Ross Capon, and makes extensive use of sources to which NARP referred Author Francesca Lyman.
- The August issue of *Habitat: Journal of the Maine Audubon Society* is devoted to "Rethinking Transportation Priorities"—all 8 articles plus the Director's Column. One article, "Getting Back on the Track," reports that NARP Dir. Wayne Davis, founder of TrainRiders Northeast, "has been quite successful in generating both popular support and initial interest from transportation officials."
- The May/June *Greenpeace* includes this phrase on the cover: "America's Love Affair with the Automobile is Headed for Disaster." This refers to a story by Robert Schaeffer, "Car Sick: Automobiles ad Nauseam," which lists our Campaign as a resource.
- The Boston-based Conservation Law Foundation's *CLF Newsletter* devoted its Summer 1990 issue to transportation—7 articles plus the editor's column. Cover headline: "Inspection: The Car and its Driver." One of the articles: "Rail: The Forgotten Alternative."
- *Garbage: The Practical Journal for the Environment* included an article, "Cars," by Janet Marinelli in the Nov./Dec., 1989, issue.

*To get one or more Worldwatch Papers, make check payable to Worldwatch Institute, and write to them at 1776 Massachusetts Ave., NW, Washington, DC 20036. One paper is $4; bulk copies (any combination of titles): 2-5, $3 each; 6-20, $4 each, and 21 or more, $1 each.* ■

**MORE ORGANIZATIONS ENDORSE CAMPAIGN**

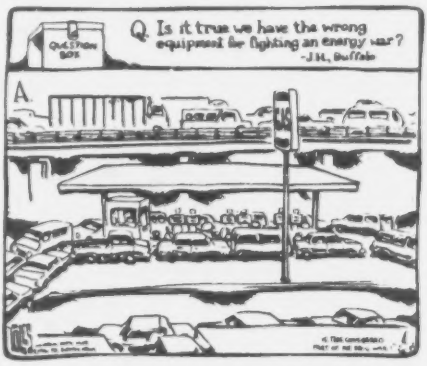
**35 national and local organizations have now endorsed our Campaign for New Transportation Priorities. Add these groups to the list in May *News*: Baltimore Area Transit Assn.; Boston Area Bicycle Coalition; Citizens for Modern Transit (St. Louis); Conservation Law Foundation (Boston); Committee for Better Transit (New York City); Fossil Fuels Policy Action Institute (Fredericksburg, VA); High Speed Rail Assn. (Pittsburgh); National Assn. of Transit Consumer Organizations (Minneapolis). Our apologies to Committee for Better Transit—which submitted one of the earliest endorsements—for not including them in the May list.**

**Meanwhile, other coalitions have recently formed, mostly around individual items on our agenda:**

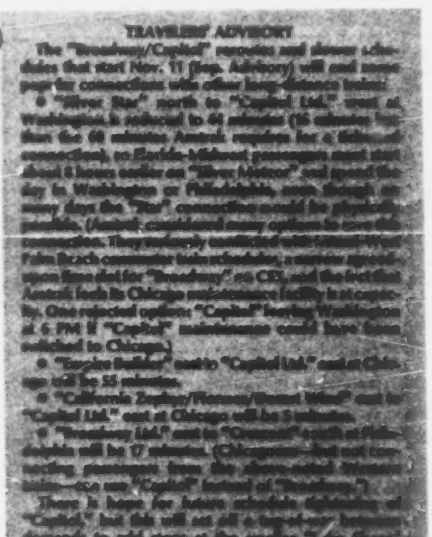
- **CRASH, working against bigger trucks;**
- **American Institute of Architects has a working group focussing on "liveable cities" (element 7 of our Campaign's policy brochure);**
- **TRANSIT NOW, a broad coalition initiated by the transit industry to promote a greater role for all mass transit including car pools and HOV lanes;**
- **METRO AMERICA, an effort of the Washington-based Institute for Policy Studies to act as a resource center for environmentally-sound transportation efforts. IPS is in touch with many superb academicians who work on balanced transportation.**

**A PENNY FOR AMTRAK**

**NARP Director Samuel E. Stokes Jr., of Alstead, NH, noting the 800,000 U.S. highway fatalities (at a cost of at least $600 billion) and 42 Amtrak passengers who died since Amtrak's 1971 creation asks: Does anyone in Congress think a gasoline penny tax (for Amtrak) to reduce this slaughter significantly would be worthwhile?**



—Tom Toles in the *Buffalo News*



### FUTURE BAY AREA AMTRAK CHANGES

**On June 27 the Amtrak board approved a $1.5 mill. contribution to the joint CalTrain/Amtrak maintenance facility planned for San Jose. Such a facility would permit shifting Amtrak's Bay Area maintenance work from Oakland to San Jose. That in turn would facilitate establishing state-supported San Jose-Oakland-Sacramento "corridor" trains and extending "California Zephyr" and perhaps "San Joaquins" to San Jose.**

**Planning is already underway to relocate Oakland passenger facilities from the old, earthquake-devastated and physically isolated Southern Pacific 16th St. Station to Jack London Square, an attractive waterfront commercial area.**

**But nothing is perfect. Although railroad operational problems at Jack London Square appear solveable, the ferry service is negligible, BART (Lake Merrit) is 7 blocks away (the joint Amtrak/BART Richmond station will always be the best transfer), and passengers riding the connecting bus or driving to/from San Francisco will have both a slightly longer trainride and a longer drive. (The old station's one virtue is its proximity to the Bay Bridge.)**

**Hopefully, with Bay Area-based trains serviced in San Jose, through trains (Los Angeles-Seattle "Coast Starlight") would still be fueled and watered during the longer Oakland stop that would remain necessary for mail, baggage, and passengers. The alternatives—a special servicing stop or a lengthened San Jose stop—would add to the train's overall running time.**

### MORE ON AIR MARKETS

**Our August listing of U.S. air markets with the most ridership failed to reflect that U.S. DOT logically considers New York and Newark as a single market; wherever "New York" or "Newark" appeared, "New York/Newark" was intended.**

**Here are the numbers for the 12 months ending Mar. 31, and their growth since calendar year 1981. (Ridership is from a 10% ticket sample, multiplied by 10. Remember: New York = New York plus Newark.)**

| 1990 Rank | City-Pair | Passengers (Millions) 12 mos. ending 3/31/90 | % Growth over 1981 | 1981 Rank |
|---|---|---|---|---|
| 1 | Los Angeles-New York | 3.145 | + 42.9 | 3 |
| 2 | Boston-New York | 3.104 | + 32.5 | 1 |
| 3 | New York-Washington | 2.951 | + 34.0 | 2 |
| 4 | Chicago-New York | 2.485 | + 35.0 | 6 |
| 5 | Miami-New York | 2.342 | + 19.2 | 4 |
| 6 | Dallas-Houston | 2.241 | + 39.3 | 8 |
| 7 | Los Angeles-San Francisco | 2.221 | + 14.2 | 5 |
| 8 | New York-San Francisco | 2.084 | + 55.8 | 9 |
| 9 | Honolulu-Kahului (Maui), HI | 2.027 | +282.1 | 22 |
| 10 | New York-Orlando | 1.765 | +169.5 | 23 |

**The following markets with high-speed rail potential also appeared among aviation's top 45: Chicago-Detroit (#11), Chicago-St. Louis (#21), Dallas-San Antonio (#28), Chicago-Kansas City (#29), Chicago-Minneapolis (#31), Las Vegas-Los Angeles (#38), Dallas-Austin (#41), and Buffalo-New York (#44).**

## *Station Restoration Video*

*—Photo by Michael Forrester*

"Rebuilding a Landmark: The Kissimmee Train Station Restoration" shows the steps taken by citizens of that Florida community during the restoration project which ended in 1988. The information on this video could prove helpful to citizens in other communities which have train stations in need of rebuilding or restoration. Kissimmee is served by Amtrak's "Silver Meteor" and "Silver Star."

Produced by NARP Director Michael Forrester, a Kissimmee resident who was involved in the station project, the 7-min. video is available for $12.95, postpaid, by writing "Train Station Video"; P.O. Box 421901N; Kissimmee, FL 34742. Also included is a 5-page written outline of the project. A portion of the proceeds will go to NARP affiliate Florida Coalition of Rail Passengers. ■

## *Trains to "Wonderland"*

*Trains of Discovery*, a book by NARP Member and Former Dir. Alfred Runte of Seattle, outlines the pivotal role of the western railroads in developing the concept of national parks. A revised edition was published this year, with a new chapter on the Grand Canyon Railway (*NARP News*, Sep. '89, Travelers' Advisory), which marked its first anniversary Sep. 17.

The $16.95 book is 80 pages with color and B&W illustrations but is available to NARP members for $11.95 plus $2 shipping. Make $13.95 checks payable to Roberts Rinehart, Inc.; P.O. Box 666; Niwot, CO 80544-0666; 303/652-2921. ■

# A Penny for Amtrak

## A New Amtrak Law!

The process of enacting HR 5075, the "Amtrak Reauthorization and Improvement Act of 1990," showed strong congressional support for Amtrak and its expansion. But only time will tell if President Bush's signature meant a shift in his view of Amtrak to be followed by cooperation in the development of the appropriations bill that determines how much money Amtrak will actually get next year. (The House has already passed its FY '91 appropriations bill; see separate story.)

Bush may have signed HR 5075—now Public Law 101-322—to kill the freight railroad regulatory provision (see John Martin's May 17 letter) cited as the basis for his May 24 veto of HR 2364, the first version of the Amtrak bill Congress passed. The White House seemed to hate that provision more than it loved Amtrak; the White House promise to sign an Amtrak bill and not fight over its dollar amounts came with an "if-you'll-get-rid-of-the-ICC-provision" caveat.

**A HOPE WE ALL SHARE!**

**"I trust that the President's explicit statement that he will support this Amtrak reauthorization bill signals a 180-degree turn in the administration's thinking toward Amtrak . . . We hope (this) means that we can look forward to working with the administration from here on out to continue the excellent progress Amtrak has made in the past decade."**

*Rep. Thomas A. Luken (D-OH), Chairman, House Energy & Commerce Subcomm. on Transportation & Hazardous Materials, June 25 House floor statement*

The Senate sustained the veto of HR 2364 on June 12 just before the President's birthday party began. Sen. J. James Exon (D-NE)—suggesting this may have influenced some votes—said, "I hope that we can get back to not what is nice for a party, but what is right for America."

HR 2364 fell just 2 senators short of becoming the first law to be enacted over a Bush veto. (Reports referring to 3 votes reflected Senate Majority Leader George Mitchell's (D-ME) last-minute switch, which preserved his right to call for another vote—a right he never exercised, since a different outcome never seemed likely.)

To underline their support for Amtrak—and perhaps to

*(Continued on page 2)*

## Support Grows for Amtrak Capital Gas Tax Penny

### Riley, Newspapers Favor the Idea

Due largely to Amtrak's strong financial performance, the concept of earmarking a federal gasoline-tax penny for Amtrak capital expenses is rapidly moving towards the mainstream of Capitol Hill debate. Early indications are that some of Amtrak's many friends on the House Ways and Means Committee like the idea.

In his Apr. 21 address to NARP's Board, John H. Riley—Federal Railroad Administrator (1983-89) under Pres. Reagan—endorsed the Amtrak "gas tax penny." A day earlier, Federal Railroad Administrator Gil Carmichael told the Board: "We're not for it or against it; we're just listening . . . "

Significantly, Transportation Secretary Skinner's policy says "The Federal commitment to spending user charges for *transportation* purposes does not necessarily mean that trust fund revenues must be used only on the mode from which they were collected." [Emphasis added.]

An Amtrak penny could help reduce the deficit without breaking the politically popular relationship between user fees and transportation. The "Ampenny" would replace general revenues now devoted to Amtrak capital and—by permitting increased capital spending—would reduce Amtrak's operating subsidy needs.

Also, as Claytor wrote in the May-June, '89, *Private Varnish*, "Increased use of Amtrak and mass transit will ease the pressure to build new roads and the ground transportation networks necessary to support new airports."

Key passages from recent editorials supporting the "Ampenny" (for full texts, send NARP an s.a.s.e.):

- Atlanta *Journal*, Apr. 3: "[Claytor] advocates allocating one cent of any future federal gasoline tax increase to Amtrak. We don't see the need for such an increase, but a penny for rails makes sense."
- Baltimore, MD *Sun*, Apr. 24: "If Congress decides to raise the gasoline tax to help pay for a much-needed overhaul

of the nation's transportation infrastructure, it could take care of Amtrak's capital requirements by dedicating one penny of the tax to the railroad . . . . Given Amtrak's impressive improvements, the railroad deserves Washington's support."

● Fayetteville, NC *Times*, Mar. 22: "Using federal (and state) gasoline revenues for investing in Amtrak's role for the 21st century would be a sound public policy, paying rich dividends for millions of Americans in an adequate, affordable, safe, environmentally-sound transportation resource."

● Fayetteville, NC *Observer*, Mar. 21: "Devoting a fraction of a gas tax increase to Amtrak is clearly in the nation's interest."

● Lynn, MA *Item*, May 17: ". . . We think (Amtrak) should get (support) from Washington, and that an appropriate method would be through a rise in the gasoline tax. In saving wear and tear on the non-train part of our transportation infrastructure, and in controlling air pollution, Amtrak has justified this public expenditure."

● Portland, ME *Press Herald*, Apr. 30: "Sooner or later Congress will raise the gasoline tax. When it does some of those tax dollars should be earmarked for upgrading and expanding Amtrak service. After all, the better the service, the greater the number of people who will ride the rails. That's the kind of sensible environmental and fuel-efficient policy that government ought to encourage."

● Portland, OR *Oregonian*, Apr. 11: "Call it revenue enhancement, a user-fee increase or whatever, investing just one cent of any new gasoline tax adjustment in Amtrak would help the railroad move further toward ending the taxpayer subsidy of its operations, would add desirable and necessary service, and would return safety, environmental and energy-conservation benefits."

● Providence, RI *Journal-Bulletin*, May 14: ". . . Amtrak has also saved the nation much fuel and money: It's far more energy-efficient to carry several hundred people on a train than put them in automobiles. And it's cheaper to maintain train lines than superhighways, which require constant, massive rebuilding . . . . Dedicating a penny or two from the gasoline tax to Amtrak would be a good way to achieve a healthier transportation system."

Private financing is good, but Amtrak—like any corporation —cannot take on debt endlessly. Costly interest payments would overinflate Amtrak's operating costs. The "Ampenny" is an idea whose time is coming; your letters to legislators can help speed it up! ■

## NEW AMTRAK LAW *(continued from page 1)*

make clear to the President the importance of his signing the next Amtrak bill—20 of the 35 Republicans who voted to sustain the veto promptly cosigned a new authorization by Conrad Burns (R-MT) identical to HR 2364 except for removal of the ICC provision.

There were 2 major arguments for overriding the veto: the length of time House approval of a new bill might have taken (see "thanks" box), and the fact that the ICC provision itself was a good one, given the potential impact of leveraged buy-outs in the railroad industry. In the event, the House acted quickly.

### Amtrak's "Homework" in the New Law

P.L. 101-322 differed from HR 2364 in 3 respects: the ICC provision was gone and Amtrak was directed to report to Congress:

● "by June 1, 1991, on its plan to eliminate its need for Federal operating support by the year 2000. The report should include a discussion of the actions that could be taken to enhance revenues, to control costs, and to improve productivity and efficiency of operations, as well as an estimate of the capital investment need to take such actions"; and

● by July 6, 1992, on "the economic feasibility of providing new service, if such service will have the potential of covering the operating costs associated with such service, to areas not served by [Amtrak] as of [July 6, 1990]."

P.L. 101-322 retains HR 2364's studies of Iowa (see box) and Seattle-Vancouver services. Amtrak "shall cooperate with the efforts of the Washington State Dept. of Transportation in designing and carrying out a study of the feasibility of reestablishing" Seattle-Vancouver service (formerly operated there 1972-81).

Anticipating this law, a Seattle-Vancouver inspection train ran Aug. 11, 1989. Capital costs needed to start the service were found to be low (about $60,000), but Amtrak found that additional equipment would be needed, that operating costs on Burlington Northern within Canada could be high and that—under present track conditions—up to 5 hours would be needed for the 156-mile trip. In March the State of Washington approved $500,000 over the next 2 years for intercity rail passenger projects, but has not formally requested "403b" service.

### Money

For Fiscal Years 1989-92, P.L. 101-322 has funding ceilings of $630 mill., $656 mill., $684 mill., and $712 mill. (Appropriations determine actual funding: Amtrak got $584 mill. in FY '89; $604.7 mill. in FY '90.)

Perhaps the most important funding impact of the new law is the roughly $17 mill. in 1989-90 Railroad Unemployment

---

### THANK YOU, MESSRS. CHAIRMEN!

**"I would like to take a moment to express my sincere gratitude to the chairman of the Committee on Ways and Means [Dan Rostenkowski, D-IL], to the chairman of the Committee on Public Works and Transportation [Glenn Anderson, D-CA], to the chairman of the Committee on the Judiciary [Jack Brooks, D-TX], and thank them for their cooperation in bringing this matter to the floor so quickly. Most importantly, I want to thank the chairman of the Committee on Energy and Commerce [John D. Dingell, D-MI], for his unwavering support of our efforts to include a commuter rail provision within this Amtrak [reauthorization], and to [Rep. Luken] who of course was critical, as well, as to the outcome.**

**"After the divisive fight over what I view to be the ill-advised veto of the first Amtrak bill, bringing this legislation forward could have been a very difficult task. Indeed, particularly given the concurrent jurisdiction of 4 major committees, there were those who were willing to lay odds and give bets around here that it would become almost impossible if not virtually impossible. Instead, we have experienced nothing but bipartisan cooperation and comity in the finest tradition of this historic body. For that, all of northern Virginia's battle-weary commuters are grateful, and particularly this Member is, and will continue to be, grateful to all those that I have mentioned before and to the other Members of this body who have been so generous in their support of this measure . . . ."**

*—Rep. Stan Parris (R-VA), June 25 House floor statement*

**LONG ROAD TO REAUTHORIZATION**

- **Feb. 28, 1989—Sen. James Exon (D-NE) introduces a bill.**
- **Sep. 25—House passes H.R. 2364 by 296-93 margin (roll call in Feb. '90 *News*).**
- **Nov. 22—Senate passed H.R. 2364 by voice vote.**
- **May 1, 1990—House-Senate conferees reach agreement under threat of veto.**
- **May 9—House passes conferees' bill, 322-93.**
- **May 10—Senate passes conferees' bill by unanimous consent.**
- **May 24—President Bush vetoes H.R. 2364.**
- **June 7—House overrides veto, 294-123.**
- **June 12—Senate sustains veto, 64-36 (see lead story—re Sen. Mitchell's vote—and John Martin's June 18 letter).**
- **June 25—House and Senate pass H.R. 5075 on voice votes.**
- **July 6—President Bush's signature makes it P.L. 101-322.**

Insurance payments Amtrak saves this year—a savings Amtrak assumed in this year's budget, which is very tight due to lower-than-projected revenues (result of the soft economy also hurting airlines and others). (See box on p. 4.)

**Virginia Rail Express**

An agreement with Conrail was the last obstacle to startup of Washington-Northern Virginia commuter rail service. P.L. 101-322 protects Conrail from "all claims" by requiring Virginia Rail Express (VRE) to carry liability insurance of at least $200 mill. and prohibits the awarding of claims in excess of that coverage.

VRE trains will use just 2.1 miles of Conrail track, including the Potomac River bridge. Service from Fredericksburg and Manassas is to start in the fall of 1991. This provision allows VRE to serve Washington Union Station and a new stop at L'Enfant Plaza.

Without the liability provision, trains would have terminated at Crystal City, forcing Washington-bound commuters to switch to Metro at Alexandria and cutting projected daily ridership from 8,000 to 5,400.

Because of an approaching deadline on VRE's option to purchase the 10 additional coaches (for a total of 30) needed to handle the larger projection, VRE was desperate to have the liability provision enacted by early July—and it was!

**Special thanks, Sen. Charles S. Robb (D-VA), for getting the "liability ball" rolling and working hard all the way!**

**Double Taxation**

With P.L. 101-322, rail and motor carrier transportation workers pay state income taxes *only* to their state of residence. Before, employees also paid taxes to certain states through which they passed on the job.

**Funds for Similar Purposes**

Last year the former Chicago, Missouri and Western Railway wished to sell some track to raise funds for repairing other trackage. But the track it wanted to sell had been repaired with a government loan and any sales proceeds would have gone back to the government. With P.L. 101-322, a railroad can use these proceeds to fund such projects of similar purpose.

**The ICC Takeover Provision That Died**

In a July 9 letter to Rhode Island ARP Chairman Steven H. Musen, Sen. John H. Chafee (R-RI) said currently the "ICC may examine the issuance of securities or the assumption of an obligation or liability by a railroad to finance a non-carrier's acquisition . . . . What the law should not do is *mandate* that the ICC evaluate the financing, control, and related details of a transaction when *neither* a merger *nor* railroad financing is involved."

But railroads may remain vulnerable to financially-shaky takeovers where the type of securities issued meets the letter but not the spirit of the law. Congress, however, is unlikely to consider this provision again this year. ■

**AMTRAK TO CENTRAL IOWA, WYOMING?**

**P.L. 101-322 requires Amtrak to give Congress by Jan. 6, 1991, a "detailed report" on its evaluation of "the short-term and long-term revenue and cost implications of separating the existing California Zephyr-Desert Wind-Pioneer train into 2 service routes serving separate western destinations via a southern route and a central route through Iowa."**

**Before the House passed HR 5075 by voice vote on June 25, Rep. Thomas Tauke (R-IA) called this study "of keen interest to the people of Iowa . . . I am confident that this study will demonstrate the substantial economic benefits of creating a new Pioneer route to connect Chicago and Seattle. This new route will enable Amtrak to provide more timely service to cities along Amtrak's California Zephyr and Desert Wind routes. And it will bring Amtrak service to portions of my State which recently lost intercity bus service."**

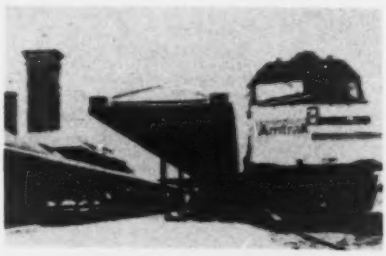
**"More timely service" presumably means that the eastbound "Zephyr" would no longer be delayed in Salt Lake City by waits for the "Pioneer," which would run as a separate train across southern Wyoming, bypassing Salt Lake City (except for a feeder bus?) but not Denver, and running Omaha-Chicago on the Chicago and North Western across more populous central Iowa, including Ames, Cedar Rapids, and Clinton.**

**[A page one story in the July 5 *Washington Post* said Clinton paid little attention to its recent loss of Greyhound service and is focussing civic efforts on restoration of passenger train and scheduled air service. The story ran with a photo of Clinton City Administrator George Langmack standing in front of the C&NW station. The story suggested that development of rural on-call van systems (16 in Iowa, 1,140 nationwide) helps explain why Greyhound route cuts have provoked so little protest.]**

**In 1987, Amtrak studied moving the *entire* existing train to the C&NW but decided that projected revenues and cost savings did not justify the move. But C&NW communities were excited by the prospect of having Amtrak service, just as southern Iowa points who now have service were aghast at the idea of losing it. Splitting the long and crowded train would please both camps—and the on-board employees.**

**P.L. 101-322 doesn't specifically mention Wyoming, but it is unlikely Amtrak would try to run 2 separate trains over the Rockies. One advantage of running the "Pioneer" on the faster Wyoming route is the eastbound train could depart Seattle later than the present 6 AM and still make present 3rd-day East Coast connections in Chicago. Moreover, the new House appropriations bill (see p. 4) requires the Federal Railroad Administration (FRA) to study reestablishment of Amtrak service in Wyoming.**

**PORTLAND CANOPY, TRACKS THREATENED**



—Photo by Rod Aho

**To facilitate real estate development near the Portland (OR) station, the city's development commission (PDC) wants to remove 2 platform tracks, one of 2 south approach tracks, and the outer of 2 remaining historic (1904) platform canopies (next to locomotive above). A lawsuit filed in U.S. District Court by the Oregon Assn. of Railway Passengers et al temporarily blocked demolition; a court hearing was set for July 23. OreARP and NARP asked Amtrak —whose initial comments were directed solely at then-current timetable needs—to make clear the scheme's impact on long-term expansion; Amtrak followed up with a strong July 5 letter to Mayor J.E. "Bud" Clark.**

## *Appropriations Process Off To Rousing Start*

By a vote of 385 to 31 the House on July 12 passed its transportation appropriations bill for FY '91 (which begins Oct. 1, 1990). H.R. 5229 has relatively generous funding levels for most programs except the Northeast Corridor Improvement Program, with Amtrak funding organized to identify costs that Subcommittee Chairman William Lehman (D-FL) said "unfairly inflate Amtrak's true subsidy needs."

Rep Lawrence Coughlin (R-PA), ranking subcommittee member, said the bill "shows what we can do when given adequate funding and fulfills our duty to bring out a bill" within the required budget target.

But, said Coughlin, "we probably will never have as generous an . . . allocation [from the Budget Committee] again." Indeed, final figures for FY '91 are likely to be much lower. As Coughlin noted, "we probably will not be able to keep [these levels] after the budget summit."

H.R. 5229 might be an effort to protect programs from big percentage cuts, but Amtrak would die nonetheless with the 38.4% automatic cut Budget Dir. Richard Darman said would hit most domestic programs if the budget summit fails. H.R. 5229 is written so that capital and operating funds would be cut by the same percentage; there would be no opportunity to salvage a workable operating budget as in the past by cutting capital more.

Key items in the bill:

- Amtrak funding, on an "apples-and-apples" basis, would rise 4.5% to $632 mill. vs. this year's $604.7 mill. (see box).
- NECIP: $16 mill. (34% below this year's $24.4 mill.). The committee report says this is "for the procurement of 2 trainsets of dual-propulsion locomotives" intended to eliminate the New Haven engine-change and speed up some Boston-New York schedules. H.R. 5229 funds no other projects, such as extension of Centralized Electric Traffic Control (now operating Washington-Wilmington), whose costs are to be jointly shared with transit authorities in Pennsylvania and New Jersey. (The Senate subcommittee, chaired by Frank R. Lautenberg, D-NJ, is likely to change this.)
- Magnetic Levitation: $12 mill. "for use by the [maglev] interagency committee [DOT chairs] to explore the feasibility of a stepped up U.S. effort leading to a competitive program to develop a standard U.S. maglev technology."

Some of this money *should* go to *rail*. The report acknowledges maglev "has yet to be proven in commercial application" and "directs the Secretary to make every effort to demonstrate the feasibility of introducing Very High Speed Rail to the U.S."

- $3.5 mill. in low-interest (4%) loans, to be matched dollar-for-dollar by Illinois, to install welded rail on the Chicago-St. Louis line (Joliet-Granite City).
- H.R. 5229 provides the legislative authority FRA needs to award $400,000 to Amtrak to "research alternate means of access to trains from stations with low platforms, including use of lifts, ramps and other devices that can ensure safe access." (The funds were included in the FY '90 bill.)
- Mass transit: $3.204 bill., which would be a 5.1% increase from this year's $3.048 bill. appropriation.
- Aviation: $8.17 bill., a 14.8% increase but still 1.3% below the President's request.
- Federal Highway Admin.: $16.3 bill. "program level," up 8.8% from this year's $15 bill.

**Homework for DOT, Due Jan. 15, 1991**

- By Jan. 15, 1991, DOT is to give to both appropriations committees a report "which explains the Administration's position and plans for expanding the use of Amtrak for federal business travel beginning in" FY 1991. (The General Services Administration "recently awarded the Washington-to-New York and Washington-to-Newark city pairs for mandated federal employee travel to airlines, even though Amtrak's bid was lower.")
- FRA, in consultation with Amtrak, is to "submit a study on the feasibility of adding" Amtrak service "through southern Wyoming as an alternative to the existing [Seattle-Chicago] Pioneer . . . . The study should include . . . an estimate of the State of Wyoming's share of providing service through section 403(b) funding."
- FRA, in consultation with Amtrak, is to "submit a cost analysis study of the feasibility of establishing [Amtrak] service between Jacksonville and New Orleans."

*The Senate Appropriations Subcommittee on Transportation was expected to mark up its bill in late July.* ■

**AMTRAK'S "FAIR" COSTS**

**Amtrak's operating/capital grant in H.R. 5229 is $482 mill. ($632 mill. less $150 mill. discussed below), of which $138.9 mill. is earmarked for capital.**

**To highlight the fact that "Amtrak's real cost to the federal taxpayer" is less than previous funding bills have suggested, H.R. 5229 puts $150 mill. "in a separate [line item] for FRA to make certain payments on behalf of Amtrak to the Railroad Retirement (RRR) Trust Account and the Railroad Unemployment Insurance Account (RUIA)," expenses formerly covered by Amtrak grants. The old practice "unfairly inflated Amtrak's true subsidy needs, since these expenses are merely passed on by Amtrak as a subsidy for the freight railroads" (Chairman Lehman's July 12 floor statement; send us an s.a.s.e. for more info.)**

**The committee report says Amtrak's revenue-to-cost ratio is 84% absent the unfair portions of RRR and RUIA.**

February 27, 1991

The Honorable Richard A. Gephardt
Attention: Mr. Ken House
9959 Gravois Street
St. Louis, Missouri 63123

Re: Statement of Madison County Transit District
Congressional Hearing on Reauthorization of the
Surface Transportation Program
March 1, 1991

Dear Congressman Gephardt:

My name is Nelson Hagnauer, and I am the Chairman of the Madison County Metro-East Transit District. Madison County Transit is the primary provider of local and express bus services, and vanpool services for the quarter of a million residents of Madison County, Illinois. MCT-sponsored services operate in both urban and rural areas of the St. Louis-Metro East metropolitan area, including the Alton small urbanized area.

I am here today to urge you and your colleagues in the House and Senate to make several important adjustments in the Administration's proposal of the five year budget authorization for the nation's Surface Transportation Program prior to passage. Madison County Transit Board of Trustees strongly encourages the adoption of a balanced surface transportation authorization which is fully cognizant of the present economic and energy realities facing us in the 1990's.

One Transit Way P.O. Box 7500 Granite City, IL 62040-7500 800-647-7433 618-797-0880

The level of transit service in the Bi-State region suffered considerably during the 1980's. The decreased Federal commitment to mass transit was a major factor contributing to this problem. The State of Illinois has committed resources to mitigate the loss of federal funds; however, it is impractical to think that any state alone can solve the transportation and energy problems of an entire nation. Therefore, the Administration's proposal to freeze the annual transit authorization for the next five years while increasing the highway authorization by 39% is not acceptable and needs to be brought into a more acceptable balance by the Congress.

Maintenance and reconstruction of existing roads and particularly the aging bridges that span the Mississippi River are extremely important to the residents and businesses of Madison County. Yet, we also recognize that too many Madison County residents are entirely dependent on their automobiles and foreign oil for 100 percent of their transportation needs because of the lack of an effective transit alternative. A relatively high percentage of our residents commute to other parts of the metropolitan area for their livelihood. We, at the local level, hear increasingly from these people that faster and more efficient transit services are needed in Madison County and throughout the metropolitan region.

Our Board members agree that the two keys to effective surface transportation in Madison County are: (1) the replacement of the deteriorating McKinley Bridge; and, (2) a high speed transit

system for commuters which might make use of the new bridge in the future. We, therefore, urge the Congress to adopt a Surface Transportation Program that places appropriate emphasis on maintenance and reconstruction of existing bridges and highways on one hand, and the expansion of regional transit systems on the other, using technology that is sensitive to growing public concerns over fluctuating gasoline prices and our deteriorating environment.

In addition to financial stress that would be placed on the St. Louis-Metro East regional transportation network by the passage of the Administration's proposal as is, we should also be concerned about pressure put on the regional planning process by forcing more intense competition among the local participants in the region for such limited transit funding. This would occur precisely at the time when better cooperation is necessary to assure that resources are spent wisely and an effective regional system is created.

Allow me to offer a couple of specific examples. The St. Louis Metropolitan area is presently constructing a light rail transit starter line as the first step in the process of rebuilding its regional transit network. This new Metro Link service will connect St. Clair and St. Louis Counties. Already there is talk of expansion which would determine additional LRT corridors through the next thirty years and beyond. Madison County is being left out of these regional plans to date, because of a long project "wish list" and short funding base. At the same time we

are hearing concerns that Madison County is not supportive of an effective regional system, which is not the case.

Another example is the condition of the McKinley Bridge, the only direct link between Madison County and the City of St. Louis. Although the bridge will soon be one hundred years old and is in very poor condition, there is as yet no regional commitment to replace the McKinley Bridge. Residents and businesses of Madison County are concerned about the negative impacts on energy consumption, economic development, and travel time that the closing of this vital link might pose in the very near future.

For these reasons, the Madison County Transit District supports congressional initiative to emphasize maintenance of the bridges and roads and expansion of transit systems in the FY 92 - FY 96 Surface Transportation Program authorization.

Specifically, the Madison County Transit District urges the Congress to pass a Surface Transportation Program with the following provisions:

- A five year authorization which increases the present $3.3 billion annual transit program by a percentage at least equal to the 39% increase proposed for the highway program.

- An increase in the Section 3 discretionary grant program rather than the draconian cut proposed by the

**Administration**. This program will be critical for Madison County to be incorporated into the region's plans for an effective high speed transit network.

- **No built-in bias in favor of highway projects through higher federal share commitments**. We believe that the Administrations's proposal to set a 75% Federal share commitment for highway projects and a 50%-60% commitment to transit projects will encourage states and localities to choose highway options to maximize federal dollars rather than effectiveness. This is exceptionally disturbing, given the recent events in the Middle East which should have taught the Administration to develop an energy policy that would reduce our dependance on foreign oil. Therefore, the Federal share commitment for all transit projects should not be reduced below 75%.

- **No elimination of federal operating assistance urbanized areas above one million people**. We feel that encouraging transit use in America's larger and more densely populated areas will have an positive effect on the nation's air quality and congestion management objectives.

- **Continuation of designated recipient status for small urban areas with population under 200,000 persons**.

The Madison County Transit District fully supports passage of a Surface Transportation Program which will insure both the development of a balanced regional transportation system for the St. Louis-Metro East region and national energy independence. We urge the Congress to work with the President to help us recover the ground lost in the 1980's and prepare the nation's transportation system for the challenges of the twenty-first century.

Thank you very much.

Sincerely,

Nelson Hagnauer

Nelson Hagnauer, Chairman
Madison County Transit District

Testimony of James Pona, AICP, Representing Gateway Trailnet, and the Open Space Council of St. Louis, Before Congressman Gephardt

March 1, 1991

(The following testimony is also given on behalf of the Open Space Council of St. Louis.)

My name is James Pona. I am a Vice President of Gateway Trailnet, Inc., and a board member of the Open Space Council of St. Louis. Trailnet is a citizens' organization of more than 300 members which promotes the development and preservation of multi-purpose trails and greenways. The Open Space Council is a large organization dedicated to the conservation of many forms of open space. On behalf of both organizations, I would like to thank you for inviting me here today to talk about our transportation needs and challenges.

In delivering this testimony, I am also representing the Surface Tranportation Policy Project, a broadly based national network of concerned organizations involved in issues of transportation, energy, environment, planning, design, and community preservation. Trailnet is one of more than one hundred organizations that are participating in the Project with the goal of ensuring that federal support for transportation promotes the attainment of our national goals of energy security, environmental quality, a strong economy, and enhanced communities.

Project participants believe that a strong continued federal role in transportation is vital to our national interests. With the Interstate System almost complete, however, we believe that it is time to re-evaluate our approach to transportation.

Current federal policies and investments focused almost exclusively on interstate commerce have produced a high-quality interstate road system that connects all major economic centers and other points of national significance such as defense installations and national parks. Rural America has been linked to commercial centers and all of our major urban centers are connected to each other.

But we are also experiencing:

* Deteriorating transportation infrastructure - both highway and rail

* Severe urban congestion that is limiting economic productivity

* Air and water quality problems that threaten the health and welfare of millions of urban residents

* A high level of dependency on foreign oil that is compromising national security and our economy

* The large scale destruction of productive farm land and forests

* A traffic safety problem that threatens motorists, pedestrians, and bicyclists alike

Unfortunately, these things also must be considered a legacy of our national transport policy of the last forty years. If we want to address these problems for our children, we must look to new ways of doing things.

The Bush Administration has recently announced its legislative proposals for highways and transit. These proposals fail to address key national interests in a number of ways:

* Despite the President's stated commitment to energy conservation and energy efficiency, this bill proposes a consumption based formula for allocation of federal highway dollars - the more fuel it consumes, the more federal highway money a state would get. Conversely, if a state takes steps to reduce fuel consumption through gasoline taxes, high occupancy vehicle lanes (HOV's) or increased transit, it would lose highway funding.

* Despite the President's leadership on Clean Air Act legislation last year, this proposal does not guarantee adequate resources for urban areas to address their air quality problems.

Despite the administration's purported commitment to funding flexibility across transportation modes, transit investments continue to be underfunded, while highway funds are increased substantially. Rather than leveling the playing field for transit and highways, the Administration's proposal exacerbates current inequities.

Despite the critical impact transportation investments have on energy consumption, clean air, and federal expenditures, nothing in the proposed bill would require the states to evaluate their transportation investments in terms of cost effectiveness, energy efficiency, or air quality impacts.

Unfortunately, the Administration's bill, if enacted, perpetuates transportation's increasing consumption of oil and reverses the nation's priorities: it would weaken our national energy security and aggravate the air quality problems of our cities.

While we at Trailnet, the Open Space Council, and the Project are deeply concerned about the Administrations's bill, we do find that the proposed legislation opens the door to some useful concepts. Thee are several provisions that I believe should be considered and their application broadened as you and your colleagues consider new transit and highway legislation. These include:

* A higher federal match (90%) for system preservation (3R) and demand management strategies, including HOV facilities, than for new capacity (75%).

* The ability of state and local governments to use funds in the proposed Urban/Rural highway program for any type of transportation investment - capital or operating, transit or highway.

* Establishing the need for certain state plans. Under current federal law, over $150 million is provided for planning at the state level, but no plan is required. We need a comprehensive transportation plan at the state level that is directed toward the attainment of national goals and that fully reflects the required metropolitan plans.

* Allowing states and localities to devote more federal funds to planning. The Clean Air Amendments of 1990 have many new requirements. In addition, new urbanized areas must now be factored into the same

metropolitan planning pot. Better models are also needed to help manage our transportation systems. With all of these imperatives, an increased level of funding is essential. We believe that the present set-asides, especially for metropolitan planning are wholly inadequate and that the minimum amount for planning should be increased.

* Increasing the emphasis in state and metropolitan plans on congestion strategies and, in metropolitan plans, on coordination of land use and air quality plans with transportation planning and development.

The Surface Transportation Assistance Act should support a well-maintained, diverse transportation system that advances the national interest in a clean environment, more efficient energy use, a sound national economy, and healthy communities. The Act can and should encourage the integration of transportation planning into planning at all levels of government and encourage state and local governments to better manage all transportation systems. We should not have a national program that directly encourages urban sprawl that then demands more infrastructure investments and makes obsolete many existing systems.

The old approach of dictating transportation solutions by modal funding restrictions will not help states and localities address the litany of problems cited earlier. Federal laws make states and localities responsible for solving the many energy, environmental, and health problems that face our region today. Federal transportation funds should be a tool to help - not hinder - us in addressing these issues.

Again, on behalf of Trailnet and the Open Space Council, I want to thank you for giving me the opportunity today to talk about this important subject. With your permission, I would like to submit for the record with my testimony, the Statement of Purpose of the Surface Transportation Policy Project.

## Statement of Purpose

A healthy transportation system is vital to our national health, no less than a healthy circulatory system is vital to our personal health. A strong, balanced, and inter-connected system of rail, highway, transit, air, water, bicycle and pedestrian facilities supports a strong, balanced and efficient domestic economy while also improving our ability to compete in international markets. Transportation stands in the front rank of issues requiring focused and informed national debate.

Unfortunately, national transportation policy is rarely discussed in the public arena. It gains attention only when gas taxes go up, a bridge collapses, a train derails or congestion becomes unbearable. Basic principles aren't addressed: only the immediate problem. The recent policy review conducted by the U.S. Secretary of Transportation, entitled "Moving America," is a welcome first step in framing the much- needed transportation debate. However, it fails to address the basic question: "What is our essential transportation mission?" Not since 1956, when Congress declared the construction of a 42,500-mile interstate and defense highway system as a national mission, has this fundamental question been posed.

The interstate system is now more than 99% complete. It is time, again, to take stock of our national transportation mission. Unless a new, clear federal role in the delivery of transportation services is identified no continued federal-aid program for surface transportation is justified. The scheduled reauthorization of the Surface Transportation Act (STAA) in 1991 adds urgency to this policy.

The STPP believes that a strong continued federal role in transportation is both justified and vital to our national interests. The time has arrived for broad public debate on national transportation policy. The purpose of the Surface Transportation Policy Project (STPP) is (1) to help frame this debate by stating some general principles that, in our judgment, should drive federal transportation policy, (2) to offer some specific program proposals consistent with these principles, (3) to assemble a broad coalition of transportation consumers and providers around these proposals, and (4) to inform public and private debate on national transportation policy. The STPP encourages the participation of every concerned citizen and organization in this effort.

## What is the STPP?

The STPP is a network of organizations and coalitions seeking to make national transportation policy more responsive to people and to better serve the economic, social, and environmental interests of the nation.

Participation is diverse, including both public and private organizations whose primary interests include transportation investment and policy, environmental quality, energy policy, natural resource conservation, design quality, neighborhood and historic preservation, transportation safety and economic efficiency.

The goal of the STPP is to assure that federal support for transportation promotes the attainment of specific national goals. These goals vastly exceed the relatively narrow modal funding objectives reflected in present transportation policy and include national security, clean air, economic competitiveness, energy and resource conservation, minimizing the contribution of transportation to global warming and ozone depletion, safety and enhancement of the quality of life in our neighborhood and communities.

The STPP particularly encourages the participation of existing coalitions in its efforts. It recognizes that transportation services support many needed state, local and private programs and projects as well as national goals. The STPP acknowledges the importance of these objectives. Its sole goal is to identify the common principles underlying these individual objectives and to frame public debate on these principles so that truly national interests are served.

## General Principles

The STPP was formed in the Fall of 1990 and adopted a process for reaching agreement on common principles for public action in transportation. Particular concern was taken to ensure

that these principles were short, few in number, easily understandable, and advanced specific national objectives. While many special interests with significant national ramifications were identified, every effort was made to frame these interests in the context of national policy. From these principles will emerge, it is hoped, broad consensus on the future mission of our national surface transportation program.

These principles are as follows:

Transportation should strengthen national and international economic competitiveness. The most significant transportation-related threat to our national economy and our ability to compete in international markets, besides reliance on imported oil, is congestion. Transportation consumers presently spend almost 1.5 billion hours each year stuck in traffic, and that figure is estimated by the U.S. General Accounting Office to increase to over 4.0 billion early in the 21st century. Congestion means lower productivity. Efficiency improvements that strengthen inter-modal linkages (air, water, truck and rail on the freight side; auto, transit, bicycle and pedestrian access on the passenger side) deserve priority for new investment. Measures that restrain demand (measured in vehicle miles travelled or VMTs) to available system capacity, through such technologies as over-utilized (highway) to under-utilized (rail, transit, bicycle) modes, also deserve priority. Capacity increases, where needed, should be prioritized on a "least life-cycle cost" basis.

Transportation should strengthen, not jeopardize, national security. Approximately 63% of present domestic oil consumption is spent on transportation, 72% if the energy costs of building and maintaining our transportation infrastructure are included. More than 50% of domestic oil consumption is imported. National transportation policy demands debate on the question "At what point does reliance on inherently unstable sources of imported oil jeopardize national security?"

Transportation must be sustainable. Transportation is now depleting two non-renewable resources: fossil fuels and land. Approximately 98% of our public and private transportation fleet is presently propelled by fossil fuels. In fifty years few, if any, motor vehicles will operate exclusively on fossil fuels. The United States should lead, not follow, the transition to new fuel technologies. Equally important, transportation infrastructure is consuming land at an enormous rate. Over 40% of the land mass in several of our major cities is devoted to streets and parking lots. Sprawl development patterns, driven by transportation investments, are devouring our suburban and rural areas. Transportation and land planning must be integrated at the regional and local levels to develop balanced, sustainable transportation systems.

Transportation services must promote, not inhibit, clean air goals. While tailpipe emission controls have lowered pollution from cars and trucks, increases in total driving (VMT) have overwhelmed these improvements, particularly in congested urban areas. Achievement of national clean air goals requires a significant shift to non-polluting modes, plus a cap on VMT growth.

Transportation should enhance the quality of life. In addition to national goals, community-based goals such as access to jobs and housing, safety, community and neighborhood revitalization, aesthetics, protection of natural, cultural, and historic sites, and access to public transportation for all people are important transportation goals in both urban and rural areas. Regional transportation planning agencies presently lack the funds, and the authority, to both articulate and implement regional quality of life goals. A new balance needs to be struck among state, local, and regional interests to ensure public support for these goals and strategies and for their implementation.

Federal transportation investments should advance explicit national interests. Investments that do not further such interest should be eliminated. Transportation should not be a revenue-sharing program where the federal government acts only as a cashbox, taking funds in through motor fuel and excise taxes and subsidizing federal-aid projects for no particular federal purpose. A clear federal mission is required. A system of accounts should be developed that measures these public benefits and public costs of federal-aid transportation investments measured in both dollars and deferred maintenance, pollution, destruction of habitat, contribution to global warming and ozone depletion, contribution to global warming and ozone depletion, generation of hazardous wastes, health costs, police and security costs, and other presently externalized costs of transportation service delivery. If benefits to the nation fail to exceed the costs of these subsidies, no federal participation is justified.

## Conclusion

The STPP will support all efforts to focus public debate on the above-stated principles as transportation policy becomes an increasingly compelling issue of public concern. Activities will include research, briefings, workshops, discussion groups, and other efforts to inform public and private decision-makers at all levels of government of the importance of transportation in the shaping of our nation's future.

The STPP invites the participation of all organizations willing to subscribe to the above-stated principles. Please contact the STPP office for further information on these principles and our program.

The work of the Surface Transportation Policy Project is made possible by grants from the Nathan Cummings Foundation, the Joyce Foundation, James C. Penney Foundation, Inc., the PEW Charitable Trusts, and SURDNA Foundation, Inc.

Re: Subcommittee on 1991 Federal Highway Funding Program

Dear Representative Gephardt:

I would request that you submit this letter as written testimony before your subcommittee studying the 1991 Federal Highway Funding Program.

My district lies in south St. Louis County and is penetrated in the northern end by Interstate 255. I also have state road 231 (Telegraph) which is our main artery and which is the feeder for most of the population to I-255.

At the interchange of I-255 and Telegraph there are several congestion and safety problems that need to be addressed. In addition, my district is one of the fastest growing areas and this situation will only get worse.

As you are aware, Missouri has the unenviable position of being among those at the bottom with regard to rankings in roadway and bridge conditions. Also, we recognize the gross need to improve our existing infrastructure and begin new projects. However, the money is not there.

It is understood that Missouri is a major contributor to the Federal Highway Fund in that we contain four (4) major Interstate systems. However, we feel that we do not enjoy a true and accurate return on these funds for our infrastructure.

I would ask this subcommittee to give consideration to the financial contribution the State of Missouri makes to the Federal Highway fund and the obvious need we have for a true and accurate return on the revenue generated.

page two
Representative Richard Gephardt
Subcommittee on 1991 Federal Highway Funding Program

The State of Missouri could benefit greatly by the proposed Congressional Highway Act. We would request 2.5% of the total fund.

I thank you for the opportunity to submit this written testimony and thank you in advance for your cooperation in making certain that it becomes a part of the record of the Subcommittee's hearing.

Very truly yours,

M. Zane Yates

# REAUTHORIZATION OF SURFACE TRANSPORTATION PROGRAMS

TUESDAY, MARCH 19, 1991

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON SURFACE TRANSPORTATION,
COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION,
*Washington, DC.*

The subcommittee met, pursuant to notice, at 9:35 a.m., in room 2167, Rayburn House Office Building, Hon. Norman Y. Mineta (chairman of the subcommittee) presiding.

Mr. MINETA. The Subcommittee on Surface Transportation will please come to order.

This year, Congress and the White House will help rewrite the highway and mass transit map of our Nation for years to come. What we achieve or fail to achieve will have a profound effect on our Nation.

Our purpose is not to just rewrite the Surface Transportation Act. The administration has already set the pace in the legislation that they have sent up to the Hill. Secretary Skinner and his team at DOT have taken title 23 and, as I said, turned it on its end, and I think we ought to follow suit in terms of what the Congress ought to be doing.

One of the other facets of surface transportation law is the whole issue of underfunding or funding. We have seen underfunding in the past, and we do not want to see underfunding of highway and mass transit in the future because that could mean economic suicide in a new world order that increasingly values economic competition more than military confrontation.

I was, to a very great degree, disappointed in the transportation provisions that President Bush put forward in his budget for fiscal year 1992. The President's proposal would redefine the Nation's transportation system by transferring to State governments a greater financial burden of support for the Federal system.

I believe this proposal chips away at the foundation of fairness at the expense of every motorist and transit rider in the Nation. However, the President's proposal does take the first steps toward redefining our policy, steps which will assist us in creating a visionary transportation system for the future.

Studies call for transportation investments of up to $3 trillion during the next 20 years. So we can differ about the final cost, but to me there are no more universal truths than these: First, the needs are there. Secondly, how we spend the money we have is as important as how much money we spend.

In the 1990's, the challenges and responsibilities will be: to maintain the Federal investment in the Federal-aid highway system; to continue broad Federal support for mass transit; and to create transportation partnerships that include Federal, local, State, metropolitan planning organizations, and the private sector.

The only way our transportation network will truly improve in the years ahead is if we put our increasingly scarce Federal dollars where the needs are today and where they must be in the future. That foresight demands not a single strategy but a series of policies that will be responsive to State, regional, and local needs well into the next century.

So today we have a very fine list of witnesses who will be offering their testimony about that vision.

I happen to have a great deal of confidence in the Secretary of Transportation and the team that he has brought together at the Department of Transportation. He has put together a capable team of model administrators, budget and policy people, and so their insights on these issues will be helpful to the committee as we continue on this road to formulate our priorities for the 102nd Congress.

So again, it gives me a great deal of pleasure at this point to yield to our very fine ranking Republican member on the full Committee on Public Works and Transportation. Mr. Shuster had indicated to me that he was going to be down at the White House at this time, and so it is my pleasure and privilege to yield to our very fine colleague from Arkansas, Mr. Hammerschmidt.

Mr. HAMMERSCHMIDT. Thank you very much, Mr. Chairman.

Mr. Chairman, normally I would just put my remarks in the record as the ranking member of the full committee, but since Bud Shuster did have to go to the White House on a Foreign Affairs Committee and Intelligence Committee briefing, I am going to make a few comments.

Mr. Chairman, today we officially begin the public debate in the 102nd Congress on the serious business that faces the Surface Transportation Subcommittee this year.

As the deadline for expiration of our current surface transportation programs is fast approaching, the subcommittee is already deeply involved in reviewing the important policies involved in a major restructuring of those programs.

The administration has submitted a comprehensive proposal for reauthorizing the highway mass transit and highway safety programs. The administration bill has provided a solid starting point for the work we must complete. Many of its concepts are likely to be embraced in the final product of this committee.

So today is an important beginning to a series of hearings in which we will focus our review on that proposal now introduced in the House as H.R. 1351.

Our witness list today is short on length but certainly not on stature. I would like to commend Dr. Larson, Brian Clymer, and General Curry for the obvious hard work and effort that went into their proposal. The bill is reasonable as well as visionary in its goals to lead our country into the next century.

With such a strong start, I believe with certainty that we can work together with you to ultimately craft a bill on which both the Congress and the President can agree.

AASHTO has played an influential role in the past 4 years to get the States, Federal Government, and industry mobilized for restructuring the post-interstate era. They laid much of the groundwork for the current policy debate in the AASHTO 2020 work. So we are grateful to them for initiating the process that has led us to this historic point.

So I extend a warm welcome to all of you. Mr. Chairman, I look forward to hearing their recommendations, and I appreciate the time. Thank you.

Mr. MINETA. Thank you very much.

We are pleased to have the chairman of the full Committee on Public Works and Transportation, the very energetic, very driving, innovative Congressman, Chairman Bob Roe of New Jersey.

The CHAIRMAN. On that opening remark, I rest my case. [Laughter.]

I want to compliment my good friend, Norman Mineta, chairman of our Surface Transportation Subcommittee, for the outstanding work that he has already done over a long period of time on this committee, and I think we are particularly fortunate to have him as chairman of this committee for his knowledge, background, and ability, and his energy in attempting to get the proper direction we want to go on this transportation.

I share those same comments with John Paul Hammerschmidt, our ranking member, and, of course, the other members that are here.

The President made an eloquent speech at the joint session of the Congress the other night, and he spoke firmly of our country's postwar future. He talked about domestic policy being our centerpiece, with both transportation and energy as being the focal key points of the domestic agenda.

We believe the President was quite right in his observations and his dynamic approach and putting these issues high on the priority list for this hearing and for the work of the Congress this year.

He also made the point, and we make the observation, that the transportation policy and the energy policies of the Nation to be evolved are inextricably related, and it seems to us that when you look over the figures that are available to us, some 67 percent of the energy resources, namely oil, whether it is domestic or international, goes into our transportation program; therefore, transportation and energy are inextricably related, and what we do today and as we do the work in the next 3 or 4 months is going to determine the transportation policies of this country.

I, too, want to join with John Paul and Norman in expressing my high regards to Mr. Larson, Mr. Clymer, and General Curry as our primary opening witnesses today for the extraordinary work they have done in the past and have done on the preparation for this legislation.

On occasion, when legislation has come to the Hill, it has been declared DA, dead on arrival. That is not the case here. There are a lot of good innovative ideas.

However, the Chair would like to make the observations that he feels should be developed, and I hope they are, as to the length of the bill; namely, 5 years we are talking about. We want to talk about flexibility, flexibility as we see it, flexibility for the States to be able to participate as full partners, not to be the partners who pay the bills while the Federal Government makes all the decisions that have to be made.

I hope that when we get into the debate of what shall be allocated from the budget level—and Congress has a responsibility here to provide the resources that are needed—that we will be bold in action, as the committee already has been in their recommendations to the Budget Committee, to be able to carry out the transportation system of the country.

I do not view our hearing today or the transportation proposals to be a continuation of the last great achievements that were made, initiated originally by General Eisenhower, in building a transportation system, namely the interstate system throughout the country. I look at this to be an enormous opportunity, Mr. Chairman, to forge a new direction for the inter-modality transportation system that this country needs to be energy-efficient, and secondly, to be able to put us in a competitive position in a global marketplace as the 1990s unfold.

Again, I want to compliment you, the members of this committee, the ranking member, and all folk that are here, and particularly our witnesses for their fine participation and the services that they have offered to the country in developing this proposal.

I thank you, Mr. Chairman.

Mr. MINETA. Thank you very much, Mr. Chairman.

Without objection, I would like to submit statements of Congressmen Nick J. Rahall of West Virginia; Glenn Poshard of Illinois; and Bud Cramer of Alabama.

[Mr. Rahall's, Mr. Poshard's, and Mr. Cramer's prepared statements follow:]

STATEMENT OF HON. NICK J. RAHALL, II (D-WV)

Mr. Chairman, I am pleased to welcome our witnesses today from the Federal Highway Administration, UMTA, and the Highway Safety Division of the Department of Transportation, Messrs. Larson, Clymer and Curry.

I commend our Subcommittee Chairman, Mr. Mineta, for beginning these final, but crucial hearings before we begin marking up our reauthorization bills. I regret that my previous commitment to a hearing before my Interior Subcommittee on Mining and Natural Resources kept me from being here as the hearing started this morning.

I will restate the obvious by saying that anticipation of the completion of the national interstate highway system has created quite a stir of interests and efforts to reassess surface transportation infrastructure needs, and by this I refer to both highways and public transit services of such importance to our large urban, small urban, and rural areas throughout the country.

None of us come into this hearing, or begin the reauthorization process unprepared. The Department of Transportation began a three-month long process in 1989 to develop a national transportation strategy. The Administration's bill that resulted from the nationwide initiative by DOT has been introduced by request by our Committee Chairman. There are parts of the bill that will be given serious consideration by this Committee, and other parts that will not.

Last year, the Committee on Public Works held a series of hearings nationwide, as well as in Washington, D.C. to receive testimony on reauthorization of the Federal highway, highway safety and mass transit programs. We have a rather impressive file of recommendations from people at the state, regional and local levels to

draw from in developing our omnibus committee bill. This year, Chairman Roe has held a number of posture hearings on highway and mass transit reauthorization, and our Subcommittee on Investigations and Operations has held oversight on mass transit needs.

Last but not least, AASHTO took the lead in establishing "Transportation 2020," holding hearings in each state to assess national mobility needs. Needless to say, AASHTO has made very credible recommendations to this committee regarding new directions in which we should move in order to bring the nation's highways into the 21st Century.

The Community Transportation Association of America as well as the American Public Transit Association, have been working for months to achieve consensus on necessary changes to the mass transit programs to meet the transportation challenges of the next century.

I, like all Members, intend to seek appropriate, adequate and timely funding for federally-assisted highways in West Virginia, particularly I will again call to attention my strong commitment to having something in this bill that will address the critical issue of energy impacted roads. I am convinced, Mr. Chairman, that if we are to see to the delivery of goods and services to the marketplace, we must make it happen as part of the system of highways of national significance. By that I mean to designate roads that are clearly energy impacted, such as coal-haul roads in my State, so that they can be funded for purposes of upgrading and expansion, and to do it in such a way as to provide funding without taking it out of a state's normal allocation. West Virginia is an energy resource, sitting on 400 years of coal—most of which is low sulphur, clean-burning coal which will be in even greater demand in the coming years. I want to help WV get its coal out of the state and into the marketplace—and WV can't do that on existing roads without serious expansion and upgrading.

I also have an abiding interest in seeing major funding shifts made in the Federal Mass Transit programs, particularly as they affect rural and small urbanized areas. I say this with all due respect and understanding of the needs of Members who represent large urban areas. They must look at mass transit with a view toward addressing massive traffic congestion problems if they are to avoid total gridlock in their large, densely populated areas. But that does not alter the fact that rural areas with both sparse and dense populations have their own unique, unmet transit dependency needs.

That is why I am pleased to have introduced the Mobility Assistance Act, and I take this opportunity to thank the 22 cosponsors of the bill, ten of whom serve on the Public Works Committee. The Mobility Assistance Act, as the Chairman knows, is a bill designated to increase formulas under the mass transit programs for funding rural and small urbanized areas, while at the same time holding large urbanized areas harmless through increased appropriations.

For too long now, Congress has allowed funding for smaller, more isolated regions to lag behind all others, with the result being that more than one-fourth of the nation's small urbanized areas are not served by federally-assisted public transportation, and fully one-third of the nation's transit dependent populations who live outside urbanized areas and are not served either. I urge other Members from the Committee to take a look at H.R. 1079, and to support it by adding your name to a list of growing cosponsors who wish to put an end to rural and small urban isolation from the mainstream of community life as well as intrastate commerce.

Ultimately, I believe that this Committee will be able to forge a consensus on all the issues of transportation embodied in the Federal-Aid Highway/Mass Transit Act during the reauthorization process, and that under the leadership of our Subcommittee Chairman will come as close as it is possible to come in meeting state, regional and local needs with fairness, and through balanced funding.

I will not keep this Committee waiting any longer by extending my statement on the reauthorization process which is beginning today, except to say that I will have questions of the witnesses later in the proceedings.

---

### Remarks of Congressman Glenn Poshard

Mr. Chairman, I am glad to be here this morning to hear more about the administration's proposed surface transportation reauthorization. This is a bill which directly affects the daily lives of the vast majority of Americans, and I am glad to be a part of the process.

I am looking forward to hearing from our distinguished witnesses from FwHA and UMTA this morning. I believe that the emphasis on an integrated national

transportation system is vitally needed, and I applaud both the committee and the administration for the work being done to move in that direction.

Coming from a very rural area, I am interested in what our witnesses have to say about rural public transportation programs and their funding in the President's proposal. I'm looking forward to a good hearing, and I appreciate that our witnesses are here before us.

---

STATEMENT OF HON. BUD CRAMER OF ALABAMA

I thank the chairman for holding a timely hearing on the authorization of the Federal-Aid Highway, Mass Transit, and Highway Safety Programs beyond fiscal year 1991. I think it is appropriate that this first hearing focus on the budget; on ways to finance the building and maintenance of our surface transportation programs.

I support the budget recommendation submitted by the committee chairman, Mr. Roe and the Surface Transportation Subcommittee chairman, Mr. Mineta, along with the ranking Republican members of the committee and subcommittee, respectively. This budget recommendation acknowledges that the Congress is committed to a major program to invest in the future of America.

The Committee on Public Works and Transportation's role in recommending methods of funding as well as designing the authorization language is integral to our mission of meeting the Nation's infrastructure needs for the 21st century. To meet the proper funding levels and meet our needs I think it is important for us to review the statement of managers in the Omnibus Budget Reconiliation Act of 1990. In that act the Senate receded to House on language that stated, "(I)t is the sense of the House of Representatives that, if any Senate amendment to H.R. 5835 provides for any increase in motor fuels excise taxes * * * then the managers on the part of the House * * * should consider provisions which ensure that an amount equal to the estimated tax payments from any such increases enacted shall be made available in the fiscal year collected for highway * * * purposes." The Omnibus Budget Reconciliation Act of 1990 increased highway fuels excise tax by 5 cents.

As Federal trustees of the highway trust fund, it is only fair that we honestly use the money for which it was originally intended; namely creating and enhancing our national intermodal transportation system. We must be cognizant of our long-term goals and use our funds in a way to meet these goals and not for unintended purposes.

I cannot emphasize strongly enough that the highway trust fund money should be used for its intended purpose. Even though the interstate system is near completion and we are talking in terms of a post-interstate there are still areas of the country that do not have a sufficient interstate system. In my district, for example, there is no east-west interstate. Even though my district is the fastest growing district in Alabama, the lack of a viable roadway has caused less growth than would have been otherwise had there been an east-west interstate. So, before, we use the highway trust fund for other purposes, it is necessary and indispensable that those taxpayer dollars meet the original needs for which the highway trust fund was designed.

Mr. Chairman, I look forward to today's hearing. It is a logical first step in designing a long-term authorization bill. An authorization bill without adequate resources is not unlike building a house on sand; it will not stand. The time to rebuild America is now. As we consider a post-interstate system, we must not overlook the fact that all of the country does not have easy access to an interstate. Before we consider using highway trust fund monies for other purposes, and I am not stating that we should consider this, it is necessary to fully complete the interstate system and fill in any gaps.

Mr. MINETA. Are there any other members who would like to make opening statements? If not, let me call on our very fine colleague from California, Chairman Glenn Anderson.

Mr. ANDERSON. Thank you, Norm, and let me commend you, also, for scheduling today's hearings on the reauthorization of our Nation's highway, highway safety, and public transit programs.

The eyes of the Nation will be on us as we determine the future of these key infrastructure programs. You have outlined an ambitious schedule for completion of this legislation, and I look forward to working with you and helping to fashion a bill that is sensitive

to the local and regional needs while assuring that the Federal interest is met.

Mr. MINETA. Thank you very much, Mr. Chairman.

Just as we have seen the Glenn M. Anderson deepwater channel and the Glenn M. Anderson freeway and the Glenn M. Anderson transit system out there, again you will have your mark on this legislation as well.

Are there any other members who wish to make an opening statement? If not, we will go to the panel of witnesses we have before us.

As I have reiterated at every meeting I have spoken to, I happen to be very, very privileged and proud to chair the Surface Transportation Subcommittee. I am only a small cog in the wheel, being associated with the likes of Chairman Bob Roe, Congressman John Paul Hammerschmidt, and Bud Shuster as the leading elements on this Public Works and Transportation Committee on issues dealing with surface transportation.

I have also indicated how proud I am about the team that is at the Department of Transportation headed up by our Secretary of Transportation, Sam Skinner. We have with us today three critical and vital members of that team, administrators of their respective administrators within the Department of Transportation.

With the budget people and the policy people and other modal administrators that Secretary Skinner has put together, I am quite sure that we have at this point, at a very critical point in surface transportation history, the confluence of a good team in the administration as well as good team on the congressional side, both the Senate and the House, to put together a very visionary piece of legislation.

Mr. MINETA. We are proud to have today with us Dr. Tom Larson, Administrator, Federal Highway Administration; General Curry, Administrator, National Highway Safety Transportation Administration; and Brian Clymer, Administrator, Urban Mass Transportation Administration. In fact, we may be even changing the titles before not too long on some of these agencies.

So in any event, it is good to have all of you here. Your joint statement will be made a part of the record.

General Curry, you may and proceed in your own fashion at this point, sir.

**TESTIMONY OF JERRY R. CURRY, ADMINISTRATOR, NATIONAL HIGHWAY TRAFFIC SAFETY ADMINISTRATION; BRIAN W. CLYMER, ADMINISTRATOR, URBAN MASS TRANSPORTATION ADMINISTRATION; AND THOMAS D. LARSON, ADMINISTRATOR, FEDERAL HIGHWAY ADMINISTRATION**

General CURRY. This may be the only time in history that the Highway Traffic Safety Administration goes ahead of Federal Highway, so I want to take advantage of this opportunity.

Mr. MINETA. Well, that is why they call you Stormin' Jerry. [Laughter.]

General CURRY. Mr. Chairman and members of the committee, thank you for providing the Department the opportunity to testify on DOT's budget proposal for fiscal year 1992 and for H.R. 1351.

We have prepared a joint statement for the record. Dr. Larson, Mr. Clymer, and I will summarize our remarks quite briefly.

We are pleased that your committee scheduled this hearing so soon after President Bush called on the Congress on March 6 to enact surface transportation legislation within 100 days. This is quite a challenge to the Department as well as Congress, and we will provide any assistance we can or information that this committee needs to help meet the challenge.

My part of the summary is quite short. Our highway safety proposals will continue the strengths of a program that has been instrumental in reducing the Nation's fatality rate by more than 40 percent in the last decade. The basic section 402 program continues to be the core of the highway safety program, but we are proposing to supplement it with a new safety bonus program that targets specific highway safety goals.

The bonus program is a joint effort of NHTSA and FHWA, and by providing funds for construction as well as for section 402 safety programs, the bonus program should enlarge the constituency for highway safety. We expect the bonus funds to provide particular benefits for alcohol safety programs.

Our proposal incorporates the essential elements of the current alcohol safety grant programs, along with a guaranteed nationwide funding level of $25 million annually and the possibility of additional funds in each qualifying State. The overall level of FHWA and NHTSA bonus programs for safety programs will be $75 million for the life of the authorization. This represents a significant increase in overall highway safety funding.

Another safety initiative that is likely to benefit from the additional funding is the effort to increase safety belt use. We are just beginning a national campaign for the summer of 1991 that will employ intensive enforcement-related and public information efforts to move toward the President's goal of 70 percent safety belt use by 1992. I hope that this bill will be the beginning of a new and constructive phase in the highway safety program, and I look forward to working with you and your committee, sir, to bring it to a reality.

Mr. MINETA. Thank you very much, General Curry.

Mr. Clymer?

Mr. CLYMER. Thank you very much, Mr. Chairman.

I would like to again summarize very, very briefly a couple of points that are in our testimony, the first having to do with the idea of bringing stability into our proposal.

We have done this by increased use of formula funding. This is something that we believe will provide more equity. We have gone more to Trust Fund funding so that we can return the dollars in an equitable and stable fashion to our grantees.

I think our proposal has provided flexibility, especially with regard to highway funds. The interchangeability of our funds is something that Chairman Roe mentioned a few minutes ago.

Thirdly, I think we have focused on local share. Yesterday you and I spoke together at NACO. You mentioned a number that certainly boggled my mind in terms of the needs for infrastructure over the next two decades.

I think, in light of that, it is simply not possible any more for the Federal Government to do it all on its own. We are proposing that States provide a greater local share. I think Congress recognized this principle last year when it provided additional funding for the construction of the Metro system with a 37.5 percent local share.

Lastly, we have proposed a new planning and research program that would involve a percentage takedown similar to the highway program. This is to allow us to go into areas of new technology development and also to formulate a new transit cooperative research program similar to its sister program under Federal Highways.

I will be happy to answer any questions after Dr. Larson has made his remarks. Thank you.

Mr. MINETA. Thank you very much.

Dr. Larson?

Dr. LARSON. Mr. Chairman, distinguished members, I am very pleased to be here with my colleagues this morning, focusing particularly on the highway program.

I believe that America's highway transportation is in fact at a very critical crossroads, and I believe this for several reasons.

First of all, there is the potential for a lull or a letdown after the interstate system, such a mammoth program, as it nears completion. It is in fact now very nearly fully complete. So there is the potential of a lull or a letdown.

Secondly, there is a growing awareness of increased need, both on a national and on a global scope.

And finally, and perhaps most difficult to cope with, are the extraordinary expectations of our public. These come in several dimensions. First, I think a system that does not move goods and people faster in the next century than it did in the last will be perceived as a failure. A system that does not provide improved energy efficiency over the future will be perceived as a failure. A system that does not demonstrate increased sensitivity to the environment will, I believe, be judged a failure.

While these expectations are not mutually exclusive, neither are they natural companions. We are going to have to work to make them so.

There are three central features of this legislation, the highway legislation, that I would comment on very briefly. First of all, the legislation moves strongly toward a national focus. I spent a number of years at a State level, and certainly my feeling was very strong that the States are growing in maturity and experience and that the national interest should be defined in ways that do not impinge too severely on the State prerogatives.

That gets to the second point, which is flexibility. As the States become more mature, as national priorities become very focused, I think we have to move through various ways to give the States more flexibility, more decisionmaking; move the decisionmaking to a more local level, to a more appropriate level.

And finally, the third point that I would want to make for this legislation is that it recognizes and deals with the need for more money. Dr. David Aschauer has spoken very sharply and keenly to the need for more money, more public investment in infrastructure, and we believe that the only way to provide for this funding

will be for there to be more money from the Federal, State, and private levels.

The proposed reauthorization would in fact provide some $17 billion more in authorization than the 1987 act. If you look at the overall spending for Federal-State shares, the previous 5 years versus the next 5 years, it would provide roughly a 50 percent increase in spending.

There will be, and should be, debate over the match ratios and the proportional shares, but the bottom line is that there has to be more money, and this legislation goes strongly in that direction.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much, Dr. Larson.

The Chair will take the prerogative of extending the 5-minute rule to 7 minutes, given the fact that we have three very fine witnesses before us today, and I know that members are anxious to ask questions of our witnesses.

Dr. Larson, in the ICE for 1991, the remaining cost to complete the interstate system is $12.9 billion, as I recall. Are the amounts authorized in the administration's legislative proposal sufficient to complete the remaining interstate segments?

Dr. LARSON. In our opinion, we have provided for the completion of the interstate system, yes, sir.

Mr. MINETA. Now, as you change this ratio in terms of the Federal-local match, from your experience of having been Secretary of Transportation of the Commonwealth of Pennsylvania, even though you have increased the amount of money that is available in the program, won't the fact that you have changed the matching ratio have the effect of making it tougher on the States? They get a double whammy. You not only increase the matching share requirement, but the fact that they get more money means they have got to come up with even more in terms of matching share.

I am wondering if you could put your hat on as a State secretary of transportation and try to envision how you would feel if that were being imposed on you.

Dr. LARSON. Mr. Chairman, after 2 years in Washington, some of my colleagues in the States would probably say I am too far away to be able to make that switch, but let me try.

First of all, I do believe that the bottom line is that there has to be more money, and that means more money from all participants—Federal, State, private, local; everybody has to do more if we are going to meet the needs of this country.

In terms of the requirement by the States, yes, there is an increased requirement of some more than $2 billion in additional State match, but there are mitigating features provided in the legislation. One of these mitigating features is that up to 25 percent of the State program can be deferred, so at least in the earliest years, a portion of the program can be 100 percent Federal aid.

A second feature is that many States have unused obligation authority that would continue at the old match ratios.

And finally, and perhaps most importantly, is the leveraging principle. The States have traditionally used the Federal program as a lever to raise more money. After the 1987 act, there were 43 States that did in fact increase their gas tax shares, and now we

are told by the Highway Users Federation that 27 States are anticipating raising gas taxes in the present year.

So to summarize, the States will be asked in this program to join us at the Federal level in bringing more money to the table, but there are a number of features that will provide for the hardship cases that may result as a result of the changing match shares.

Mr. MINETA. General Curry, under your direction NHTSA has received high marks, and we would be interested in knowing what you consider as being NHTSA's priorities in highway safety and the direction the agency will be taking under your leadership.

General CURRY. Sir, as we look forward to the future, the single most important event that we will have is this coming summer when we do a nationwide program to increase safety belt use. We may want to speak of that later.

But let me talk to you in terms of what our priorities are for the immediate future over the next 3 or so years. We will continue, of course, to look at motor vehicle safety in terms of the vehicles, the cars themselves, in terms of making minivans, light vans, light trucks, and pickup vans as safe as automobiles. We are extending the safety regulations to all of those.

We are working very hard to look at heavy trucks and to ask whether there are some regulatory decisions that we need to make that might make them safer, such as better marking of trucks so they are more visible to people on the highway and others who are driving with them, and antilock brakes to prevent skids, turnovers, jackknifing.

We also are looking at some other measures to protect people; including drunk driving campaigns with Vince and Larry, for example, automatic occupant protection, increasing seat belt use and, having more airbags. We are pushing that very hard.

We are doing a lot of research in terms of impaired drivers and we are supporting prompt license suspension and media programs across the Nation to help us with drugged as well as drunk driving.

We do look at such things as motorcycle helmet laws, for example, in the States; we encourage them to pass those laws. We are working very closely with Federal Highways in a comprehensive highway safety program.

Last of all, let me mention that there is some technology and innovation that will take place in the future, including the intelligent vehicle highway systems; a number of projects in biomechanical research which include new crash data collection programs; and then we will have an experimental international safety vehicle conference which takes place every 2 years and is coming up this fall in Paris.

Those are essentially the directions, sir, that we are going.

Mr. MINETA. Mr. Clymer, under the administration's proposal, generally, funding for transit is eliminated. In addition to that, the mass transit account funds are drawn down, and the taxes generated by last year's budget agreement are discontinued.

Since these actions would result in a transit program of approximately $1.3 billion in fiscal year 1997, how does the administration intend to make up the difference between this figure and the $3.3 billion that was proposed for fiscal year 1996?

Mr. CLYMER. We do, under the current proposal, plan on spending down the Trust Fund in accordance with what we have been hearing all around the country from governors and local officials in terms of spending down the Trust Fund.

I think that the dollars available in the program beyond the current funding period may vary depending on any number of variables that will have to be determined at that time. Certainly the extent to which it extends beyond 1996 will be based partially on the remaining balance in the Trust Fund; also, the accrued interest on the cash balance in the Trust Fund would also be available.

In theory, we could continue the spending under some scenarios through a second reauthorization at the same level.

Mr. MINETA. I will have to reserve time on a second round.

Let me at this call on a very fine colleague from California, Chairman Emeritus, Mr. Anderson.

Mr. ANDERSON. Thank you, Mr. Chairman.

Mr. Clymer, there is no question that the Federal Government has an appropriate role in assuring that the American public has clean air to breathe. Legislation enacted last year will in some cases make it more difficult for local governments to meet their transportation capacity enhancement needs through new highway construction.

The needs, though, will not go away, and so, obviously, they will be looking to expand their public transit systems instead. But the administration bill would reduce funding for new rail starts.

Now, isn't this unrealistic in light of the clean air requirements? It seems to me that we will be derelict in our responsibilities if we reduce funding for new starts around the country, forcing local governments to turn in that direction to solve the capacity problems and then denying them the resources needed.

In a similar vein, to help assure the civil rights of the disabled, sweeping new legislation was enacted last year that will have a financial impact on the operating costs of transit systems around the country. And yet the administration bill would actually eliminate operating assistance in areas of over 1 million people.

I hope and believe that this provision will not prevail, but it seems to me again that we are imposing new requirements on local government and then denying them the resources needed to meet them. Would you dispute that in this case?

Mr. CLYMER. You raised a number of areas there: new rail starts, ADA, operating assistance. I think that our proposal in general has been based on an overall assessment of needs. Certainly there is not enough funding to fund all new starts. I think we have recognized the need for new and stronger criteria there. The feeling is that the Federal Government can only afford to do those new starts which are the most effective and most cost-effective.

I think as we look at new starts and look at the Clean Air Act and the effect it may have on some areas not to build roads, flexibility exists within the highway program for those areas that are not able to build roads as a result of Clean Air, to move money over for those new starts.

With regard to ADA, we have provided funding in there under the discretionary program to deal with some special situations under ADA. Certainly the program was not set up to deal with all

of those areas. We have increased the section 9 formula dollars, which are, of course, formula-distributed, which allow local areas the flexibility to deal with ADA itself.

I do not think that any area or any aspect of American life received funding under the ADA legislation. Even private concerns that are required to come into compliance will be required to come up with funding on their own to handle that.

In the area of operating assistance, we have not eliminated funding under the section 9 formula program; the dollars are still there. We have simply, in the areas over 1 million, eliminated the ability to use those funds on the operating side of the equation. In those areas where it has been eliminated, it represents less than 5 or 6 percent of their total operating budgets. In some of the largest properties, it is even less than that. However, the capital funding is still there.

Many areas of the country—California, for one—that have transit funding from a number of different sources should have the flexibility to move local resources into operations and allow the Federal Government to have what arguably is its proper role, and that is of providing capital assistance.

Mr. ANDERSON. Thank you.

Mr. MINETA. If my good chairman would yield, Mr. Clymer, let me ask about this thing. We have not eliminated operating assistance. You have, to the extent for metropolitan areas with populations in excess of 1 million, you have said no operating assistance; however, we will allow maintenance, parts, and supplies to be included under the capital improvement program, as I understand it.

Mr. CLYMER. For areas under 1 million.

Mr. MINETA. What about areas——

Mr. CLYMER. We have also eliminated operating expenses, but we have allowed them the ability, under a redefined section 9 formula program, to use a former operating category, materials and supplies, in its place.

Mr. MINETA. For areas——

Mr. CLYMER. Less than 1 million.

Mr. MINETA. And then for areas with more than 1 million in population?

Mr. CLYMER. Areas with more than 1 million in population have to use their Formula 9 resources for capital-only programs.

Mr. MINETA. I recognize that what you are trying to do is a positive step given "ideologue" in other areas who are trying to do otherwise, and I commend you for that effort. But it is really hard for me to rationalize this and to try, frankly, to sell it.

That is why I keep coming back to you on this same question about operating assistance, because if I am wearing my mayor's hat or local transit director's hat, I really get troubled by it. But I know what you are trying to get at, so let me just let it go at that.

Thank you, Mr. Chairman.

Mr. ANDERSON. I have a brief question for Dr. Larson.

Mr. MINETA. Absolutely.

Mr. ANDERSON. Dr. Larson, you and I in the past discussed the importance of intermodalism and port access. There is no question that you share in my belief that there is a strong Federal interest

in assuring that such links to international airports and seaports are in the national interest.

The administration bill, though, provides no assurances that these links are on the national highway system. Now, do you think that this committee needs, then, to make certain that these routes crucial to our national economy and international commerce are on the national highway system and are properly funded? Would you support the establishment of a separate program set aside to fund the construction of key intermodal routes, and if not, why not, if you do see their importance to the Federal Government?

Dr. LARSON. May I begin at the back end and say that I do not believe that a special program would be in order, in part because we have made a major emphasis in this proposed legislation to simplify rather than to add additional programs.

As to the question of why it is not necessary, I think that goes to the notion that the national system is intended to be a national system that would in fact provide the proper highway access to ports like Los Angeles, Long Beach, would provide for improvements in the Alameda corridor, something that we have discussed, and as to ensuring that those ports are served by the national highway system, that is in part the result of our committing to work with the States over a period of time, 2 years, before the system is finalized.

So we would hope that there would be no national port or no national node that is excluded from this system of national priority, and certainly the process that we envision will provide for that, sir.

Mr. ANDERSON. Thank you.

Mr. MINETA. Mr. Boehlert, a very fine colleague from New York.

Mr. BOEHLERT. Thank you, Mr. Chairman.

Dr. Larson, you will recall that last fall Congressman Applegate and I were working extensively with the Department concerning the transportation of hazardous materials. There was direction to the Department to find $300,000 to contract with the National Academy of Sciences for a study of this issue. Can you give us a progress report on that?

Dr. LARSON. Yes, sir, I am pleased to do that.

The proposal was sent to the National Academy of Sciences last week for the study that you are referring to, sir. A response is due March 25, and we believe a contract will be awarded in April. So that work is in fact moving forward very positively.

Mr. BOEHLERT. Thank you. That is good news.

Mr. Clymer, I am a big believer in your operation, and I am here to help you. But I am a little bit concerned——

Mr. CLYMER. Thank you.

Mr. BOEHLERT. Don't be nervous. I am a little bit concerned as I interpret what we are proposing. Am I correct in my understanding that we are talking about 5 years of level funding for the Urban Mass Transit Administration?

Mr. CLYMER. There is an increase in the capital side funding, but the increase over the 5-year program is approximately 6 percent.

Mr. BOEHLERT. I do not find that adequate. I am wondering if you do, and I will tell you why. I am not from metropolitan New York; I am from beautiful upstate New York.

But the fact of the matter is that mass transit, public transit systems are clearly more energy-efficient, more environmentally sound, and I am at a loss to understand why we are not putting more focus on that, which would give you more money and more responsibility. So I say, I really am here to help you.

Mr. CLYMER. Thank you. [Laughter.]

Mr. BOEHLERT. How about responding to that, though? [Laughter.]

Mr. CLYMER. All right. It was a good try.

We have developed a budget based on needs, what our perception of the needs was over the next 5-year authorization period. Again, as I point out, there is considerable flexibility built into the legislation as between highway needs and transit needs that would allow some $3.9 billion of urban and rural funds in the highway program, a 15 percent passdown from the national program, as well as funds in the national highway program to be used for both HOV lanes and park-and-rides. So there is considerable flexibility there.

I think our program reflects those spending needs that we can meet directly. In the event that additional needs are created as a result of the Clean Air Act or the desire for less highways, then those funds are available, also.

Mr. BOEHLERT. Well done.

Dr. Larson, on page 9 of your testimony, you are talking about bridges, and bridges are a prime concern of mine because I have the dubious distinction of representing the congressional district where we had a bridge over the Schoharie Creek collapse and result in a tragic loss of lives.

Senator Moynihan and I had a hearing on that subject, and the New York State Throughway Authority, with great pride, told us immediately after that tragedy that they had inspected all of the 167 or 168 bridges along the New York State Throughway, and they were pleased to report that all were found acceptable.

But that was not very comforting to me when I asked the question, "Did you use the same criteria for those inspections that you used to inspect the bridge over the Schoharie Creek" and they said yes. So I am a little bit concerned.

Can you talk about the bridge program? First of all, do you have any sort of rough guesstimate on how many substandard bridges there might be over our Nation's highway system today?

Dr. LARSON. Yes, sir. Bridges are almost a preoccupation of the Federal Highway Administration because we recognize that the failure of a bridge is not only catastrophic in terms of life and property, but it also disrupts the system in a very unique way.

In terms of the specifics, let me say that there are some 580,000 highway bridges in the United States and those are inspected for the most part on a 2-year cycle as required by our regulations now going back several decades, and that data base is getting better as time goes on, so that we know more and more about the condition of the Nation's bridges.

There is in fact a problem with the terminology. The notion that bridges are unsafe is somehow a part of the understanding, and what we really are saying is that when bridges are below minimum standards, then we post the bridges for lower loads, and so they can continue to be used by autos, for example, when they might

not be safe for trucks. So there is a terminology problem that has to be gotten past.

Mr. BOEHLERT. Dr. Larson, if I may just interject right here, when you post it for lower loads, I think you are doing your job and I applaud you for that, but the problem is, who monitors that? We do not really have a tight, sophisticated monitoring system.

Dr. LARSON. Once a posting is set, then it is in fact a matter for police authority to monitor that. During my years in Pennsylvania, we worked closely with the Pennsylvania State Police to ensure that those postings were recognized. But that is the step that is taken to provide for safety.

Now, the other side of that is that economic needs are not necessarily met when you do that. If there is in fact a rural farmer in upstate New York that has a dairy pickup truck, a milk truck, that wants to operate at legal limits, then that poses a very serious economic problem for that carrier. So, ideally, we would have bridges that are up to the expectations of the public.

What are we doing about it? The proposal calls for a very significant increase in the bridge funding so that there would be more money available to the States to deal with bridges, both on a regular apportioned basis and on a discretionary basis.

Mr. BOEHLERT. Well, I want to commend you and the administration for what you indicated to be almost a preoccupation with bridges, because it is a very serious matter, and I think you are addressing it in a very responsible way.

Mr. Clymer, one final question, if I may. How are the studies coming with respect to alternative fuels for public transit systems, for mass transit? I know there have been some projects under way fueling buses with natural gas and that type of activity. How are we coming?

Mr. CLYMER. We have made it a primary initiative. We are trying to support alternative fuel studies wherever we can in light of the many different alternatives that are out there. Without trying to give a technical answer as to what the findings are, we are certainly in the beginnings of that industry.

The industry can produce motors and it can produce engines in buses. There are problems with fuel delivery. There are problems with bus durability, the length of life. We run into problems of needing additional vehicles because of buses coming out from breakdowns. So we certainly have some problems that are being dealt with. The successes are becoming more and more and the failures less and less, but we clearly have some learning to do in this area, and I would say they are coming along fairly well.

Mr. BOEHLERT. I see my time is up. Would you have your staff provide me with a summary of where we are right now with the research into the alternative fuels? The reason I want to pursue this is because Secretary of Energy Watkins, testifying before the Science Committee, said to us, "Oil has a stranglehold on the transportation sector of our economy." I agree with that, and I would like to loosen up the grip if I could. So if you could have your staff provide some of that information to me, I would be most appreciative.

Mr. CLYMER. I would be happy to do that. In addition, we are going to be providing a newsletter to the industry to keep them ap-

praised of the goings-on out there, and we would be happy to add you to that mailing list.

Mr. BOEHLERT. Thank you so much.

Thank you, Mr. Chairman.

[The following was received from Mr. Clymer:]

U.S. Department of Transportation
Urban Mass Transportation Administration

# Clean Air Program

## Office of Technical Assistance and Safety

*"The transit industry is now at the forefront of low emission and alternative fuel technologies."*

## Overview of UMTA's Clean Air Program

The UMTA Clean Air Program (CAP) consists of a number of related UMTA activities, including the Alternative Fuels Initiative Program, the Methanol Bus Demonstration Program, the Diesel Particulate Trap Demonstration Program, the Fuel Cell/Battery Bus Development Program, and the Alternative Fuel Bus Program from the Alternative Motor Fuels Act of 1988. UMTA consolidated these related programs into the Clean Air Program in April, 1990 in response to the transit industry's growing involvement in exploring the new technologies for reducing vehicle emissions.

Clean Air Program Demonstration Sites

These programs will benefit from the top level coordination and streamlining which results from their integration within the Clean Air Program. The Clean Air Program provides a mechanism for UMTA to support the national goals of reducing both vehicle exhaust emissions and oil imports. Recent events in the Persian Gulf have made the CAP even more important as a way to evaluate technologies to reduce America's dependance on imported oil.

UMTA is allowing local transit agencies to choose the technologies to evaluate in their fleets. The result is a rich diversity of technologies operating throughout the U.S. The transit industry is now at the forefront of low emission and alternative fuel technologies. While heavy trucks and passenger automobiles are stepping up their activities in these areas, urban transit buses will have the largest fleets of such vehicles for the near term. The figure at the left shows the distribution of CAP bus demonstrations for which grant applications have been received, and the fuels they have chosen.

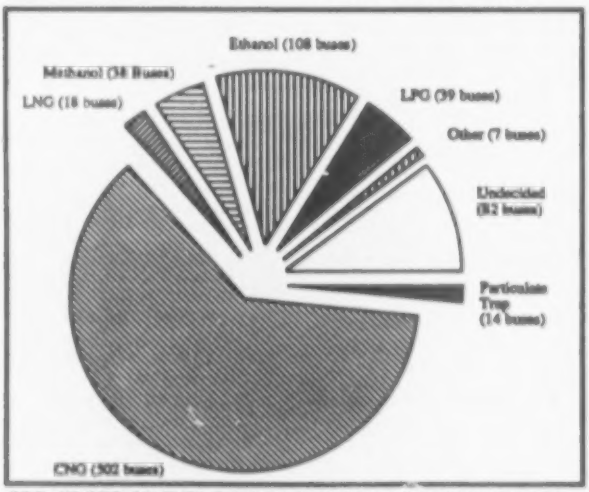
The UMTA CAP is providing objective information on these new technologies that is essential both to the transit industry for meeting new exhaust emissions standards, and to the Nation in its urgent need for cleaner air and alternatives to imported oil. UMTA is still accepting applications for API grants. Page 5 of this document gives information on how you can participate.

*"The DDC...methanol engine has recently made dramatic improvements in injector life."*

## Clean Air Program Grant Status

On September 16, 1988, former Secretary of Transportation Burnley announced UMTA's Alternative Fuels Initiative (AFI) program. The AFI program is designed to encourage the use of alternative fueled buses in a wide range of transit applications to improve air quality. This program provides the avenue for placing alternative fueled vehicles into the mainstream of transit revenue service operations. It also offers the opportunity for transit systems to take a proactive position in America's battle for clean air and energy security. The transit industry response has been excellent. As of August 14, 1990, UMTA has approved 31 grants for the purchase of 274 alternative fueled buses. In addition, UMTA has received grant applications and expressions of interest that would involve the purchase of an additional 534 alternative fueled buses, bringing the total requested to 808. The figure below shows a breakdown of the number of buses requested by fuel type.

Only a few of these buses are in operation today, although many demonstrations are expected to begin revenue service in the next few months. The figure on page 1 shows the location of these demonstration sites.



**BREAKDOWN BY FUEL TYPE OF THE NUMBER OF VEHICLES REQUESTED IN AFI GRANTS AND EXPRESSIONS OF INTEREST**

## Methanol Bus Demonstration

In 1986, UMTA established the Methanol Bus Demonstration Program to assess the performance and costs of operating these buses in revenue service. The program involves 61 buses operating in 8 cities. The methanol buses have accumulated over 2 million revenue miles, and 58 of them are currently operating.

The buses are of two basic types. Fifty of these buses are GM or TMC coaches with a Detroit Diesel Corporation (DDC) 6V-92TAM methanol engine. Eleven buses are M.A.N. methanol buses using the M.A.N. 2566 methanol engine.

As these demonstrations approach 3 million miles of revenue service and three years of operation, some important results are now available.

The demonstrations have shown that it is possible to handle methanol safely in a transit environment. No incidents have been reported in the past four years in which transit workers or the public have been harmed by methanol fuel. Measurements of methanol vapor levels have been made by both Battelle and by the National Institute of Occupational Safety and Health (NIOSH) at various demonstration sites, and no violations of health standards were found.

The DDC methanol 6V-92 TAM

*"The CNG buses began revenue operations in early 1990, and some preliminary results are available."*

engine has recently made dramatic improvements in fuel injector life. A fuel additive developed by DDC and the Lubrizol company has reduced injector failures to a level similar to that of diesel engines. The additive was introduced into the demonstrations in early 1990, and all DDC methanol engine demonstration sites using the Lubrizol additive (i.e., Denver RTD, Triboro, and SCRTD) report that injector life has improved by an order of magnitude. DDC has also made improvements in the injector design and construction which are intended to further improve methanol injector life to be equal to that of the diesel 6V-92 injectors.

The details of the fuel additive are a trade secret of Lubrizol, and the final product name, pricing, and availability will not be available until after October 15. However, the additive is believed to be similar to gasoline additive packages, and is being used in the demonstrations at a 0.06 percent concentration (i.e, one teaspoon in two gallons of methanol).

The M.A.N. methanol buses at Seattle Metro have experienced the same injector reliability as their diesel control counterparts, and no fuel additive has been used in these buses. Although these engines and fuel systems are substantially different than the DDC engines in a number of important ways, this experience shows that engines can be designed and built which have reliable fuel injectors when run on neat methanol without additives. The M.A.N. buses have also shown that they can provide the same productivity as a diesel bus. The M.A.N. buses have accumulated essentially the same number of revenue service miles as the diesel control buses over a 3 year period.

Seattle Metro is phasing out their methanol buses due to their high operating cost (i.e., fuel, spark plugs, and catalytic converters). Further, since M.A.N. has stopped marketing their buses in the U.S., there has been a reduced level of, and commitment to, engineering and technical support. During their 3 years of operation these methanol buses have proved to be safe and relatively reliable with an overall excellent operating experience.

DDC has stated that their methanol engine has met and exceeded the 1991 EPA standards in laboratory tests. DDC is now in the process of certifying the methanol 6V-92TAM engine for EPA emissions levels.

The DDC methanol engines are continuing in revenue service, and grant applications have been received by UMTA for new methanol buses. The methanol engines are the most mature alternative fuel technology, and DDC plans to offer the engine for sale in early 1991. The UMTA demonstrations have played an important role by providing the manufacturer with an opportunity to use prototype engines under actual revenue service conditions while simultaneously allowing the transit industry to learn about this new technology.

## CNG Buses Operating in Ohio

Two CNG powered buses are currently operating in revenue service in Ohio, one in Columbus (COTA) and one in Cleveland (RTA). The buses are representative of the current state of the art, with Flxible coaches and Cummins engines both designed by the manufacturers specifically for natural gas. The buses are owned by gas utilities, while Cummins retains ownership of the prototype engines.

The CNG buses began revenue operation in early 1990, and some preliminary results are available.

The engines are Cummins CNG L-10's, and are the early configuration known as "Phase I". The engines have provided good service to date in Ohio, although a few problems typical of prototype engines have cropped up.

The two buses have had three separate engine failures. The Coumbia Gas bus at Columbus COTA experienced two of these engine failures. The first was due to worn valve stems and valve carboning. When the engine was examined by Cummins, the turbocharger bearing was found to be excessively worn, and was replaced to prevent an in-service failure. More recently, the same bus suffered a scored piston with a cracked cylinder liner. The Consolidated Gas bus at Cleveland RTA has had a similar engine failure. These events are much like others experienced at SCRTD, where Phase I CNG L-10's in Flxible coaches are in service.

Cummins has recently made changes to the engines directed at solving these developmental problems. A set of changes is being made and designated the "Phase II" engine. Included in these are changes to the turbocharger

waste gate intended to both modify and more precisely control the turbo boost schedule, the addition of water-cooled bearings to the turbocharger, and incorporation of a more advanced ignition system. The prototype engines now in service will be upgraded to the Phase II configuration, and all future prototype CNG L-10's will be released in the Phase II configuration.

The Columbia Gas bus at COTA has averaged about 22 percent less MPG than the COTA diesel fleet, on an energy equivalent basis. The bus is fueled at a fast-fill facility owned by Columbia Gas. The bus has operated well in service so far.

The Consolidated Gas bus at Cleveland RTA is identical to the Columbia Gas bus, and has also provided good service. RTA provides a special drivers report for this bus, and the drivers have often reported that the bus has lower power than typical diesel buses. Consolidated Gas has built a portable fueling facility which has been placed at RTA.

This prototype compressor station is a slow-fill type. The compressors are driven by a stationary natural gas engine, and the station is fitted with two gas meters to allow determination of how much gas is used to power the compressors during fueling. This prototype fueling station burns 18 standard cubic feet of gas to put 100 standard cubic feet of gas in the bus. It may be possible to reduce this 18 percent additional fuel cost by further engineering development.

UMTA will be producing a final, detailed report on these buses after a full year of operation. When completed, these reports will be available to you.

Other CNG bus demonstrations are now underway, including the New York City DOT/Brooklyn Union Gas demo in New York, and SCRTD in Los Angeles. The SCRTD buses are the same Flxible/Cummins L-10 buses used in Ohio, while the New York Buses are 40-foot Orion coaches with Chevrolet 454 cu. in. V-8 gasoline engines converted for natural gas.

Cummins intends to offer a CNG L-10 for sale in 1991. DDC is also developing CNG bus engines, and is now working on several engineering approaches to implement CNG in their engines.

## Particulate Traps in Revenue Service

Particulate traps are an attractive technology for meeting the proposed 1991 emission standards because they allow the use of conventional diesel engines and diesel fuel. Traps also appear to be a practical method for retrofitting current fleet of buses to achieve reduced exhaust emissions. However, traps have technical issues which must be resolved before they can be widely adopted with confidence. Among these are questions about long-term reliability, cost, and effectiveness.

UMTA is funding several demonstrations of particulate trap technologies in order to gather information on these questions. The demonstrations will involve traps from several different manufacturers. New York City has ordered 400 trap-equipped buses, and represents the largest trap demonstration. Other trap demonstrations are being conducted at SCRTD, Denver RTD, Minneapolis, and SEPTA.

## Other Program Elements

The Clean Air Program involves additional elements that are not described in this document. These elements are: The environmental issues and assessment efforts of Argonne Laboratories, the methanol facilities and employee safety studies by NIOSH, the methanol use training efforts of Battelle, the NHTSA efforts on gaseous fuel system integrity regulations and the Fuel Cell/Battery Bus Development Program. These efforts will be described in future publications of this document.

## Who Can Participate

A public agency that qualifies for receiving federal assistance under the UMTA Act may be a participant in this program. Participants may use Section 9 (Formula Grant Program) for ordinary capital costs that are incurred. Section 3 (Discretionary Grant or Loan Program) funds are available to pay for extraordinary

capital costs associated with participation in the Clean Air Program. Section 8 (Planning and Technical Studies) funds are available for the planning and development of AFI projects. Applications will be accepted from public agencies to support both privately and publicly operated services. Participants are encouraged to forward innovative proposals which incorporate creative partnerships between the public and private sector.

The private sector is encouraged to participate in this program and to take a pro-active position in support of America's drive for clean air and energy security.

## HOW TO PARTICIPATE

The application procedures for the Clean Air Program will follow the existing procedures and requirements for UMTA grant programs. The application should be sent to the appropriate UMTA Regional Office for processing with a copy to the Director, Office of Engineering Evaluations, at UMTA Headquarters in Washington, D.C. The names, addresses, and telephone numbers of the appropriate individuals are given on the following pages.

## UMTA REGIONAL CONTACTS

Mr. MINETA. Thank you very much.

The gentleman from the Virgin Islands, Mr. de Lugo.

Mr. DE LUGO. Thank you very much, Mr. Chairman, and I thank the witnesses here this morning.

I am going to be very brief. I would like to ask Dr. Larson a question. Dr. Larson, in all of your new highway proposals, particularly highways of national significance and the urban-rural program, the States must put up a greater matching share.

My question would be, how does the administration expect the States to do this, since most have already increased their gasoline taxes?

Dr. LARSON. The answer that I gave a moment ago, I think, applies. As we look to the needs of the country on almost any level you choose to base your assessment on, the needs exceed the ability of any one of the partners to meet the full requirements.

So the proposal is for the Federal share to go up, the State share to go up, and to permit private funds for the first time. The State legislative bodies have traditionally followed the Federal lead, and as I said, after the last major reauthorization, there were 47 States that increased their funding. At the present time, we are told that 27 States are anticipating raising their levels of gas tax.

If that is not possible, then we have provided, for 25 percent of the program for the first 2 years, they can go forward at 100 percent Federal match. There are also unused apportionments that carry the old match levels with them, and that is another potential solution.

So there are a number of strategies that States can and, I believe, will follow to manage their affairs so that they can in fact use the Federal funding that is being provided in this legislation.

One other observation that I did not make a moment ago is that while we talk about the theoretical match levels—at present, they are 83 percent and we propose dropping them to 72 percent—in fact, on the Federal-aid highway system, the overall State match is 56 percent. In other words, the States have chosen to use 100 percent State money on Federal-aid projects on a very broad basis, and we certainly applaud this, but we believe that with this change in match ratio, for many States it will simply be a minor readjustment of the strategies already being used.

Mr. DE LUGO. Thank you for that answer.

I yield back the balance of my time, Mr. Chairman.

Mr. MINETA. Mr. Packard?

Mr. PACKARD. Thank you, Mr. Chairman.

I am sorry I had to leave for just a few minutes and miss part of your testimony.

There are two or three points that concern me. One is that our additional 5 cent gas tax is now coming in, half of it going to the general fund, but half of it is coming in for transportation purposes. And yet in the President's transportation proposal, I still see a significant buildup of the trust funds rather than spending the money, and I think that that 2.5 cents is essentially being used to build up the trust fund rather than being used for needs that are crying for money.

In fact, I am concerned that we have a 150,000-mile plan when in fact the States have submitted a plan that would require 184,000,

so there are 34,000 miles that are not being addressed, and yet money is building up in the trust fund. Would you comment on that, please, Dr. Larson?

Mr. LARSON. Yes, sir, I would be pleased to.

With regard to the trust fund, this has been a very difficult and continuingly contentious matter. Let me try to address it specifically.

The proposed program level is a substantial increase over where we have been over the past 5 years, and while it is true that over the authorization period there is a sum of money perhaps in the $5 billion to $8 billion level that could be spent above the particular spending levels proposed without triggering the Byrd amendment, we believe that the program level is one that meets the goals of the 1990 budget agreement and also is a proposal that is rational with respect to the States' level to accelerate their spending.

As to the very specific numbers of the trust fund, let me say that under this proposal the highway account of the trust fund will in fact build to a level of approximately $16 billion in 1995, but the proposal anticipates that the tax that was proposed and passed by the Congress, which expires October 1 of 1995, will expire, and so the trust fund balance, then, after this peak of $16 billion, drops very swiftly, and if the spending levels that are proposed for 1996, the $20 billion plus, were continued, within 2 years we would be below the level required by the Byrd amendment.

So we have tried to walk a balanced approach between accelerating the spending, living within the congressional budget caps that we have, and also managing within the Byrd amendment and not putting the program in jeopardy. These constraints have been difficult, and we think we have threaded our way between them.

As to the mileage for the national system, there is considerable disagreement as to what the exact numbers should be. In California, as a matter of fact, there is a sentiment for having a smaller national system, 80,000 miles. Other States have argued very strongly for 200,000 or more.

We have shown the committee our tentative map of 150,000 miles that we believe is a workable system. But we have also provided in the legislation for an additional 10 percent at the option of the Secretary, working with the States, and so we think that that system is a manageable system. We think we can work out the numbers to the satisfaction of the States and the local governments.

Mr. PACKARD. On the trust funds, we always get a promise that in the out years we are going to start spending them down, but then when the out years get to be this year's budget proposal, we find that there is a change.

I would also be interested in comments regarding the use of Federal-aid rights-of-way. For some time, there are many proposals and opportunities to use Federal-aid highways for non-Federal highway purposes. I am very pleased, frankly, to see in your proposal, the administration's proposal, that it does open that door. Would you explain to what extent it does open and if it still will leave some regulations that prevent certain public works facilities to be used in Federal-aid highway rights-of-way?

Mr. LARSON. Yes, sir.

First of all, we defer to the States on matters like this, and so the language is discretionary with the States. But if a State—California, for example—were to explore the use of higher ground travel technologies, maglev or high-speed rail, and consider that they might want to use an interstate right-of-way for this purpose, the language would permit either a public or a private use of this kind to proceed.

It also would permit highway funds to be used for making adjustments in the alignment that might be required in order for this new use to be accommodated. But the control of that right-of-way is vested with the State of California or the other States involved.

Mr. PACKARD. Would it allow such things as a fiberoptic cable, water mains, and so forth, to go down the right-of-way as well?

Mr. LARSON. I am told that it potentially can include all utility facilities including fiber optics and water main.

Mr. PACKARD. All right. Well, I hope that this is a door that is beginning to open that will allow these very expensive rights-of-way to be used for other purposes as long as they do not interfere.

One last question. Mr. Clymer, I appreciate your being here this morning. I am very interested in grade separation in terms of safety, in terms of allowing mass transit and rail to move a lot safer and a lot faster. What does the administration proposal allow in terms of grade separation monies and projects?

Mr. CLYMER. Maybe Dr. Larson can answer this. Our program is not specific to such things as grade separations. To the extent that medians were opened up for transit use, our programs are certainly permissive in the use of funds to build those rights-of-way.

Mr. PACKARD. Mr. Larson, you might wish to address that, also. Will there be monies available for grade separation projects?

Mr. LARSON. Yes, sir. As a matter of fact, the proposed legislation requires that 10 percent of all the highway apportionments be used for safety improvements, and so, at the option of the States but with that 10 percent requirement, monies could be used for grade separations, yes, sir.

Mr. PACKARD. Thank you very much. I appreciate your being here this morning.

Mr. MINETA. Mr. Valentine?

Mr. VALENTINE. Thank you, Mr. Chairman. I will be brief.

I have been in and out and apologize in advance because I know I am going to ask a question that has already been answered.

Mr. Curry, I understood you, when I came in here, sir, to be talking about efforts at highway safety, renewed efforts, and I wanted to ask you if the concern that the Department has for highway safety involves in any way the continued use of radar detectors, or if it has anything to do with limiting or prohibiting triple trailers, or if it has anything to do with the speed limit.

General CURRY. Let me start first with the middle part of your question, which is trailers. We have for some time been taking a look from a safety standpoint at trailers. We have not completed the inquiries yet or the evaluations but we think that, clearly, there may be a safety implication. At some time down the road, we are going to have to be prepared to take a stand and we are working in those directions in our intention to get ourselves in a place where we can play an intelligent role in that in the safety arena.

The other part of it, of course, is not something that our administration in safety is directly involved in, but we have an interest and an abiding concern in that area.

Let me talk to you just briefly on speed limits and speeds, and the answer is yes, we are quite involved in that. As you know, the Congress requires that we submit a report to Congress on the changes that have taken place in the driving habits of people on roads where speed limits have gone from 55, for example, to 65. And yes, we have been tracking that now for about 3 years.

We just recently submitted a report to Congress on that. You may not have had a chance yet to see it, but I think it will probably be made available to you very shortly.

Mr. VALENTINE. On the question of the formulas that some States have raised questions about in the past, mass transit and formulas generally may be of some interest. It is to me. I just left a group of constituents from a small county in our district, which includes ten counties and part of another county, who talked to me about a mass transit system in Eastern and Central North Carolina, but of course, mass transit to us means the operation of buses.

The State of North Carolina, with all of its economic problems, a population of over 6 million people, however, under the past formulas, at least, for every dollar that we sent to the Federal Government for mass transit, they sent us back a nickel or 7 cents. They tell us that mass transit means rail transportation.

Well, we just have to have some help on that situation some way. I mean, it just makes no sense for a State like North Carolina—and I am sure there are many others—to be helping to that extent to finance mass transit systems in other parts of the country.

Does the new legislation have any change in that formula, and does the formula take into account the Federal Government helping those States that help themselves?

Mr. CLYMER. From the standpoint of mass transit, first let me point out that we believe that mass transportation is anything other than a single-occupant vehicle. So we are now including carpools and van pools and HOV lanes, certainly the buses as you have down in North Carolina. Mass transit is not synonymous with rail travel. You need to look at what is effective and works for your region.

We are trying to put more dollars into the regions, and especially to the grantees, by the greater use of the formula program. The formula program has been effective. I think it has withstood the test of time pretty much. So we are not proposing any change in the formula itself.

We are recognizing that there are greater rural and suburban needs. Our section 18 rural programs, which affects your area, although we have kept the formula at the current 2.93 percent, we have put a minimum dollar amount on that of $89 million, which would be about a 50 percent increase in section 18 funds.

So I think we have taken a number of steps not only to increase the flexibility of dollars coming into areas like yours, but also to increase the equity and the stability of those funds.

Mr. VALENTINE. Thank you.

Two other brief questions, Mr. Chairman.

Somebody here has mentioned the word, I think, a time or two, "private funds"—Federal money, State money, local money, and private money. Could you tell us what you mean by that? From whence comes private money into the Federal interstate system?

And finally, does the money that we are talking about to complete the interstate system include any new stretches of interstate that were not on the books, say, 10 or 15 years ago?

Mr. LARSON. Sir, on the interstate system, the proposal does not add new mileage to the interstate system. It is what has been planned over a long period of time. The legislation does, however, provide that if there are additional miles of interstate-level roads that should be added to the system, and if they meet the standards, they could in fact be added to that system.

Mr. MINETA. Would the gentleman yield on that point?

Mr. VALENTINE. Yes, Mr. Chairman.

Mr. MINETA. I would like to clarify that, Dr. Larson. As I understand it, the last time we ever added any mileage to the interstate system was 1981, and to the extent that in 1981 the Congress said, "This is it; we are going to close it out," this year we are saying that by the end of 1991 we will have completed the Federal interstate system.

To the extent that we want to complete that, we have monies in there for monies to complete, but we really do not want to add any more miles to the interstate highway system, do we?

Mr. LARSON. Sir, the intent of the language is permissive to the States if the roads are built and are already at interstate standards——

Mr. MINETA. Let me then make that distinction. It is fine if the States want to build their highways to interstate standards, but it does not add another mile to the interstate system. Is that correct?

Mr. LARSON. The language is permissive that miles that already meet the standard, and with the approval of the Secretary, could carry the shield of the interstate highway system. It is not an extension of the program; it is simply an extension or permission to give that designation to highways that fit the character of the interstate miles.

Mr. MINETA. And in terms of construction, what would be the Federal share?

Mr. LARSON. There would be no construction provided for in this program.

Mr. MINETA. All right.

Mr. LARSON. So it is not an extension of the interstate construction program.

Mr. MINETA. I guess that is the point I am trying to get at. And what about the I-4R program?

Mr. LARSON. The I-4R program would become an I-3R program. The reconstruction element would not be continued in this proposal. This would fall to the national system.

Mr. MINETA. I wanted to make that clear because I wanted to make sure that the gentleman from North Carolina was not getting the wrong interpretation in terms of what can be included in the interstate system.

Mr. VALENTINE. Yes, sir. Thank you, Mr. Chairman.

How much money did you say is in here for dealing with new work on the interstate system?

Mr. LARSON. The work on the interstate system that is provided for over the period of the reauthorization is in several categories. There is interstate completion, $7.2 billion which includes special treatment of the Boston projects; and then there is interstate substitution money. So there are several categories of money.

Mr. VALENTINE. What is the special treatment of the Boston system?

Mr. LARSON. This is to provide for completion of the third harbor crossing and the central artery in the Boston area, something that has been talked about in the Congress, most recently in the 1987 reauthorization.

Mr. VALENTINE. Based on the questions the chairman asked you and the answers that you have given to my questions, do I understand that, say, in a State like North Carolina, for Interstate 40, if the State authorities wanted to spend the money this way, they could construct a section of highway and call it Interstate 140 and put the shield on it as long as they wanted to use their money that was allotted to them for that purpose?

Mr. LARSON. That is essentially correct, sir.

Mr. VALENTINE. And finally, Mr. Chairman, I asked you if you could tell us—you have used words which I find kind of puzzling, private money, because I did not know any private money went into the interstate system. What do you mean by that?

Mr. LARSON. Let me speak to it, and then perhaps Mr. Clymer can add to it as well.

The Congress in 1987 provided for pilot projects where up to 35 percent private money could be commingled with Federal and State money.

Mr. VALENTINE. Like toll roads?

Mr. LARSON. Toll roads. Those projects are moving ahead. They have been examined, and there has been a review of the progress on those projects. This legislation would permit up to 35 percent private funding to be commingled again with Federal and State monies for either public or private toll roads or bridges, so that the total pool of money would in fact be increased.

There are not only the nine projects that were provided for by the Congress, but in California there are some totally private projects—$2.5 billion worth, approximately—that are in fact moving forward. So this is a source of funding that is now demonstrably important to the overall program.

Mr. MINETA. Mr. Clymer, did you want to add to that?

Mr. CLYMER. In terms of the private dollars, if I might, Mr. Chairman, we believe that the private sector represents not only a great deal of energy and expertise but also dollars that can be brought into transit in a number of ways, such as contracting out for maintenance facilities, operating those segments of transit that it might be able to do more efficiently than in the public sector.

Also in the area of real estate development, such as shared facilities, real estate development around rail stations or even bus stations, are opportunities to bring the private sector in and allow the public sector to tap into the great appreciation that is realized

when the public sector brings rides and customers into areas of real estate development.

Mr. VALENTINE. Thank you, Mr. Chairman.

Mr. MINETA. Dr. Larson, did you want to expand?

Mr. LARSON. I want to correct, sir, if I may. I misspoke. It is 35 percent Federal participation in toll projects. That is the condition that is provided for in the 1987 act, and that is the provision that we intend to continue but make it more broadly available. It is 35 percent Federal participation.

Mr. MINETA. Let me call on our very fine colleague from Michigan, Mr. Upton, whom we are going to be losing, I guess, from the committee to Energy and Commerce.

Mr. UPTON. I hope not.

Mr. MINETA. Is that not the case?

Mr. UPTON. Not yet, anyway.

Mr. MINETA. Not yet.

Mr. UPTON. I am delighted to be here this morning, in more ways than one.

Dr. Larson, I noted that the proposed national highway system, which is composed of the interstate system with the principal arterials, is capped at 150,000 miles. But I note that when you add the interstate and the urban and rural principal arterials, you come up with a figure of 184,000, in fact a little bit more than that.

I wondered whose calculator you were using, whether it was Dr. Darman's at OMB, perhaps, or Mr. Skinner's, in trying to trim 34,000 miles from the already 184,000 that are there to achieve the figure of 150,000. How did you arrive at that figure, knowing that on present use there is 184,000?

Mr. LARSON. The question of the size of the program is one that has been much discussed. The feeling now is that by selecting portions of those systems that total 180,000 miles, by including the interstate and the strategic network, we can in fact achieve the national objectives at the 150,000-mile level.

As I said a moment ago, the legislation provides for up to 10 percent additional mileage to be added at the discretion of the Secretary, and the final selection process is open for 2 years. So I do not know that we have an absolutely firm hold on just what this ought to be. It is in negotiation now.

We have had official discussions with all of the 50 States, and the targets vary between 80,000—some States would like to see a smaller system—to up over 200,000. We think that at 150,000, with the 10 percent expansion, that we can in fact meet most of the objectives that we see as national objectives.

Mr. UPTON. All right.

Mr. Curry, in your testimony, you talked a little bit about helmet laws, and you indicated that the Department had a policy of encouraging States to pass helmet laws. Have you had any success?

General CURRY. Yes, we have had quite a bit of success.

Mr. UPTON. I know Michigan does have a helmet law. I am curious to know how many States do not have a helmet law.

General CURRY. We can get that figure in just a second for you. But we have had great success. For example, I just recently received a letter from the State of California, which, as you may or may not know, for 2 years running has had a bill passed and then

vetoed by the governor, the letter from the State indicates that if the bill was again introduced and passed this year, it would probably be signed by the governor of California.

So we have been working that very hard, and as you know, we have to do that in individual States, and we work with each governor, with all the legislatures, and we send expert witnesses to testify before State legislatures. We have been very successful, bit by bit; no great success, but each year we get two or three.

Let me see what we have here in terms of numbers. We have 22 States, including the District of Columbia and Puerto Rico, that require that everyone wear a helmet. Twenty-four States have an age qualification; that is, those under 18, for example, must have a helmet.

There is no requirement of any kind in five States: Colorado, Connecticut, Illinois, Iowa, Rhode Island.

Mr. UPTON. Would the Department object or oppose if we were able to stick something like we have done with seat belts into the highway bill? Would they formally take a stand?

General CURRY. Yes.

Mr. UPTON. In support of a helmet law?

General CURRY. I would personally take a stand in opposition to it because I believe that is an issue that should be decided by each State. I believe that my role as the Administrator is to present as forceful and persuasive a case as possible in favor of helmet laws, and we are doing that. But personally, I prefer that the States in fact enact that kind of legislation and that we not do it as a Federal fiat.

Mr. UPTON. All right, thank you.

Dr. Larson, in the proposed urban-rural flexible program, I note that the funds for it are completely fungible; in other words, that there are no minimum guarantees for either rural or specifically for urban areas.

Without such a guarantee, how will the rural and urban areas be assured that each will receive a "fair share"? How do you envision that working?

Mr. LARSON. Sir, the language requires that there be a certification of reasonable distribution between urban and rural interests. Again, this is a matter that we believe is appropriate for the several States, and so we are simply asking that each State make that judgment and certify that it is in fact a reasonable approach. We believe that is the proper Federal role here.

Mr. UPTON. Lastly, let me ask this question with regard to the bridge program.

I am concerned about the States that have done a fairly good job at maintaining their bridge stock, I guess you could call it, those that have spent significant funds for their infrastructure versus perhaps States that have not done as good a job.

Do you feel that in the administration's proposal there is perhaps more of a reward for those States that have not embarked on a more ambitious program over the past number of years than perhaps those that have?

Mr. LARSON. We would hope, sir, that the legislation would provide a new approach to distributing bridge monies that will be a more balanced approach. The level-of-service concept has been de-

veloped within the Federal Highway Administration, and we will be distributing a white paper on this subject in the immediate future.

But the notion is that we will try to use a level-of-service approach so that each State can in fact provide a minimum level of service on bridges using Federal aid. So we have a new approach that will, hopefully, get at the questions that you are raising.

Mr. UPTON. Thank you very much.

Thank you, Mr. Chairman.

Mr. MINETA. Mr. Laughlin?

Mr. LAUGHLIN. Thank you, Mr. Chairman.

Dr. Larson, I appreciate your words about a more balanced approach to the funding, and I have a request in that area.

As I look at all the charts I have been given, I have had a very difficult time trying to determine what is the funding formula for our States. In that regard, there is a strong perception in some States—and I must tell you that it certainly exists in my State of Texas—that our citizens pay in a lot more tax dollars than we get back proportionally, and by that I mean we are one of those donor States.

As I appreciate, there was a time when the interstate system was being developed, which you say will be completed this year and will not be added to, that many recognized that if we were to have a national transportation system, some States would have to pay disproportionately into that.

I do not think any of the States that consider themselves donor States think they ought to get back dollar for dollar, but there is that feeling that some of us pay in substantially more than we get back.

I would like to see one of your charts that is simplified and not confusing with mass transit, with bridges, with superhighways, with secondary road money all in there. I would like to see the formula that shows the ranking of State payments of monies into the highway fund and the total amount of money they get back.

I must tell you that on the one chart I saw, the State of Texas was 49th, when we have more highways and more bridges and rank fourth in population. I need some help when I go back home and the county commissioners and the highway department lean on me for not doing a very good job up here in seeing that we get a fair return. Do you hear where I am coming from?

Mr. LARSON. I think I do, sir.

Mr. VALENTINE. Mr. Chairman, would the gentleman yield before you answer that question?

Mr. LAUGHLIN. Sure.

Mr. VALENTINE. Could I ask that you send me a copy, too? [Laughter.]

And that you include in there the rankings of States with mass transit money.

Mr. LAUGHLIN. In fairness, on the one chart I saw, it was either Alaska or Rhode Island that was 50th, and there is a substantial difference in population and size of living space in those two areas compared to a number of other States.

Mr. LARSON. Well, sir, this comes very close to one of the gut questions of this whole reauthorization proposal, and that is the question of formulas, distribution, equity.

We have worked very hard to try to come up with a balanced approach. Importantly, the work has been carried on by others. I have here, for example, the proposed formula factors for allocating Federal highway funds prepared by AASHTO. They were not able to come to a conclusion, but they studied the matter at great length.

We did in fact propose—and I emphasize that word—we proposed a formula that we believe does in fact treat the States fairly from a variety of perspectives.

Turning specifically to Texas, I have met with delegations from Texas on several occasions. Arnold Oliver has looked carefully at our formula. Importantly, Texas comes to a higher level of apportionment than they do under the present law which includes minimum allocation. But we will certainly sit down and go over those numbers with you in detail, because I think the story for Texas is a very positive one.

Let me, if I may, Mr. Chairman, amplify just a bit on this to say that the equity question transcends just the interstate highway system. If we are going to have a system of highways that knits the United States together and provides for national and international needs, there has got to be some distribution across the country.

I could use Montana as an example. Montana has perhaps five people per square mile compared to 1,000 in New Jersey. They pay $380, I believe it is, per capita for highway purposes as opposed to less than half of that in a more populous State like California. And so somehow, if there is going to be a system of national highways, then we have to have some leveling across all the States, even beyond the interstate system.

But again, getting back to Texas, we do have the numbers, and we will be glad to sit down with you and share them, and I think you will see that they are very positive.

[The following was received from Mr. Larson:]

TEXAS—COMPARISON OF APPORTIONMENTS FOR FISCAL YEAR 1991 TO THE ESTIMATED FISCAL YEAR 1992 APPORTIONMENTS UNDER THE PROPOSED 1991 STAA

[In thousands of dollars]

| Program | Fiscal year— | |
|---|---|---|
| | 1991 | 1992 |
| National Highway | | 510,837 |
| Intersate | 93,509 | 52,935 |
| Interstate 4R | 189,899 | |
| Interstate Transfer | 0 | 0 |
| Primary | 131,840 | |
| Urban/Rural | | 273,520 |
| Secondary | 36,755 | |
| Urban | 46,968 | |
| Bridge | 51,647 | 116,912 |
| Hazard Elimination | 10,656 | |
| Rail-Highway Crossing | 10,907 | |
| Minimum Allocation | 196,747 | |
| Urban Planning | 2,913 | 4,524 |
| Total | 771,841 | 958,728 |

Mr. LAUGHLIN. Well, I am glad to hear there is an improvement over the past, because going back and talking to citizens who read reports that some States get 116 percent back on what they pay in and some States get 85 percent because that is what the minimum law requires does not strike as equity and fairness.

Next I want to shift to the national highways of significance. As I understand that program, that is a highway program to supplement the interstate system. Is that correct?

Mr. LARSON. I think it would be fair to say that it is a program that is the next stage in the national highway program development. The interstate system is complete, and so this really goes beyond that program and puts it in a different context that meets the demographic needs of today and of tomorrow.

Mr. LAUGHLIN. Is that the program that would take in the shift of population and the shift in the economic factors of our country since the interstate system was designed in the mid-1950s?

Mr. LARSON. Yes, sir. We believe that it does not only at the outset, but with the continuing changes that are permissible, we believe that it will reflect the demographic and economic and social changes of this country.

Mr. LAUGHLIN. Is that the map you talked about earlier that is a 150,000-mile map?

Mr. LARSON. Yes, sir. That is the proposal that is on the table. It is an illustrative map only at this time. We provided it to this committee at their request, and we have worked with each of the States. Certainly the Texas delegation, Mr. Oliver and others—as a matter of fact, Texas was really ahead of the pack in developing this. The Texas trunk road proposal has really pretty much been incorporated into this national system.

Mr. LAUGHLIN. I was going to ask you if you have incorporated the trunk system. There is a reason why we have to be ahead. Much of our State has no mass transportation. Sporadic bus service, if I hear your definition of mass transportation, would be the only form. We have no subways. Much of our State has no commercial air service. So there is a reason why we are sensitive to needing equity in the funding for highways and bridges.

I see the red light is on. I did want to ask you about alternative fuels and would hope one of my colleagues will ask you about alternative fuels and encouragement of industry to use alternative fuels.

Thank you.

Mr. LIPINSKI [assuming chair]. Thank you.

Mr. Emerson?

Mr. EMERSON. Thank you, Mr. Chairman.

Mr. Larson, your proposal makes funds available to the IRS for the purpose of augmenting Federal fuel tax enforcement efforts, and I am curious as to why the Highway Trust Fund should be used to fund another Federal agency to help it do its job. If the expected rate of return on investment is high, then why doesn't the IRS allocate more of its own resources to this activity?

Mr. LARSON. The question of resource allocation is, of course, always difficult. For the IRS, this program is a very small component, perhaps 1 or 2 percent. We have developed a very good working relationship with IRS, and the notion of going forward is one that has been promoted by AASHTO. There is in fact an AASHTO resolution that supports this concept of using a portion of the Highway Trust Funds to put a special focus on collecting more of the taxes that are provided for on the highway side.

So we believe this is a cost-effective way to use Highway Trust Funds, and we have the broad support of the States in this initiative.

Mr. EMERSON. Do you believe that the return to the Highway Trust Fund will be greater than the administrative costs of the IRS?

Mr. LARSON. Yes, sir, we do. I am told that it is 20-to-1, sir.

Mr. EMERSON. Pardon?

Mr. LARSON. I am told that the expectation is for a 20-to-1 return.

Mr. EMERSON. That is a good return. [Laughter.]

Under your proposed metropolitan and rural innovation bonus program, non-capital-intensive projects that provide innovative approaches to air quality and congestion are eligible for special treatment. The funding is also available for rural areas to solve rural access problems.

Would you give us an idea of what type of non-capital-intensive projects would be eligible for the bonus funds in rural areas?

Mr. CLYMER. You are talking about non-capital-intensive? We are trying in our——

Mr. EMERSON. Do you want me to restate the question?

Mr. CLYMER. It would be helpful.

Mr. EMERSON. Well, under the proposed metropolitan and rural innovation bonus program, non-capital-intensive projects that provide innovative approaches to air quality and congestion—I think that is key, innovative approaches to air quality and congestion—are eligible for special treatment. The funding is also available for rural areas to solve rural access problems.

What I am fishing for, what I am asking for is if you can give us an idea of what type of non-capital-intensive projects would be eligible for the bonus funds in rural areas.

Mr. CLYMER. I think, predominantly, we are talking about HOV lanes that would also integrate into——

Mr. EMERSON. Now, wait a minute. HOV lanes in rural areas?

Mr. CLYMER. I am sorry. We are talking interconnectivity and trying to connect rural and suburban areas into urban areas. In looking at the program and trying to deal not only with congestion, which is, of course, something not particularly evident in rural areas, where predominantly we have an interconnectivity problem, and we need to deal perhaps in intermodal facilities, where we can

connect the rural areas to suburban areas and subsequently into urban areas.

Mr. EMERSON. Give me a for instance. I am still puzzled.

Mr. CLYMER. Intermodal bus facilities and rail facilities, perhaps signage, things to direct people to areas where they can make these connections.

Mr. EMERSON. Rural areas would qualify for the bonus program if they had the right kinds of signs? If they were proposing certain signs, this would be an enticement?

Mr. CLYMER. Not having the signs but proposing programs to enhance the accessibility, enhance the passenger coverage of the interconnecting systems.

Mr. LARSON. May I speak to this further? For the metropolitan and rural innovative bonus programs, for urbanized areas over 200,000, the provision is for non-capital, but for projects in rural areas, the program is much more open. They could be capital or non-capital, and the intent is to bring out innovative approaches and strategies, and I guess the word "innovation" suggests that we would like people to come up with ideas, but for the rural areas, we have made the program more broadly available.

Mr. EMERSON. But you do not have specifically in mind what you are looking for. You want the rural areas to be more innovative?

Mr. LARSON. I think that is in fact the intent of the program. We do not specify a set of program actions, but certainly access to systems, better modal connections, perhaps assistance to elderly people in rural areas that are really disenfranchised from present access, these are the things that we would like to see addressed in this program.

Mr. EMERSON. That is good. So you are open there in order to give us flexibility to meet our needs.

Mr. LARSON. That is correct.

Mr. EMERSON. Very good.

Mr. CLYMER. I think one of the things that has happened over the last couple of years with the Greyhound and Trailways situations is that it has brought to our attention the need to focus more on the intercity connectivity. So we are currently, as Dr. Larson pointed out, trying to encourage outreach and encourage rural areas and access groups to come in and bring their suggestions in to us.

Mr. EMERSON. Good. I look forward to working with you and pursuing that.

One more question here. Why is the transferability from a national highway system to the urban-rural program permitted while not in the opposite direction?

Mr. LARSON. The intent, sir, is to maintain a very high priority on the national system, and so the notion of moving 15 percent was thought to be an appropriate upper limit.

The question of moving from the urban and rural to the national is something that we believe would probably not be considered a desirable move in that the match ratios are different, and we believe that the provision of funding at the national level is appropriate; as a matter of fact, for some it is too high already. And so the notion of moving money towards the more innovative block grant type program is the one that we think is most appropriate.

Mr. EMERSON. Thank you.

Mr. LIPINSKI. Thank you very much.

Mr. Brewster?

Mr. BREWSTER. Thank you, Mr. Chairman.

Mr. Laughlin must have been reading my mind a moment ago. I am a supporter of alternative fuels.

Is there anything in the form of capital help as far as developing infrastructure for compressed natural gas or other fuels of that type, and what about tax credits for conversion? We are spending about $70 billion a year on foreign oil, burning about 7 million barrels a day in automobile fuels. I think it is obvious that we have to do something on alternative fuels.

Mr. CLYMER. From a transit perspective, we have made alternative fuels one of our priority initiatives over the last several years.

Mr. BREWSTER. I heard the question on transit earlier. I am curious about the general public out there. We do not have a heck of a lot of transit in Oklahoma.

Mr. LARSON. There is no special provision in the legislation dealing with alternative fuels on the highway side.

Mr. BREWSTER. So we are doing nothing, then, to encourage alternative fuels on the highway side?

Mr. LARSON. There is no provision in that area, sir.

Mr. BREWSTER. My second question is this. What are we doing as far as development of highway materials? Are we doing significant research on highway materials, utilizing recycled rubber or whatever might work to give our highways a longer life span? Is there anything being done on that?

Mr. LARSON. Yes, sir. The whole area of improved pavements and other structures relating to the highway program is getting a lot of attention. There is a program that was approved by the Congress at the time of the last action that provided for what we call the Strategic Highway Research Program. That looks at a broad range of new technologies to make better pavements.

We have also cooperated with the States and through AASHTO and with various associations to look more carefully at a European technology. We had a combined tour of State and public and private officials that visited and came back with new ideas of how to make asphalt pavements better and more durable, and we are implementing some of those ideas.

So yes, that is an area that we are putting a lot of attention on, and we have simply got to have pavements that do in fact perform better in the world ahead.

Mr. BREWSTER. That is good to hear.

Back on the alternative fuels, the Canadian Government does have a fairly significant grant program, both for infrastructure and for conversion. I was in Alberta last year on another project, and its very obvious that they are far ahead of us on conversion of vehicles.

General CURRY. Could I speak to that for a minute?

Mr. BREWSTER. Yes.

General CURRY. While fuels are not covered in this reauthorization bill that is as you have been asking and have learned, in the National Energy Strategy, they are covered considerably. In fact we have a provision, for example, to encourage automobile manu-

facturers to manufacture vehicles that are alternative-fuel vehicles or multi-fuel vehicles, and when they do that, they get what we call a corporate average fuel economy or CAFE credit. There is a formula that allows them to in fact increase their CAFE level by manufacturing alternative fuel vehicles so that they get a better break in terms of manufacturing the rest of their fleet. So it is to their advantage to produce alternative-fueled vehicles, and all of the industry is moving in that direction, and we are encouraging them greatly in the National Energy Strategy to do that.

Mr. BREWSTER. Yes, I was aware that that was in the National Energy Strategy. I would just like to have it two or three places, and it has a better chance of being enacted, then.

Our State of Oklahoma, for instance, produced less than 300,000 barrels a day of oil last year. We never again will be a significant oil producer. That is less than any year since 1940. It is obvious that we must do some things to convert to alternative fuels.

Mr. LIPINSKI. Thank you, Mr. Brewster.

I apologize for having been late for this hearing this morning, but it is very nice to see all of you gentlemen once again.

Have we changed their position yet, meaning the Department of Transportation, on operating assistance for mass transit in large metropolitan areas?

Mr. CLYMER. No, sir.

Mr. LIPINSKI. You have not changed that.

Have we changed our position in regard to utilizing any money out of the general revenue fund for mass transit as of yet?

Mr. CLYMER. No, sir.

Mr. LIPINSKI. Let's see. What else might you have changed that I did not hear about that I would be interested in? [Laughter.]

Have you changed anything in your original proposal from the time it became public up until today?

Mr. CLYMER. No. We think it is a pretty good proposal, Mr. Chairman.

Mr. LIPINSKI. Obviously. You have been defending it all over the place, and I compliment you on that defense that you have put forth in behalf of what I consider a very feeble program.

Let me ask you a question in regard to whether I understood the answer correctly. The Illinois Department of Transportation is concerned about its bridge funding program. They are afraid they are going to lose 28 percent of their current funding underneath your new established level of service criteria.

Did I understand it, Mr. Larson, that you said that there really is not a criterion established as of yet, that you are working on that?

Mr. LARSON. That is right. We have not put forth the proposal for this level of service. We will certainly work with the State of Illinois very carefully. Mr. McCormick, the Deputy Federal Highway Administrator, was a senior official in Illinois. We have worked with Kirk Brown, the new secretary, and the good news is that the funding for bridges goes up substantially and that we are going to work very carefully to have a program that more equitably distributes those funds.

Mr. LIPINSKI. But as of yet, there really are no criteria for it, so we really do not know what we are dealing with, so it would be very difficult for them to really say they are going to lose 28 per-

cent of their funding since they do not know what the criteria are, right?

Mr. LARSON. It would be premature.

Mr. LIPINSKI. Well, since you have not really changed any of your positions, and I do not know that there is anyone else—Mr. Anderson, do you have any further questions?

Mr. ANDERSON. No.

Mr. LIPINSKI. Then I will turn the chair back to the real subcommittee chairman, Mr. Mineta. Thank you.

Mr. MINETA [resuming chair]. Dr. Larson, let me ask about the national highway system. As I understand it, it is basically 150,000 miles but it can go up to 165,000 miles because of that 10 percent plus or minus adjustment on it.

I am wondering if you could explain the criteria that were used to designate which segments of highways should be included in the national highway system.

Mr. LARSON. Mr. Chairman, I wish I could give you a precise set of criteria that we used, but in fact the criteria have been changing, and they probably will change some more. We wanted to serve the national interest, and so the miles of travel on any particular section of road was a factor.

We also looked at the early work of reclassification, and so principal arterials were part of the designation. Then, of course, we automatically included interstate and strategic highways.

But let me give you one illustration of why precise criteria were not possible. Some months ago, in our early meetings with the States, we found that for some of the Western States, the notion of a better access to a national park was considered a matter of national priority, and we had not really considered that. So we went back and said yes, for a State like Utah, for example, access to major national parks should be part of the package.

So I think, rather than looking at particular and rather specific criteria, we have tried to work with the several States to reach a broadly accepted definition of national significance, and we think we are very close to having accomplished that, as we indicated in our correspondence with you recently.

So I can give you all the various factors that have been used, but there is not a small or short, precise list because the country is simply too diverse to permit that.

Mr. MINETA. We will be talking to your staff about the bridge program. We would like a little more of a detailed explanation about that bridge program.

Let me ask you, we have been talking about flexibility. Flexibility is an important factor for you, as the chairman has indicated, and I was wondering, to the extent that flexibility really requires a good planning process, if you could explain the planning requirements in the administration's bill both from a highway as well as a mass transit perspective.

Mr. LARSON. Well, first of all, we build on the notion that the decisionmaking in the future should be moved to the appropriate level, whether that be State or local, and we provide planning funding at a 75 percent match to enable this to go forward.

We have looked especially at the Clean Air Act and provided for a total integration of planning between transportation and Clean Air requirements.

We have made the match ratios common so that transit and highway planning can go forward as a joint enterprise.

We have, both in our policy and in our legislation, put a strong focus on the MPO process as the place where this decisionmaking should be focused.

So, in a variety of ways, we have tried to send a clear signal, and have sent the money along with that signal, that we believe that for the years forward, very careful planning is going to be required to meet the transportation needs.

I think that there are some specific areas that Mr. Clymer might want to comment on.

Mr. CLYMER. I think I will just add to what Dr. Larson has already said, that we see the metropolitan planning organizations playing a key role in decision on the use of transit funds now.

All projects, as they are now will, have to be included in the local transportation improvement program, or TIP, and local governments and transit operators in each of the urbanized areas will work through the MPOs to a greater degree to decide on the best use of funds for the various proposed projects.

Mr. MINETA. The most recent report to Congress on the status of the Nation's highways and bridges identified a shortfall of 11,000 to 15,000 lane miles of new capacity on urban and rural interstate systems and other urban freeways and principal arterials.

What effect would the reduced Federal share for interstate 4R projects have on the ability of the States to address capacity needs?

Mr. LARSON. The capacity in urbanized areas, or the flip side of that, the congestion in urban areas, is certainly a major concern. We believe that the national highway system and a very substantial portion of that will be in urbanized areas, and the increased funding for this program totalling a very substantial $43 billion over the period of the bill will allow the States to address these problems.

But we have gone beyond just building toward a solution. As you know, Mr. Chairman, we have advanced in a very aggressive way the IVHS, intelligent vehicle highway system. As a matter of fact, this week there is a major conference out in Reston of the new organization, IVHS America, which is going to, we believe, bring the private and public sectors together to provide some of the non-build solutions that are necessary.

In the legislation, we also have provided for a congestion management system so that there will in fact be a requirement for the urbanized areas to look very carefully at all of the strategies that might go forward toward meeting congestion, and we have provided, of course, the flexibility to do transit or highway funding.

Finally, I might say that the highest capital investment level is for HOV lanes, for HOV lanes on the interstate system. They continue at a 90 percent match ratio.

So a variety of things, we believe, go toward solving the Nation's congestion problems.

Mr. MINETA. Now, under the administration's bill, commercial establishments would be permitted along rights-of-way of fully ac-

cessed and controlled highways on the national highway system. What effect would the location of commercial establishments on the rights-of-way of the national highway system have on those commercial establishments that are located along interchanges to serve the traveling public? We have had a number of people coming in to see us about those who saw those opportunities, made their own investments along those interchanges, and now find the possibility of seeing that being dissipated by commercialization of the rest stops on the rights-of-way.

Mr. LARSON. Mr. Chairman, this is proposal that cuts both ways. We have had major corporate interest in the idea of permitting privatization, and certainly the State of California has been one of the States that has been a leader in this concept.

It has a number of potential benefits. Besides revenue, there is the management of the area to prevent crime, for example. Having more activities would make these areas more viable.

But the legislation is permissive. It does not require a State to take such action. It is simply permissive. Overall, I believe that it would open up more commercial opportunities than in fact it would deny. So we believe that it is a desirable general direction, again at the discretion of the several States.

Mr. MINETA. Earlier, Dr. Larson, you said that 10 percent could be used for safety programs, and you listed a number of eligible activities. As I recall, one of them was railway grade crossings. The problem is, is that program authorized in law?

Mr. LARSON. There is currently a grade crossing and a hazardous location program. Those individual programs are an eliminated attempt to simplify. The same purposes would be provided for in the urban-rural and the national program, and this target of 10 percent is a way of ensuring that the safety needs of the country are in fact addressed.

Mr. MINETA. So you are eliminating the railroad crossing program but keeping it as eligible activities to be funded under the 10 percent? Is that correct?

Mr. LARSON. Ten percent or more. There is a minimum of 10 percent. But yes, that is the strategy, sir.

Mr. MINETA. General Curry, in addition to the section 402 highway safety program, the administration's proposed highway safety provisions include a bonus safety program, which you spoke to earlier. As I understand it, the bonus program provides for the awarding of grants to States that meet certain criteria, including criteria contained in the current 408 alcohol traffic safety programs and the 410 administrative license revocation program.

There have been some concerns expressed to us about the folding in of these programs together, and I am wondering whether or not you could tell us how the proposed bonus program differs from the current 408 and 410 programs and why you think this will be more effective when at least MADD and some others feel that there is a directed program in terms of alcohol that would be lost if these programs were all folded in together.

General CURRY. We think that there is a gain for the States, and we have worked with them to be sure that we have come up with things that were helpful.

For example, even though 408 and 410 are being subsumed by this broader program, we are keeping the criteria that the States had to meet under those old programs, and we are adding some new safety criteria. Let me just mention a few of those to you and tell you that it is now a menu arrangement; that is, there is a broad range, and the State only has to meet X percent of that particular group of programs.

Therefore, the state has great flexibility. They can select from that menu and choose those things that they wish to concentrate on. Those include things like safety belt use, pedestrian, bicycle, motorcycle, heavy truck safety, uniform crash data reporting, emergency medical service, public information education.

But at the same time, there is another part of the program where $25 million is set aside strictly for alcohol, and I think that will more than meet the requirements of the other programs.

So there is no real difference in the way we go about the programs, 408 and 410. The criteria stay the same. But you do get an increase of about 30 percent in the amount of funds that are available for these programs.

Mr. MINETA. Let me ask you about the CADRE program and its current status. I am wondering what is required under this new reporting system, and do you see it ultimately responding to the need for more uniform accident reporting?

General CURRY. We are very pleased with this program. It has taken an awful lot of effort, as you can imagine, to get the 50 States and the territories all to agree that they are going to report accidents with certain data elements. This has not been easy. We have been working with them for almost 2 years now trying to get that. It is not a mandatory program, by the way; it is a voluntary program.

But we are very pleased that through a number of efforts on the States' parts and our parts, we now have come into agreement. The accident data and analysis, we believe, are going to be of superior quality. In addition, it will give us an opportunity at the national level to look at accidents and accident reporting and to pull them apart and put them together and to aggregate data and things to provide the Congress. We believe CAFE will give us a much higher quality program and much better data than we have ever had before.

Mr. MINETA. All right.

Mr. Clymer, do we have a comprehensive needs study for transit as the Federal Highway Administration has done for highways and bridges?

Mr. CLYMER. I do not think we have a study quite the same as the highway needs assessment.

Mr. MINETA. Is that something we should undertake?

Mr. CLYMER. We have a 308 report which has just recently been submitted to Congress, with a number of transit statistical information available.

Mr. MINETA. Now, is that a good, comprehensive estimate as to what our transit needs might be in the United States?

Mr. CLYMER. I would say it is fairly accurate, yes.

Mr. MINETA. Fairly comprehensive? Does that estimate or that kind of study under 308 also include projected costs that are being mandated on transit agencies as a result of the Clean Air Act?

Mr. CLYMER. No, it does not.

Mr. MINETA. Do we have any idea what that cost might be to transit agencies in terms of the impact of the Clean Air Act?

Mr. CLYMER. No, not at this time.

Mr. MINETA. Is that something we are looking at?

Mr. CLYMER. Yes.

Mr. MINETA. And when you do think that we might have some kind of definitive study completed on that issue?

Mr. CLYMER. I do not think we have a particular study on the Clean Air going forward. We are trying to accumulate data as testing and alternative fuels are being looked at by various transit agencies. I think this is something that is going to evolve over the next year or so as more and more agencies, in contemplation of both the Clean Air Act and perhaps changes in the National Energy Strategy, start to come to grips with what changes they might have to make.

I think it is probably a little early right now to try to assess, in the infancy of the development of alternative fuels and their delivery systems, what the costs are, since, as these things become more and more in use, the costs of them should start to drop.

Mr. MINETA. Let me ask about something I think we touched on briefly earlier from another question, and that is this whole issue of everyone wanting to have a level playing field as it relates to highway and transit decisionmaking in a more flexible Federal program.

We still retain, for instance, new starts at an even lower level of 50–50 in the administration bill. We have lowered the Federal share as it relates to transit projects, and we have a 60–40 under both the UMTA program and the urban- rural program, and then we have the 75–25 under the national highway system.

Does this really speak to the issue of a level playing field with these various matching grant shares?

Mr. CLYMER. I think the issue of a level playing field needs to come into play when highway and transit funds are being used in terms of being interchangeable, that you do not want a decision made on a local basis that is skewed toward one or another based on a more favorable match or easier accessibility to local matching funds or a different process of decisionmaking.

I think we have attempted to level those areas out. The funds that are flexible do have the same match. The transferability of funds does require inclusion of the transportation improvement program. In the case of moving transit funds into highway, for example, the decision could not be made based on having local available funds for highways and not having matching funds for transit. They would then both have to seek the same resource for a funding match, which would then be the State general fund.

So I think we have taken a number of steps to try to level out that playing field. Certainly there are other areas in which we need to continue to push for a level playing field, a number of those being considered right now, such as in the area of the tax treatment.

Mr. MINETA. One of the things that has always concerned me is this issue of alternative analyses that new starts are subjected to, and yet new start projects on the highway side are not subjected to alternative analyses.

Why is it that we feel that environmental impact statements are sufficient for Federal decisionmaking as they relate to highway projects but that this is not sufficient for transit projects?

We will give Dr. Larson an opportunity to respond.

Mr. CLYMER. Good. The alternatives analysis process is, of course, one that is mandated by Congress and we are required to go through. It is difficult to speak to the highway side as to why they would not use a similar process. We have found the process to be an emminently successful one and one that is, in practice, also used on the highway side.

Mr. LARSON. I could comment briefly on the highway side. First of all, the States initiate the projects. The States have agencies that have the capability to do these types of analyses. As a matter of fact, several years ago, in the State of California, one of the senior officials there, Heinz Heckeroth, described to me a very detailed benefit-cost analysis approach that California had taken to reordering all of the projects in the State. This goes back a few years.

Other States have at one time or another chosen to use a benefit-cost analysis approach. But from a Federal perspective, we have really deferred to the States to make this analysis if they choose.

Mr. CLYMER. If I might also add, I think one of the other major differences between the highway new starts program and the transit program is that the highway program is apportioned based on formula. In transit, our programs are discretionary, and therefore we have to select between the cities in different States.

Mr. MINETA. We cannot use Formula 9 funds, is that correct?

Mr. CLYMER. For?

Mr. MINETA. For alternative analyses studies.

Mr. CLYMER. Yes, they can be used for that purpose.

Mr. MINETA. Or you can use your discretionary funds. If you have to use your apportioned funds——

Mr. CLYMER. That is correct. We prefer that grantees first decide what their most important projects are and use their formula funds for that and then come into the discretionary category for their lower priority projects.

Mr. MINETA. Mr. Shuster, I hope you have said hello to the President to us.

Mr. SHUSTER. I said hello to him and I said goodbye to him. [Laughter.]

It is good to have you here, and I wish I could have heard all of your testimony, although I have a feeling I know what a good bit of it would have been.

Last week, the leadership of this committee decided to support a very substantial increase in proposed funding for the surface transportation bill. In fact, we are recommending that the Federal investment in the Nation's highways and mass transit systems be $153 billion during the next 5 years, which is 46 percent more than the administration's proposal sent up there, and of that $153 billion, $119 billion would be for highway construction and rehabilita-

tion, all of which would be funded from existing gas tax levels, and then $34.5 billion for improvements to mass transit, of which 67 percent would be paid for by the existing gas tax.

Indeed, our proposal is based on four fundamental assumptions: first, that when the last nickel of the recent past as a result of the budget summit expires--and I believe it is 1996—that rather than it expiring, that nickel be applied to highway and transit expenditures; second, a modest increase in general fund spending for transit, really just to account for inflation; third, that we spend down the balances in the trust fund to a lower balance, I believe down to about $7 billion; and fourth, and perhaps the biggest sticking point, that beginning next year, the 2.5 cents, which, as a result of the budget summit, goes for deficit reduction, should rather go for what trust fund is supposed to go for, and that is into the trust fund to be used for transportation purposes.

I would be interested in your response to this proposal by the leadership of the committee as it pertains to each one of these four aspects of the package or any one of them, if you would care to comment on them.

Mr. CLYMER. Well, we have not had the opportunity to look at this proposal or to come up with a response on it. Again, I think I would point out that, of course, we do not presume any actions of Congress that Congress may take upon the sunsetting of these actions.

The proposal that we put on the board——

Mr. SHUSTER. Well, just a minute, Brian. You presume an awful lot. You sent a bill up here which is a presumption in itself. It is new legislation which proposed major transportation legislation. So I think it is reasonable—we are all making presumptions here, assumptions; that is what this all is about—as to what we think we can pass.

Do you think it is a good idea to increase spending on transit?

Mr. CLYMER. I think within modest boundaries, certainly. I do not think there is any agency head that comes before you who would not like increased funding. I think the question is in terms of what the needs are out there and what our ability to spend that is going to be, and that is something we will have to assess.

Mr. SHUSTER. I realize my questions are tough questions, if indeed not unfair questions, because you are constrained, I realize perfectly, by the administration's position on issues, and you have to support the administration's position, and I respect that completely.

But let me try what I hope is an easier part of the package. Do you believe we can spend down the trust fund to a lower level than is proposed by the administration? Perhaps Dr. Larson can respond.

Mr. LARSON. Mr. Shuster, within the administration proposal, the balance of the highway account of the Highway Trust would in fact increase in the early—well, it would reach its peak of about $16 billion in 1995, but then, without the presumption of the continuation of the 2.5 cents or certainly of the additional 2.5 cents going into the highway account, the balance drops swiftly, and if the program level stays at the level we propose that it would be in

1996, we would simply be below the minimum Byrd level requirements by 1998.

So the decision as to the continuation of the tax and the amount of the tax that goes into the trust fund are absolutely central provisions to any calculations that we would make.

Mr. SHUSTER. Is it fair, then, to say that if, indeed, we do extend the trust fund, then you do not need that $16 billion buildup there, and therefore we can spend down the balance in the trust fund by several billions of dollars as long as we have extended the trust fund into those later years?

Mr. LARSON. The comments that I made a few moments ago suggested that on the order of $5 billion to $8 billion additional spending over the life of the 5-year reauthorization would be possible. But again, we are operating under the constraints of the budget agreement, the Byrd amendment, and the level at which the States can usefully ramp up their programs, and those constraints are all difficult ones to work within. We have tried to do that in our administration bill.

Mr. SHUSTER. Taking the last point, Dr. Larson, do you believe if the Congress can find a way to extend the trust fund in order to, within the revised law, make that $5 billion to $8 billion additional available, do you believe the States can in fact spend it?

Mr. LARSON. Given even a modest period of ramping up, I am sure they can. The experience of the past would suggest that they can. But I think it is important to note that between 1990 to 1991, the action that was taken to significantly increase spending, the 1992 proposal and this 5-year proposal does have a steep ramping up, and I think it is a matter of having the proper conditions surrounding the money and then giving the States a lead and some comfort level that it is going to be continued.

One of the concerns is that at the present we are operating with States that do not have the level of comfort, perhaps, and contractors that do not have the level of comfort, perhaps. They need to make the additions to their staffs and to their capabilities that would support this kind of an effort.

Mr. SHUSTER. Well, I think that, indeed, we are facing an historic opportunity here, and I think the American people should be very happy to have you three gentlemen in the positions you are in, because I think you absolutely bring to the table the kind of expertise and wisdom that is so badly needed, and I want to compliment all three of you for the absolutely outstanding job you are doing. We should have medals to give out as they do in the Defense Department, and if we did, all three of you would be very deserving.

Thank you.

Mr. MINETA. Let's turn to our fine colleague from Georgia, Mr. Lewis.

Mr. LEWIS. Thank you, Mr. Chairman.

Since I missed most of the testimony and arrived late, let me just ask Mr. Larson just one question.

Mr. Administrator, I would like to know what is the position of the administration regarding the cutting of trees along the Federal-supported highways in order for motorists to see billboards.

Mr. LARSON. The proposal in the legislation is that for the portions of the system outside of urbanized areas of 50,000 or more,

there would be a billboard control provision. In urbanized areas, we would simply permit that responsibility to be a municipal or State government responsibility.

Mr. LEWIS. Have you had an opportunity to review the piece of legislation that has been introduced in the Senate, in the other body, and the piece that I have co-sponsored with my colleague, Mr. Shaw from Florida?

Mr. LARSON. No, sir, I have not.

Mr. LEWIS. Thank you, Mr. Chairman.

Thank you, Mr. Administrator.

Mr. LARSON. I will do that, sir, promptly after this hearing.

Mr. LEWIS. Thank you.

Mr. LIPINSKI. Mr. Chairman?

Mr. MINETA. The gentleman from Illinois, Mr. Lipinski.

Mr. LIPINSKI. I just have one question.

In regard to the ADA, do we have any figures out of the Department of Transportation on what that is going to cost mass transit in this country as of yet?

Mr. CLYMER. No. That is currently under review as part of the NPRM that will be issued in implementing the ADA rule.

Mr. LIPINSKI. Do we know when that is going to come out?

Mr. CLYMER. I do not have a time on it, but it should be shortly.

Mr. LIPINSKI. Thank you.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much.

Let me again reiterate what Mr. Shuster said and what I had mentioned earlier about the team that is at the Department of Transportation as well as those of us in the Congress. I really do feel confident that we are going to be able to come up with a good program. We are going to work together on this. So again, I appreciate very much your being here as part of this constructive effort to have a 5-year timely bill.

Thank you very, very much.

Mr. LARSON. Thank you.

Mr. CLYMER. Thank you.

General CURRY. Thank you.

[Mr. Larson's, Mr. Clymer's and Mr. Curry's joint prepared statement appears on page 315.]

[Responses to Post-hearing Questions From Mr. Clymer Follow:]

QUESTIONS FOR SURFACE TRANSPORTATION HEARING
(HOUSE PUBLIC WORKS - COMMITTEE)

Q-1: MR. CLYMER, the Administration's bill calls for "flexibility" among the transit programs, which roughly translated means the ability of State DOT's to transfer ALL of its transit funds to highway projects, and the ability of transit authorities to use a small percentage of highway funds.

This flexibility, as it might apply to rural and small urbanized areas, would only intensify the isolation of rural and small urban area services -- not enhance them.

Wouldn't it be better to exempt rural and small areas, given their grave need for additional services funding, and leave it in place for large urban areas who believe they can successfully compete for funding transfers if their State DOT's find them necessary?

If not, why not?

ANSWER: We believe that decisions regarding the use of transit program funds for highway projects (or vice versa) are best made at the State or local level, and that is what our bill provides. We think that issues should be looked at from a larger transportation perspective rather than be based upon the availability of Federal funds from discrete programs.

Regarding small urban and rural areas, our bill would give the Governors flexibility to allocate section 9 (small urban), section 18 (rural), and section 16(b)(2) (elderly and disabled) funds - some $310 million a year - among those programs at the discretion of the Governor. These funds also would be eligible to fund highway projects.

We were concerned, however, in drafting this proposal that in some cases transit funds might be used for highway projects without an adequate consideration of transit needs. Accordingly, our bill would allow a Governor to use small urbanized area and rural formula funds for highway projects only if the Governor certifies that no priority transit needs are unmet among such areas and the affected areas concur. By giving these areas an active role regarding how transit funds will be spent, we think transit interests will be protected.

**Q-2: MR. CLYMER, my Mobility Assistance Act, H.R. 1079, contains a Mobility Assistance Program especially designed to help implement the provisions of the Americans with Disabilities Act by helping defray the costs of compliance. There is, according to the U.S. Department of Transportation's published rule on the requirements for accessible vehicles being obtained for use in fixed route services, an estimated cost in the range of $72 to $78 million a year -- yet your bill does nothing to add funding for these additional costs.**

**Given that you estimated $78 million for the cost of compliance with the ADA for transit authorities, but did not recommend a funding source -- just how did the Administration believe local transit agencies would be able to fund the costs of these new requirements?**

**What is your opinion of the MAP program contained in H.R. 1079 for that purpose?**

**ANSWER:** It is important to note that the Americans with Disabilities Act applies to all transportation providers and is not limited to recipients of Federal funds. It really is a civil rights bill that will bring persons with disabilities into the mainstream of American life.

More specifically, we believe that the increased capital formula funding in our proposal is a good start in helping areas address their transit needs, including those arising from the costs of implementing the Americans with Disabilities Act. We propose to make some eighty two percent of the funds under our program available by formula.

Regarding H.R. 1079, the Department is now drafting its views on that bill, and we will forward that document to the Committee as soon as possible.

**Q-3: While it is heartening to have a set of Administration recommendations that do not include dramatic cuts for transit assistance, the level of funding being proposed would still not keep pace with inflation. Given that transit assistance has been cut in half, in real terms, over the last decade and that it is now assigned a budgetary importance only one-fourth of that assigned to it ten years ago, did the Office of Management and Budget give you any indication of the reasoning they used in arriving at the levels being proposed?**

**ANSWER:** We believe the funding levels in our proposal - approximately $3.2 million a year from the Mass Transit Account of the Highway Trust Fund - together with the higher local share proposed in our bill, are sufficient to address the capital needs of transit systems over the next five years. As Secretary Skinner often has noted, projects get built on time and within budget when more local funding is committed to the project.

**Q-4: The Administration proposes relying almost entirely on funds from the Mass Transit Account for UMTA programs. Estimates prepared by the Congressional Budget Office suggest to me, at least, that while there is sufficient funding to cover the period of your proposal, the Mass Transit Account would be liquidated within five years thereafter unless new revenues for it are approved. Does the Administration have estimates that are substantially different from those of CBO? If not, how do you recommend that we deal with this problem?**

**ANSWER:** Quite frankly, our proposal responds to a recommendation we have been hearing repeatedly from members of Congress, States and localities over the past year or so, namely, that we spend down the Trust Fund. Our bill would do just that. By fiscal year 1996, only some $425 million in Mass Transit Account funds would remain uncommitted under our proposal.

At the same time, however, even with this level of commitment, some $8 billion in cash would still be in the Mass Transit Account generating interest in 1996, and the one cent for transit from the tax on motor fuels would be collected through fiscal year 1998. Those two elements alone should generate considerable funding, even without taking into consideration what Congress or the Administration might propose regarding the tax on motor fuels beyond 1998.

**Q-5: There is another problem relating to the near-total reliance on Mass Transit Account funding for the UMTA programs. It is my understanding that, under current law, Mass Transit Account funds can not be used for operating assistance. While you are proposing that operating assistance be terminated for areas of 1 million or more in population, you are assuming that it will continue at about the same level as now in other areas, are you not? Is the Administration proposing to amend the legislation establishing the Mass Transit Account so as to make those funds more flexible? If not, isn't this an inconsistency in your budget proposals?**

**ANSWER:** We agree that Congress would have to enact legislation permitting Mass Transit Account funds to be used for operating assistance. We believe enactment of the language in our bill would provide that authority, but also would support a change in the revenue portion of the bill that would explicitly permit Mass Transit Account funds to be used for operating assistance.

Question 6
UGM-11
Sahaj

QUESTION: Table 1-1, Page 16, of the Fiscal 1989 Statistical Summaries prepared by UMTA breaks down $3,354.6 million in total program obligations that year by size of recipient area. Comparing the figures in that table with estimated 1989 population figures, my staff have calculated the following levels of per capita assistance: $24 in the large urbanized areas (200,000 population and up); $7 in small urbanized areas (50,000 to 200,000 in population); and $1 per capita outside of urbanized areas. Would you furnish the Committee with comparable figures for 1984 and for anticipated levels of assistance in FY 1992 under the Administration proposal?

ANSWER: The table 1-1 below displays FY 1984 obligations for capital and operating by program and population group. Based on these obligations, the per capita distribution by the three area sizes you identify, using 1980 census data, is as follows: $29.86 in the large urbanized areas (200,000 population and up); $5.28 in small urbanized areas (50,000 to 200,000 in population); and $1.39 per capita outside of urbanized areas.

We are unable to provide comparable estimated obligations for FY 1992 at this time. However, the Administration's reauthorization proposal for the formula program in FY 1992 would provide the following amounts of formula funds to the three area sizes you specify. The per capita calculation is based on 1980 census data, since we do not yet have the 1990 data.

| | FY 1992 Formula | Per Capita |
|---|---|---|
| 200,000 - and up | $2,271,126,315 | $19.46 |
| 50,000 - 200,000 | 176,287,375 | 7.29 |
| under 50,000 | 89,000,000 | 1.03 |

In addition, the Administration's proposal for the discretionary program in FY 1992 is $350 million. Of this amount, $300 million is intended for New Starts projects, all of of which are in urbanized areas above 200,000 in population.

TABLE 1-1

FY 1984 OBLIGATIONS FOR CAPITAL AND OPERATING
BY PROGRAM AND POPULATION GROUP

PLEASE NOTE THAT 16(b)(2), URBAN SYSTEMS, AND PLANNING ARE NOT INCLUDED. FORMULA INCLUDES SECTIONS 9A AND 5.

**Q-7: It has been said that nearly half of our nation's rural residents do not have access to pubic transportation services and that more than one-fourth of our small urbanized areas are without such service. Would you furnish the Committee with information on the number of counties in the United States not in the service area of a public transportation agency funded under sections 9 and 18 of the Act?**

**ANSWER:** Let us first point out that UMTA has published an extensive directory on rural transit, "A Directory of UMTA-Funded Rural and Specialized Transit Systems." Its 4,409 listings include all agencies providing rural public transportation funded under section 18 of the UMT Act, and all nonprofit agencies receiving capital assistance for transportation of the elderly and handicapped under our Section 16(b)(2) program. Moreover, it lists all of the counties in the country in which at least some service is provided.

In response to your question, our records indicate that there are 32 small urbanized areas between 50,000 and 200,000 in population that do not have conventional mass transit service. This represents twelve percent of the 257 urbanized areas within this population category.

According to research performed by the Community Transportation Association of America in preparing the UMTA directory, 950 of the 2375 non-metropolitan counties in the U.S. do not have any section 18 service. In addition, 1425 non-metropolitan and 383 metropolitan counties are listed in the Directory as having some section 18 service.

**Q-8: The funding level being proposed for the Section 18 program is $89 million, which appears at first glance to be a welcome and significant increase over this year's $65.4 million in formula funds. However, the FY 1989 UMTA Statistical Summary indicates that it may be the equivalent of $2 million cut when you consider the section 3 funds previously available to non-urbanized areas. And, if you adjust for inflation, the proposed FY '92 funding appears to be a level less than 58 percent as large as actual obligations under the Section 18 program in FY '84. Under those circumstances, would you be opposed to a more realistic increase in the rural program?**

**ANSWER:** The proposed funding level in our bill for the Section 18 program - $89 million - represents a significant increase over the current rural program level. We should also again emphasize that funds would be available to fund transit projects under FHWA's proposed Urban and Rural Program, which could represent additional funding for these areas. In short, we believe that our bill represents a significant recognition of the importance of the rural program and provides an appropriate funding level.

**Q-9: It seems to me that there has been general recognition that public transportation agencies in rural and small urban areas are far more dependent on Federal operating assistance than are systems in larger urban areas -- not only because the local tax base is likely to be more limited but also because their ridership is more heavily characterized by the elderly and others on fixed or low incomes. Leaving aside for the moment the issue of operating assistance in areas of 1 million or more in population, which the Administration has rather consistently opposed, what new factors lead you to propose for the first time this year the "capping" of operating assistance for the Section 18 program?**

**ANSWER:** Our proposal would allow rural areas to continue to spend Federal transit funds on operating expenses up to permissible levels in fiscal year 1991. We believe that amounts beyond that level - the increased program level the Administration is proposing - should be spent on the capital needs of these areas. We did not want to increase the reliance of rural areas on Federal operating assistance, since operating costs can best be controlled at the local level.

Q-10: I am often told by rural transit operators that coming up with the local match required for UMTA assistance is one of the toughest challenges they face -- especially in those States which do not provide any financial assistance to public transportation. I have also been told that this makes it extremely hard to extend service into unserved areas. The Administration is proposing to more than double the local dollars that have to be raised to secure the same level of UMTA assistance. In a State like West Virginia, for example, 25 of the 45 rural counties do not currently have section 18 services. In 20 of those counties, per capita income is $6,700, which is 38 percent below the national average. Do you think that increasing the match requirement is just going to make it that much more impossible for those people to get their mobility needs met? Do you think that where the State and the locality are already taxing themselves fully and they can not meet that match requirement, they should be given some special consideration?

ANSWER: You raise some very good issues. But bear in mind that our perspective is national and we have to decide, within budgetary constraints, how transit funds can best be allocated around the country. In fact, the National Transportation Policy explicitly calls for local and State areas to play a larger role in terms of financing transportation costs. This enables Federal transit dollars to be leveraged across the country, and places greater responsibility for implementing and carrying out projects at the local level.

Mr. MINETA. At this time, I would like to call on Mr. Hal Rives, the Commissioner of the Georgia Department of Transportation and the National President of the American Association of State Highway and Transportation Officials.

Mr. Rives will be accompanied by the Executive Director of AASHTO, Francis B. Francois.

We are pleased, Mr. Rives, to have you and Mr. Francois with us this morning. Your statement will be made a part of the record, and you may proceed in your own fashion.

**TESTIMONY OF HAL RIVES, PRESIDENT, AMERICAN ASSOCIATION OF STATE HIGHWAY AND TRANSPORTATION OFFICIALS AND COMMISSIONER, GEORGIA DEPARTMENT OF TRANSPORTATION, ACCOMPANIED BY FRANCIS B. FRANCOIS, EXECUTIVE DIRECTOR, AASHTO**

Mr. RIVES. Thank you, Mr. Chairman.

As you say, I am Hal Rives, president of AASHTO, and Mr. Frank Francois, executive director of AASHTO, is here with me today.

You have been provided copies of my written statement, which I would like to submit for the record.

Let me begin by thanking you and the subcommittee for conducting this hearing and for your pledge to move rapidly forward with legislation reauthorizing the highway and transit programs.

We also want to thank the leadership of the Public Works and Transportation Committee for the strong highway and transit funding recommendations they sent to the Budget Committee last week.

We recognize the difficulties faced by the Congress in meeting those recommendations. But you have spoken out very forcefully about the real needs of America's transportation systems, and that is always good.

AASHTO's recommendations for the federal-aid highway and transit programs are contained in our 1989 report, New Transportation Concepts for a New Century, and other policy resolutions. The report and those policy resolutions have been approved by at least a two-thirds' majority of our member States and have been transmitted to this subcommittee.

We have summarized AASHTO's recommendations on one sheet of paper, which is exhibit B to my written statement. Let me briefly review these and, where we differ, discuss the differences between our positions and those taken by the administration in H.R. 1351.

Let me say, however, that AASHTO commends both Secretary Skinner and President Bush for their initiative in developing and sending this bill to the Congress. We believe it establishes a framework for reauthorization, but we take issue with certain important elements of the administration's bill. I will describe these along with AASHTO's positions on these same issues.

First, for highways, AASHTO believes that the Federal-aid highway program should be restructured into a two-component program designed for the America of the 1990s. The first component is a categorical program focused on meeting national transportation

goals, a system of highways of national significance that would include the interstate system and additional mileage from the principal arterial system.

While the association has not specified specific mileage levels, our report does suggest mileage levels between 150,000 to 180,000 miles. I would recommend the latter mileage rather than the first.

The second basic component of our recommended highway program is a flexible State and local program focused on specific national goals identified by the Congress. This program will provide the flexibility needed to address the unique needs found in the communities across the Nation, while assuring that the Federal funds are spent to solve those national issues. Funds could be used on either highways or for public transit as determined by the States and their local governments.

The two programs are called the national highway system and the urban-rural program in H.R. 1351. I will use that terminology in this statement with respect to them.

H.R. 1351 is very close to our programs for the national highway system except in mileage, funding, and allocation of funds, and that is a pretty big exception. H.R. 1351 recommends only 150,000 miles, with another 15,000 miles at the discretion of the Secretary. AASHTO recommends 150,000 to 180,000 miles. Some States find this adequate, while others, including my State, believe that a higher cap approaching some 200,000 miles is more realistic. We ask that you please look very carefully at this issue. It is extremely important.

With respect to funding, AASHTO recommends a Federal-aid highway program funding level of $17.6 billion in fiscal year 1992, rising in increments to $25.9 billion in fiscal year 1995. The funds would be divided evenly between the two components, with the possibility for transferring up to 20 percent from one component to the other.

As to matching ratios, the association recommends an 85 percent Federal-15 percent State and local match in the Federal aid highway program. Unfortunately, however, H.R. 1351 does not include sufficient funding for the highway component. Funding in H.R. 1351 rises to $16 billion in 1992 and continues to rise to only $18.3 billion in 1995 as compared to AASHTO's recommendation of $25.9 billion in 1995.

It further shifts a greater burden to the States with lower matching ratios, which reduces the existing overall matching rate of about 83 percent Federal and 17 percent State and local to an average of about 72 percent Federal to 28 percent State and local. Simply put, the funding levels and the proportions of the funds are far below what is needed and what is a proper Federal share.

Also, H.R. 1351 proposes a two-thirds/one-third split of funds between the national highway system and the urban-rural programs, allowing a 15-percent transfer from the national highway system down to the urban-rural program.

AASHTO examined this issue very thoroughly in developing its recommendations for a 50-50 split between these two programs, with a capability to transfer 20 percent either way. We believe this is a much better division of the funding in that it would accommodate the specific and unique highway situation in each State. With

a two-thirds and one-third split and the low mileage recommended by H.R. 1351, too much money will be dedicated to too few miles. This should be changed.

AASHTO supports a continued minimum allocation program for the national highway system, but only for the national highway system. Specifically, AASHTO believes that minimum allocations should be developed for any program addressing the needs under the national highway system. The MA would apply only to those funds designated for components of the national highway system, including interstates and bridges.

Specifically, AASHTO recommends that an 85 percent MA provision should be established and the existing ½ percent minimum apportionment retained for the national highway system. Along with the minimum allocation program, I believe there must be language not penalizing MA States by deducting from the minimum allocation other monies received from discretionary, demonstration, and other types of programs, as is in the current legislation.

For the urban-rural program, AASHTO recommends returning 100 percent of the funds to the States on the basis of "pro rata shares" based on percentage of total highway user contributions attributable to each State. Unfortunately, H.R. 1351 contains no minimum allocation program.

The opposite side of the equity coin, however, from the MA is hold harmless. AASHTO's New Concepts recommendation calls for assured hold harmless to all States so that no State will receive less annually under the new program than the current highway program would receive in 1991, as if all States had completed their interstate highway system.

The New Concepts report does not recommend a specific allocation formula for the national high system. It does, however, include a general guideline which reads as follows: "The basic formula for distributing national highway system funds should be driven by factors such as lane miles, travel (VMT), and other appropriate factors."

Inherent in this statement is a separation of the formula from direct reliance on the number of miles in the national highway system. Instead, the desire is to make the formula responsive to measures of need, which AASHTO believes includes lane miles and travel on the system.

The formula advanced in H.R. 1351 relies mainly on fuel consumption, which is, of course, a surrogate for travel. The formula also includes center-line miles as opposed to lane miles.

AASHTO has spent considerable time and effort examining different formulas, but there is no real consensus among the States. So far, we are not aware of any formulas which our member departments would agree provide reasonable equity in funds distribution for donor States. It appears, therefore, that the best available way to achieve this equity is through a minimum allocation program, as discussed above.

With respect to highway safety, AASHTO believes that highway safety is most important, and it should be an eligible item for expenditure in both the national highway system program as well as the urban-rural program.

Now for transit. AASHTO supports the current basic structure of the federal transit program. We also support the current funds distribution process, except that for funding beyond the current $1.1 billion in the discretionary program, a formula distribution should be used holding currently funded programs harmless.

We also support continued operating assistance for areas over 1 million in population and the current matching ratios. AASHTO strongly supports continuation of general fund support for the Federal transit program.

With regard to the Federal funding level for transit, the association recommends a capital funding level of $3.5 billion for fiscal year 1992, increasing to $5 billion in fiscal year 1995, accompanied by a continuation of operating assistance at the current level of about $800 million annually. Unfortunately, the program in H.R. 1351 is essentially level-funded at $3.25 billion for 5 years. This means that your program level will go down if your funds stay level.

We find that this is unacceptable. Unfortunately, therefore, we must express our opposition to the following transit proposals in the administration's bill: Elimination of operating subsidies for cities over 1 million in population. We think this will cause a diminishment of service, thus decreasing the return on billions of dollars of capital investment.

We also oppose: No growth in funding over the life of the bill; reducing the Federal match; and elimination of general fund support for transit.

AASHTO is well aware of the fiscal constraints placed upon the Congress by the 5-year budget accord enacted last fall, especially for fiscal years 1992 and 1993. But additional funds are needed for both highways and transit above what is recommended by the administration. We hope you can provide funding to the levels we have recommended.

Mr. Chairman, on behalf of AASHTO, we thank you for this opportunity to provide you with our views. Mr. Francois and I stand ready to respond to questions now or later in writing.

Mr. MINETA. Thank you very much, Mr. Rives.

Let me at this point turn to our very fine colleague from your State, a person who has had a great deal of influence on this subcommittee as well as the full committee and who has done a great job for us, Congressman John Lewis.

Mr. Lewis?

Mr. LEWIS. Thank you very much, Mr. Chairman.

It is good to see you, Mr. Commissioner. I know you are wearing two hats today, and let me just take an opportunity to welcome you here. You have been welcomed by the chairman.

Mr. RIVES. Thank you, sir.

Mr. LEWIS. I congratulate you on being the president of the American Association of State Highway and Transportation Officials.

Mr. RIVES. Thank you.

Mr. LEWIS. I was not aware that you were going to be here until a few hours ago. My office is in regular contact with you, and you usually call when you are on Capitol Hill or when you are coming to Capitol Hill. You did not need to get a visa or a passport, but I

am glad that you are here, and I want to take an opportunity to ask you a couple of questions about some matters that I think are important to the Nation and to the State of Georgia.

One of those matters, Mr. Director, happens to be maybe a very local matter, and it deals with something that is known as the Presidential Parkway. Could you tell us and members of the committee, what are your plans regarding the building of the road known as the Presidential Parkway? Are you still pursuing the building of that road?

Mr. RIVES. Mr. Congressman, we are right now in very intensive discussions with representatives of the City of Atlanta and the representative of CAUTION, which is the umbrella neighborhood group, in trying to reach a compromise.

We discussed this matter all last Saturday, with attorneys for both sides there and executives from both sides present. I think it is significant that we all advanced compromise proposals. I think it is even more significant that we agreed to get together next Tuesday and Wednesday and see if we could not reach a compromise. I am hopeful that we can.

Mr. LEWIS. Could you tell us members of the committee where this road is going to go, from where to where?

Mr. RIVES. As currently designed, it leaves from what we call the downtown connector, which is a combination of I-75 and I-85 as it passes through the City of Atlanta. It starts with the connection to that, travels easterly, crossing several major arteries, crossing Moreland Avenue, providing access to the Jimmy Carter Library complex, proceeds on across Moreland Avenue, crosses several city parks, goes through the historical district, and winds up with a connection on Ponce de Leon just at the Atlanta city line in DeKalb County.

It is estimated to cost, in the overall, counting some funds already spent, about $27 million. The traffic forecasts are that it will carry some 32,000 vehicles per day.

Mr. LEWIS. How much in Federal dollars will be allocated or spent for the construction of this road?

Mr. RIVES. It is funded under the urban systems program, which is an 80–20 match.

Mr. LEWIS. Mr. Commissioner, is it true that most of the elected officials, including the mayor of the city of Atlanta, members of the city council, the county commissioners, all of the elected officials in those impacted areas are opposed to this highway?

Mr. RIVES. I would not say that all are. I would say that the majority are. I think, to be fair, though, I would have to say that this project was developed by the Metropolitan Planning Agency, it has been supported by the Metropolitan Planning Agency, and it continues to be supported by the Metropolitan Planning Agency.

Mr. LEWIS. Mr. Commissioner, let's move to another area. I notice in the State of Georgia and around the Nation there have been a great deal of discussions about what I call visual pollution. I notice that you have been holding hearings in the State. What is the position of the State highway and transportation officials regarding the cutting of trees, greenery, in order for motorists to see billboard?

Mr. RIVES. The State Transportation Board, which is the policy board for whom I work, which sets the policy of the department, had been approached by the Outdoor Advertising Association to allow the trimming—and that is somewhat different from cutting—the trimming of trees in order to make outdoor advertising billboards more visible.

The State Transportation Board is thinking of adopting a rule—they have published the rule as a draft rule, and we have had public hearings on it—which would allow the trimming of trees and in some few instances the actual removal of trees. When trees are removed, the removing party will have to replant three additional trees on the same route at a location nearby.

These are still draft rules. The State Transportation Board will address whether or not to make those rules final at its April board meeting.

Mr. MINETA. The gentleman's time has expired. We will have an opportunity to go with a second round.

Mr. LEWIS. Thank you, Mr. Chairman.

Mr. MINETA. The very distinguished friend of ours from Pennsylvania, Mr. Shuster.

Mr. SHUSTER. Thank you very much, Mr. Chairman.

We certainly appreciate your testimony. You were here, I think, when I was raising questions with the previous witnesses concerning our proposal to increase funding.

Mr. RIVES. Yes, sir, I was.

Mr. SHUSTER. What is your reaction to that? What is AASHTO's position on the proposal of the leadership of the Public Works Committee as released last week?

Mr. RIVES. I think it is great. [Laughter.]

Mr. SHUSTER. All right. Let me move on to the next question. AASHTO supports our position. Do I understand that?

Mr. FRANCOIS. Mr. Shuster, let me speak up on one other aspect of that. You queried whether or not the States would be able to support Federal funding levels of this scale.

I think there are at least two factors involved there. One issue, of course, is what is the ultimate match out of the Federal aid highway program, which clearly affects how much State and local money we ultimately need. We do know that the States clearly support the AASHTO program as we have laid it out to you, and we do know that a majority, at least, of the States are certain that, given time, they could clearly meet higher Federal funding levels. The record is such that it indicates that is exactly what would occur.

When the 1982 act was passed, there was great fear on some people that the States would not be able to achieve the increased matching dollars. We did. During the 1980s, the States repeatedly increased fuel taxes and other sources of revenue to the point that whereas the average fuel tax in 1980 was about 8.6 cents per gallon, it is now well over 16 cents and still climbing. So we are confident that the States would match whatever dollars Congress makes available.

Mr. RIVES. One statement that was made by the previous gentleman here at this table, though, however, is significant, and that is particularly for the contracting industry to gear up to handle

that—and they would have to gear up, too—they need some assurances of continuation.

Mr. SHUSTER. One of the goals you emphasized in your testimony is preserving America's existing highway system. The administration's proposal does not impose any minimum requirements for maintaining of the interstate system. Would you support such minimum requirements?

Mr. RIVES. Yes, sir, I would. AASHTO will support such minimum requirements. We think they should be realistic. As far as my State is concerned, we already maintain ours quite well.

Mr. SHUSTER. Nor does the administration's proposal impose any specific guidelines on the States in the allocation of funds between urban and rural areas, other than to say that they should be distributed fairly and equitably. Do you think that should be more specific?

Mr. RIVES. No, sir. I like that flexibility. I believe that each State needs to be able to do that within their own unique circumstances, and remember, we are responsive to the populace because we are responsive to general assemblies that have been elected by the populace. I think that we can do that quite fairly.

Mr. SHUSTER. The historic argument here, I believe, has been that in some States the legislatures, the general assemblies are controlled by the rural areas, and in those States the urban areas will get shortchanged; and, conversely, in other States, the urban areas control the legislature, so it is the rural areas who get shortchanged.

By the Congress providing some specificity between how the money should be spent between urban and rural, it assures a balance and eliminates political manipulating by regions of States which have the political clout. Would you care to comment on that? You do not think that is worth consideration?

Mr. FRANCOIS. Mr. Chairman, if I could just offer some comments on that. First of all, we need to remember, as Congress is well aware, that it is reapportionment time, and we are going to see reapportionment in State legislatures, also, out there all over the country. So it is a little uncertain now to determine the makeup of different States.

Mr. SHUSTER. Yes, but reapportionment is going to be over, and it is going to be back to business as normal.

Mr. FRANCOIS. Well, whatever business as normal is, although that may change in some States.

I think maybe the more important point, though, is to ask what action Congress could take that would deal equitably with 50 different State constitutions, 50 different State systems out there.

In my own State of Maryland, we worked out a compact years ago between the local governments and the State government where all the Federal aid basically goes to the State government. So in that instance, it makes no real change. In some States—North Carolina, for example, where the State has responsibility for all roads—you have a different situation.

So it is hard to really come up with a single formula. We think the best approach is to require the States to come up with a fair formula. Now, what is fair? Perhaps there you can offer some guidance.

Mr. SHUSTER. Thank you very much.

Thank you, Mr. Chairman.

Mr. MINETA. Mr. Rives, AASHTO has chosen a formula of 50 percent section 9 formula factors and 50 percent population factors to distribute additional monies made available to transit above current levels. Why did AASHTO use this formula?

Mr. FRANCOIS. Mr. Chairman, that was the result of extensive negotiations between a number of States, and quite frankly, it was a compromise that we could reach agreement on. I cannot put it any simpler than that.

Mr. MINETA. We have talked about funding levels between highway spending and transit. AASHTO proposes an increase of roughly 47 percent for highways. Transit programs are increased by 35 percent. Considering AASHTO's policy acknowledgment of the tremendous transit needs in this country and the underfunding of both highway and transit programs over the last decade, why doesn't AASHTO propose increasing transit programs by a higher percentage, similar to highways, as they have done?

Mr. RIVES. We think, Mr. Chairman, that any inequity in that will and can be taken care of in the urban-rural program, whereby AASHTO recommends as part of that program the funds in that program can be used for transit as well as highways.

Mr. MINETA. And what about your proposal to keep operating assistance capped at the approximate $800 million right now rather than to adjust the cap for the dollars lost to inflation over the last decade, or to include an inflation adjustment for the fiscal years 1992 through 1996?

Mr. RIVES. At the time we made that recommendation, Mr. Chairman, we thought that was probably the best we could do.

Mr. MINETA. Now, you have not recommended a funding formula to distribute highway funds, although vehicle miles traveled and its surrogate, motor fuel usage, are generally supported by you in your statement as "appropriate factors."

Mr. RIVES. Plus lane miles, Mr. Chairman.

Mr. MINETA. How would you propose to compensate those communities, then, that are, for instance, out of clean air attainment, where that would significantly reduce their vehicle miles traveled and which would then be penalized under a flexible Federal surface transportation program which used VMT to distribute funds?

Mr. RIVES. I believe that is another reason why we need to fall back on the minimum allocation program, and that would be the backstop that would take care of that as well as for other things that might occur.

Mr. MINETA. Now, in your statement and in previous AASHTO proposals, technologies such as IVHS are recommended as a means to alleviate congestion and to create a safer highway environment. Are there technologies other than IVHS that you would also recommend?

Mr. RIVES. To create a safer highway environment, there are improvements that we can do. I think, however, that there is a limit to what improvements can do. On the best designed freeway that I know of, which is I-85 in Atlanta, still, when you travel it out, going home from work, if you do not travel 70 miles an hour, you are a moving obstacle to the flow of traffic. How we get around

that when you start talking about highway safety, I do not know. Perhaps greater enforcement.

Mr. FRANCOIS. Mr. Chairman, I would note that AASHTO has adopted a comprehensive safety program which I believe we provided copies of to the committee in the past. The issue of safety is a very comprehensive one.

Mr. MINETA. Well, rather than safety, I was thinking more in terms of innovative technology and what we should be doing in terms of R&D efforts. The kind of money we are putting into IVHS, is that a benefit we will get in a relatively short period of time, or is that really long range, and should we be looking at other kinds of technologies or improvements that might give us better return in a shorter period of time?

Mr. FRANCOIS. Well, there are many things in the research program, of course, that we need to look at. IVHS is a set of subjects—some are short-term, some are long-term. In the short-term range, some of the traffic management techniques that come out of there could be deployed in the next year or so, and I think many will. Some of the long-term benefits with respect to vehicle safety control systems may take a little longer. So there is a lot there, and it is a balanced program.

Dr. Larson mentioned briefly the IVHS America conference which is going on right now. I came from there this morning. We have almost 500 people out there, many from industry, 30 States represented, eight nations, and there is a lot of activity in that area, so I have great hopes for that.

But by no means is that all. The SHRP program and the physical side of the highway system is something we still need to spend a lot of time and effort on. The SHRP research program was a 5-year program. It will be completed on time in 1992 with respect to most of the work, but the long-term pavement performance component of that must run for another 15 years. We must have in this highway bill the funding necessary to do that, and a new structure for managing research needs to be authorized.

Now, the provisions in the administration's bill would allow all these things to be done. We are in the process of developing a memorandum of understanding between the National Academy of Sciences and AASHTO and the Federal Highway Administration discussing a management process for research. So I think you will see a revitalized and new research program, but it will need the kind of language that is in the bill to happen.

Mr. MINETA. Mr. Rives, what is your opinion regarding the administration's proposal to eliminate the separate hazard elimination and railway-highway crossings funding categories?

Mr. RIVES. I do not mind that because, as we stated in our testimony, the safety should be an eligible item under either national highway system or the urban-rural system. We can spend money now over and above and beyond what is in the safety programs for hazard elimination and for railroad separations. There is a certain amount of money. We get extra money for it if we do it, but we can spend our normally authorized programs for railway-highway separations, anyway. I believe we would continue to have those safety programs without a specified amount.

Mr. MINETA. Very well. Thank you very much.

Mr. Jones, another fine colleague from Georgia.

Mr. JONES. Thank you, Mr. Chairman, and welcome, Commissioner Rives.

Mr. RIVES. Thank you.

Mr. JONES. I did not know you were coming, either. I would have baked a cake.

Mr. RIVES. I should have called you. I am your constituent.

Mr. JONES of Georgia. That is right. Well, welcome once again, and Frank, it is good to see you.

I wanted to brag a little bit about our highways. You mentioned I-85 through Atlanta. Anybody who has been to Atlanta in the last few years has seen our tremendous highway network there. Transportation is vital to us, and the Georgia Department of Transportation has done a yeoman's job, I think, under difficult circumstances because we have had such tremendous growth.

To adjust to that growth, you know that I am a big advocate of rapid rail and transit and would like to see more done with moving people by rail; also, I think we are going to ultimately have to do that because of our tremendous growth. We are going to have to look more at that.

I wanted to touch on a couple of things. My colleague touched on a provincial matter for us, or it is a provincial matter for folk who are not from Atlanta, but for us it is anything but provincial, and that is the Presidential Parkway.

I wanted to compliment you and the Department of Transportation for becoming involved in that mediation effort. I am very hopeful that there will be some positive results. They always say that a good compromise is one that nobody likes. Well, hopefully, we will come up with a compromise that people can live with; all parties involved can find a positive resolution to this, and I am very hopeful for those mediation sessions and grateful that you are involved in that.

Mr. RIVES. I hope so, too.

Mr. JONES. Yes, sir.

What I wanted to ask about, though—I guess this is still sort of wearing two hats—is the formula system and how Georgia would fare under H.R. 1351.

Mr. RIVES. Very poorly. We are now a minimum allocation State, which means that we get back 85 percent. Under the formula proposed in H.R. 1351, we would be the lowest in the Nation in return at 80.27 percent.

Mr. JONES. So we are going in the wrong direction.

Mr. RIVES. Going in the wrong direction.

Mr. JONES of Georgia. At a time when there is tremendous growth.

Mr. RIVES. Yes, sir.

Mr. JONES. I regret that I missed your testimony. How does AASHTO's proposal differ, and how would it address this?

Mr. RIVES. AASHTO is a collection of 52 States. We cannot develop an allocation formula because if I win with a certain amount of money, someone else loses. We cannot do that. We did propose that an allocation formula be developed that would contain vehicle miles of travel as a factor. And motor fuel usage is a surrogate for that; it would also contain a factor for lane miles—you maintain

under the number of lane miles you have, not total miles—and then we said other appropriate factors.

Since then, we have done an awful lot of work in AASHTO looking at various formulas. We do not think that we can find one, really, that provides equity to all of the donor States. If Georgia gains back to its position, someone else is going to lose.

We therefore recommended very strongly that for the national highway system and its components we go back to a minimum allocation program. But not for the urban-rural. That is set up in both our recommendations and in H.R. 1351 to be 100 percent return.

Mr. JONES. Yes, sir. So there could be a shifting there that could solve some of this shortfall for us?

Mr. RIVES. If we go back to the minimum allocation.

Mr. JONES. Once again, if you would take off the AASHTO hat——

Mr. RIVES. And AASHTO recommends—let me interrupt. It is not just Georgia, but AASHTO recommends a minimum allocation program at 85 percent on the national highway system component.

Mr. JONES. All right.

I had one other question, and it has come up again, and it has to do with the idea of an interstate highway from Memphis to Atlanta. Some of our colleagues from Alabama and Tennessee have mentioned that. Isn't the interstate system complete as you see it?

Mr. RIVES. Yes, sir, as I see it, it is complete. Now, you have to make a distinction between an interstate highway and an interstate type of highway. We think that many of the highways under the national highway system would have traffic on them sufficient to be designed to interstate, full freeway standards. Other segments of the national highway system would not need to be so designed. Whether or not the one between Memphis and Atlanta would need to be an interstate type of highway or of a lesser type, I do not know. I have not examined it. We have not done any planning studies at all on it.

Mr. JONES. All right. So there could be a new road as part of the national highway system identified that would be practically identical to a present interstate serving the same kinds of purposes with limited access. So that is a possibility, as you see it?

Mr. RIVES. It would be a possibility under H.R. 1351, yes, sir, but it would not legislatively be fully limited access. It would depend upon the factors that you use in determining what type of highway should be constructed.

Mr. JONES. Well, thank you. Thank you for your testimony.

Mr. RIVES. Thank you, sir.

Mr. MINETA. Mr. President, thank you very, very much for your presence here, and Mr. Francois.

Let me just point out in the audience someone who—oh, I am sorry. I did indicate that I would get back to you for a second round.

I am sorry. Please.

Mr. LEWIS. Thank you, Mr. Chairman. I will not be long. I know it has been a long morning already.

Mr. Commissioner, has AASHTO kept track of WBE and MBE participation since the two groups were lumped together in the 1987 reauthorization act?

Mr. RIVES. I do not know that AASHTO has, but I have.

Mr. LEWIS. What did you discover?

Mr. RIVES. I can only speak on Georgia data and a little bit of what I have seen, some graphs I have seen on national data. But prior to the 1986 act, we were achieving 11 or 11.5 percent MBE participation on our work, plus an additional percentage point or two for the Women's Business Enterprise. They were separate.

After the 1986 act, where the WBE and and the MBE were merged into the Disadvantaged Business Enterprise Program, the percentage of minority business enterprise had gone sharply down; while the percentage of the women's business enterprise had gone up. In fact, the lines on the graph had crossed, where you have been going down on the minority and are going up on the women's business enterprises.

I personally think, and I have made this public statement, that they ought to be separated again. That is from Georgia, now, not from AASHTO.

Mr. LEWIS. Correct me if I am wrong. By law, Georgia is required to expend no less than 10 percent of Federal funds with small disadvantaged business, SDBS. That is correct, right?

Mr. RIVES. Yes, sir. It is a goal. The law, I believe, calls it a goal. But we do spend no less than 10 percent.

Mr. LEWIS. Could you tell the committee how much you have expended with small disadvantaged businesses?

Mr. RIVES. It is running right around between 11 and 12 percent, generally speaking.

Mr. LEWIS. Could you break down the percentage with women and the percentage with minorities?

Mr. RIVES. No, sir, I cannot break it down. I have not broken it down. I do know that the percentage of minorities has gone sharply down and the percentage for the women has gone sharply up.

Mr. LEWIS. Let me ask you this, Mr. Commissioner. Couldn't the State of Georgia, couldn't you as the Commissioner, Department of Transportation, take the lead, take the initiative? You do not have to wait for the Federal Government. Couldn't you come up with your own plan?

Mr. RIVES. I do not know. We were going to do that at one time, and then two events happened: the Federal decision in Richmond and then the decision by the judges of the Supreme Court in an Atlanta case stating that you could specify goals only where you had documented evidence of actual discrimination.

It stopped the city of Atlanta's program to a great extent, and we simply had to stop ours for the same reason, except for the Federal program. That did not affect the Federal program because it was established by Congress.

The city of Atlanta has been working for a long time— and I understand they are about to complete it—on a way of documenting that evidence of actual discrimination. When they do, I intend to borrow it and see if it can be adapted to my own programs.

Mr. LEWIS. As the president of the Association of State Highway and Transportation Officials, could you play a major role in getting the other States—it is not just a problem for Georgia but it is a problem for the Nation—to move toward a higher percentage of minority, small disadvantaged business, and women getting Feder-

al contracts, Federal dollars? We are talking about spending millions and billions of dollars when we reauthorize this legislation, and it is right that a share, a portion, should be set aside for small disadvantaged business, including minority and women. You would agree, wouldn't you?

Mr. RIVES. I would agree with you, but I think, realistically, Mr. Lewis, that if you are going to achieve what we were achieving with respect to the minority business enterprises, you are going to have to separate the two again.

Mr. LEWIS. So you would support legislation by this committee to separate the two?

Mr. RIVES. I, as Commissioner of the Georgia DOT, would support that. As president of AASHTO, I do not think I can make that statement.

Mr. LEWIS. Thank you, Mr. Commissioner.

Thank you, Mr. Chairman.

Mr. FRANCOIS. Mr. Lewis, I might comment a bit more here, too. There are many States that have very aggressive programs, as I am sure you are aware, in this area. We also have within AASHTO a special committee that is devoted specifically to the topic of MBE/WBE, and it has developed guidelines that are utilized by all States. If you would like, I will be glad to get that for you.

Mr. LEWIS. I will be delighted to receive it, sir. Thank you very much.

Mr. FRANCOIS. I think you will find, nationwide, that there is great attention to this issue by Mr. Rives and all of his counterparts.

Mr. LEWIS. Thank you, sir.

Mr. RIVES. Could I add one other thing? Georgia's experience is not unique to it. I have seen publications on the national level that show the same charts going down and then going back up.

Mr. LEWIS. Thank you very much, Mr. Chairman.

Mr. MINETA. Thank you very much, Mr. Lewis and Mr. Rives, Mr. Francois. Thank you very, very much.

[Mr. Rives' prepared statement appears on page 387.]

Mr. MINETA. Let me just point out in the audience someone who testified before us in Missouri when we had our recent hearings. Mr. Muri, it is good to see you here; from the Missouri State Department of Transportation, Wayne Muri.

Again, thank you very much, Mr. Francois and Mr. Rives.

Mr. RIVES. Thank you, Mr. Chairman.

Mr. MINETA. There being no further business before the subcommittee, we stand adjourned.

[Whereupon, at 12:34 p.m., the subcommittee adjourned, to reconvene at the call of the Chair.]

PREPARED STATEMENTS OF WITNESSES

DEPARTMENT OF TRANSPORTATION

BEFORE THE
COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION
SUBCOMMITTEE ON SURFACE TRANSPORTATION
UNITED STATES HOUSE OF REPRESENTATIVES

ON
THE FISCAL YEAR 1992 BUDGET
AND
THE SURFACE TRANSPORTATION ASSISTANCE ACT OF 1991 (H.R. 1351)
MARCH 19, 1991

Mr. Chairman, Members of the Committee. Thank you for providing us the opportunity to submit testimony on the Department of Transportation's (DOT) Fiscal Year (FY) 1992 budget proposals and our proposal for reauthorization of the surface transportation programs, H.R. 1351. We are pleased that your committee scheduled this hearing so soon after President Bush called on the Congress on March 6 to enact surface transportation legislation within 100 days. That is quite a challenge to the Department as well as the Congress and we will provide whatever assistance or information this Committee needs to help meet that challenge.

When Secretary Skinner appeared before this Committee on February 20, he called H.R. 1351 a "breakthrough bill both in its increased funding levels and in its intermodal design." We appear

here together today in that spirit of intermodalism and pledge to work together with your Committee in the bipartisan spirit which the Secretary described as characterizing this Committee.

The Administration bill, H.R. 1351, represents a significant new direction in transportation, driven by the principles of the President's National Transportation Policy. In today's fiscal climate we must focus our resources on programs and projects that will provide desired national benefits and will advance national goals for sustained economic growth and enhanced international competitiveness.

First, let us briefly summarize the DOT Budget for FY 1992 as it relates to surface transportation. The budget reflects the principles of the National Transportation Policy by endorsing capital investment in surface infrastructure, sound and viable financing in the interest of deficit reduction goals, measures to insure safe transportation systems and national security, the protection of the environment and the quality of life, and research and development efforts to advance U.S. transportation technology and expertise.

For the Federal Highway Administration (FHWA), we are requesting $15.979 billion of budget authority in FY 1992, which is $1.374 billion over the $14.605 billion level available in FY 1991. The $16.456 billion obligation level is about $100 million more than the $16.356 billion estimated for FY 1991.

Outlays for FY 1992 are estimated at $15.248 billion compared to an estimated level of $14.436 billion in FY 1991. The obligation limitation for Federal-aid highways is proposed at $15.722 billion for FY 1992, $1.22 billion higher than in 1991. Over the proposed 5-year reauthorization period, the Federal-aid program level would rise to $20.3 billion.

The budget does not propose any change in the Highway Trust Fund tax rates or structure except to let rates in fiscal year 1996 and beyond return to those in effect prior to December 1, 1990. Fuel taxes added by the Budget Deficit Reduction Act on December 1, 1990, would lapse effective October 1, 1995. The budget would continue a State-Federal pilot project to reduce fuel tax evasion.

For the National Highway Traffic Safety Administration (NHTSA), the FY 1992 budget requests a funding level of $292.2 million in appropriations and obligation limitations, a $43.8 million (17.7 percent) increase over the FY 1991 level. These funds will support efforts to continue the decline in the traffic death rate and meet the President's goals for improved traffic safety. The budget proposes to fund all of NHTSA's programs from the Highway Account of the Highway Trust Fund. Currently, 69 percent of the NHTSA budget is funded from the Trust Fund and 31 percent from general revenues.

For the Urban Mass Transportation Administration (UMTA) $3.329 billion is requested for FY 1992. This is a $71 million increase over the enacted level for FY 1991.

The UMTA budget and legislative proposals reflect significant changes and certain key principles. The first is to provide reliable and stable funding for mass transit needs, through greater dependence on trust fund financing and formula allocations. In FY 1992, the entire UMTA program except $80 million for Washington Metro would be funded from the Mass Transit Account of the Highway Trust Fund, compared to 43 percent in FY 1991. In addition, 82 percent of the FY 1992 funding would be allocated using existing statutory formulas compared to 52 percent in FY 1991. State and local decisionmakers would therefore have a more predictable and stable Federal funding stream upon which to base investment decisions. Grantees would have enhanced flexibility with which to develop the most cost effective local transportation systems.

Specific details on the FY 1992 budget proposals of each of the three agencies are set forth in the Department's Budget in Brief, which we supplied with our testimony.

**THE SURFACE TRANSPORTATION ASSISTANCE ACT OF 1991 (H.R. 1351)**

Secretary Skinner highlighted for the Committee on February 20 the provisions of the Surface Transportation Assistance Act (STAA) of 1991 (H.R. 1351) and I'm sure by now

each of you have received considerable input on our proposal. For your reference a summary of the bill has been supplied to you today. Accordingly, we will not again review all its areas but will discuss a few items we wish to highlight, the first area being intermodalism.

**MULTIMODAL FLEXIBILITY**

The bill, we, are proud to say, contains a number of multimodal provisions that allow us to embark on a new era of flexibility in use of highway and transit funds and one hopes will help deter constraints on intermodal thinking.

In preparing the National Transportation Policy, the Department held a series of public hearings around the country, and one issue we heard about often was the fact that Federal transportation funds come from discrete program sources, highway or transit, and may only be used for the purposes of those different programs. This, we heard, failed to reflect the realities facing decisionmakers at the State or local level who deal with transportation issues, not just highway or transit issues.

Our bill would respond directly to those concerns by opening up portions of both the highway and transit programs to permit the funding of either highway or transit projects based upon decisions made at the local level. Specifically, about $2.6 billion of the funds available under the transit

title of the bill and $4 to 5 billion of the funds available under the highway title - essentially the proposed Urban and Rural Program - would be available for highway and transit projects at the discretion of State or local officials. Whether or not a particular transportation need should be met by means of a highway or transit project is a matter that best can be addressed at the local level. Our bill, for the first time, would let localities make that decision. And we believe that expanding rail transit lines or improving bus service could be as important for some urban areas as building more roads.

We recognize, of course, that given the high level of dedicated or tax funding at the State and local level for highway projects, this provision may inadvertently facilitate the funding of a greater proportion of highway projects than of transit projects. To keep the playing field level, this provision could only be used so long as the State or local share source of a highway project to be funded with UMTA funds is available to fund either highway or transit projects; or when the Secretary determines there is a sufficient amount of dedicated funding available for transit projects. We believe such a "balanced" local approach will assure an equitable distribution of funds.

**HIGHWAY/TRANSIT LOCAL SHARE**

Along with increased Federal and local funding flexibility, we also need to increase the level of funding and commitment

at the local level for mass transit and highway projects. To accomplish this, we are proposing to modify the Federal share to 60 percent under most of the transit programs, generally paralleling the matching shares in the highway Urban and Rural Program. The Federal share for new transit starts would be modified from 75 percent to 50 percent.

As Secretary Skinner often has said, we believe we get the best decisions at the local level when State and local governments have a significant financial commitment to projects. We believe that projects that are of better quality, get built on time and within budget where there is greater local financial participation.

MULTIMODAL PLANNING

Another multimodal provision in this bill provides authority for multimodal intercity corridor studies out of highway planning funds. Moreover, highway rights-of-way could be used without charge by public or private high speed ground transportation facilities with State approval; and highway adjustments to accommodate high speed rail and maglev would be eligible for National Highway Program funds.

Pursuing further intermodal conformity, the same changes in the planning program are included in both the highway and transit titles. Because transportation planning must include air quality considerations, metropolitan areas

would be required to develop congestion management systems that provide for effective management of new and existing transportation facilities. These plans would include travel demand reductions and operational management strategies. In urbanized area planning, the bill would require consideration of long-range land use plans, development objectives, and costs and impacts of the projects on both mobility and air quality.

Specifically, urbanized areas of over 200,000 population will be required to provide more emphasis on multimodal considerations including intermodal connectivity and cost effectiveness, and on coordination with land use planning, including impacts of land use decisions on transportation needs and opportunities for transportation corridor preservation and innovative financing mechanisms, such as value capture.

More emphasis on consideration of transportation related air quality problems will be required. A higher priority is to be given to congestion management before major capital investment. The development of an areawide multimodal congestion management system in coordination with the process for the development of any required transportation elements of the State Implementation Planning is required. Urbanized area cooperation with the State in the development of pavement, bridge, and safety management systems is also required.

In urbanized areas of less than 200,000 the State and Metropolitan Planning Organization will decide on the extent of the process. As a minimum, they must develop a Transportation Improvement Program, assure that air quality problems in non-attainment areas are addressed and assure that the Transportation Improvement Program conforms to the State Implementation Plan.

Planning funds will be distributed to the States on the basis of urbanized area population. States will distribute them to the Metropolitan Planning Organizations by a formula that considers population and provides an appropriate distribution of funds to all urbanized areas. The Federal share for urban planning is 75 percent.

**RESEARCH AND DEVELOPMENT (R&D)**

The FHWA, UMTA and NHTSA titles of the bill include an increased emphasis on research and development with the purpose of expanding activities in cooperation with the private sector to advance U.S. technology leadership, and to support a productive, safe, 21st surface transportation system.

The highway research program will continue to be funded through general operating expenses and will focus on Intelligent Vehicle-Highway Systems, long-term pavement performance, and technology assessment and deployment activities.

Local training and technical assistance will continue to be provided to rural areas (currently provided through the Rural Transportation Assistance Program) and will be expanded to provide

improved access to highway technology for urban transportation agencies.

FHWA and UMTA will also continue the Centers for Excellence as established under the University Transportation Centers, with the addition of three centers beginning in 1992, and the National Highway Institute would be continued.

**HIGHWAY SAFETY RESEARCH AND DEMONSTRATION PROGRAMS**

NHTSA's FY 1992 budget request seeks $45,869,000 for the section 403 research and demonstration program. This represents an increase over the FY 1991 level and reflects the contribution that we believe the research and demonstration program will make to future improvements in highway safety. The STAA proposal retains the basic components of the section 403 program, which stress research on such topics as the effects of alcohol and drugs on driver behavior, and adds research activities on Intelligent Vehicle-Highway Systems and other aspects of the driver/vehicle interface.

**TRANSIT PLANNING AND RESEARCH**

We believe the transit research program needs to be strengthened. We are proposing an expanded and coordinated Transit Planning and Research Program. This new structure provides for an increase in emphasis and funding for research and development. An amount equal to 2.8 percent of the total UMTA appropriation would be set aside within the Mass Transit Account to support this program. In FY 1992, for example, this would represent $93.2 million.

In our view, the Federal Government must invest in research and planning to provide a more stable, cost-effective environment that will stimulate increased private sector investments and economic growth. To yield maximum benefits from our transit investment dollars, planning and research must be a more prominent element of the UMTA Program with a consistent source of funding, in scale with the total size of the mass transit program.

The Transit Planning and Research Program has two major elements: A national component and a State and local component. The national Transit Planning and Research program is proposed to advance Federal objectives, to help resolve problems of national concern and to initiate a new emphasis on technology development. One-third of the total resource will support this component. The State and local programs will support existing planning activities as well as implement a new Transit Cooperative Research Program designed to address the transit industry's short-term problems. Two-thirds of the total resource will support this component. The emphasis in both components is research, planning, demonstration, and training.

We will now briefly highlight some of the other significant provisions in the different titles of the bill.

**THE HIGHWAY - RELATED PROVISIONS OF H.R. 1351**

Briefly, the highway provisions of the STAA provide a 5-year, $89.1 billion highway and highway safety program,

restructure the Federal-aid highway program, and give form to the major principles of the National Transportation Policy. Assistance will be provided to the States through three major categories - a National Highway Program, an Urban and Rural Program, and an apportioned and discretionary Bridge Program. The highway - related provisions provide strong Federal support for highway and motor carrier safety, Federal Lands Highways, and research and technology.

**NATIONAL HIGHWAY PROGRAM (NHP)**

The National Highway Program will identify a National Highway System serving interstate and interregional commerce and personal transportation.

**NATIONAL HIGHWAY SYSTEM (NHS)**

The National Highway System would consist of the current Interstate System and, based on criteria set by the Secretary, other rural principal arterials, urban freeways and other principal arterials, and the Strategic Highway Network (STRAHNET). There would be a designated system of about 150,000 miles with a possible adjustment of up to 10 percent of the designated mileage by the Secretary. Designation would be made by the States in FYs 1992 and 1993 in consultation with local officials with approval by the Secretary. A new functional classification for all public roads would be part of the process.

There would be a single National Highway System and we have provided the Committee with a map indicating our initial assessment of such a system. The Interstate System would carry its own identity as it does today. There would be provisions to add mileage to this Interstate subsystem if the mileage meets current Interstate design standards and is connected to the Interstate subsystem. Interstate facilities will be eligible to display the Interstate shield. The National Highway Program would replace the current Interstate 4R, and primary programs. Although the mileage of the Interstate System will be included in the National Highway System and will be eligible for National Highway System funding, the current Interstate construction program will continue to its completion as a separate category, with authorizations through FY 1995.

**STRATEGIC HIGHWAY NETWORK (STRAHNET)**

The STRAHNET will consist of roads in rural and urban areas that are critical to U.S. strategic defense policy. The network will provide defense access, continuity, and emergency capabilities for the movement of personnel and equipment in both peacetime and wartime. It will include the Interstate System and approximately 16,500 miles of non-Interstate highways. The non-Interstate network will be designated by the Secretary of Defense jointly with the Secretary of Transportation and the States. STRAHNET connectors may also be included as determined by the Secretary of Defense and the Secretary of Transportation.

**TOLLS**

The toll provisions of our proposal have generated a lot of public interest and comment. Under H.R. 1351 the States may use their apportioned National Highway Program funds for improvements on any facility that is part of the designated system, including existing toll roads and for construction of new non-Interstate toll roads. In addition, States may combine Federal-aid with toll and other financing to reconstruct and replace existing free bridges or tunnels and to reconstruct free non-Interstate highways to add lanes and to change the character of the highways to fully controlled access highways. Facilities may be publicly owned or, if the States contract with private firms to design, finance, construct and operate the toll facility, privately owned. Further, there may be private participation in the State matching share which will be at least 65 percent for toll roads. States will have the option of continuing tolls after construction costs are recovered if in excess of operation and maintenance revenues are used for title 23 purposes.

**HIGHWAY MANAGEMENT SYSTEMS**

H.R. 1351 provides for a unique new concept to address problem areas in the highway program. States would be required to have in place a bridge management system, a pavement management system, a safety management system, and a congestion management system. Details of management system requirements, including

a phase-in schedule, will be developed through the regulatory process.

**SCENIC, ENVIRONMENTAL AND ENERGY CONSIDERATIONS**

In addition to being an intermodal bill, H.R. 1351 is an environmental bill. The STAA has been developed with strong environmental protection and mitigation measures that will be on-going activities in the planning and project development process. Several sections contain provisions for scenic enhancement through the purchase of easements, landscaping programs and scenic highway programs. Highway planning will be made an eligible activity under the National Highway System and the Urban and Rural Program for use early in the system planning process. This approach will encourage better integration of land use, environmental, and transportation planning and air quality in State Implementation Plan development. Provisions for early acquisition of rights-of-way will make Federal funds available to acquire rights-of-way necessary to preserve environmental resources (e.g., recreational, parklands, historic) sites and scenic views early in the planning process and in advance of Federal project approvals.

Scenic byways will be eligible for development and improvement with National Highway and Urban and Rural Program funds, if otherwise eligible under those programs. Also, a special set-aside from the urban and rural program will be earmarked for scenic byway development in FYs 1992-1994.

The proposal also makes number of changes to current provisions affecting outdoor advertising by focusing on controlling billboards in rural areas where aesthetic protection is most important. It would prohibit new off-premise signs in areas of control except for most of the currently excepted sign categories such as directional signs. Payment of compensation for removal of nonconforming billboards would be a State matter under State law; and Federal funds could be used to a limited extent to pay for sign removal.

Provision will be made to use Federal funds under the National Highway Program and Urban and Rural Program either as part of a highway construction project or as a separate project to create wetland banks or contribute to Statewide programs which are compatible with the requirements of the Secretary of the Army and the Administrator of the Environmental Protection Agency (EPA) that create, conserve, or enhance wetland habitat. The programs may include the development of Statewide wetland mitigation plans, State or Regional wetland conservation and enhancement banks, and other projects. Contributions toward these efforts may occur in advance of specific project activity to build up credit for future projects that impact wetlands.

The highway reauthorization proposal also contains a number of features that are supportive of the Clean Air Act. The STAA would assure that transportation activities are fully integrated with the air quality requirements and commitments.

The urban transportation planning process is being strengthened to specifically increase emphasis on multimodal considerations, land use and development decisions, and transportation-related air quality problems. The congestion management system in areas over 200,000 population must be coordinated with requirements of the Clean Air Act, and transportation improvement plans must conform to State Implementation Plans.

Under the Urban and Rural Program, metropolitan and rural projects that provide innovative approaches to air quality, congestion or rural access problems that the States want to advance may be treated in a special way. If the project meets selection criteria, the State may ask for additional obligation ceiling for that project. A set-aside of any enacted obligation ceiling will be requested in the annual appropriation process for this purpose. These projects will be approved according to criteria reflecting innovation, immediate action, non-capital intensiveness and local commitment up to the amount of the obligation ceiling set-aside.

Operational tests on the use of congestion pricing measures may be approved in the Standard Metropolitan Statistical areas of 1,000,000 population or more that are experiencing significant air quality nonattainment problems. Guidelines will be issued by the Secretary.

Transportation Air Quality Planning Guidelines developed in cooperation with the Administrator of EPA are required to assure that Federal-aid highway projects conform to the Clean Air Act.

The transportation planning process as a minimum will cover the existing urbanized area and the area expected to become urbanized within the forecast period, and may encompass the entire Metropolitan Statistical Area/Consolidated Metropolitan Statistical Area at the discretion of the Governor and the affected units of local government.

Several provisions of the STAA reflect considerations for both environmental issues and energy conservation. On the Interstate system, a higher Federal matching ratio is proposed for operational improvements which are usually less energy intensive than initial construction projects. A congestion management system will be required for the National Highway System and for areas over 200,000 population to monitor and address congestion by development of short- and long-term relief strategies. Finally the enhanced level of funding for research and development will allow expansion of environmental and energy research leveraged with research conducted by other Federal agencies.

**THE TRANSIT TITLE OF H.R. 1351**

We believe that our transit reauthorization proposal sets the stage for transit in the 1990s. It would provide some $3.3 billion annually from the Mass Transit Account of the

Highway Trust Fund over the 5-year life of the bill. It is important to emphasize that this amount is 45 percent above the Administration's budget request for FY 1991, 2 percent above the current fiscal year appropriation level, and a 23 percent increase over this year's capital funding levels.

**SOURCE AND DELIVERY OF UMTA FUNDING**

The transit bill would make two key changes regarding the program's source of funding and how those funds would be delivered.

First, we propose to fund the UMTA program entirely from the Mass Transit Account of the Highway Trust Fund. The Mass Transit Account currently has a genuine surplus and is under-committed. The transit component of the Trust Fund thus can support the proposed program level, some $3.3 billion annually or $16 billion over the 5-year life of the bill. This funding level will substantially reduce the present uncommitted cash balance in the Mass Transit Account by FY 1996. We think this is a fiscally prudent way to maximize use of the Trust Fund resources. Moreover, this financing from the Trust Fund would benefit all of our grantees, unlike the current program which primarily finances, from the Trust Fund, the discretionary program. The discretionary program currently benefits relatively few grantees.

Second, we propose to deliver much more of the overall transit program's funding by formula than is done under the existing program. Currently, some 52 percent of the program is delivered by formula. In contrast, our bill would distribute some 82 percent of the program under the existing statutory formulas. This is done by transferring the discretionary rail modernization and bus system activities to the formula program.

We believe it is in the best interest of transit recipients to provide them with a stable and assured source of formula funding from the Trust Fund so that they may develop long-range plans to address their transportation needs with some assurance that the Federal funds will be there.

**FORMULA PROGRAM, OPERATING ASSISTANCE**

As noted earlier, the transit bill would distribute 82 percent of its funding under our current formula program. In fiscal year 1992, we would fund the section 9 formula program at a level of $2.6 billion. We think the existing statutory formula for the most part does an excellent job in delivering transit funds.

We would make one key new funding allocation under the formula program, however. We would deliver rail modernization funds under the rail tier of the formula, some $600 million a year, as well as additional amounts to the rail cities through the allocation of the remaining formula funds. We would deliver

this resource to all rail cities, not just to the older rail cities as is done under the current discretionary program. Because the funds would be distributed on a formula basis, each area would better be able to plan for the use of this resource.

Our bill no longer would permit areas over 1 million in population to use Federal funds for operating assistance. Let us make two points about this. First, this does not represent a funding reduction for these areas because we have significantly increased the capital funding for all areas under the formula program, including areas over 1 million in population. Second, these areas typically do not rely substantially on Federal operating assistance for their programs. For cities of this size, Federal operating assistance collectively represents only 4 percent of their total operating budget. We believe the appropriate Federal role is in the area of capital funding of projects, to provide for the replacement and enhancement of fleets and facilities, and that the costs arising from labor and other operating expenses can and should be addressed at the local level.

At the same time, however, we do recognize that other areas rely on Federal operating assistance and our bill would essentially "hold harmless" all areas below one million in population to their 1991 operating assistance levels.

**NEW STARTS, SECTION 3 FUNDING**

Let us now turn to another significant element of our bill, the fact that we would provide some $300 million in fiscal year 1992 to fund new start projects under our discretionary section 3 program, and that figure would increase to $400 million in fiscal year 1996. Reflecting experience under the current program, where cities are overmatching Federal funds, we propose a Federal share of 50 percent for new starts projects.

The key point about our proposal is that we would fund only those new start projects that truly are cost-effective and supported by an acceptable degree of local financial commitment. Our bill includes language that would strengthen the new starts criteria under current law to emphasize and underline how critical we believe the cost-effectiveness issue is.

In addition, $50 million would be made available for a range of discretionary projects under section 3, including the metropolitan and rural bonus projects program, which is under both the highway and transit titles. This program would fund non-capital intensive designed to address congestion and air quality problems or innovative and "fast start" projects designed to ease congestion or address special rural needs.

**RURAL FUNDING, STATE FLEXIBILITY**

Our section 18 rural program has played an important role in providing assistance for meeting the mobility needs of those

outside of our urban areas. We recognize the great significance of this program and propose to increase the level of Federal funding for this important mobility need. Under current law, the program is funded at the $65 million dollar level. Our proposal would provide Federal assistance at the $89 million level each year over the life of the bill.

As with our other programs, we would raise the local share for capital projects under the program to 40 percent. We would permit operating assistance under the section 18 program at the same level that is available in FY 1991 with the same Federal share as under current law, 50 percent.

The States play an integral role in administering this vital program, and our bill would further expand and clarify the State's role in the section 18 program, the section 16 elderly and handicapped program, and the section 9 formula program for small urbanized areas - those below 200,000 in population.

Specifically, to provide needed flexibility in the allocation of funds among these programs, the States would decide how much of the Federal funding available - some $310 million a year - would be allocated under each of the programs.

SAFETY PROGRAMS

We want to begin our discussion of the safety programs with the good news about the Nation's continuing progress on highway safety. In 1990, the national highway fatality rate fell below

2.1 deaths per 100 million miles traveled -- 40 percent lower than the rate in 1980. If the 1980 fatality rate of 3.3 deaths per 100 million miles traveled had remained constant, 151,000 more people would have died in traffic crashes from 1981 through the end of 1990.

Several factors contributed to this success -- safer roads, safer vehicles, higher levels of safety belt and child restraint use, and the growth of public sentiment against drunk driving -- and many of these factors are directly influenced by the highway safety programs under title 23.

**STATE AND COMMUNITY HIGHWAY SAFETY PROGRAMS**

The section 402 State and community grant program is the core element of the Federal highway safety effort. This program, through its focus on essential State and local highway safety needs, such as drunk driving countermeasures and safety belt use programs, has been instrumental in improving public safety. For FY 1992, NHTSA is proposing to fund the State and community highway safety program under section 402 at the level of $115 million. This is slightly above the obligation level for FY 1991.

The highway safety title of the H.R. 1351 proposes to maintain this funding level for the State and community highway safety program throughout the life of the reauthorization. The STAA would fund growth in highway safety through a new

bonus program, which would give States bonus funds for meeting specific objectives. For FY 1992, $25 million in bonus funds under the new subsection 402(h) program would be available for general highway safety purposes. An additional $25 million in bonus funds would be made available in FY 1992 for alcohol safety programs. NHTSA is seeking full funding for each of these bonus funds in its FY 1992 budget request. When added to the $25 million provided as FHWA safety bonus funds from FHWA's Section 402 program, these provisions will contribute an annual total of $75 million in new highway safety funding, beginning in FY 1992 and lasting for the life of the reauthorization. In addition, funds will be set aside from FHWA's Urban and Rural Program, starting at $5 million in FY 1992, $55 million in FY 1993, then rising to $25 million per year until the set-aside reaches $130 million in FY 1996. We believe that these funds will increase the involvement of the highway and transit industries and significantly enhance highway safety efforts at the State and community level.

The bonus set-aside under the Section 402 program (title 23) is to be managed jointly by NHTSA and FHWA. It will include the present NHTSA alcohol safety grant programs. The bonus grant criteria will include nine safety performance criteria from which States can choose: 1) alcohol/drunk driving, 2) safety belt use, 3) fatality rate reduction, 4) pedestrian/bicycle safety, 5) heavy

truck safety, 6) motorcycle safety, 7) emergency medical services, 8) public information and education, and 9) crash data collection and analysis. The alcohol criterion will result in more bonus funds than the others.

**OTHER SAFETY PROGRAMS**

The bill requires that not less than 10 percent of the total of apportioned National Highway Program, Urban and Rural Program, and Bridge Funds must be used for projects that have safety benefits. These projects or portions of projects would include safety enhancements designed to eliminate or reduce highway hazards or crash severity.

The highway safety management system requirement referred to earlier will be a major effort to encourage States to take steps toward safety enhancements in many new areas; these requirements will be developed through the rulemaking process.

A provision on new construction or major reconstruction of beltways and bypasses will require, in areas over 200,000, a highway design to provide for ultimate development as multilane, divided highways with separate roadways for through traffic. A new Interstate system maintenance requirement will ensure safer, better maintained routes. In the proposed urban/rural program States will be able to use up to 5 percent of those funds for hazard elimination or rail-highway crossing projects on rural minor collector roads or local roads.

The bridge program would be expanded to include certain safety related deficiencies (e.g. seismic retrofit) when identified by the Secretary of Transportation as high priority, and the bridge inspection and inventory systems required will greatly enhance bridge safety nationwide.

In the motor carrier program, drug awareness or enforcement activities are newly eligible under the Motor Carrier Safety Assistance Program as well as vehicle size and maximum weight enforcement.

Under the transit title UMTA would be authorized to issue a regulation requiring sensitive safety transit workers to be subject to drug and alcohol testing, including random drug testing. UMTA is the only agency within the Department that does not have a drug testing program in place, and this bill would provide the authority necessary to implement such a program. We no longer can ignore this critical safety issue.

**VEHICLE SAFETY AND CONSUMER PROGRAMS**

In the FY 1992 Budget Request, NHTSA is for the first time seeking to fund its activities under the National Traffic and Motor Vehicle Safety Act and the Motor Vehicle Information and Cost Savings Act from the Highway Trust Fund. It is the Department's view that the fuel taxes paid by motorists can appropriately be used for programs that directly benefit motorists. Accordingly, the STAA of 1991 proposes to authorize

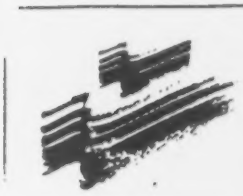
funds from the Highway Trust Fund for these programs. The budget request seeks $75,207,000 for NHTSA's vehicle safety and consumer programs for FY 1992, all of which would be derived from the Highway Trust Fund.

**NATIONAL DRIVER REGISTER**

The budget request for FY 1992 also proposes a funding level of $6,131,000 from the Highway Trust Fund for the ongoing operations of the National Driver Register and for its transition into the fully interactive system envisioned by the National Driver Register Amendments of 1982. The National Driver Register has a vital role in the States' operation of their commercial drivers licensing systems as well in their day-to-day driver licensing activities. With the implementing regulation for the interactive National Driver Register nearing final completion, NHTSA expects that the States will quickly become participants in the new system.

**CONCLUSION**

As you can see the Administration bill provides for a great diversity of changes to deal with completion of the Interstate System and to enhance transportation safety, intermodal efforts, planning, research and development, and environmental protection. We are looking forward to working with this Committee on what we believe will be a landmark surface transportation reauthorization bill.



# *Moving America*
## *Into the 21st Century*

**SUMMARY OF HIGHWAY PROVISIONS OF**
**1991 SURFACE TRANSPORTATION ASSISTANCE ACT**

- A five-year, $89.1 billion highway and highway safety bill, which restructures the Federal-aid highway program, gives form to major principles of the National Transportation Policy. Assistance is provided through three major categories - the National Highway Program (NHP), the Urban/Rural Program, and an apportioned and discretionary Bridge Program. Also, the proposal continues strong Federal support for highway and motor carrier safety, Federal Lands Highways, and research and technology.

**NATIONAL HIGHWAY PROGRAM**

- Purpose - To foster national productivity and mobility by focusing investment on maintaining and improving an identified National Highway System (NHS) serving interstate and interregional commerce and personal transportation.

System

- The designated system will consist of the current Interstate, and, based on criteria set by the Secretary, such mileage as other rural principal arterials, urban freeways/urban other principal arterials, and Strategic Highway Network (STRAHNET) mileage. This should result in a designated system of up to 150,000 miles with possible adjustment upward by the Secretary, not to exceed an amount equal to 10 percent of the mileage designated. Designation will be made by the State in Fiscal Years (FY) 1992 and 1993 in consultation with local officials with approval by the Secretary. A new functional classification will be part of the process.

- Interstate System - There will be a single NHS; however, the Interstate System will carry its own identity as it does today. There will be provisions to add mileage to this Interstate subsystem if the mileage meets current Interstate design standards and is connected to the Interstate subsystem. Such facilities will be eligible to display the Interstate shield. (See Interstate Construction and Substitution also.)

U.S. Department of
Transportation

- Strategic Highway Network - Roads in rural and urban areas that are critical to U.S. strategic defense policy. The network provides defense access, continuity, and emergency capabilities for the movement of personnel and equipment in both peacetime and wartime. It includes the Interstate subsystem and approximately 16,500 miles of non-Interstate highway. The non-Interstate network will be designated by the Secretary of Defense jointly with the Secretary of Transportation and the States. STRAHNET connectors may also be included as determined by the Secretary of Defense and the Secretary of Transportation.

Program Features

- Replaces the current Interstate construction, Interstate 4R, and primary programs. Although the mileage of the Interstate System will be included in the NHS and will be eligible for NHS funding, the current Interstate construction program will continue to its completion as a separate category, with authorizations through FY 1995.

- Toll roads - The States may use their apportioned funds for improvements on any facility that is part of the designated system, including existing toll roads and for construction of new non-Interstate toll roads. In addition, States may combine Federal-aid with toll and other financing to reconstruct and replace existing free bridges or tunnels and also reconstruct free non-Interstate highways that do not have fully controlled access to add lanes and to change the character of the highways to fully controlled access highways. Facilities must be publicly owned, but States may contract with private firms to design, finance, construct and operate a toll facility. Limited indemnification of feasibility studies by private firms will also be eligible. Further, there may be private participation in the State matching share. States will have the option of continuing tolls after the construction costs are recovered; however, any excess revenues must be used for Title 23 purposes.

- States will be required to have in place a bridge management system, a pavement management system, a safety management system, and a congestion management system. Details of management system requirements, including a phase-in schedule, will be developed through the regulatory process. (See Planning also.)

- Operational Improvements - States will be permitted to use funds for operational improvements such as surveillance, motorist information, incident management, HOV preferential treatments, demand management, and spot geometric/traffic control modifications to alleviate specific bottlenecks and hazards. Operational improvement projects on other public roads (except those functionally classified rural minor collector or as local) that are adjacent to a fully access controlled National Highway route are eligible, if the

project improves the level of service and enhances operations of the NHS facility and is more cost effective than an improvement on the NHS facility. (See Urban/Rural Program also.)

- Start-Up Costs of Traffic Management and Control - States will be permitted to use funds for start-up and administrative costs of integrated traffic control systems, incident management programs and traffic control centers. Eligibility is restricted to a time period not to exceed two years, funds shall not be used in lieu of existing funds operating a facility, and the public agency using the funds must agree to continue operating, or be responsible for operating, the improvement at the end of the eligibility period. (See Urban/Rural Program also.)

- Commercialization of Rest Areas - States will be permitted to enter into lease agreements with private concerns to allow such concerns to provide services on fully access controlled National Highway facilities.

- Beltways and Bypasses - New construction or major reconstruction, serving areas over 200,000, shall be designed to provide for ultimate development as multilane, divided highways with separate roadways for through traffic. Access to the through traffic lanes is limited to interchanges with other National Highway routes only.

- Federal Share

  - The basic Federal share for the NHP is 75 percent. Operational improvements and 3R activities on Interstate routes will have a Federal share of 90 percent. The maximum Federal share will be 35 percent for projects to convert existing free facilities to toll facilities or to construct new toll facilities.

  - Sliding scale provisions, permitting an increase in the Federal share for States with large areas of Federal lands, will apply except for toll projects.

- Transfers - A State may transfer up to 15 percent of its apportionment to the Urban/Rural program, if it can demonstrate that adequate conditions exist on the Interstate System mileage and that it will meet criteria, such as proper implementation of the required management systems, to be determined by the Secretary.

- Interstate System maintenance - If a State is not adequately maintaining its Interstate System highways, the Secretary will require the State to program amounts needed from its NHP funds to bring the Interstate System up to adequate condition and keep it in that condition.

- Right of Way Acquisition

  - Preservation of potential future NHP transportation corridors will be continued through the right-of-way revolving fund. Such sums as necessary are authorized for the Right of Way revolving fund but must be sought in future years' appropriations. The fund will provide loans to States at two points below the current Value of Funds Rates as published by the U.S Treasury.

  - Retroactive reimbursement will be possible to States for land acquired prior to Federal Highway Administration (FHWA) approval. Any acquisitions made prior to Federal approvals must be accomplished in compliance with the requirements of the Uniform Act, Title VI, Section 4(f) and other Federal laws and shall not influence the need to construct a project or the selection of a specific location alternative.

- Control of Outdoor Advertising - States will be required to maintain effective control on those parts of the NHS and rural arterials that are outside urbanized areas; allows State law to determine method of compensation; establishes eligibility to use Federal funds to pay for sign removal; allows States discretion on whether to remove nonconforming signs; and prohibits new off-premise signs in area of control except for most of the currently exempted categories.

- Takedowns

  - Administrative takedown of up to 3 3/4 percent of authorization to fund the operation of FHWA including research and development.

  - Takedown of one-half percent of remaining amount for Metropolitan Planning (distribution to States; see Planning also.)

  - High Cost Projects fund - Takedown from the NHP funds for Fiscal Years 1992-1995 for a special fund for discretionary large-scale, access controlled projects, which increase capacity on either the Interstate or routes which directly connect to the Interstate and which provide transportation or other public benefits in excess of cost. Allocations are to be paid back to the fund by reduction of the State's subsequent 3 years of NHP apportionments or by direct repayment.

- Availability - Through FY 1994, apportionments under this program will be available for 4 years. After FY 1994 the period of availability will be 2 years. Any funds not obligated by the State within the availability period will be released and be reapportioned to other States not releasing funds.

- Distribution of Funds - Apportionments will be based 70 percent on each State's share of total highway use of motor fuel, 15 percent on each State's share of total public road mileage and 15 percent on land area. An apportionment factor will apply in States with low population densities (persons per square mile), based on a graduated scale. Each State will receive at least one-half percent of the total NHP funds.

- Interstate Construction and Substitution

  - Final authorizations for Interstate construction and Interstate substitute projects will be authorized for FYs 1992-1995.

  - All States, except Massachusetts, will receive yearly Interstate construction apportionments based on each State's proportionate share of the remaining needs in the 1991 Interstate Cost Estimate (ICE), excluding Massachusetts' cost to complete. Massachusetts will receive a specified yearly allocation of Interstate construction funds also based on the 1991 Interstate Cost Estimate that approximates its projected construction schedule.

  - Takedowns from Interstate construction funds for administration and metropolitan planning will be continued. Also, the Federal share will be continued at 90 percent with application of the sliding scale in States with large areas of Federal lands.

  - Availability - Apportionments for FYs 1992-1994 will be available for one year. The FY 1995 funds will be available until expended.

  - States may transfer to their NHP apportionment from their Interstate construction apportionment the value of the costs for additional work on sections of the Interstate System that are open to traffic and have been built with Interstate construction funds as shown in the 1991 ICE.

  - The Interstate Substitute funds will continue to be available for highway substitute projects (transit projects will be eligible from the Mass Transit account) and the Federal share will be continued at 85 percent. A takedown for administration will be continued. The funds will be available until expended.

**URBAN/RURAL PROGRAM**

- Purpose - Provide assistance via a program with increased flexibility and minimal Federal requirements, allowing State and local governments to target funds to address metropolitan and rural transportation issues more effectively.

- Replaces part of the current primary for routes that are not designated as NHS routes, the urban and secondary, and several other categorical programs.

- Eligible Facilities

  - Any public road except a road on the NHS or a road functionally classified as rural minor collector or as a local road. This will include roads and bridges on the current secondary and urban systems, and portion of the other principal arterials and minor arterials on the primary system.

  - Toll roads will also be eligible to the same extent as in the NHP. (See National Highway Program.)

- Eligible Activities

  - Construction; transit capital costs in urban and rural areas; capital projects to improve access and coordination between intercity and rural bus service; highway operational improvements and start-up costs (see NHP for definition); hazard elimination and rail-highway crossings; and others.

  - Also, up to 5 percent of the funds may be used for hazard elimination or rail-highway crossing projects on roads functionally classified as rural minor collector or as local.

  - The Federal Mass Transportation Administration formula program will also be eligible for highways at a 60/40 matching ratio if the matching funds are available for use on both highway and transit projects or there is a sufficient and dedicated source of transit funding at the State or local level.

- Metropolitan and Rural Innovation Bonus Projects - Metropolitan and rural projects that provide innovative approaches to air quality, congestion and/or rural access problems may qualify for special treatment. If the project meets certain selection criteria, the State may seek additional obligation ceiling for that project from a set aside of any enacted obligation ceiling. These projects

will be approved according to criteria reflecting innovation, immediate action, noncapital intensiveness, and local commitment.

- Distribution Procedures - Funds distributed by formula based on each State's percentage of contributions to the Highway Trust Fund. Each State will receive at least one-half percent of the total Urban/Rural funds.

  Obligations will be incurred at the time the State submits its annual certification. The amount obligated will be an estimate by the States and could be revised during the year.

  Progress payments will be made to the States in a manner that provides them funds as they are needed to meet costs incurred.

- Takedowns

  - Administrative takedown of up to 3 3/4 percent of authorization to fund the operation of FHWA including research and development.

  - Takedown of one-half percent of remaining amount for Metropolitan Planning (distribution to States; see Planning also).

  - Takedown of one-half percent of authorization for the Territorial Highway Program.

  - Specified amounts will be set aside from each year's authorization to fund safety bonuses awarded to States meeting certain criteria. (See section on safety bonus.)

  - A set aside of up to $5 million from FYs 1992-1994 authorizations will fund State development costs of scenic byways.

- Federal Share - The Federal share will be 60 percent except for converting free facilities to toll facilities or to construct new toll facilities. These toll projects are to be funded at an up to 35 percent Federal share.

  - Sliding scale provisions for States with large areas of Federal lands will apply up to a maximum of 75 percent, except for toll projects.

- Funds available until expended.

- A State must certify that:
  - It is using a method of distributing funds that is fair and equitable over the period of the legislation to both rural and urban areas, including urbanized areas over 200,000.
  - Projects meet applicable Federal laws such as environmental, uniform relocation, and Civil Rights laws.
  - Projects will be constructed, operated and maintained in accordance with State approved standards and procedures including safety requirements.
- Eliminates project approvals/agreements/inspections/programs (see General Provisions), except that project approvals for Metropolitan and Rural Innovation Bonus projects which will be administered in the same fashion as NHP projects.
- No sanctions except that: 1) obligations may not be incurred if a State fails to certify that requirements will be adhered to; and 2) if a State is found not to adhere to its certification, future payments will be withheld.
- Each State to provide the Secretary an annual report on how funds have been used to improve transportation in the State. The Secretary may conduct reviews of State procedures or projects as deemed necessary.

**BRIDGE PROGRAM**

- Purpose - To focus priority on deficient and obsolete bridges through continuation of dedicated special Federal-aid funds to assist the States in rehabilitating or replacing bridges.
- The bridge program has two elements:
  1) An Apportioned Program that will apply to bridges on any public road with percentage requirements for roads functionally classified as rural minor collector or as local. Eligibility expanded to include certain safety related deficiencies (e.g., seismic retrofit) on bridges, provided such deficiencies have been identified as high priority by the Secretary. There will be a revised apportionment process based on level of service.
  2) A Major Bridge Discretionary Program that will apply to high cost bridges on roads not functionally classified as rural minor collector or as local. Minimum cost thresholds: for bridges on the NHS - $10 million; for bridges not on the NHS - $5 million. Any request for

funding from this category must include a comprehensive assessment of the feasibility of constructing a toll bridge and the option of commingled funding.

- States will be required to have an ongoing bridge inspection and inventory system for all bridges and a bridge management system for bridges on the NHS.

- Takedowns

  - Administrative takedown of up to 3 3/4 percent of authorization to fund the operation of FHWA including research and development.

  - Takedown of one-half percent of remaining amount for Metropolitan Planning (distribution to States; see Planning also).

- The maximum Federal share for bridge projects is 75 percent.

- Non-NHS bridge projects will be administered in the same way as the Urban/Rural Program, including obligation procedures and certification.

**BONUS SET-ASIDE FOR HIGHWAY SAFETY**

- A special Safety Program will be initiated under Section 402(h) to provide bonus incentives to accelerate the advancement of highway safety. The program will be jointly managed by National Highway Traffic Safety Administration (NHTSA) and FHWA and will include in its scope the present NHTSA alcohol safety incentive grant programs (i.e., Section 408 and Section 410).

- Bonus grant criteria will include nine safety performance criteria from which States can choose their program to qualify for incentives. Eligibility criteria will be established by the Secretary.

- The nine criteria for the Section 406 incentive are aimed at the following areas: 1) alcohol/drunk driving, 2) safety belt use, 3) fatality rate reduction, 4)pedestrian/bicycle safety, 5) heavy truck safety, 6) motorcycle safety, 7) emergency medical services, 8) public information and education, and 9) crash data collection and analysis.

- In FYs 1992-1996, a State will qualify for a bonus grant by meeting the first three criteria. For FYs 1993-1996 each State's bonus will increase in relationship to number of criteria met. Federal share for the bonus grants will be 60 percent.

10

- Distribution of the annual incentive grants to qualifying States will be based on the same formula as the Urban/Rural Program (i.e., relative share of contributions to the Highway Trust Fund) and the number of criteria met. Compliance with alcohol criterion will result in more bonus funds than compliance with any other criterion.

**RESEARCH AND TECHNOLOGY**

- Purpose - To expand activities in cooperation with the private sector to advance U.S. technology leadership to support a productive, safe, 21st century highway system.

- The program will continue to be funded through General Operating Expenses and will focus on the following major areas:

  - Highway Research and Development - to focus on research in the areas of highway safety, pavements and structures, right-of-way and environment, and policy development, and planning. (Motor Carrier Productivity Research and Motor Carrier R&D will be funded through a separate Trust Fund appropriation under Motor Carrier Safety.)

  - Intelligent Vehicle-Highway Systems - to increase safety and mobility through a program to develop and deploy advanced technologies in the U.S. highway system and vehicle. Includes Research and Development and Operational Tests in the following: Advanced Traffic Management Systems, Advanced Traveler Information Systems, Commercial Vehicle Operations, and Advanced Vehicle Control Systems.

  - A cooperative alliance of Federal, State, local governments, private sector, and academia will participate in the Intelligent Vehicle-Highway System Program.

  - Long-Term Pavement Performance - to continue the program initiated under the Strategic Highway Research Program (SHRP). The program will support State highway agencies and Canadian plans to establish a pavement performance data base for North America.

  - Technology Assessment and Deployment activities will continue to provide technical assistance and training at the State, local and international levels; will identify transportation technology needs; will develop products to meet those needs; and will facilitate use of the products both nationally and internationally.

- Establish and maintain a national, federally funded, research and technology coordination and communication mechanism among transportation organizations.

- Local training and technical assistance will continue to be provided to rural areas (currently provided through the Rural Transportation Assistance Program) and will be expanded to provide improved access to highway technology for urban transportation agencies.

- Continue the Centers for Excellence as established under the University Transportation Centers, with the addition of three centers beginning in 1992.

- National Highway Institute is continued with minor modifications.

**MOTOR CARRIERS**

o The Motor Carrier Safety Assistance Program is continued with modifications in eligible activities to include weight enforcement and drug initiatives.

o In order to reduce the paperwork burden on Interstate motor carriers and enhance their productivity, States will be required to adopt uniform commercial motor vehicle registration and fuel tax reporting standards. A single base State collection and proportional sharing of revenue will be required. States' authority to require interstate carriers to register their economic operating authority will be preempted.

o States' authority over interstate or intrastate rates, routes, or services of any interstate motor carriers will be preempted. FHWA will enforce preemption through injunctive relief.

o An information system to serve as a clearinghouse and depository of information pertaining to the collection of commercial vehicle registration fees and fuel taxes will be established.

**OTHER PROGRAMS/PROVISIONS**

o High Speed Ground Transportation (HSGT) Support - Multimodal intercity corridor studies are eligible for highway planning funds; highway right-of-way may be used without charge by private HSGT entities with State approval; and highway adjustments to accommodate high speed rail and maglev will be an eligible use of NHP funds subject to safety, operational, environmental, improvement flexibility, and other highway considerations.

- The Emergency Relief program is continued with minor modifications.

- The following Federal Lands Highway Program categories will be continued: Park Roads and Parkways, Forest Highways, and Indian Reservation Roads. The current Public Lands Highway category will be discontinued. Federal Lands funds will continue to be subject to an administrative takedown of up to 3 3/4 percent.

- Ten percent of the total of apportioned NHP, Urban/Rural Program, and Bridge funds must be used for projects that have safety benefits.

- There will be an increased emphasis in International Transportation to support international highway and transportation activities; to increase FHWA interaction with developed countries; and to expand training and technology transfer activities with developing countries in Latin America, Asia, Africa, and Eastern Europe. Funding will be made available through annual appropriations.

- Alternative project procedures, replacing current Certification Procedures, are available for projects on the NHS and bridges costing less than $1 million and meeting environmental categorical exclusion criteria. Alternative project procedures will be mandatory by the end of FY 1995 and the threshold may be increased if the Secretary deems appropriate. The qualifying projects may be developed and constructed by the State under a certification that they will be built in the same manner as other projects on the NHS.

- Statewide preliminary engineering projects are permitted if the State enters into an annual agreement with the Secretary.

- Innovative design, construction and management practices for Federal-aid highway projects will be allowed as an experimental program to be followed by a report to Congress.

- Scenic byways will be eligible for development and improvement with National Highway and Urban/Rural Program funds, if otherwise eligible under those programs. Also, a special set aside from the Urban/Rural program will be earmarked for scenic byway development in FYs 1992-1994. Federal Lands Highway funds will continue to be available for vehicular parking areas and scenic easements; scenic outlooks will now also be eligible.

- Davis-Bacon threshold is raised to $250,000.

- A limited operational congestion pricing test is allowed for severe clean air non-attainment areas subject to criteria to be established by the Secretary.

**PLANNING**

- Highway Planning and Research, currently funded by a 1 1/2 percent earmarking of apportioned funds, will be continued.

- In addition, the States may use an unlimited amount of NHP and Urban/Rural funds for planning and research activities including metropolitan planning.

- Metropolitan Planning (PL) will be funded by a one-half percent takedown of the NHP funds, the apportioned Bridge funds, and the Urban/Rural funds.

- Urbanized areas over 200,000 will be required to have a technical process similar to the current process with the following additions:

  - more emphasis on multimodal considerations including intermodal connectivity and cost effectiveness,

  - more emphasis on coordination with land use planning, including impacts of land use decisions on transportation needs and opportunities for transportation corridor preservation and also opportunities for innovative financing mechanisms such as value capture.

  - more emphasis on consideration of transportation related air quality problems,

  - priority on congestion management before major capital investment,

  - development of areawide multimodal congestion management system in coordination with the process for the development of any required transportation elements of the State Implementation Planning (SIP), and

  - cooperation with the State in the development of pavement management, bridge management, and safety management systems.

- All urbanized areas will be required to have a Metropolitan Planning Organization (MPO) and produce a Transportation Improvement Program (TIP) approved by the MPO that includes the projects to be funded under the NHP, Urban/Rural Program, and the Bridge Program. In areas over 200,000, the TIP must be developed through the required technical process.

- In urbanized areas of less than 200,000 the State and MPO will decide on the extent of the technical process. However, as a minimum they must develop a TIP, assure that air quality problems in non-attainment areas are addressed and assure that the TIP conforms to the SIP.

- PL funds will be distributed to the States on the basis of urbanized area population, as they currently are. States will distribute them to the MPOs by a formula approved by FHWA that considers population and provides an appropriate distribution of funds to all urbanized areas.

- Federal share is 75 percent.

## GENERAL PROVISIONS

Eliminate/Repeal

- Programs
  - Urban Program
  - Secondary Program
  - Primary Program
  - Hazard Elimination
  - Rail-Highway Crossings
  - Strategic Highway Research Program (SHRP)
  - Optional Highway Planning and Research (PR)
  - Economic Growth Center Highways
  - Traffic Operations Improvements
  - Access Highways . . . on Certain Lakes
  - Minimum Allocation
  - Great River Road
  - Priority Primary Routes
  - Public Lands Highways

- Systems
  - Federal-Aid Urban
  - Federal-Aid Secondary
  - Federal-Aid Primary

- Requirements
  - Speed limit monitoring. (The national maximum speed limit and provisions for State collection of speed-related data are retained, but sanctions for motorist non-compliance are repealed.)

## FUNDING PROVISIONS

- Extend the Highway Trust Fund through FY 1998. The new nickel fuel tax will not be continued beyond its current expiration date (9/30/95). Beginning in FY 1996 user fees will revert to levels in effect on November 30, 1990.

- Total authorizations for all programs administered by FHWA range from $15.9 billion in FY 1992 to $20.3 billion in FY 1996.

- An obligation limitation for each of the five years of the bill is placed on the Federal-aid highway program. The limitation ranges from $15.7 billion in FY 1992 to $20 billion in FY 1996. Obligations of previously allocated minimum allocation funds, emergency relief, and special disaster assistance funds are exempt from any obligation limitation.

- Programs with unobligated balances remaining on September 30, 1991, will be continued in parallel with the new programs until their periods of availability expire. This will be FY 1994 for most of the categories. States will be provided the option of transferring unobligated balances to new program categories. If transferred, funds become subject to the rules and requirements of the new program.

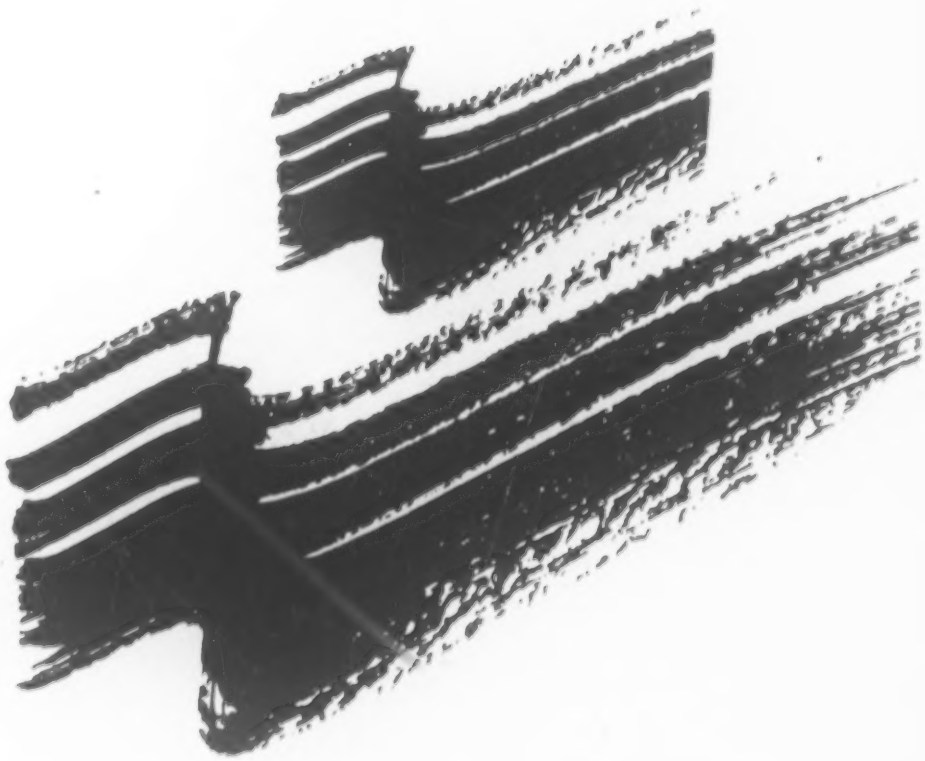
- A Highway Tax Compliance Project is funded as a separate authorization for FYs 1993-1996 to boost the IRS's and States' capabilities to place greater emphasis on fuel tax enforcement efforts in order to reduce the highway revenue losses from fuel tax evasion.

- Temporary Matching Waiver - States will be permitted to waive the State match on apportioned funds (NHP, Bridge and Urban/Rural) under Title 23 for FYs 1992-1993. The limit on the amount obligated under this provision is 25 percent in each of FYs 1992-1993 of the funds apportioned for FY 1992. States must repay the waived amount by March 31, 1994, or their FY 1995 and FY 1996 apportionments will be reduced by the waived amount.

U.S. Department of Transportation
Office of the Secretary of Transportation

# FY 1992 Budget in Brief

February 1991



# DEPARTMENT OF TRANSPORTATION

## HIGHLIGHTS OF FY 1992 BUDGET

Just as the Model T and the Kitty Hawk prepared the way for today's millions of cars and thousands of passenger jets, so it is now our turn to invest in America's future, to begin to create the transportation system of the 21st. century.

President George Bush
March 8, 1990

In the next decade, economic challenges will continue to put transportation to the test. Now, with the National Transportation Policy, we have a blueprint for action. We must keep working together to ensure that we have a sound, efficient intermodal transportation system to meet those challenges, in the 1990's and beyond.

Samuel K. Skinner
Secretary of Transportation
February 1991

* * * * * * * * * * *

In support of the Administration's National Transportation Policy (NTP), the Department of Transportation's FY 1992 budget request totals $33.55 billion in appropriations and obligation limitations.

This request is 24.8 percent above the FY 1991 President's Budget and 6.3 percent above the FY 1991 enacted level. Our National Transportation Policy (NTP) helped us identify and articulate the infrastructure and safety needs facing this country. The growth reflected in this budget supports critical initiatives important to this Department and to the goals of this

Administration: support for the President's aviation programs reflected in the recently enacted legislation; investment in surface transportation infrastructure as the centerpiece of the Administration's proposal for reauthorization of surface transportation programs; maintenance of a strong and effective Coast Guard; continuing support for safety programs; investment in research and development across the Department; and support to assure a quality DOT workforce.

The staffing request totals 109,904 Full Time Equivalents (FTE), a 3.6 percent increase over FY 1991. This staffing increase is necessary to meet our safety and security responsibilities and to implement new legislation. The staffing increase includes additional safety inspectors, air traffic controllers, and security personnel.

Major themes of the budget which reflect the principles of the NTP follow:

o Maintain and Expand the Nation's Transportation System

Nearly $24 billion, or 71 percent of the Department's budget, is for programs directly supporting capital investments in highway, transit, rail, and aviation infrastructure. Such investments are needed to maintain current conditions as well as to expand capacity and the Department's proposal is 8.1% above the FY 1991 enacted level. This includes $19.3 billion for surface transportation investments — a 6 percent increase over FY 1991 enacted levels. Moreover, our five-year reauthorization proposal for surface transportation will propose capital investments totalling $102 billion.

- **Foster a Sound Financial Base for Transportation**

Given the transportation needs and the deficit reduction requirements facing this country, it is imperative that the Department foster sound, viable financing to ensure long term investment without conflicting with deficit reduction goals. Hence, the budget continues to rely heavily on user fees rather than general funds to finance transportation programs; 80 percent of our budget would be financed from user fees in FY 1992 versus 72 percent in FY 1991. In addition, the Department continues to pursue funding mechanisms for ensuring that federal transportation investments promote as much non-federal investment as possible. The Administration's proposal for passenger facility charges at airports, which Congress enacted in 1990, will be implemented. Our surface transportation reauthorization proposal will encourage innovative financing mechanisms.

- **Ensure that the Transportation System Supports Public Safety and National Security**

The budget includes $1.8 billion for direct, operational safety programs, a 14 percent increase over FY 1991, needed to carry out the Department's responsibilities to ensure a safe transportation system and the safety of the travelling public, particularly on our highways where nine out of ten transportation casualties occur. This amount includes funds for inspections, search and rescue, safety grants to States and transportation security. The budget also continues efforts to ensure that transportation services are drug-free and supports the Nation's overall drug

interdiction strategy and proposes $751 million, essentially the same as FY 1991, to maintain these efforts. To support this country's national security, we are requesting $630 million or 1.9 percent of the Department's budget to support the Coast Guard's responsibilities for military readiness as well as the Ready Reserve Force and the National Defense Reserve Fleet in MARAD. Both the Coast Guard and the Ready Reserve Force have been actively supporting Operation Desert Storm.

- o Protect the Environment and the Quality of Life

The budget includes $614 million for environmental activities. This includes funds to clean up DOT facilities and to ensure environmental compliance as well as funds to carry out new legislative requirements pursuant to the Oil Pollution Act, the Hazardous Materials Transportation Uniform Safety Act, the Sanitary Food Transportation Act and the Clean Air Act. This amount does not include funds for mitigation of environmental impacts or environmental enhancement of federally funded transportation projects. These are eligible expenses and costs are included in the total for programs supporting capital investments. All of these laws increase our regulatory requirements as well as prevention and enforcement responsibilities.

- o Advance U.S. Transportation Technology and Expertise

The budget includes $435 million for research and development, overall a seven percent increase over FY 1991. Through this investment, the Department will act as a catalyst to promote technological advances to

improve the productivity and safety of transportation services. In particular, significant growth is proposed in the areas of maglev and high speed rail and intelligent vehicle highway systems.

This budget also provides for management improvements. Significant investments are proposed in information systems improvements, financial management, procurement system controls, and training. These investments will contribute to the productivity of DOT staff.

Across the Department, funds are requested to enhance the Department as a workplace and to improve the quality of life of its employees, by addressing workplace facilities, housing, and child care needs. In this way, the Department seeks to retain and attract talented career civil servants. All of these areas are key to the long term effectiveness of this Department.

## FEDERAL HIGHWAY ADMINISTRATION

The FY 1992 program, including exempt obligations, for the Federal Highway Administration (FHWA) is $16.5 billion. Excluding demonstration projects, this represents a $630 million (four percent) increase over the FY 1991 enacted level. The budget is based on the Administration's comprehensive legislative proposal to reauthorize the surface transportation programs for FY 1992-96.

The legislative proposal seeks to reorient the Federal Highway Program. It will reshape the Federal program for the post-Interstate era by restructuring current multiple categorical grants into a few major Federal interest areas:

- **National Highway Program** would focus investment on maintaining and improving an identified national highway system serving interstate and interregional travel. The new system will incorporate the Interstate System but will also reflect major demographic and travel changes that have occurred since Interstate routes were designated.

- **Urban/Rural Program** would replace several existing categorical programs including the secondary and urban programs and that part of the primary program covering minor arterials. It would allow custom tailored solutions to regional and local transportation problems through a flexible multimodal approach.

**Highlights of the FHWA budget include:**

- For Federal-Aid Highways, an obligation limitation of $15.722 billion is proposed for FY 1992. With obligations exempt from the limitation assumed at $100 million for Emergency Relief and $450 million associated with prior year Minimum Allocation authority, obligations would total $16.272 billion. By FY 1996, the obligation limitation would increase 27 percent to $20.0 billion.

- For Motor Carrier Safety Grants, an obligation limitation of $60 million is proposed. This program would increase to $80 million in FY 1993 and then to $100 million in FY 1994.

- For the Motor Carrier Safety program, the request totals $49.3 million, a 23 percent increase over FY 1991. The budget supports an increase of 43 positions and 39 FTEs necessary to implement the Hazardous Materials Transportation Uniform Safety Act of 1990, the Motor Carrier Safety Act of 1990, and the Sanitary Food Transportation Act of 1990.

- Highway-Related Safety Grants are funded at $35 million, 250 percent above the FY 1991 level. The increased funding will contribute to a safety bonus program, a new effort jointly administered by FHWA and NHTSA to reduce fatalities and accident severity by focussing on driver performance.

- The University Transportation Centers program is funded at $7 million. This program, together with funding from the UMTA budget, now funds

transportation research at ten university centers, one per region. The budget proposes to increase the program to 13 university centers, thus diversifying the program, and providing for special attention to safety issues.

- A limitation of $352 million on General Operating Expenses (GOE) is requested for FY 1992, an increase of $95.6 million (37 percent) above the FY 1991 level. More than half of this increase ($54.6 million) reflects enhanced funding for our Research and Technology program. The budget includes 88 new positions and 44 FTEs to manage the expanded research and Federal-aid programs proposed for FY 1992-96. Other areas of growth include increased funding for Minority Business Enterprise, Highway Use Tax Evasion, and International Transportation programs such as technology exchange and technical committees and seminars.

- Funds for Highway Safety Research and Development would be merged with the Highway Research and Technology initiative in the General Operating Expenses account. The combined program would be $104 million, a 111 percent increase over FY 1991. Among the areas that will be addressed are: traffic gridlock on urban freeways, including computerized traveler information systems both in the vehicle and on the roadside; and the application of artificial intelligence to traffic congestion problems. These efforts are intended to enhance safety design in the future and to help improve on-the-road efficiency through better technology.

## NATIONAL HIGHWAY TRAFFIC SAFETY ADMINISTRATION

For the National Highway Traffic Safety Administration (NHTSA), the FY 1992 budget requests a funding level of $292.2 million in appropriations and obligation limitations, a $43.8 million (17.7 percent) increase over the FY 1991 level. These funds will support efforts to continue the decline in the traffic death rate and meet the President's goals for improved traffic safety. The budget proposes to fund all of NHTSA's programs from the Highway Account of the Highway Trust Fund. Currently, 69 percent of the NHTSA budget is funded from the trust fund and 31 percent from general revenues.

Highlights of the NHTSA budget include:

- The $127.2 million request for Operations and Research includes funding to support vehicle and highway safety, and related research and analysis programs. Of particular significance are programs to train police in additional metropolitan areas to detect drivers impaired by alcohol and other drugs; programs to examine human factors associated with driver performance; and research into injury causation and occupant protection during crashes.

- The budget proposes $165 million to continue highway safety grants to States including $115 million for Section 402 formula grants. The reauthorization proposal for the highway safety program will include new safety bonus funds of $50 million in FY 1992 (plus $25 million in companion FHWA funding). The bonus funds will include $25 million for alcohol program incentives to encourage states to implement stronger alcohol safety programs.

## URBAN MASS TRANSPORTATION ADMINISTRATION

For FY 1992, $3.329 billion is requested for the Urban Mass Transportation Administration (UMTA). This is a $71 million increase over the enacted level for FY 1991. The budget is based on the Administration's comprehensive legislative proposal to reauthorize the surface transportation programs for FY 1992-96.

The budget and legislative proposals reflect key principles. The first is to provide reliable and stable funding for mass transit needs, through greater dependence on trust fund financing and formula allocations. In FY 1992, the entire UMTA program except $80 million for Washington Metro will be funded from the Mass Transit Account of the Highway Trust Fund, compared to 43 percent in FY 1991. In addition, 80 percent of the FY 1992 funding will be allocated using statutory formulas compared to 58 percent in FY 1991. State and local decision makers will therefore have a more predictable and stable Federal funding stream upon which to base investment decisions. Grantees will have enhanced flexibility with which to develop the most cost effective local transportation systems. Funds for bus and rail projects will not be earmarked and centralized "discretionary" funding will be reduced.

**Highlights of the UMTA budget include:**

- o $2.60 billion for Formula capital and operating grants. This represents a 3.6 percent increase over FY 1991, adjusted for programs previously funded under Discretionary Grants (e.g., Rail Modernization, extraordinary Bus needs, and Elderly and Handicapped) that are now proposed to be funded within Formula Grants.

The Formula program includes:

-- $2.2 billion for Formula capital assistance to transit agencies serving areas over 50,000 population. This is a $1.3 billion increase (133 percent) in formula capital funding over FY 1991. This level is achieved by redirecting $.8 billion of Discretionary capital funding to Formula capital, and by redirecting $.5 billion of Formula operating grants to Formula capital. Reducing operating subsidies and increasing capital expenditures is a priority of this Administration's National Transportation Policy.

-- $.2 billion of operating assistance and $.1 billion for materials and supplies will be provided to cities under one million population. Cities over one million will not be eligible for operating assistance beginning in FY 1992. In those areas, formula grants will be redirected strictly to capital investment.

-- $45 million for Elderly and Handicapped Grants, a $10 million increase over prior years.

-- $89 million for Non-Urban areas, a $24 million increase from prior year levels of about $65 million.

o $350 million for Discretionary Grants: $300 million dedicated to New Starts, including $212 million to complete funding for those projects currently under Full Funding Agreements with the Department and

$88 million for new projects that meet cost-effectiveness criteria. The Discretionary Grant program also includes $50 million to fund particular needs not addressed through the formula program.

- $160 million for Interstate Transfer Grants--Transit: the same level as the FY 1991 enacted budget. This program will likely be completed in FY 1993, given the estimated cost to complete of $321 million remaining at the end of FY 1991.

- $93 million for a new program entitled "Transportation Planning and Research." This program combines several separate programs: Research, Training and Human Resources; the state and local planning program; and the Rural Transit Assistance program and adds a new cooperative research program oriented toward solving specific local transit problems. Funding for research and planning programs increases 60 percent from the $58 million provided in FY 1991.

- $80 million for Washington Metro, which will complete all funding requirements for the existing 89.5-mile system and begin funding an additional 13.5 miles as authorized under the "National Capital Transportation Amendments Act of 1990."

- $6 million for University Transportation Centers, a $1 million increase over FY 1991. This funding together with funds requested in the FHWA budget will support three additional centers for a total program of 13 centers.

o $40 million for Administrative Expenses, including 31 additional FTE to improve grant oversight.

## FEDERAL RAILROAD ADMINISTRATION

For the Federal Railroad Administration (FRA), appropriations of $566 million are requested, a decrease of $339 million from the FY 1991 enacted level. Support for the safety and research and development functions of FRA, however, are proposed to increase in total by 19 percent over FY 1991. For the first time since FY 1985, the President's Budget requests funds for Amtrak.

**Highlights of the FRA budget include:**

o $41 million for Railroad Safety, an increase of $7 million over FY 1991. The budget request funds an additional 67 positions (43 FTE) to strengthen inspection coverage and to implement new regulations mandated by the Hazardous Materials Transportation Uniform Safety Act of 1990, the Sanitary Food Transportation Act of 1990 and the Rail Safety Improvement Act of 1988.

o $26 million for Railroad Research and Development, an increase of $4 million over FY 1991. The additional funding provides $15.5 million to conduct safety, economic, and other technical studies to assess the viability of high speed rail and magnetic levitation (maglev) systems.

45-155 O—91——13

- $18 million for the Office of the Administrator, an increase of $3.8 million over FY 1991, excluding Local Rail Freight Assistance which the budget does not propose to fund in FY 1992. Included in this request is $1.8 million for Alaska Railroad Environmental Cleanup and Workers' Compensation payments for which the Federal Government, as the prior employer, has a continuing responsibility.

- $480 million is requested for Amtrak. The budget, together with companion legislation, envisions an aggressive strategy of legislative reform and management actions to reduce operating costs, increase revenues, and provide more capital investment to increase productivity. The budget includes $180 million for operating subsidy, $150 million for mandatory payments and $150 million for capital, which Amtrak needs to make its services more cost-effective.

- Railroad user fees, estimated to raise $41 million in FY 1992, are included to help offset the cost of railroad safety activities, including inspections.

## FEDERAL AVIATION ADMINISTRATION

For FY 1992, a funding level of $9.3 billion (including the Airport Grant obligation limitation) is proposed for the Federal Aviation Administration (FAA). This is $1.1 billion (14 percent) above the FY 1991 enacted level. Consistent with the FAA reauthorization, 75 percent of FAA's request is financed from the Airport and Airway Trust Fund. In prior years, the share of the FAA budget funded from the trust fund averaged 55 percent (FY 1985-90).

The FY 1992 budget provides for the continued safe, reliable, and efficient operation of the National Airspace System (NAS), including financing of the multi-year program to modernize and improve air traffic control and airway system facilities.

**Highlights of the FAA budget include:**

- $4.457 billion for Operations, an increase of $420 million (10 percent) over the FY 1991 enacted level. These funds will support the operation and maintenance of the Nation's air traffic control and navigation systems, provide for aviation safety and security inspections, and establish and enforce civil air regulations. The FY 1992 program provides for the addition of 450 air traffic controllers for a total of 17,945 controllers, 100 new aviation inspectors, and 178 new civilian aviation security personnel. For FY 1992, almost half of the Operations appropriation will be financed from the Trust Fund.

- $2.7 billion for Facilities and Equipment, an increase of $605 million (29 percent) over FY 1991. The FY 1992 budget continues implementation of the multi-year National Airspace System Plan to update obsolescent labor-intensive facilities with new solid-state equipment, and to provide new facilities with modern equipment capable of handling the volumes of air traffic predicted for the 1990s and beyond. Major systems proposed for funding in FY 1992 include: the Advanced Automation System, Voice Switching and Control System, Long Range Radars, Automated Weather Observing Systems and facilities in support of major hub airport capacity expansion.

- $210 million for Research, Engineering and Development, a two percent increase, including research on airport capacity improvements, aviation security, and aging aircraft. Work will continue to modernize communications systems and systems for the acquisition, processing, dissemination, and display of weather information tailored to the needs of aviation users.

- $1.9 billion obligation limitation for airport improvement grants, a six percent increase over the FY 1991 enacted level to address capacity needs. Airport capacity funding will be further augmented by implementation of the new authority to levy passenger facility charges (PFC). Airports could generate an estimated $1 billion or more annually in local revenue, depending on the number and size of airports that opt to levy a PFC and the level of PFC charged.

## UNITED STATES COAST GUARD

For FY 1992, the budget requests a funding level of $3.627 billion. This is a $284 million (8 percent) increase over the enacted FY 1991 level. The budget continues to emphasize funding for marine environmental and law enforcement efforts, while maintaining the Coast Guard's traditional strong roles of protecting and saving lives at sea, and serving in the Nation's defense. The budget also includes a renewed emphasis toward improving the quality of working and living conditions for Coast Guard personnel.

**Highlights of the Coast Guard budget include:**

- $2.54 billion for Operating Expenses to operate and maintain a wide range of multimission vessels, aircraft, shore units and aids-to-navigation, including facilities acquired through capital investments in previous years. The total includes $35 million proposed to be funded from motor fuel taxes deposited in the Boat Safety Account and $31 million from the Oil Spill Liability Trust Fund.

- $423 million to fund capital improvements, including vessel and aircraft acquisition, replacement, and rehabilitation; information management resources; and construction and renovation programs at selected shore facilities, including $26.8 million from the Oil Spill Liability Trust Fund. In FY 1992, renovation of the twelfth and final 378-foot cutter will complete the Fleet Renovation and Modernization process, the multi-year modernization and renovation of Coast Guard's largest and most capable class of multi-mission cutters. Funding is requested for the first

replacement seagoing buoy tender and for the design work leading to the replacement of the buoy tender fleet. Replacement of obsolescent helicopters currently being used in the Caribbean to thwart illegal drug activities will continue and a major effort will be directed at extending the availability of decent, affordable housing to eligible Coast Guard military members and their dependents.

- $25.1 million to carry out the Coast Guard's responsibilities for environmental compliance and restoration (up from $21.5 million in FY 1991) associated with environmental problems resulting from the construction and operation of former and current Coast Guard facilities. The budget includes funds for work at four major sites and numerous smaller locations.

- $10.2 million for Alteration of Bridges, to continue alteration of the CSX Railroad bridge in Pascagoula, Mississippi, and the Burlington Northern Railroad bridge at Burlington, Iowa and to conduct preliminary engineering design work at other sites.

- $77.3 million for Reserve Training to fund and train a selected reserve strength of 12,000 members. The budget maintains the FY 1991 funded level of reservists.

- $28.8 million for Research, Development, Test and Evaluation, a 15 percent increase over FY 1991, to fund the development of hardware, procedures, and systems that directly contribute to increasing the productivity of Coast Guard operating and regulatory programs.

- $35 million for Boat Safety Grants, the full authorized level, to provide financial assistance to States for the development and implementation of a coordinated National Boating Safety Program.

- $487.7 million to fund retired pay, annuities, and medical care for military retired personnel and former Lighthouse Service members, their dependents and survivors.

- $50 million available without further appropriation from the Oil Spill Liability Trust Fund pursuant to the Oil Pollution Act of 1990 (Section 6002) to finance the cleanup and initial damage assessment of oil spills.

The budget assumes the collection of $153 million in user fees for selected Coast Guard services, consistent with the Omnibus Budget Reconciliation Act of 1990.

## MARITIME ADMINISTRATION

For the Maritime Administration (MARAD), appropriations of $298 million are requested for FY 1992.

**Highlights of the MARAD budget include:**

- $225 million for the Ready Reserve Force, equal to the FY 1991 enacted level. With this level of funding, MARAD will make further progress toward meeting the Department of Defense requirement of attaining a 142-ship RRF

fleet by 1994. Growth of the RRF fleet is needed to provide basic logistic support to our deployed forces during the initial surge period of an armed conflict. Currently 69 RRF ships have been activated in support of Operation Desert Shield/Desert Storm.

- o $73 million for Operations and Training for continued support of the U.S. Merchant Marine Academy and support of State maritime schools, management of maritime promotional programs, operation and maintenance of the National Defense Reserve Fleet (exclusive of the RRF), and for a Research, Technology and Analysis program.

- o No appropriation for budget authority is required under current law for Operating Differential Subsidies, because existing subsidies are covered by prior years' contract authority. An appropriation to liquidate contract authority of $272 million in FY 1992 is requested

- o No new commitments for Title XI Federal Ship Financing loan guarantees for ship construction are projected for FY 1992.

## SAINT LAWRENCE SEAWAY DEVELOPMENT CORPORATION

For FY 1992, $10.8 million is requested to be appropriated from the Harbor Maintenance Trust Fund to the Corporation. These funds, together with non-toll revenues estimated at $1.6 million, will finance the operation and maintenance of the United States portion of the St. Lawrence Seaway.

## OFFICE OF THE INSPECTOR GENERAL

The budget for the Office of the Inspector General (OIG) requests $38.7 million to support audit and investigative activities. Twenty-four new positions are requested, including 19 auditor positions to meet the provisions of the Chief Financial Officers Act of 1990, which requires audited financial statements of the Department's trust funds, revolving funds, and to the extent practicable, commercial type activities. The request also includes: $600 thousand for contracting for selected audits of financial statements to be performed by public accounting firms; $400 thousand for implementing provisions of the Federal Law Enforcement Pay Reform Act of 1990 (P.L. 100-509); and an increase of $753 thousand for audits performed by the Defense Contract Audit Agency.

## RESEARCH AND SPECIAL PROGRAMS ADMINISTRATION

The FY 1992 request of $37.9 million for the Research and Special Programs Administration represents a 41 percent increase over the FY 1991 enacted level, consistent with a more aggressive enforcement of pipeline safety and hazardous materials transportation activity. Highlights include: $3.6 million and 23 positions to implement new hazardous materials and sanitary foods transportation laws; $1.4 million and 18 positions to administer the University Research and Airline Tariff Filing programs previously located in the Office of the Secretary; $7 million for grants to States for Natural Gas and Hazardous Liquid Pipeline Safety Programs, a 35 percent increase over

FY 1991; and 75 FTE added to the Volpe National Transportation Systems Center to maintain a core technical and management capability to respond to the Department of Transportation's and other government agencies' research requirements.

## OFFICE OF THE SECRETARY

Appropriations and obligation limitations totalling $198.1 million are requested for the Office of the Secretary in FY 1992.

**Highlights of the OST budget include:**

- $38.6 million (obligation limitation) for Payments to Air Carriers, consistent with the authorization level for this program in FY 1992.

- $4.8 million for the Office of Commercial Space Transportation, and 25 FTEs to support safety and regulatory responsibilities. A staff increase of 4 positions, and 2 FTE is proposed for the licensing program in support of new launch vehicle concepts, new launch facilities and the increase in expected launches and licenses. The budget also assumes $300 thousand collected in user fees will support the licensing program.

- $81.5 million for Salaries and Expenses, to support 710 FTE, of which $12.2 million will fund development of certain Departmentwide systems, especially DAFIS, the Department-wide accounting system.

- $69 million for Headquarters Facilities, to fund a portion of the cost (e.g., certain communication costs) of the new DOT headquarters building not financed by the General Services Administration.

- $4.2 million for Transportation Planning, Research and Development for intermodal studies to support the formulation of national transportation policies.

- $165.6 million (obligation limitation) for the Working Capital Fund to support departmentwide services.

## INTERSTATE COMMERCE COMMISSION

- The budget proposes $15.9 million, 216 FTE, to transfer certain rail activities of the Interstate Commerce Commission (ICC) to the Department, subject to the enactment of proposed ICC sunset legislation.

# AMERICAN ASSOCIATION OF STATE HIGHWAY AND TRANSPORTATION OFFICIALS

HAL RIVES, President
Commissioner
Georgia Department
of Transportation

FRANCIS B. FRANCOIS
Executive Director

STATEMENT BEFORE

THE SURFACE TRANSPORTATION SUBCOMMITTEE
OF THE
HOUSE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

Relating To

AUTHORIZATION OF THE POST-INTERSTATE SURFACE TRANSPORTATION PROGRAMS

By

HAL RIVES
President, American Association of State Highway
and Transportation Officials
and
Commissioner, Georgia Department of Transportation

March 19, 1991

Founded in 1914, AASHTO represents the departments concerned with transportation and highways in the fifty States, the District of Columbia and Puerto Rico, to foster the development, operation and maintenance of an integrated national transportation system. The active members of AASHTO are the duly constituted heads and other chief directing officials of the member transportation and highway agencies.

EXECUTIVE OFFICE: 444 N. Capitol St., NW, Suite 225, Washington D.C. 20001
Telephone (202) 624-5800 Telefax (202) 624-5806 Telex 4900009580 HTO

Mr. Chairman, I am Hal Rives, President of AASHTO, and Commissioner of the Georgia Department of Transportation. On behalf of the Association, we are pleased to respond to the Subcommittee's request for the Association to provide you with our views on surface transportation reauthorization legislation.

Let me begin, Mr. Chairman, by thanking you and the Subcommittee for conducting this hearing, and for your pledge to move rapidly forward with legislation reauthorizing the highway and transit programs. You are fully aware that the 1987 STURAA expires on September 30 of this year, and we share your concern that new reauthorization legislation be enacted before that date.

The surface transportation bill we all hope will be enacted by this 102nd Congress is important to the future of America, as you and other members of Congress and President Bush have all stated. It is important because we know that transportation is key to our economy, and that if America hopes to compete effectively in the world economy of the 1990s and beyond we must improve the efficiency of our transportation system. Transportation is also important because it is vital to the life style of Americans.

The kind of transportation system we plan now will make or break this nation's economy into the 21st century, and will directly affect the daily lives of all Americans. We have choices to make. We can continue to live with congestion, let transit limp along, lose time and money traveling on decaying highways, and watch as our competitive position in the world economy declines. Or we can act to think anew about our transportation problems and how to solve them, and enact a surface transportation program that will keep the United States a world-class competitor and provide Americans with the mobility we know they are seeking.

Mr. Chairman, in this statement I want to do two things. The first is to review with you AASHTO's recommendations for highways and public transportation, highway safety, and transportation research. Then, I want to comment on the Administration's proposed Surface Transportation Act of 1991, which the Committee leadership has introduced as H.R. 1351, by request.

AASHTO's Recommendations

With respect to AASHTO's recommendations for the federal-aid highway and transit programs, they are contained in our 1989 report New Transportation Concepts for a New Century, and some policy resolutions adopted more recently. The report and the policy resolutions were all approved by more than our required two-thirds majority of our 52 member departments, and have previously been transmitted to the Subcommittee.

Turning first to the New Concepts report, copies of which have been provided to the Congress, we have prepared a Summary of AASHTO's Recommendations for Federal Surface Transportation Reauthorization Legislation based on the report, a copy of which is attached as Exhibit A. To further summarize and clarify our recommendations, we have also prepared a one-page summary, which is attached as Exhibit B.

Before discussing our highway and public transportation recommendations, I want to make clear that AASHTO believes all transportation modes are important and vital if we are to meet America's needs to move people, goods, and freight, and that we must begin to both think and act in a more intermodal manner. It is for this reason that our New Concepts report includes analysis and recommendations affecting all transportation modes. A special concern we have is to assure adequate linkages between the modes, so that they will function as a part of a national transportation system serving America.

It is not possible for any one transportation mode to meet our national transportation needs for people and freight. Instead, we need an interrelated network of air, rail, water and motor vehicle transportation services. The surface transportation reauthorization act will deal directly with only two modes, highways and public transportation. But it should also recognize the other modes, and include linkage processes among the modes.

In the New Concepts report, AASHTO has identified seven goals we believe surface transportation reauthorization legislation should address. They are:

- Preservation of the highway and public transportation systems we have already created, which alone will require substantial investments by all levels of government;
- Congestion relief for our choked urban and suburban areas, using a mix of highways and transit;
- Adequate funding based upon user and benefitter fees, with general funds as well as motor fuel tax funds continued for public transportation;
- A renewed national commitment to safety through research and new programs and applications;
- Access to all the regions of this nation through a balanced, coordinated system;
- Planning and research to develop new transportation technologies and apply them promptly; and
- Economic growth and vitality through improved productivity, reduced costs, and improved international competitiveness.

For America's highways, we must provide for system preservation, bridge needs, Interstate reconstruction, urban congestion relief, and in some instances new highway facilities and capacity improvements. AASHTO is also committed to completion of the remaining Interstate highway and Interstate substitution projects.

In transit, we must improve public transit services to address urban congestion, enable the reconstruction and maintenance of our facilities, and provide mobility for the non-driving public.

In both highways and public transportation, we need to address concerns about Clean Air and the environment, and energy supply and usage.

As described in the New Concepts report, and summarized in Exhibits A and B, the Association's principal program recommendations include:

Highways

AASHTO believes that the federal-aid highway program should be restructured to eliminate the many current categories, and to establish a two-component program designed for the America of the 1990s.

The first component is a Categorical Program focused on meeting national transportation goals, a System of Highways of National Significance that would include the Interstate system and additional mileage selected from our principal arterials. While the Association has not specified a specific mileage for this system, the New Concepts report provides a range of from 150,000 to 180,000 miles. I would recommend the higher level.

The second basic component is a Flexible State and Local Program, focused on specific national goals identified by Congress. The states would be charged with annually preparing a plan to meet those goals, and federal oversight would be maintained by approval of the annual plan and through annual progress reports. This Program will provide the flexibility needed to address the unique needs found in communities across the nation, while assuring that federal funds are spent to solve national issues identified by the Congress. Funds could be used on either highways or for public transit, as determined by the states and their local governments.

Moving to highway safety, in 1990 AASHTO adopted a report titled Highway Safety Strategic Plan, 1991-2000, a copy of which is also attached. That Plan called for an increase in federal funds for highway safety, and identified 19 specific safety strategies to be addressed in the areas of people, vehicles, highway environment, post accident, and safety management, arranged in ten major program areas. The Association believes that highway safety should be an eligible item for expenditure in both the Categorical Highway Program and the Flexible State and Local Highway Program, centered around the ten major areas.

With respect to funding, AASHTO recommends a federal-aid highway program funding level of $17.6 billion in FY 1992, increasing in increments to $25.9 billion in FY 1995. The funds would be divided evenly between the two components, with the possibility for transferring up to 20 percent from one program to the other. Overall, the Association recommends an 85 percent federal, 15 percent state/local match in the federal-aid highway program.

Transit

AASHTO supports the current basic structure of the federal transit program, with the Discretionary Program being considered as a Categorical Program and the Formula Program as a Flexible Program. The Association also supports the current funds distribution process, except that for funding beyond the current $1.1 billion in the Discretionary Program a formula distribution

would be employed, holding currently funded programs harmless. The new formula should distribute 50 percent of the new funding by the Section 9 formula, and 50 percent by total population.

The Association also supports continued operating assistance, including areas over 1 million in population, and the current matching ratios. AASHTO also strongly supports continuation of general fund support for the federal transit program.

With regard to the federal funding level, the Association recommends a capital funding level of $3.5 billion for FY 1992, increasing to $5.0 billion in FY 1995, accompanied by a continuation of operating assistance at the current level of about $800 million annually.

The Administration's Proposal

Let me now turn to H.R. 1351, the Administration's proposed Surface Transportation Act. At the outset I want to make clear that AASHTO commends both Secretary Skinner and President Bush for their initiative in developing and sending this bill to the Congress. We believe it does, and should, establish the framework for reauthorization.

We take issue with certain important elements of the Administration's bill, including specifics of the proposed National Highway System, the distribution of funds between the two components of the new highway program, the absence of a minimum allocation program to assure donor states a fair return on their contributions to the federal Highway Trust Fund. We also have concerns about the proposed transit program, including the proposed elimination of general fund support and operating assistance for urban areas of over 1 million in population. As to funding, we take issue with the overall proposed level of federal investment in both highways and transit, and with a transit program that is essentially flat over the five years of the bill, in current dollars. I will take up each of these concerns.

But first, let me state that we find many good things in the Administration's bill. We believe that the overall structure of the bill, including the re-write of Title 23, is good. We find many parallels between AASHTO's recommendations and what the Administration's bill proposes, as shown by the following side-by-side comparison:

| AASHTO Recommendation | H.R. 1351 Provision |
|---|---|
| Highways | |
| 2-component program - | 3-component program - |
| - Highway System of National Significance (HSNS) | - National Highway System |
| - Flexible State and Local Program | - Urban/Rural Program |
| - Bridges on each program | - Separate Bridge Program |

| AASHTO Recommendation (cont.) | H.R. 1351 Provision (cont.) |
|---|---|
| Discretionary fund for high cost bridges | Has provision |
| HSNS of 150,000-180,000 miles | NHS of 150,000 miles, with 15,000 in reserve |
| Flexible Program useable for roads or transit, at option of state and local governments | Has provision |
| Fund Interstate Completion and Interstate Substitution projects | Has provision |
| Apportionment formula not linked to miles on HSNS | Formula not linked to miles on NHS |
| Distribute Flexible Program funding pro rata based on contributions to federal Highway Trust Fund | Has provision, but with 1/2% minimum to all states |
| Strengthen highway research, provide for Long Term Pavement Performance component of SHRP, establish public/private IVHS research and development | Has provisions |
| Simplify administration of Flexible Program, using certification concept | Has provisions |
| Strengthen highway safety program | Has provisions |
| At least a 4-year bill | 5-year bill |
| Transit | |
| Categorical program for major needs and new systems, funded from Mass Transit Account | Has provisions |
| Establish a transit research program paralleling the federally-supported highway research program | Has provisions |

Mr. Chairman, there are many other provisions of H.R. 1351 that are significant, and in which AASHTO concurs. The Administration's bill, in our opinion, offers an excellent beginning point for reauthorization of the surface transportation programs.

Let me now turn to those areas of H.R. 1351 where AASHTO's recommendations are in disagreement with provisions of the bill, or where serious concerns have been expressed.

## Highway Program

### National Highway System

AASHTO is in agreement with the basic concept of the National Highway System, as contained in H.R. 1351. However, as work has gone on over the past year between the Federal Highway Administration and the states, there is some dissatisfaction with the 150,000 mile cap placed on the basic NHS in H.R. 1351.

It should be stated that AASHTO did not identify a specific mileage cap in the New Concepts report. Instead, a commentary discussion was included in the report describing how the HSNS should be identified, and which suggested a cap of between 150,000 and 180,000 miles. As work has proceeded since the leadership of the House Public Works and Transportation Committee requested the FHWA and AASHTO to cooperate in producing a preliminary designation of routes to constitute an illustrative HSNS or NHS, some states have found the 150,000 mile cap adequate. Others, including my state, believe that a higher cap is necessary, perhaps 200,000 miles. This 200,000 mile length for the HSNS or NHS was also supported by the National Governors' Association, in public statements.

Mr. Chairman, the Subcommittee is requested to look carefully at this issue, to be certain that all states are treated fairly.

### NHS and Urban/Rural Funding Split

There is concern within AASHTO about the proposal in H.R. 1351 to place some two-thirds of highway funding in the categorical National Highway System, and one-third in the Urban/Rural Program, with the possibility of transferring up to 15 percent of the NHS funding to the other program.

AASHTO examined this issue thoroughly in developing its recommendation for a 50-50 split between these two programs, with the capability to transfer up to 20 percent from one to the other. We believe this is a much better division of the funding, in that it will accommodate the specific highway situation in each state.

This issue is in part related to the size of the NHS, particularly at a limit of around 150,000 miles. It is a fact that the Interstate mileage varies significantly in the different states, as will factors likely to be utilized in the formula utilized to distribute NHS funding. In a state with limited miles on the NHS, compared to other states, but with significant fund allocations, there simply may be too much money allocated in that state to the NHS while the Urban/Rural program is under funded. When this situation occurs, as it would in Georgia, it will make it very difficult to stretch the thus limited Urban/Rural funds to handle both road and transit projects, even with the possible transfer of 15 percent of the NHS funding to the Urban/Rural program.

Looking at all factors involved, and there are others beyond those discussed, it was AASHTO's judgement that the only fair division of funding was 50-50 to the two components of the highway program. Even then it was recognized that in a given state conditions might demand a different division of the funds, which gave birth to our 20 percent transfer recommendation.

The argument might be raised that a 50-50 division of funding to the NHS will not assure adequate preservation of the Interstate System, or other NHS highways. We believe that the FHWA has ample authority to address such a situation.

Minimum Allocation Program

AASHTO's position is in support of a continued Minimum Allocation Program (MAP). Specifically, AASHTO believes "that minimum allocations should be developed for any program addressing needs on the national highway system," and recommends that "an 85 percent minimum allocation provision should be established and the existing 1/2 percent minimum apportionment retained for the Categorical Highway Program."

For the AASHTO Flexible Highway Program, which corresponds to the Urban/Rural Program in the Administration's proposal, AASHTO recommends 100 percent return of funds to the state on the basis of "pro rata shares based on percentage of total highway user contributions attributable to each state."

The Administration's bill contains no minimum allocation provision for the programs addressing needs on the national highway system, but does include the 1/2 percent minimum apportionment. We believe that in the interests of equity the bill should also contain an 85 percent minimum allocation provision.

It is the Administration's position that the distribution formulas they have included in H.R. 1351 will assure an 85 percent minimum return to all states, and that continuation of the MAP is therefore not necessary. Yet an examination of distribution tables released by the FHWA show that this argument is wrong.

Moreover, there are at least two situations which could easily change what is projected on the released FHWA tables. First, the factors utilized in whatever formula is adopted may well vary during the five years of the bill, which could move any state's return up or down significantly. Secondly, the bridge program allocations indicated on the table are only FHWA's best estimates at this time, and will ultimately depend upon the bridge funding formula approved by Congress and subsequent implementing regulations. The bridge funding allocations could vary significantly, depending on future events.

The Administration's goal of eliminating the need for Minimum Allocation Program is commendable. But the evidence is that they have not achieved this goal. AASHTO believes that there is still need for a Minimum Allocation Program in any proposal, to help assure equity to the donor states. If FHWA is correct and no need will arise to utilize the MAP, then no harm is done. But if FHWA is wrong, the MAP will be an insurance policy to assure equity.

We must reiterate that the AASHTO position is a 100 percent return on the Urban/Rural Program on a pro rata basis, and an 85 percent minimum return for programs addressing needs on the national highway system.

Hold Harmless

The opposite side of the equity issue coin from MAP is hold harmless. AASHTO's New Concepts recommendations call for assured hold harmless to all states, so that no state will receive less annually under the new program than the current highway program would provide in 1991, as if all states had completed their Interstate highway system. The Administration has tried to meet the hold harmless situation in H.R. 1351 through a combination of a one-half percent minimum allocation in both the National Highway Program and the Urban-Rural Program, and the use of a low density adjustment factor. The ultimate success of this approach depends to an extent on the funding level approved for the highway program by Congress, and Congressional acceptance of a low density adjustment. Mr. Chairman, the attention of the Subcommittee to this important equity issue is strongly urged.

Allocation Formula

The New Concepts report does not recommend a specific allocation formula for the National Highway Program. It does, however, include a general guideline, which reads as follows:

> "...the basic formula for distributing categorical highway funds should be driven by factors, such as lane miles, travel (VMT), and other appropriate factors."

Inherent in this statement is to separate the formula from direct reliance on the number of miles in the HSNS or NHS. Instead, the desire is to make the formula response to measures of need, which AASHTO believes include lane miles and travel on the system.

The formula advanced in H.R. 1351 relies mainly on fuel consumption, which of course is a surrogate for VMT. The formula also includes centerline miles, as opposed to lane miles. It also includes "other appropriate factors," as suggested by the New Concepts language cited above.

AASHTO has spent considerable time and effort examining different possible formulas, but there is no real consensus among the states. Traditionally, the Association has not recommended specific formulas, leaving this to the political process in Congress.

There are different formula concepts being advanced by individual states and groups of states, and the Subcommittee is urged to carefully examine each from the standpoints of equity, and responding to the needs of the highway system. So far we are not aware of any formulas which our member departments agree would provide reasonable equity in funds distribution for donor states. It appears, therefore, that the best available way to achieve this equity is through a Minimum Allocation Program, as discussed above.

Matching Ratios

It is the recommendation of AASHTO that overall the federal-state match in the highway program should be about 85 percent federal to 15 percent state and local, which is similar to the current average of about 83 percent federal to 17 percent state and local. As we understand it, H.R. 1351 would move in the other direction from the Association's recommendation, toward an overall match of about 72 percent federal, 28 percent state.

With regard to the categorical HSNS or NHS program and bridges, AASHTO recommends that the match should be around 85 percent federal, with up to 100 percent for extremely important projects like roadway preservation and bridge needs.

Under AASHTO's flexible program, which corresponds to the Urban/Rural Program of H.R. 1351, we believe that it should be up to the state, working with its local governments, to determine the specific match.

H.R. 1351 sets a 75 percent federal match for the NHP, with up to 90 percent for Interstate 3R projects. The Urban/Rural program has a lower federal match of 60 percent. This rigid arrangement will cause problems in the states as they work with local governments and transit agencies, and as funds are transferred from one program to the other. We believe the AASHTO approach of working from an overall match ratio, and we recommend 85-15, with the opportunity to adjust the Urban/Rural Program match to an appropriate level, is a better concept.

Transit

Elimination of Operating Assistance

AASHTO supports continued operating assistance to transit agencies, regardless of the size of the urban area. We believe that the Administration's proposal to eliminate operating assistance for areas of over 1 million population will simply force many transit systems to increase fares, which may in turn reduce ridership. This seems to contradict the federal initiatives in the Clean Air Act Amendments passed last year which require state and local areas to take actions to reduce pollution in non-attainment areas, in part by increasing transit ridership.

If fares are not raised, then it will be up to state and local governments to find additional subsidy funds. In many instances, a combination of the two sources of revenue would be needed. In other areas further funds may simply be unobtainable by either approach, which could cause significant service curtailments.

We believe that there is a federal interest in assuring the operation of transit in these large cities, and that the surface transportation reauthorization bill should support this position. Otherwise a curtailment of service is probable that will diminish in value the many billions of dollars of capital investment in our transit systems.

Reduced Federal Match

The Association supports the current federal match provisions in the public transportation program, and therefore opposes the reduced federal shares for transit included in the bill. Many state and local governments have been doing their share to increase funding to transit. We believe that the resources of most states and local governments for transit are already significantly stretched, in part because of the transfer of funding responsibility from the federal level that has occurred since 1981. It is not reasonable to expect these jurisdiction to double their matching share in order to receive federal transit funds.

Elimination of General Fund Support

The Association believes that general fund support should be continued for the transit program, at least at the current levels. We therefore cannot support the elimination of general fund support for transit, as proposed in H.R. 1351. The agreement reached in the establishment of the Mass Transit Account in 1982 was that general funds would be retained for operating purposes and certain other transit purposes, and that mass transit account funds would be used for capital projects. General funds are an integral part of the federal mass transit program and should be retained.

With respect to funding transit entirely out of the Mass Transit Account of the Highway Trust Fund, all indications are that this will be a diminishing resource, if efforts to increase the use of transit and reduce vehicle miles of travel and fuel use by automobiles are successful. Implementation of Clean Air legislation, with its emphasis on alternate fuels and less automobile usage, will serve to reduce the amount of revenue in the Mass Transit Account, as well as the Highway Account. For this reason alone, reason calls for continued general fund support for transit.

Funding Levels

Mr. Chairman, we are greatly concerned at the overall funding levels proposed for the highway and transit programs in the President's budget, and H.R. 1351. Simply put, the proposed funding levels for both programs means a further shifting of costs to state and local governments, and a further decline in federal support for a truly national program, transportation.

AASHTO is well aware of the fiscal constraints placed upon Congress by the five-year budget accord enacted last fall, especially for FY 1992 and FY 1993. But we believe that additional funds are needed for both highways and transit, above what is recommended by the Administration. And we believe, as others have testified, that at least some additional funding can be generated by use of the accumulated interest in the Highway Trust Fund and other creative actions.

Let me now briefly address funding levels for the two modes.

## Transit

Looking first at the proposed transit budget and funding in H.R. 1351, the Administration is proposing a transit program that is essentially flat for five years at $3.3 billion, which means that when inflation is taken into account buying power will decline substantially over this period.

After a significant amount of analysis examining future needs for all modes of transportation, which is detailed in our 1988 The Bottom Line report, copies of which have been sent to Congress, AASHTO has recommended that funding for transit be increased to $4.3 billion in FY 1992 and rise incrementally to $5.8 billion by FY 1995, including both capital and operating subsidies. This funding level is needed just to maintain existing transit service and provide a modest level of improvement. Anything less, in our judgement, can well cause declines in service, and a withering away of this vital national resource.

In 1990 Congress enacted Clean Air legislation that states it is a federal objective to reduce transportation-related air pollution in America, in part through increased transit services. The Administration's proposal sends the opposite signal from the federal government, that the promise of the Clean Air legislation was not truly meant.

## Highways

AASHTO's funding recommendations for the federal-aid highway program are also based on the findings of The Bottom Line report. Included in our assumptions are the need for a funding level of about $100 billion per annum in the highway program by all levels of government, if we hope to preserve our system, improve safety, at least partially relieve congestion, assure safe bridges, and increase efficiency of the system. This $100 billion compares to a current expenditure level of about $68 billion per annum, and should be shared by all levels of government.

We believe that the federal share our highway funding should climb back toward the 25 percent level of several years ago, or at least that it should not fall below the current 22 percent level of participation. The Administration's proposal could well reduce federal participation to 20 percent, or less, if fully implemented.

Mr. Chairman, AASHTO has proposed a federal funding level of $17.6 billion in FY 1992, climbing in increments to $25.9 billion in FY 1996, a level that would then be maintained, adjusted for inflation. When matched by state and local governments, this would approach the needed $100 billion annual funding level.

The Administration's bill moves upwardly toward the needed funding levels, at least in the last two years. But it falls short of what is needed. Mr. Chairman, we urge the Subcommittee to do everything possible to move upward toward the levels proposed by AASHTO.

Conclusion

Mr. Chairman and members of the Subcommittee, when our Policy Committee met in December it adopted policy resolution PR-9-1990, a copy of which is attached. That resolution contained six resolves directed toward the Congress and the Administration. The first resolve called upon the leaders of the Congress to make passage of a surface transportation reauthorization act a high priority for 1991, and this you have done. The fourth resolve requested the Administration to complete and transmit its proposed bill to Congress early in 1991, and this they have done. The stage is now clearly set for action.

The remaining four clauses of PR-9-1990 contain the essence of what AASHTO urges you to consider. Mr. Chairman, we hope that the Subcommittee will take our requests and our recommendations into account, and that we will have a new, landmark bill enacted well before October 1.

If there is any way in which I or AASHTO can be of assistance to the Subcommittee, please do not hesitate to let us know. I will be pleased to respond to any questions, either now or in writing later.

EXHIBIT A

# SUMMARY OF AASHTO'S

# RECOMMENDATIONS FOR

# FEDERAL SURFACE TRANSPORTATION REAUTHORIZATION LEGISLATION

Based on the AASHTO Report

"New Transportation Concepts For a New Century,"
Published December, 1989

March 19, 1991

## GOALS, OBJECTIVES AND FEDERAL ROLE PRINCIPLES

### Goals

The member departments of AASHTO have set out seven specific national goals the Association believes should guide surface transportation reauthorization legislation. They are:

1. Preservation

Preservation of America's existing surface transportation system should be the primary goal of any future national transportation program since it is this system which provides the basic network upon which this nation's economic health and international vitality depend.

2. Congestion Relief

A balanced approach to increasing capacity and reducing congestion on this nation's surface transportation system should be employed, including an appropriate mix of highways and transit, and a thoughtful application of systems management technologies and demand management techniques.

3. Adequate Funding

User and benefitter fees, set at an appropriate level to cover the economic cost of the surface transportation facilities and services provided, should be dedicated solely to the funding of transportation improvements. General fund commitments to public transportation should continue.

4. Safety

The safety of Americans, using the surface transportation facilities and services, should be preserved and enhanced through the continued national commitment to safety research, safety applications and safety projects.

5. Access and Balance

The national surface transportation system should be comprised of a balanced, integrated and coordinated multi-modal network of facilities and services which provide an adequate level of access to all of the various regions of this nation.

6. Planning and Research

This nation should continue to commit sufficient funding to transportation planning and research to ensure that established goals are met, that future options do not get precluded, and that new

technologies are developed and applied to transportation infrastructure in a timely manner.

7. Economic Vitality

The national surface transportation program should preserve and enhance the economic vitality of this nation by providing employment, reducing transport costs, improving freight movement productivity, revitalizing rural America, rejuvenating blighted urban areas, supporting existing land uses, attracting economic development, providing transportation for rapidly growing regions, and improving international competitiveness.

## Objectives

Given these seven, AASHTO believes that the following should be the objectives of the highway and public transportation components of the surface transportation reauthorization act:

### Highways

1. System Maintenance, including pavement preservation;

2. Bridge Needs, including maintenance, repair and replacement;

3. Interstate Reconstruction, including pavement rehabilitation and preservation of the existing system;

4. Urban Congestion should be addressed with improved freeway/expressway capacity where appropriate;

5. Principal Arterials se ing interstate and intrastate needs; and

6. Interstate Capacity should be increased by the addition of lanes in congested sections.

In addition, AASHTO strongly supports the prompt funding and completion of the remaining Interstate highway and Interstate substitution commitments.

### Public Transportation

1. Urban Congestion should be addressed with improved public transportation services where appropriate;

2. Reconstruction and Maintenance of facilities and vehicles should be provided to preserve existing service; and

3. Mobility should be provided for the non-driving public by public transportation services.

Modal Interlinks, Applicable to Both Highways and Public Transportation

1. Access by highway and public transportation modes should be improved to ports, terminals and other modal facilities; and

2. Planning should ensure that decisions to locate ports, terminals and other modal facilities include adequate consideration of existing and future surface transportation requirements.

Federal Role Principles

AASHTO believes that all levels of government, federal, state and local, as well as the private sector, have roles to play in meeting these goals and objectives. Turning specifically to the federal role, the Association believes that the following eleven principles should apply to surface transportation reauthorization legislation:

1. Issues of National Significance should be included in the federal focus on transportation;

2. Systems of National Significance should be included in the federal focus on transportation;

3. Preservation Needs on the existing surface transportation should be included in the federal focus;

4. National Economic Well-Being and economic growth should be included as part of the federal focus and role in transportation;

5. Planning should be emphasized in the federal role;

6 Safety should be emphasized in the federal role;

7. Major Capital Needs requiring massive expenditures for new construction or reconstruction should be part of the federal role;

8. Research should be emphasized in the federal role;

9. Interstate or Interregional Issues should receive at least a minimum response at the federal level;

10. Emergency Relief should be provided for at the federal level; and

11. Defense should be included in the federal role in providing surface transportation.

RECOMMENDED SURFACE TRANSPORTATION PROGRAM

Building upon the above-summarized goals, objectives and principles, which are more fully discussed in the New Concepts report, the Association makes the following recommendations with regard to the content of surface transportation reauthorization legislation:

4

## Funding Levels

### Premises

Based on AASHTO's findings as published in the September, 1988 AASHTO report titled "Keeping America Moving - The Bottom Line," copies of which have been filed with the Subcommittee, the Association believes that to deal effectively with highway and public transportation needs into the 21st century total annual spending by all levels of government, regardless of source, should rise to a level of over $100 billion for highways and about $16 billion for public transportation, in constant dollars, compared to today's investment level of about $68 billion for highways and $14.5 billion for public transportation. The Association also believe that the overall federal percentage share of the Federal-aid highway program should be at least the same as has been traditional, and that the federal share of the public transportation program should be increased over the levels of recent years.

## Federal-Aid Highway Program Funding

### Program Level

The Association recommends a federal-aid highway program funding level beginning at $17.6 billion in FY 1992, increasing to $19.6 billion in FY 1993, to $22.7 billion in FY 1994, and reaching what would be a continuing level of $25.9 billion in FY 1995.

Of a Federal-aid highway program beginning at approximately $18 billion in FY 1992 and increasing to approximately $26 billion in FY 1995, 50 percent should be allocated to the Categorical Highway Program and 50 percent to the Flexible State and Local Highway program; a state should be allowed to transfer up to 20 percent of its total highway apportionment either way between that state's Categorical Highway Program and Flexible State and Local Highway Program, without FHWA approval.

### Minimum Allocation and Hold Harmless

To help assure that all states receive equitable highway funding in a new surface transportation program, the Association recommends continuation of a minimum allocation program with respect to the donor states, and implementation of hold harmless provisions mainly for Western states that are large in land area and relatively sparsely populated.

Under AASHTO's recommendations, no state should receive less under a new surface transportation program than the current federal-aid highway program would provide in 1991 as if all states had completed their Interstate Highway Systems. An 85 percent minimum allocation provision should be established and the existing 1/2 percent minimum apportionment retained for the Categorical Highway Program.

In the event federal highway funding is increased above the 1991 levels, every state, including hold harmless states, should then receive an increase in its allocation. The percentage growth in highway allocation amounts for

hold harmless states should be at an equitable percentage growth rate.

Public Transportation Program Funding

With respect to public transportation, the Association recommends a federal capital funding level of $3.5 billion in FY 1992, rising annually to a level of about $5.0 billion by FY 1995, along with a continuation of operating assistance at the current level, which is approximately $800 million per year. Approximately $1.1 billion of these funds would be used for the Categorical Transit Program, and all other funds would be used for the Flexible State and Local Transit Program.

AASHTO'S HIGHWAY AND PUBLIC TRANSPORTATION PROGRAM RECOMMENDATIONS

In both the federal-aid highway and the public transportation programs the Association recommends a two-component program. The first is a categorical program focused on meeting clearly national requirements, and the second is a flexible state and local program which will enable the states and their local governments to tailor transportation solutions to their unique needs. Under the flexible state and local programs federal funds would be utilized only to address specific transportation issues as defined by the Congress and necessary federal oversight would be assured, but current procedures that hamper the effective use of federal funds would be eased. In the categorical programs the federal role would remain much as at present.

The New Concepts report describes AASHTO's highway and public transportation program recommendations in detail. The following summarizes the Association's recommended categorical and flexible programs for highways and public transportation, the numbers in parenthesis after each section indicating the page(s) of the New Concepts report containing the recommendation.

THE AASHTO CATEGORICAL HIGHWAY PROGRAM

I-Purpose: The purpose of the Categorical Highway Program is to provide a National Highway System to serve interstate commerce and national defense needs. The National Highway System, which in the New Concepts report is called the Highway System of National Significance (HSNS), would be larger than the present 44,629 miles of the Interstate system, but smaller than the 303,698 mile combined total of the Interstate system and the present federal-aid primary system. (3-11)(3-15)(C-2,3).

II-Procedure:

1. This program would be focussed on a Highway System of National Significance, or National Highway System, which would consist of the present Interstate system and a portion of the principal arterial system as redefined. The redefinition necessary would include a cooperative and rigorous effort between AASHTO and the Federal Highway Administration (FHWA) to develop consistent criteria to be used by states in

designating principal arterial system routes to be part of the National Highway System (3-15).

2. The formal establishment of the National Highway System should be completed as a cooperative effort between AASHTO and FHWA after adoption of federal authorization legislation. Consultation should occur with local governments and private sector users as the System is defined, and the FHWA would be given an appropriate mileage to assign in order to ensure system rationalization and route connectivity. The new National Highway System, or Highway System of National Significance, should result in a nationally consistent, state designated, federally approved system plan (3-15).

3. In defining the National Highway System, at least the following criteria should be considered in identifying existing routes and new corridors beyond the existing Interstate system:

   Serve interstate and international commerce and travel
   Provide for national defense needs
   Enhance economic vitality and international competitiveness
   Provide service to all portions of the nation

   The identification procedure should not be static, but should allow the states to respond to changing population and travel patterns over time through an objective review of the process (3-15).

4. Categorical Highway Program funds would be used for projects on the Highway System of National Significance (HSNS), or National Highway System, to:

   Reconstruct and/or rehabilitate
   Provide additional urban capacity
   Provide for pavement preservation
   Provide additional mileage needs
   Provide for bridge needs (3-14)

5. An appropriate amount of Highway Trust Fund monies would be appropriated and apportioned to each state under the Categorical Highway Program. A percentage of funds would be set aside for meeting needs like:

   Transportation planning and research
   Transportation safety
   Transportation emergency relief
   Transportation to federal lands (3-15)

6. In addition to bridge needs funded through regular Categorical Highway Program apportionments, AASHTO also supports a Discretionary Bridge Program to fund structural and/or capacity deficient bridges on any public highway if the cost of rehabilitating, replacing or supplementing the capacity of the bridge exceeded $10 million or 10 percent of the state's total annual federal-aid highway apportionments under the new highway program. An amount of funds not to exceed 2 percent of the total federal-aid highway funding should be used for this Discretionary Bridge Program (3-16).

III-Federal Oversight:

1. The Categorical Highway Program should continue to be administered in a manner similar to that employed presently. Coordination will be required among the state transportation agencies, regional planning bodies and local governments, particularly in the case of urban transit systems, transportation planning and modal interlink projects (3-20).

2. A streamlined certification process should be used for projects developed under the Categorical Highway Program. Differences which exist between the certification of highway and transit projects would be retained at the federal level (3-22).

IV-Funding:

1. The basic formula for distributing Categorical Highway Program funds should be driven by factors such as lane miles, travel (VMT), and other appropriate factors (3-20).

2. The matching ratio for highway and bridge improvements under the Categorical Highway Program should range between 100 and 85 percent federal dollars. For extremely important projects like roadway preservation and bridge needs the federal portion could initially be 100 percent. For other needs, like capacity increases or additions to the system, the initial federal matching ratio could come closer to an 85 percent level. Over the first five years of any new program, AASHTO believes that the federal matching ratio for the Categorical Highway Program should be around 85 percent (3-22 and 3-23).

3. Emergency relief and Public Lands highway projects, due to their very nature, should be eligible for 100 percent federal funding (3-23).

## THE AASHTO FLEXIBLE STATE AND LOCAL HIGHWAY PROGRAM

I-Purpose: The purpose of the Flexible State and Local Highway Program is to provide a highly flexible source of funding to be used at the discretion of state and local governments, as long as Federally identified transportation Issues of National Significance are being addressed. The Flexible Highway Program would replace all other federal-aid highway categories and programs now existing at the federal level. (3-17)

II-Procedure:

1. Funding for the Flexible Highway Program could be spent by states or local governments on projects which address federally adopted Issues of National Significance, like:

   Urban mobility
   Suburban congestion
   Rural access
   Modal interlinks (3-17)

   Eligible facilities and services would include:

   Other primary, rural secondary and urban routes
   Other functionally classified roadways
   Public transit (E-25 - Figure A)

2. Flexible Highway Program funds would be administered and coordinated on a statewide basis under the direction of state officials. An appropriate amount of funding would be appropriated and apportioned to each state to fund projects like:

   Construction and reconstruction
   Rehabilitation and preservation
   Bridge needs (3-17) (E-25 - Figure A)

   Roadways and bridges which are not on the Highway System of National Significance, but are functionally classified as arterials or collectors, and any other highways or bridges which are currently eligible for use of federal aid are eligible for improvement under the Flexible Highway Program.(3-17)

3. Flexibility of decision-making, prioritizing and programming at the state level would be achieved under the Flexible Highway Program through processes that include city and county governments and ensure consideration of their surface transportation needs. (3-17)

III-Federal Oversight:

1. Each state would prepare an annual list of projects

for its Flexible Highway Program, using existing documents like the state construction program, the regional Transportation Improvement Programs and the local government project lists, for prior approval at the federal level. (3-22)

2. Annual progress reports covering the preceding year's achievements under the Flexible Highway Program would be required, and would be submitted at the same time and as a part of the annual list of projects document. The annual progress report would assure that the federally adopted Issues of National Significance are being addressed through expenditures of those federal highway funds, and would keep Congress and the Administration abreast of progress toward the national goals surrounding the Issues. (3-20)(3-22)

3. Certification for highway projects developed under the Flexible Highway Program would not occur at the individual project level, but at the statewide Program level. (3-22)

IV-Funding:

1. The Flexible Highway Program funding should be allocated to the states strictly on a pro rata share of federal Highway Trust Fund collections attributable to each state as a proportion of federal Highway Trust Fund revenues collected throughout the nation; no donor/donee relationship should exist. (3-21)

2. To ensure an equitable distribution of Flexible Highway Program apportionment by each state, Congress would specify that each state shall allocate in aggregate to non-state systems an amount of Flexible Highway Program apportionment equal to not less than their FY 1991 apportionment of urban funds, secondary funds, and bridge funds that was made available to non-state systems of the respective state. (3-17)

3. Matching ratios for the Flexible Highway Program should be determined at the state level, with care taken to ensure that rural needs are not overlooked or overshadowed by procedures or matching ratios which preference urban transportation-related goals. (3-23)

## THE AASHTO CATEGORICAL TRANSIT PROGRAM

I-Purpose: The purpose of the Categorical Transit Program is to fund capital needs for the nation's major public transportation systems (3-16).

II-Procedure:

1. The Categorical Transit Program would fund projects and programs which:

   Address major rehabilitation needs
   Address new systems and services (3-16)

2. A percentage of funds from the federal Categorical Transit Program would be set aside for meeting special needs like:

   Transit planning and research
   Elderly and handicapped transit (3-16)

3. Funding for the Categorical Transit Program would be provided through the Mass Transit Account of the Highway Trust Fund. This funding would consist of one-ninth of the current federal gasoline tax, one-fifteenth of the current federal diesel fuel tax, and one-third of the current alternative fuels tax (3-16).

4. The fiscal year 1989 funding allocation levels for rail modernization, new starts and bus capital expenditures from the federal fuel tax would be maintained and continued as discretionary grants under the Categorical Transit Program (3-17).

III-Federal Oversight:

1. The Categorical Transit Program should continue to be administered in a manner similar to that employed presently. Coordination will be required in the level of the modified federal role among the state transportation agencies, regional planning bodies and local governments, particularly in the case of urban transit systems, transportation planning and modal interlink projects (3-20).

2. A streamlined certification process would be used for projects developed under the Categorical Transit Program. Differences which exist between the certification of highway and transit projects would be retained at the federal level (3-22).

IV-Funding:

1. For the Categorical Transit Program, the federal share should remain at the current level of 75%. For new starts, or system extensions, funding priority should be given to projects providing a non-federal share higher than the minimum 25% (3-23).

12

THE AASHTO FLEXIBLE STATE AND LOCAL TRANSIT PROGRAM

I-Purpose: The purpose of the Flexible State and Local Transit Program is to fund a range of capital and operating state and local transit needs with General Funds, and to fund a broadened range of capital projects with a portion of the Mass Transit Account revenues (3-17).

II-Procedure:

1. Funding under this program would be spent in addressing state and local transit needs, including:

   On-going operating assistance
   Rehabilitation needs
   New bus services
   Small urban and rural transit (3-17 to 3-18)

2. The above programs would continue to be funded from the General Funds of the U.S. Treasury, and apportioned in accordance with current law to designated transit recipients, which include local transit authorities for the large urban areas, and the states for small urban and rural areas (3-18).

3. A second component of the Flexible State and Local Transit Program would be funded from a portion of the Mass Transit Account. Under the AASHTO recommendation, all Mass Transit Account resources in excess of FY 1989 transit funding allocation levels would be distributed by a broad-based public transportation formula.

   For these Mass Transit Account formula funds, eligible projects would be broadened to permit funding for public transportation capital projects that serve to increase vehicle occupancy rates and enhance basic mobility as follows:

   Traffic signal improvements which provide priority treatment for transit and ridesharing vehicles;
   Exclusive high occupancy vehicle lanes;
   Transportation system management measures which provide priority treatment or improve operations for high occupancy and shared ride vehicles; and
   Commuter rail service capital improvements which include service between multiple urbanized areas within a single state (3-18).

4. Flexible transit funds would be administered as today, with the local transit authorities being the recipients for urban areas over 200,000 population, and the states being the recipients for small urban areas and rural areas (3-21).

FY 1989 funding allocation levels would be distributed 50% based on the current formulas, and 50% by total population (3-21).

III-Federal Oversight:

1. The states and/or transit funding recipients would be responsible for the certification of all projects receiving federal assistance (3-22).

2. Certification for projects developed under the Flexible Transit Program would not occur at the individual project level but at the statewide or local transit agency level, depending upon who was the recipient of the funding (3-22).

3. Each state or transit funding recipient would prepare an annual list of projects, using existing documents like the state construction program, the regional Transportation Improvement Programs and the local government project lists for prior approval at the federal level (3-22).

4. Annual progress reports covering the preceding year's achievements would be submitted at the same time and as part of the same document. In this manner, the Administration, the Congress and the Federal Government would be kept abreast of progress (3-22).

IV-Funding:

1. The matching ratio for capital projects under the Flexible Transit Program is proposed to remain at 80 percent federal/20 percent state/local (3-23).

EXHIBIT B

# *SURFACE TRANSPORTATION REAUTHORIZATION*

## RECOMMENDATIONS FROM THE AASHTO REPORT NEW TRANSPORTATION CONCEPTS FOR A NEW CENTURY

**OVERALL RECOMMENDATIONS:**

- New two-tiered federal programs for highways and transit: categorical and flexible
- Increased federal funding to meet established increased investment requirements.

  Highways: $17.6 B (FY 92) - $25.9 B (FY 95)

  Transit: $3.5 B (FY 92) - $5.0 B (FY 95) for transit capital, plus continuation of approximately $800 million annually for transit operating assistance from the general fund.

**HIGHWAY-SPECIFIC RECOMMENDATIONS:**

- Highway System of National Significance (HSNS) to include the Interstate system and a portion of the Principal Arterial System as redefined.
- Hold harmless (categorical) highway program funding, states assured of 1991 levels and equitable share of any future increases in funding.
- Release of obligation authority equal to apportionment balances in addition to regular apportionments.
- 50/50 highway funding split: categorical and flexible.
- 20 percent transferability between categorical and flexible programs.
- Revised highway apportionment formulas: (lane miles, VMT, other appropriate factors).
- Pro rata allocation of trust fund contributions for flexible program.
- Retain 85 percent MA and 1/2 percent minimum apportionment, (categorical program).
- Fund completion of remaining Interstate and Interstate substitution commitments.
- Continue discretionary bridge program: (up to 2 percent of total highway program).
- Permanent Highway Trust Fund, removed from unified budget.
- Matching ratios (New highway programs)
  * Categorical - 85 percent federal
  * Flexible - set by states

**PUBLIC TRANSPORTATION-SPECIFIC RECOMMENDATIONS:**

- Discretionary categorical transit grants.
- Current UMTA formula for flexible transit funding.
- Matching ratios (New transit programs)
  * Categorical - 75 percent federal
  * Flexible - 80 percent federal
- Mass transit account funding in excess of current funding levels (approximately $1.1 billion per year) would be distributed 50% by Section 9 formula and 50% by total population.

Prepared January, 1991

ADDITIONS TO THE RECORD

Testimony of David Burwell, President

Rails-to-Trails Conservancy

Before the Surface Transportation Subcommittee

House Public Works and Transportation Committee

on the Surface Transportation Assistance Act

March 19, 1991

Mr. Chairman, my name is David Burwell. I am President of the Rails-to-Trails Conservancy (RTC), a nationwide, non-profit membership organization that seeks to preserve the more than 150,000 miles of rail corridor that presently lay abandoned throughout our nation as trails and greenways, and for possible future rail use. We have more than 50,000 members in all 50 states and chapter offices in Pennsylvania, Ohio, Illinois, Michigan, Florida and Washington. As a nation we simply cannot afford to allow this existing system of transportation corridors, constructed at an enormous cost in lives and money (much of it public), to wither away from neglect. We urge you to address this important issue in this reauthorization bill.

I also appear on behalf of the Surface Transportation Policy Project (STPP), a broadly-based network of concerned organizations--including public agencies, non-profits, and private companies--involved in issues of transportation, energy, environment, planning, design and community preservation. RTC is one of more than 100 organizations participating in the STPP with the objective of ensuring federal support for attainment of such national transportation goals as energy security, environmental quality, a strong economy, and enhanced communities.[1]

For the last twenty years the Executive Branch of the federal government has repeatedly advanced proposals to turn back major portions of federal-aid transportation programs to state and local governments.[2] By and large, these proposals have met

[1] The Statement of Purpose of the STPP is attached as Appendix A.

[2] An excellent summary of these proposals is an article by Elizabeth Parker, Senior Policy Analyst in the Office of the Secretary of the U.S. Department of Transportation, entitled "Major Proposals to Restructure the Highway Program,"

National Office: Suite 300 • 1400 Sixteenth Street, NW • Washington, DC 20036 • Tel: 202-797-5400 • FAX 202-797-5411

with little success in Congress due to (1) state and local opposition to shouldering more of the burden of these programs, and (2) the perception that a broad range of national interests require a strong and continuing federal role in the delivery of transportation services. While Congress has taken specific measures to expand the role of local elected officials in both transportation planning and funding decisions, federal oversight of this program has remained strong.

The Administration proposal before this committee is yet another attempt by the Executive Branch to sharply restrict the federal role in transportation. While containing some initiatives to promote better planning, flexible funding, system preservation, and operational improvements, these initiatives will be under the control of state highway agencies, most of which have demonstrated little historical interest in meeting the real transportation needs of congested urban areas and isolated rural areas. Meanwhile the costs of the system will fall disproportionately on regional and local governments. Mr. Chairman, you yourself have characterized the Administration proposal as "The Shift and the Shaft." We do not dispute this characterization.

In our view, the major failing in the Administration proposal is its unwarranted focus on building systems rather than improving performance. It defines the federal interest in transportation primarily in terms of one system--the National Highway System--and assigns almost 70% of all federal assistance to this one initiative. Under this program the amount of Interstate-Standard highways would quadruple--from 42,500 miles to somewhere between 150,000-160,000 miles, all tied together with new connectors, by-passes, and beltways. As for the rest of our transportation system, including urban and rural transit, maintenance of existing urban and rural systems, promotion of non-motorized modes and transportation demand management--that's where "the shift and the shaft" is applied.

We can--and must--do better. We need to enhance the liveability of our cities that must now watch helplessly as their tax base erodes in waves of suburban sprawl. A more sensitive and focused approach to transportation planning and funding is essential. Our national security interest in energy efficiency demands that more attention be paid to total transportation energy demand. Our national interest in environmental quality demands that more attention be paid to integrating transportation, clean air and land use planning, through an enhanced and accountable MPO process, to fight global warming, ozone destruction, air pollution, and habitat loss. And our

---

Transportation Quarterly, Vol. 45, No. 1 (January 1991) at 55-66.

overriding national interest in economic competitiveness requires much more national attention to urban congestion, rural isolation, a commitment to inter-modalism, and the preservation of choice in consumer selection of transportation services.

These performance standards; (1) enhanced communities, (2) energy efficiency, (3) environmental quality, and (4) economic competitiveness--the "4E's,"--are the standards by which, in the judgment of the STPP participants, transportation programs must be measured.

But standards alone are not sufficient to tie national goals to transportation decisionmaking. Good planning is equally important. Some of the standards outlined above have objective criteria for measurement; such as clean air standards. Some, such as community enhancement, are inherently subjective. Therefore, more participation and accountability at the regional and local levels--where "the rubber meets the road" to use a modal metaphor--must be a cornerstone of the federal-aid transportation program.

Unfortunately, regional and local governments fare poorly in the Administration proposal in both (1) the funding of projects that meet their 4E needs, and (2) the planning function--the authority to tie project funding to specific national and community objectives. Specifically:

A. Highways

The Interstate Highway Program has its boosters and detractors, but one conclusion from a review of the 35-year history of the program is irrefutable: it has hurt central cities. In retrospect, we should have seen it. The new urban arterials constructed under the Interstate Program lead to the creation of "bedroom communities" circling our central cities. However, as suburban population grew, so did the demand for public services: schools, police, fire departments, sewers, streets etc.--far more demand than could be supported by the residential tax base. County governments did whatever was necessary to attract the commercial and retail activity needed to expand the tax base.[3] Enticed by new roads, underserved population centers, relaxed zoning laws and attractive public incentives packages, commerce and industry moved out of our central cities. Lewis Mumford's dire prediction in 1958 that the recently-enacted Highway Act of 1956 would result in "a tomb of

[3] One popular strategy is "fiscal zoning,"--zoning to maximize tax revenues, not create communities. Ironically, the land use with the capability of yielding the greatest total tax revenue per square foot is the automart--strip-zoned car dealerships and repair services.

concrete roads and ramps covering the dead corpse of the city" has been at least partially verified by experience.[4] A price has been paid.

The Administration's proposal to create a National Highway System (NHS), though superficially logical, is a bad idea. It will perpetuate and exacerbate the unforseen unhappy side effects of the Interstate System--tax base flight, suburban sprawl, urban blight and environmental degradation--while contributing little or nothing to reduced congestion, intermodalism, clean air or economic competiveness.[5] It's primary economic advantage will be to facilitate the movement of big trucks, a mode which already is subsidized at a level of at least 35% of the direct costs they impose on the system, while hurting rail freight.[6] It makes little sense to spend billions of dollars to shift freight transport from a highly under-utilized rail system to a highly-overutilized and subsidized highway system, particularly when the adverse social and environmental side effects are substantial.

The Administration appears to anticipate resistance to its highway-dominated proposal by promoting flexibility among programs. Under the Administration proposal you can switch rather than fight. But closer analysis reveals less of a shift and more of the shaft for regional and local governments. Of the total five-year highway authorization of $87.7 billion, some $65 billion is not transferable to transit. However, of the $16.3 billion allocated for transit, the majority is transferable to highways. And, with decision-making power over transfers resting primarily in state transportation agencies with little or no responsibility for transit you don't have to be a genius to figure out which way the money will flow. This is not a "level playing field" proposal.

Just how out of touch Administration funding priorities are with state and local needs is demonstrated by a study of state and local behavior when flexibility is provided in the use of federal highway funds. A good program to analyze such behavior

---

[4] Mumford, Lewis, The Highway and the City, (Harcourt, Brace & World, Inc. 1963) at 238.

[5] A major justification for the NHS is that it carries 40% of total traffic on 3% of the total highway system. Yet, this is not the 3% that has the most significant congestion and air pollution problems. Indeed, construction of much of this system was initially justified on the ground that it would solve congestion and pollution problems created by non-Interstate highways.

[6] U.S. Department of Transportation, Federal Cost Allocation Study, May 1982.

is the Interstate Transfer Program which gave state and local governments the option of using funds for non-essential interstate segments on substitute highway or transit projects. Despite the fact that localities which chose transit often had to convince Congress to appropriate funds out of general revenues while substitute highway projects could be funded out of the Highway Trust Fund, of more than $12 billion in interstate transfer funds obligated through FY 1990, fully 48% went to transit programs.[7] Given this clear "market signal" in favor of transit from the recipients of federal transportation assistance, and the strong connection between national energy and environmental objectives and transit services, the sharp federal withdrawal from transit funding proposed by the Administration is a total mystery.

The Administration proposal to combine the Urban and Rural Programs into one pot under the control of state transportation agencies is also deficient:

First, at $22.2 billion over five years it is grossly underfunded. In addition, with reduced federal share of 60% the opportunity for state and local government to take advantage of this program is greatly reduced. The greatest share of federal transportation assistance should be assigned to this program for the simple reason that this is where the real problems are located.

Second, it is not clear that metropolitan and rural areas should be asked to compete for the same funds; their needs are different and they should each be given control over their own transportation destinies.

Third, more control over planning and project funding must be delegated by the states to the areas most directly affected.

Fourth, the program should provide clear incentives to take care of the existing system before funding new capacity. On this point the Administration bill does make some good suggestions. For example, it would require that urban areas over 200,000 prepare Congestion Management Plans (CMPs) and implement these plans before projects providing significant new capacity. It also qualifies operational improvements that manage total transportation demand for federal funding, and increases the federal match to 90% for operational improvements in the interstate system. Finally, it establishes a "Metropolitan and Rural Innovative Bonus Project" program in areas over 200,000 population or rural areas. This bonus program would increase the obligation ceiling for such projects if they addressed problems

[7] The figures through FY 1990 are $6.306 billion for highways, $5.923 billion for transit. See Appendix B.

of congestion or air quality. Our main objection is the limitations on eligibility contained in the bill. If reducing congestion, cleaning up the air, and increasing operational efficiency is a good idea, why not qualify all geographic areas for such programs?

B. Transit

Transit, including buses and paratransit services in rural areas, take a big hit in the Administration proposal. While there is a nominal increase of 3% in authorizations (from $3.2 Billion to $3.3 billion per year), the actual transit share of total federal surface transportation capital and operating assistance declines over the life of the program. Whereas in 1982 transit represented 30% of total federal surface transportation assistance, under the Administration proposal it falls to 17% in FY 1992 and further to 15% by FY 1996. Yet transit is the mode with the highest ability to promote national objectives such as clean air and energy security while unclogging our streets and arterial highways. It makes absolutely no sense to withdraw federal assistance from transit programs just when our national commitment to clean air and energy security takes a seat in the front rank of our national policy objectives.

More than 50% of all Americans now live in urban and suburban areas of greater than one million total population. Here is where the majority of our transportation needs--and transportation-related social and environmental problems--are located. A study of local transportation referenda in these areas reveals a sharply different funding profile than is offered by the Administration's proposal. In recent referenda in Houston, Dallas, Portland (Ore.), San Diego and San Francisco, the lowest amount of total revenues approved for transit was 33% in San Diego. In last June's statewide transportation referendum in California fully 45% of total receipts qualify for transit use.[8] The argument that these results demonstrate that transit is a local issue that will be supported by those who directly benefit is wrong-headed. It is in these same areas that the problems of congestion, air pollution, and lack of choice (economic efficiency) are greatest. The same people who are paying the highway taxes are voting for more transit.

Our concern over the Administration's proposed transit funding levels is magnified by it's proposed transit funding strategy. Under the Administration proposal all transit funding comes out of the mass transit account of the Highway and Mass

[8] Of the $16.5 billion 10-year program, $7.5 billion qualifies for transit use. In addition, referenda totalling $1 billion each for rail transit will be presented to the voters in 1992 and 1994.

Transit Trust Fund--not general revenues. Over the life of the administration's bill, the mass transit fund would be virtually exhausted. Yet the Administration proposal makes no provision to replenish that account to fund transit programs beyond FY 1996. We strongly urge the Committee to retain funding for the Section 9 formula grant program out of general revenues while retaining support for the transit program from the Trust Fund at the administration's proposed level of $16.318 billion over five years. In addition, we support increased funding for the rural and small urban programs and the elderly and handicapped program.

C. Planning

Planning is another big defect in the administration proposal. While the Administration bill qualifies all federal assistance to be used for planning, the decision to do so remains with the states--not the metropolitan areas that are in most need of planning funds. We recommend (1) that Metropolitan Planning (PL) assistance be increased from 0.5% to 1.5% of total apportionments, (2) that Highway Planning and Research (HPR) assistance be increased to 2.0% of total apportionments, and (3) that planning assistance for the transit program be increased to 2.5% of transit trust fund apportionments. Moreover, more control over planning funds must be delegated from the states to regional and local planning agencies.

But planning, to be effective, must be connected to project funding. It is not. Projects endorsed by regional Metropolitan Planning Organizations (MPOs) and included in their Transportation Improvement Plans (TIPs) are regularly ignored by state highway and transportation agencies in developing statewide funding priorities.

A study of state apportionments for all highway programs in comparison to actual obligations for FY 1987-FY1990 reveals how grossly regional and local needs are being ignored by the majority of state transportation agencies. For this four-year period actual obligations for the major programs--Interstate, Interstate 4R and Primary Programs--averaged 105% of program apportionments.[9] At the same time only 82% of Federal Aid Urban apportionments were obligated, and obligations under the Secondary (rural) program amounted to only 76% of total apportionments.

There is much talk in transportation circles about "freeing the highway trust fund," meaning that the federal government must draw down the unobligated balance in the fund by increasing total authorizations. Certainly, more funding for our deteriorating

[9] The actual figures are 118% for Interstate projects, 102% for Interstate 4R projects, and 96% for primary projects.

transportation infrastructure is needed. But, as that is done, equal concern must be given to assigning these funds where they are most needed. Presently, states are starving the cities and communities that need funds to deal with congestion, dirty air, lack of mobility, and deteriorating roads and bridges while overfeeding programs that increase capacity on the major arterial systems. Yet, as they do so, they simply generate more traffic, more pollution, and more deterioration of the urban and local support system.

This must stop. Cities and suburban communities must have more control over federal-aid transportation funding. It is at the regional and local levels that the primary responsibility for clean air, growth management, traffic management and system maintenance lies. Working together through a regional planning process that is both coordinated with local needs and accountable to local elected officials, cities and towns must be given more control over their transportation destiny through strengthened power to plan and select whatever transportation improvements are most needed for their communities. This means more money, more flexibility, and more accountability in the federal-aid program.

But this is not what is proposed. Instead, the Administration bill places control of urban and rural funds at the state level and delegates all environmental and other oversight responsibilities to these same agencies. States will be able to simply certify that they have done everything they can to avoid using parks, wildlife refuges, historic properties or wetlands for transportation projects with "minimal" (the term used by the Administration) supervision. Regional and local agencies that are under legal obligation to meet national clean air goals through improved transportation planning and funding must go--hat in hand--to state agencies for the necessary funding. This simply won't work.

D. Other Provisions

The STPP participants also wish to go on record in opposition to two finance-related provisions in the Administration bill:

First, 70% of the NHP apportionment formula and 100% of the urban/rural apportionment formula is based on fuel use: the more fuel consumed the greater the state apportionment. This is not the way to encourage energy conservation. A formula that provides incentives for fuel conservation while meeting the "85% rule" for redistribution of funds back to the states must be developed.

Second, with almost 40% of our highways and bridges in below-standard condition, and transit needs expanding far faster than our ability to finance these needs, the Administration's

proposal to eliminate five cents from the federal gas tax in FY 1996 makes no sense. As a nation we are not paying the full costs of transportation on a pay-as-we-go basis. We are consuming now and letting future generations pay the consequences in poor health, deteriorating infrastructure, polluted air, global warming, ozone destruction and many other externalized costs of transportation. We are also crippling our economy; witness the high productivity rates of countries that impose gas taxes in the area of $1.00-$2.00 per gallon. No reduction in the federal gas tax should be considered in this bill.[10]

While the STPP participants have many serious problems with the Administration Bill, we do want to give credit for action taken in two important areas: Billboards and Scenic Byways/Scenic Easements. The STPP participants support the Administration's proposal to defer to state law in the area of billboard control, and to qualify billboard removal for federal assistance. We also support qualification of scenic easements and development and improvement of scenic byways for federal funding. While the Administration bill proposes a special set aside for scenic byways out of the urban/rural program, we suggest applying this set aside requirement to total apportionments and qualifying a wide array of transportation enhancement activities for federal funding as well, such as:

--Scenic enhancements, including those authorized under existing section 319 (roadside facilities and wildflower program);
--demonstration projects to encourage design excellence in the construction, rehabilitation and use of transportation facilities;
--rehabilitation of historic transportation structures;
--preservation of abandoned rail corridors and their conversion to pedestrian, equestrian and bicycle trails;
--construction and maintenance of pedestrian and bicycle ways;
--archeological planning and research;
--acquisition of scenic, recreational and historic areas or easements; and
--control and removal of billboards;

In addition, we would prohibit the cutting of trees on federal-aid highways for the sole purpose of increasing billboard

[10] An excellent book on the benefits of gas taxes is Gas Tax Advantages by Dr. Ernest J. Oppenheimer, Ph.D. (Pen & Podium Press, 1986). A list of 15 reasons to increase gas taxes summarized by Dr. Oppenheimer is attached as Appendix C. We encourage this committee to give close study to the gas tax issue.

visibility.

Finally, I would like to end by putting on my Rails-to-Trails Conservancy hat and address the problem I outlined in the outset of my testimony: preservation of our national system of unused rail corridors. It would be a national tragedy if we let this system dissappear just at the time that the value of preserving existing transportation corridors intact is increasingly obvious. The Admininstration proposal does provide for 100% federal funding for bicycle and pedestrian trails under Title 23 in conjunction with highway rights-of-way. We request three improvements to encourage the preservation of our built rail system for trails, and for possible reconversion to rail use:

First, add the phrase "or unused railroad rights-of-way" as eligble for Title 23 funding. This would make it clear that any rail-trail project qualifies for funding under Title 23 as long as it serves a transportation purpose.

Second, we ask that Section 203(d) of Title I, which requires states acquiring a right-of-way to actually build a highway within 20 years or reimburse the federal government for its share of the cost, be amended to provide that states acquiring abandoned railroad corridors for future transportation uses can "railbank" them indefinitely as trails. This would give states an incentive to acquire abandoned rail corridors under Title 23 without fear of this penalty.

Third, we request that Section 303(j) of Title I be amended to delete the word "major" in the description of non-motorized transportation routes that could not be severed by a Title 23 project without providing a reasonable alternative route. We also ask that this sentence be amended to clarify that underpasses or overpasses shall be included in the project at the request of the non-motorized trail manager, and shall be eligible for federal assistance at the 100% federal rate provided for other bicycle and pedestrian facilities under Section 314 of Chapter 3 (Section 106), Title I.

That concludes my remarks. The STPP continues to study the Administration bill and will prepare its own proposal for restructuring the Surface Transportation Assistance Program in the near future. Thank you.

## Statement of Purpose

A healthy transportation system is vital to our national health, no less than a healthy circulatory system is vital to our personal health. A strong, balanced, and inter-connected system of rail, highway, transit, air, water, bicycle and pedestrian facilities supports a strong, balanced and efficient domestic economy while also improving our ability to compete in international markets. Transportation stands in the front rank of issues requiring focused and informed national debate.

Unfortunately, national transportation policy is rarely discussed in the public arena. It gains attention only when gas taxes go up, a bridge collapses, a train derails or congestion becomes unbearable. Basic principles aren't addressed: only the immediate problem. The recent policy review conducted by the U.S. Secretary of Transportation, entitled "Moving America," is a welcome first step in framing the much needed transportation debate. However, it fails to address the basic question: "What is our essential transportation mission?" Not since 1956, when Congress declared the construction of a 42,500-mile interstate and defense highway system as a national mission, has this fundamental question been posed.

The interstate system is now more than 99% complete. It is time, again, to take stock of our national transportation mission. Unless a new, clear federal role in the delivery of transportation services is identified no continued federal-aid program for surface transportation is justified. The scheduled reauthorization of the Surface Transportation Act (STAA) in 1991 adds urgency to this policy.

The STPP believes that a strong continued federal role in transportation is both justified and vital to our national interests. The time has arrived for broad public debate on national transportation policy. The purpose of the Surface Transportation Policy Project (STPP) is (1) to help frame this debate by stating some general principles that, in our judgment, should drive federal transportation policy, (2) to offer some specific program proposals consistent with these principles, (3) to assemble a broad coalition of transportation consumers and providers around these proposals, and (4) to inform public and private debate on national transportation policy. The STPP encourages the participation of every concerned citizen and organization in this effort.

## What is the STPP?

The STPP is a network of organizations and coalitions seeking to make national transportation policy more responsive to people and to better serve the economic, social, and environmental interests of the nation.

Participation is diverse, including both public and private organizations whose primary interests include transportation investment and policy, environmental quality, energy policy, natural resource conservation, design quality, neighborhood and historic preservation, planning, transportation safety and economic efficiency.

The goal of the STPP is to assure that federal support for transportation promotes the attainment of specific national goals. These goals vastly exceed the relatively narrow modal funding objectives reflected in present transportation policy and include national security, clean air, economic competitiveness, energy and resource conservation, minimizing the contribution of transportation to global warming and ozone depletion, safety and enhancement of the quality of life in our neighborhoods and communities.

The STPP particularly encourages the participation of existing coalitions in its efforts. It recognizes that transportation services support many needed state, local and private programs and projects as well as national goals. The STPP acknowledges the importance of these objectives. Its sole goal is to identify the common principles underlying these individual objectives and to frame public debate on these principles so that truly national interests are served.

## General Principles

The STPP was formed in the Fall of 1990 and adopted a process for reaching agreement on common principles for public action in transportation. Particular concern was taken to ensure

that these principles were short, few in number, easily understandable, and advanced specific national objectives. While many special interests with significant national ramifications were identified, every effort was made to frame these interests in the context of national policy. From these principles will emerge, it is hoped, broad consensus on the future mission of our national surface transportation program.

These principles are as follows:

Transportation should strengthen national and international economic competitiveness. The most significant transportation-related threat to our national economy and our ability to compete in international markets, besides reliance on imported oil, is congestion. Transportation consumers presently spend almost 1.5 billion hours each year stuck in traffic, and that figure is estimated by the U.S. General Accounting Office to increase to over 4.0 billion early in the 21st century. Congestion means lower productivity. Efficiency improvements that strengthen inter-modal linkages (air, water, truck and rail on the freight side; auto, transit, bicycle and pedestrian access on the passenger side) deserve priority for new investment. Measures that restrain demand (measured in vehicle miles travelled or VMTs) to available system capacity through such technologies as road pricing and fuel taxes, and encourage modal shifts from over-utilized (highway) to under-utilized (rail, transit, bicycle) modes, also deserve priority. Capacity increases, where needed, should be prioritized on a "least life-cycle cost" basis.

Transportation should strengthen, not jeopardize, national security. Approximately 63% of present domestic oil consumption is spent on transportation, 72% if the energy costs of building and maintaining our transportation infrastructure are included. More than 50% of domestic oil consumption is imported. National transportation policy demands debate on the question "At what point does reliance on inherently unstable sources of imported oil jeopardize national security?"

Transportation must be sustainable. Transportation is now depleting two non-renewable resources: fossil fuels and land. Approximately 98% of our public and private transportation fleet is presently propelled by fossil fuels. In fifty years few, if any, motor vehicles will operate exclusively on fossil fuels. The United States should lead, not follow, the transition to new fuel technologies. Equally important, transportation infrastructure is consuming land at an enormous rate. Over 40% of the land mass in several of our major cities is devoted to streets and parking lots. Sprawl development patterns, driven by transportation investments, are devouring our suburban and rural areas. Transportation and land planning must be integrated at the regional and local levels to develop balanced, sustainable transportation systems.

Transportation services must promote, not inhibit, clean air goals. While tailpipe emission controls have lowered pollution from cars and trucks, increases in total driving (VMT) have overwhelmed these improvements, particularly in congested urban areas. Achievement of national clean air goals requires a significant shift to non-polluting modes, plus a cap on VMT growth.

Transportation should enhance the quality of life. In addition to national goals, community-based goals such as access to jobs and housing, safety, community and neighborhood revitalization, aesthetics, protection of natural, cultural, and historic sites, and access to public transportation for all people are important transportation goals in both urban and rural areas. Regional transportation planning agencies presently lack the funds, and the authority, to both articulate and implement regional quality of life goals. A new balance needs to be struck among state, local, and regional interests to ensure public support for these goals and strategies and for their implementation.

Federal transportation investments should advance explicit national interests. Investments that do not further such interest should be eliminated. Transportation should not be a revenue-sharing program where the federal government acts only as a cashbox, taking funds in through motor fuel and excise taxes and subsidizing federal-aid projects for no particular federal purpose. A clear federal mission is required. A system of accounts should be developed that measures these public benefits and public costs of federal-aid transportation investments measured in both dollars and deferred maintenance, pollution, destruction of habitat, contribution to global warming and ozone depletion, contribution to global warming and ozone depletion, generation of hazardous wastes, health costs, police and security costs, and other presently externalized costs of transportation service delivery. If benefits to the nation fail to exceed the costs of these subsidies, no federal participation is justified.

## Conclusion

The STPP will support all efforts to focus public debate on the above-stated principles as transportation policy becomes an increasingly compelling issue of public concern. Activities will include research, briefings, workshops, discussion groups, and other efforts to inform public and private decision-makers at all levels of government of the importance of transportation in the shaping of our nation's future.

The STPP invites the participation of all organizations willing to subscribe to the above-stated principles. Please contact the STPP office for further information on these principles and our program.

# Memorandum

Appendix B

Washington, D.C. 20590

Subject: Status of Interstate System Withdrawals and Substitution Under 23 U.S.C. 103(e)(4) as of September 30, 1990

Date: DEC 18 1990

From: Chief, Federal-Aid and Design Division

Reply to Attn of: HNG-13

To: Regional Federal Highway Administrators

Two summaries of information through September 30, 1990, relating to Interstate System withdrawals and substitution under 23 U.S.C. 103(e)(4) are attached for your information. The first listing is a summary of withdrawal actions to date. The second listing summarizes, for each withdrawal area, the base costs, the withdrawal values after deducting obligations, the amounts obligated for substitute mass transit and highway projects, and the total amounts made available.

A column, entitled "Reserved Transit Amount," is included in the second listing. This column represents the additional transit withdrawal value distributed in accordance with Section 103(c) of Public Law (PL) 100-17. The additional $100 million was distributed using apportionment factors contained in revised Table 4 of House Committee Print 100-2. This additional withdrawal value is considered to be reserved for transit obligations. Accordingly, transit obligations after the date of enactment of PL 100-17 (April 2, 1987) will be continually deducted from the reserve column until that column is depleted.

Copies of the status report have been sent directly to all FHWA Division Offices for States with approved withdrawals. The summaries are mailed to you on a quarterly basis. Please contact the Interstate and Program Support Branch, Federal-Aid and Design Division, if you find discrepancies between the Headquarters' records and your records.

L. A. Staron

NOTES:

1. All amounts are in Federal funds.
2. The "Base Costs" column represents the cost of the withdrawn routes as they were reported in the Estimate applicable to the specific action.
3. Remaining withdrawal values were computed in accordance with 23 U.S.C. 103(e)(4), as amended by Section 107(c) of the 1982 STAA.
4. The "Total Amounts Being Made Available" column is the sum of the "Total" column plus obligations through the current quarter.
5. The "Reserved Transit Amount" column represents the additional transit withdrawal value added by Section 103(c) of Pub. L. 100-17. The column also includes, in Portland, $16,300,223 made available by the withdrawal of eligible Interstate lanes under Section 142 of the 1987 STURAA. Transit obligations after April 2, 1987, are deducted from this column first to assure these portions of withdrawal values are used for transit purposes. Obligations used towards the Portland substitute project associated with the Section 142 withdrawal will be deducted from Portland's "Reserved Transit Amount."
6. Project substitute obligation figures reflect net obligations to date, that is, total obligations less total deobligations.

## Gasoline Tax Advantages

by Ernest J. Oppenheimer, Ph.D.

From the Foreword by Dr. Lester C. Thurow, Professor of Management and Economics, Massachusetts Institute of Technology:

"If one is serious about curing America's federal budget deficit or its international trade deficit, gasoline taxes have a very high place, perhaps the highest, on any list of possible solutions....

*Gasoline Tax Advantages* by Ernest J. Oppenheimer gives us a comprehensive summary of the pros and cons of gasoline taxes and the pros clearly dwarf the cons....

The economic case for a gasoline tax is clear and made even clearer by Dr. Oppenheimer."

ISBN 0-9603982-5-2

# GASOLINE TAX ADVANTAGES

- ☑ Strengthens energy security
- ☑ Reduces federal budget deficits
- ☑ Lowers interest costs
- ☑ Improves foreign trade balance
- ☑ Boosts automobile business
- ☑ Stimulates natural gas industry
- ☑ Assists domestic petroleum producers
- ☑ Creates more jobs
- ☑ Provides for fairness to poor
- ☑ Restores soundness to U.S. economy
- ☑ Helps clean the environment
- ☑ Avoids pitfalls of oil import tax
- ☑ Excels all other government options
- ☑ Fosters statesmanship in policy making
- ☑ Serves the best interests of Americans

**Ernest J. Oppenheimer, Ph.D.**

responsible for the federal deficit. The president can blame the congress, the congress can blame the president, the Democrats can blame the Republicans, the Republicans can blame the Democrats, oil patch representatives can blame rust belt representatives, rust belt representatives can blame farm state senators. Each elected politician can promise to deliver to his district what it would most desire, fail to deliver on the promise in Washington, yet get re-elected on the grounds that he is working hard to get the rest of Washington to see the wisdom of his platform. Failure and unrealistic promises are seldom punished.

Part of the problem lies with an administration that does not believe that a big federal deficit or a big trade deficit is a problem. In their view given time the market will by itself cure the trade deficit (lending will eventually stop, the dollar will go down, and American exports will expand while imports fall) and the large federal deficit has not led to a disaster (the crowding out so confidently predicted by the critics in early 1981 has not occurred). What this analysis ignores is the nature of the problems created by the trade and federal budget deficits. Neither produces a crisis; both produce a long run hemorrhaging of economic potential.

Federal budget deficits represent negative savings. Funds that could otherwise be used for investment have to be borrowed to finance public consumption. As long as this money can be borrowed from abroad there is no immediate crowding out of investment. What there is is a growing international indebtedness that will at some point in the future lead to a reduction in the American standard of living. Every $40 billion owed to the rest of the world in annual interest payments means one percent less of the GNP available to be divided among Americans. Problems may be serious without being crises.

The economic case for a gasoline tax is clear and made even clearer by Ernest Oppenheimer. The question then becomes how can Americans be made to clearly see that their long run self interest is served by imposing a gasoline tax upon themselves?

## Summary

Unsound government policies in relation to energy, taxes, and budgets have undermined the U.S. economy. Currently, the nation's wealth is being dissipated to pay for budget deficits and foreign trade imbalances totaling more than $1 billion a day. To rectify this alarming situation, it is recommended that the federal gasoline tax be increased by 25 cents a year until it reaches $1 per gallon, a level similar to that prevailing in other industrial countries.

The gasoline tax would have the following advantages:

**(1) It would strengthen energy security.** The more than 130 million automobiles registered in the U.S. consume over 6.5 million barrels of gasoline each day. It is estimated that the proposed gasoline tax would gradually reduce consumption by one million barrels a day, thereby lessening dependence on oil imports.

**(2) It would reduce federal budget deficits.** Over a ten year period following enactment of the tax, the U.S. Treasury would collect an estimated $750 billion. Most of these funds would reduce federal budget deficits.

**(3) It would lower interest costs.** The sharp reduction in federal borrowing requirements which would follow in the wake of the gasoline tax would have a salutary effect on interest rates. It is estimated that interest costs would drop by about two full percentage points. Interest savings by all borrowers would eventually reach $160 billion annually on the $8 trillion total debts outstanding. The federal government alone would save about $40 billion a year on interest payments, thereby further reducing budget deficits.

**(4) It would improve the U.S. foreign trade balance.** The U.S. competitive position in the international marketplace has been handicapped by excessive business taxes and interest costs. Major competitors, such as West Germany and Japan, rely heavily on consumption taxes, notably on gasoline, to reduce budget deficits, interest rates, and taxes on business. The U.S. would be well advised to emulate these policies. The gasoline tax would be an important step

432

in the right direction.

(5) **It would boost the automobile business.** The gasoline tax would provide strong incentives for millions of car owners to switch to fuel-efficient vehicles. To meet this demand, the automobile industry would be operating at full capacity for years to come. Suppliers to automobile manufacturers, such as producers of steel, aluminum, plastics, chemicals, tires and electrical equipment would also enjoy increased business.

(6) **It would stimulate the natural gas industry.** Lower interest costs would benefit all capital-intensive industries, including natural gas producers, pipelines, and utilities. The natural gas industry would also gain from increased demand by industrial customers. Compressed natural gas (CNG), which should be exempt from fuel taxes, would find increased acceptance as a vehicular fuel. This development would stimulate demand for domestically produced natural gas.

(7) **It would assist domestic petroleum producers.** The comments that were made about natural gas also apply to petroleum producers, who produce both oil and natural gas. Any stimulation in demand for natural gas will boost the income of domestic petroleum producers. Lower interest costs would be helpful to oil companies, which depend heavily on borrowed funds. Finally, some of the proceeds from the gasoline tax could be utilized to put a realistic floor under domestic oil prices and/or to expand the Strategic Petroleum Reserve to include domestic oil resources for future use.

(8) **It would create more jobs.** The improved competitiveness of U.S. industry, the increased demand for fuel-efficient vehicles, and the stronger markets for domestic energy, notably natural gas, would create many new job opportunities. It is noteworthy that these jobs would be primarily in the manufacturing and energy sectors, which have hitherto been the most depressed.

(9) **It would provide for fairness to the poor.** It is estimated that at least 25 million automobiles are owned by individuals who are economically disadvantaged. Most of these vehicles are old gas-guzzlers, which average less than ten miles to the gallon. Some of the proceeds from the gasoline tax should be utilized to enable the poor to acquire more fuel-efficient vehicles. This recycling procedure would enable the poor to cope with higher gasoline taxes without creating a burden on society as a whole.

(10) **It would restore soundness to the U.S. economy.** In recent years the U.S. economy has been beset by a host of interrelated problems, including $200 billion federal budget deficits, $150 billion foreign trade imbalances, the unsolved energy problem, inadequate savings/investments to nourish the private sector, high interest rates, and chronic weakness in manufacturing and employment. All of these problems would be reduced by the gasoline tax.

(11) **It would help clean the environment.** In most urban areas, vehicular emissions are the largest source of air pollution. By providing financial incentives for reducing gasoline consumption, the tax would have a beneficial impact on the environment.

(12) **It would avoid the pitfalls of the oil import tax.** An oil import tax is a disguised price support scheme. It would raise domestic energy prices by the amount of the tax. It would be unfair to consumers. It would be inflationary and raise interest costs. It would undermine U.S. competitiveness in the international marketplace. It would jeopardize U.S. relations with oil producing countries. All of these problems could be avoided with the gasoline tax.

(13) **It would excel all other government policy options.** The gasoline tax is the only policy option that has a positive impact on federal budget deficits, foreign trade imbalances, the energy problem, and the general economy. No other policy option has a positive effect on more than two of these four variables.

(14) **It would foster statesmanship in policy making.** Hitherto, U.S. energy policy has been dominated by interest groups who placed their selfish objectives above the national interest. This orientation has led to harmful consequences

for the nation. The gasoline tax would place the national interest ahead of all other considerations, thereby restoring statesmanship to its proper place in policy making.

(15) It would serve the best interests of the American people. Wrong energy policies have cost the American people more than $1 trillion since 1973, without giving them fair value in return. In contrast, the gasoline tax would generate multiple benefits. This tax would have a positive multiplier effect that would produce several dollars of benefits for each dollar of cost. The gasoline tax makes good economic sense.

## Preface

I have spent the past seven years doing research on the energy problem. My studies have convinced me that the U.S. government has failed to deal realistically with this important issue. Wrong government policies concerning energy and related matters have brought this nation to the brink of financial disaster. The time to implement corrective action is long overdue.

The most important single step in the right direction is to impose a substantial tax on gasoline. Such a tax would improve energy security, reduce federal budget deficits, lower interest rates, strengthed U.S. competitiveness in the marketplace, and stimulate the economy. Each dollar of gasoline tax would generate an estimated three dollars of tangible benefits to the nation. No other policy option would accomplish so much good on such a favorable basis. The case for the gasoline tax is supported by the experience of countries in Western Europe and Japan, which levy more than $1.25 per gallon, compared with nine cents collected by the U.S. Treasury.

It is hoped that this book will provide the readers with a sound perspective on the gasoline tax, including obstacles that must be overcome to implement this policy. I want to appeal to those who find the book of value to share the information with others. You can play a most valuable role in the educational effort that is essential for proper understanding and action. It would be very helpful if you passed copies of the book along to your friends and contacts, as well as to your representatives in government. To facilitate this effort, the publisher will make the book available at generous quantity discounts. In addition, special bonus offers await quantity purchasers. For details, please see the back of the book.

Suite 520
Washington, D.C. 20006

45-155 O—91——15

## EXECUTIVE SUMMARY

### The Federal Role

The federal role in highway transportation must continue in partnership with the states, concentrating on programs that are national in scope, particularly where there is need to raise revenues to assist in planning and construction.

### Highway Investment

While there is a need to balance the federal budget, Congress should not withhold needed highway funding in the name of deficit reduction. PCA recommends that the Highway Trust Fund be removed from the unified budget (which limits obligations), and that balances in the fund be drawn down to finance much needed highway construction and repair.

### Alternative Fuels

PCA supports the use of alternative fuels to improve the environment or to reduce reliance on imported oil. The concern is with the negative impact on the Highway Trust Fund of subsidies for gasohol, which amount to 6 cents of the present 9-cent federal gasoline tax. The exemption should be eliminated.

### Highway Design and Durability

Pavement loads and traffic volume have increased, and highways wear out faster than they can be maintained. Most highway departments select materials based on a least-cost-estimate, a concept that often can result in shortened pavement life and lead to premature reconstruction. Substantially stronger pavements are needed to minimize costs to highway agencies and users. PCA supports a proper life-cycle costing analysis that compares material costs over the life of the project.

### Expansion of the System

PCA supports the proposal by the American Association of State Highway and Transportation Officials to designate the Interstate and portions of the Primary System as Highways of National Significance as a means to add capacity. Also, as the planning for the Interstate System was done in the 1950's, demographic shifts mandate a review of the existing system with the view of adding additional mileage. PCA also recommends that additional lanes be constructed to accommodate increased truck and passenger vehicle traffic.

### National Truck Route

Truck traffic is expected to grow twice as fast over the next decade. Now is the time to plan for this increase. PCA urges Congress to examine the feasibility of constructing a national truck route.

Innovative Technology

Present law does not address the use of innovative technology in the area of highway design, materials, products, or methods. Nor does it provide incentives for the states to promote innovative ideas. PCA recommends that Congress authorize a 5% increase in the federal share of a project's cost if it includes innovative technology with the potential to improve or eliminate pavement failures, preserve or extend the service life of highways and bridges, and enhance highway safety.

Toll Road Construction

With a growing need to expand the capacity of the highway system, toll roads are an effective means of pay-as-you-go financing for highway improvements. PCA recommends expanding the present test program to use federal funds for toll road construction.

## INTRODUCTION

The Portland Cement Association (PCA) welcomes the opportunity to discuss our nation's transportation needs as the Subcommittee on Surface Transportation undertakes the important task of reauthorizing the Federal Aid Highway Program. PCA is a trade association of North American cement manufacturers, representing approximately 80% of domestic production capacity. It carries out extensive programs of basic and applied research, market development and promotion, education, public relations and government affairs on behalf of its member companies.

An efficient national highway system is essential to our economic well-being. The nation's business sector depends on an effective, well-maintained transportation system for the distribution of raw materials and manufactured goods. Needs have been identified, and studies and recommendations have been completed in both the public and private sectors. Congress must now act decisively to maintain a strong federal role in developing and maintaining our nation's transportation infrastructure.

## THE FEDERAL ROLE

Our highway system has largely been the province of Congress, which has a constitutional mandate to provide for the movement of interstate commerce and for the national defense. Congress has met that obligation through a dedicated investment in a network of interstate highways which is now in place and virtually complete. However, because of the emphasis on the Interstate System, other categories of highways have not received adequate attention. The National Transportation Strategy addresses this shortcoming by calling for greater management and fiscal responsibility at the state and local level. We disagree with this proposal. Because the federal contribution to the highway system has been dropping steadily since 1987, the states have already been absorbing the shortfall. In 1988, states contributed 50 percent and local governments contributed 28 percent. The federal share dwindled to about 22 percent. This includes reduced levels of authorization and ceiling obligations and the withholding of user fees collected to finance the highway program as a means to offset the deficit.

Local governments are taking the initiative to design, finance and construct their own systems, due mainly to reduced federal aid, burdensome bureaucratic requirements, and the need to construct the projects quickly. Many state and local governments are aggressively supporting economic development, which includes improvement of local transportation facilities. Such programs cannot continue indefinitely, as local funds for improvements are exhausted, and federal trust funds are held hostage in the name of deficit reduction.

Although state and local government action is commendable, a federal interest must continue in programs that are national in scope, particularly in raising revenues to assist in planning and construction. National goals should be defined and established in a continuing partnership with state and local governments, rather than by shifting the burden to them.

Studies by both private and governmental agencies show that portions of the Interstate and the Primary Systems have reached the end of their design life and must be replaced. Urban congestion, deteriorating and inadequate bridges, and the need for additional capacity requires continued federal investment. Although the federal share is small compared with total outlays, it provides the impetus for states to initiate improvement projects and is essential for maintaining and improving our nation's international competitiveness and quality of life.

## HIGHWAY INVESTMENT

### Deficit Reduction

We understand and appreciate the need to reduce the federal deficit. But withholding user fees earmarked for transportation is not the answer. Under present accounting methods, the true deficit is masked when the Treasury borrows from one account to pay another. In the case of the Highway Trust Fund, such borrowing must be repaid with interest, compounding the problem.

Because the highway program is linked to the overall budget, methods have been devised to reduce the levels of obligations. The Congressional Budget Office, in its 1990 budget projections, suggests that nearly $9 billion can be saved (deficit reduction) by "holding new spending authority to the level of tax revenues [about $14 billion annually] and by reducing budget authority and [the use of] obligation ceilings between the period 1991 and 1995." This scenario provides for "business as usual." However, CBO expressed a caveat with which the Portland Cement Association agrees. It is:

> "Arguments for maintaining the current program are that more could be spent to maintain highways in good condition and that highway rebuilding projects have high economic benefits. Reducing federal aid for rebuilding might induce states to spend less on maintaining highways. Such reductions might also lead states to redirect spending away from the main routes of interstate commerce, thus undermining the national benefits from highway investments of the past 30 years."

The highway program is different from other federally aided programs in that it requires no appropriations upon authorization. Once the authorized amount is apportioned, the states may proceed immediately to contract projects. The Secretary of Transportation merely obligates the federal government to pay its share of the costs, which may not occur for several years. Limiting expenditures in the name of deficit reduction only plays havoc with planning and construction.

### Highway Trust Fund Off Budget

The Portland Cement Association believes the federal government should renew its commitment to a strong national highway transportation program and regain the nation's trust by eliminating the practice of double entry bookkeeping in order to give the appearance of reducing the deficit. PCA recommends that the Highway Trust Fund be made permanent, and that the highway program be removed from the unified budget to allow those balances to be used for needed construction or improvements as provided for by law. Gasoline and other highway related taxes are user fees which should be dedicated solely to highway improvements.

Highway Trust Fund Draw-down

The Administration has suggested that a draw-down on the trust fund be accomplished over a period of time, "in a fiscally responsible way." PCA agrees, but believes a draw-down can be immediately implemented without creating a fiscal crisis. Even with current obligations against the fund, the balance could be drawn down at a minimum level of $3 billion annually over the next four years, beginning with Fiscal Year 1992. This would allow the present authorization level of $14 billion to be raised to a minimum of $17 billion annually. According to the General Accounting Office, the trust fund balance at the end of the fund life will exceed the outstanding commitments by about $6.4 billion, thus providing a $3 billion cushion.

Alternative Fuels

The Portland Cement Association supports the use of alternate fuels as a means to improve the environment and reduce our reliance on imported oil. The major concern is with the serious impact on the Highway Trust Fund of a fuel that enjoys an exemption from user fees that could be used to rebuild or repair our highway system. Presently, gasohol is exempt from six of the nine cents of the federal motor fuel tax. This results in a $500 million loss to the Highway Trust Fund which could balloon to $1.5 billion under pending clean air legislation.

In our view, the exemption for oxygeneated fuels should be eliminated since the rationale for user fees is that those who use the highways must share the responsibility to construct and maintain them. If a subsidy is required to encourage manufacture of alternative fuels, it should be charged to general revenues.

Highway Design and Durability

Although the United States has the best highway system in the world, more than 60 percent of the miles of paved roads need some form of surface rehabilitation. When the Interstate System was initiated, it was designed for a twenty-year life. Now, 30 years later, sections have long outlived their design life.

A major issue to be addressed in the rehabilitation of the highway system is how best to design an extended life for pavements. Research by both the American Association of State Highway and Transportation Officials and the Federal Highway Administration has been conducted on highway wear and the effects of heavy loads on various pavement thicknesses. According to AASHTO, "Subsequent research has substantiated and reconfirmed the basic findings that heavier loads cause pavements to deteriorate more rapidly and require substantially thicker pavements."

Most state highway departments base materials selection decisions on a-least-cost-estimate for a highway project. Future resurfacing and maintenance may or may not be a part of that process. As a result, some pavements have a short performance record, usually 7 to 12 years, before major maintenance is required. In the meantime, the cost to repair or replace doubles. Figures show that one-third of the total highway budget goes to maintaining the nation's 4 million mile state and local road network. Pavement design should be reevaluated and efforts undertaken to construct or reconstruct these routes with more durable designs.

The American Trucking Association (ATA) has pointed out that, "The economies of scale of building stronger and thicker pavement structures are enormous." ATA referenced the AASHTO design guide, pointing out that, "one additional inch of concrete pavement effectively doubles the strength (and life) of a pavement yet adds only 4% to pavement related construction costs and less than 1/2 of 1% to the total construction costs of a rural Interstate highway (according to Federal Highway Administration [FHWA] cost data)".

Asphalt and concrete are used extensively for highway construction and maintenance, with asphalt dominating the nation's highway network. Over $10 billion annually is spent on asphalt pavements. Because of the comparatively short life of asphalt pavements, the Strategic Highway Research Program (SHRP) will devote $50 million over five years to better understand the properties of asphalt and methods to improve its performance. By contrast, SHRP will spend only $12 million over the five year period to examine cement and concrete in highway construction, with the majority of the effort devoted to bridges and structures.

We believe properly designed and constructed portland cement concrete pavements provide a degree of durability, safety, longevity, and long term cost-effectiveness which is not available from other materials. Concrete pavements do not rut, they provide greater skid resistance, and are less subject to damage during spring thaws.

A means of extending pavement life even further is to specify somewhat greater concrete strengths than those now used. A review of state practices shows that, in many cases, higher strengths can be easily achieved which will result in substantial gains in performance.

Life-Cycle Cost Analysis

While materials selection for pavement is correctly a state decision, we feel that a proper life-cycle costing analysis should include a comparability test in relation to the useful life of the roadway. Costs should be examined for the 20 or 30 lifetime years, including maintenance, future overlays and repairs prior to the end of the projected life cycle. User costs, as well as agency costs, should be included in the analysis. It should be the sense of the Congress that pavement selection should be based on life-cycle costing using the design equivalency test as a means to construct more durable and safe highways.

## EXPANSION OF THE SYSTEM

When Congress authorized funding to complete the Interstate System by 1990, it envisioned no further authorizations for this program. We have found, however, as we have reached 1990, that the Interstate System is incapable of handling the volume of traffic -- both commercial and passenger vehicles -- due to wear and lack of capacity. PCA feels that it is time for the Congress to reexamine our highway system in 1990 terms, in an effort to relieve pressure on both the urban and national grid by removing the current Interstate mileage limitation. The 42,500 miles that were thought adequate in 1955 are not adequate for 1990 and beyond.

Highways of National Significance

It has been suggested that the Interstate and portions of the Primary System, and bridges on those routes, be incorporated into a highway system of "national significance," to augment the Interstate. These routes, approximately three to four percent of the nation's highway system, now carry about 30 percent of vehicle travel and are becoming increasingly important in siting decisions for manufacturing and service facilities which must move both materials and products.

Many parts of the Primary system will not support additional loads and must be brought up to Interstate standards, particularly by the addition of lanes to accommodate increased truck and passenger vehicle traffic. However, a program now in place inhibits the use of Interstate funds in these necessary upgrades. The "Section 139" provision of Title 23, U.S. Code, allows a state to designate a route as an Interstate if it meets Interstate standards. However, use of Interstate and Interstate 4-R funds for construction or maintenance are prohibited. This prohibition should be repealed.

National Truck Route

Our nation's highway system has been described as "warehouses on wheels," racing to meet the "just-in-time" delivery demands. General Motors Corporation, for example, has estimated that approximately 7000 trucks are required daily to support its 299 assembly plants. Any delay triggers a domino effect in all industries serving that particular market.

The 1982 Surface Transportation Assistance Act required the Transportation Research Board (TRB) to conduct a study of truck access to Primary and local routes, including problems encountered in the establishment of a "National Network" for heavy trucks. The study noted the difficulty of implementing a national network and providing "reasonable" access to services, due mainly to the inadequacies of the existing highway system. The program restricted trucks to a network of "the nation's 'best' highways" that either meet Interstate standards or are sufficiently capable of limited service for heavy loads.

Congress is urged to examine the feasibility of constructing a continuous national truck route as part of the program to enhance interstate commerce. This initiative could eliminate or reduce the need for detours around deficient roads that are limited to certain sizes and weights which affect delivery time and detract from economic productivity.

We recommend that Congress authorize a study on the issue of a national truck route, to be undertaken by the Transportation Research Board, in cooperation with the Federal Highway Administration, the American Association of State Highway and Transportation Officials, and the American Trucking Association.

Innovative Technology

Although the Federal Highway Administration (FHWA) studies new methods of construction and equipment use through its Demonstration Projects Division and other experimental programs, the Federal Aid Highway Program provides no direct funding of innovative technology in the area of design, materials, products, or methods. Nor does it provide incentives for the states to promote innovative ideas.

More attention is now being given to research and development on pavement and bridge problems. However, these programs are the result of long-term planning by AASHTO and FHWA through the National Cooperative Highway Research Program, administered by the Transporation Research Board, and the Strategic Highway Research Program. Efforts generally are concentrated on specific problems experienced by the states as a whole, and do not allow for inclusion of ideas, products, materials or designs that come on-line during the course of these R&D projects.

It is in the national interest to encourage and promote the use of innovative technology that has the potential to improve or eliminate pavement failures, preserve or extend the service life of highways and bridges, and enhance highway safety.

Congress should provide incentive for technology development by allowing an increase of 5% in the federal share of a project's cost if innovative technology is proposed. More importantly, it should provide a separate funding category for the federal share to preclude a reduction in a state's apportionment that might be used for other projects. Final project approval would rest with the FHWA, based on the applicability of the product, material, or design to the highway program.

Toll Road Construction

In this era of dwindling resources, with a growing need to expand the capacity of the highway system, toll roads can be an effective means of pay-as-you-go financing for highway improvements. Available federal funds have not kept pace with bridge and highway requirements and the Highway Trust Fund cannot alone provide total funding.

Under present law, seven test projects for toll construction using a percentage of federal funds are underway. Because complete funding is available through bond issues plus the federal share, construction progresses rapidly and the projects can be placed in service more quickly. The present test program should be expanded to allow states to use federal funds for toll road construction. Further, tolls should be eliminated upon debt retirement.

## CONCLUSION

In summary, we believe the Federal role in our highway transportation system is critical and must be maintained. We must provide adequate funding for both new construction and rehabilitation. We must build for the long term, requiring pavements and other systems that are durable and safe. Finally, we must support additional research and development to ensure that we are prepared to meet the new challenges and transportation needs of the 21st Century.

We look forward to working with this Committee and the Congress as these important issues are considered. We offer any assistance that we can provide and appreciate the opportunity to discuss our views with you.

# REAUTHORIZATION OF SURFACE TRANSPORTATION PROGRAMS

WEDNESDAY, APRIL 10, 1991

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON SURFACE TRANSPORTATION,
COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION,
*Wcshington, DC.*

The subcommittee met, pursuant to notice, at 10:08 a.m., in room 2167, Rayburn House Office Building, Hon. Norman Y. Mineta (chairman of the subcommittee) presiding.

Mr. MINETA. The Subcommittee on Surface Transportation will please come to order.

I would like to thank all the participants in today's hearings because we are in the home stretch of completing our hearing schedule for the Reauthorization of the Surface Transportation Assistance Act.

As all of you know, studies call for transportation investments of up to $3 trillion during the next 20 years. We can differ about the final cost, but to me there are no more universal truths than these:

First, the needs are there.

Second, how we spend the money we have is as important as how much money we spend.

In the 1990s, the challenges and the responsibilities will be to maintain the Federal investment in the Federal-Aid Highway System; to continue broad Federal support for Mass Transit; and to create transportation partnerships that include Federal, local, State Governments, metropolitan planning organizations, and the private sector.

The only way our transportation network will truly improve in the years ahead is if we put our increasingly scarce Federal dollars where the needs are today, and where they must be in the future.

That foresight demands not a single strategy, but a series of policies that will be responsive to State, regional, and local needs well into the next century.

We will be hearing about the transportation priorities of many of our Congressional colleagues. We will also hear testimony from national experts on Mass Transit who will discuss the need for continued and increased investment.

I look forward to hearing the testimony of today's witnesses. Their insights on these issues will be very helpful as we continue to formulate our committee legislation.

At this time, I am pleased to yield to our very fine colleague from Arkansas, the ranking republican on the full Committee on

Public Works and Transportation. Unfortunately, because of the death of Senator Heinz, our very fine ranking member, Congressman Bud Shuster I believe is up in Pennsylvania for the funeral and is unable to be here today.

At this time, I am pleased to yield to our fine colleague, Mr. Hammerschmidt.

Mr. HAMMERSCHMIDT. Thank you very much, Mr. Chairman.

Mr. Chairman, today we continue the public debate on Reauthorization of the Surface Transportation programs, hearing from individual Members of Congress, the Mayor of the city of New York, and representatives of the transit industry.

As I have indicated on several occasions, as have you, Mr. Chairman, members of this subcommittee are committed to seeing this legislation enacted before the September 30th expiration date. As part of this effort, it is critical to hear from members who can share with us the special needs of their regions. And only by hearing of the unique problems in members' districts can we fashion a bill that is truly national in scope and character.

I will also listen with great interest this morning to representatives of the transit industry. I am anxious to know of their reactions to the Administration's proposal, and their further recommendations for improving transit services nationwide.

Transit has a unique role in the national transportation network, and is often advocated as the transportation alternative which can help areas of the country suffering from clean air restraints. Testimony offered today should help us learn of transit's potential and guide us in determining its appropriate future role.

So I extend a warm welcome to all of you. I look forward to hearing your recommendations.

Thank you, Mr. Chairman.

Mr. MINETA. Any other members who would like to present opening statements?

Mr. Applegate.

Mr. APPLEGATE. Thank you very much, Mr. Chairman. I appreciate what we are initiating—not initiating but continuing on with additional hearings until we reach the point where we will try to put together what is necessary to create a five-year plan; hopefully, it will be a five-year plan. It isn't going to be easy. There are a lot of needs. We are looking forward to the testimony of our colleagues and of representatives of the various municipalities and States.

I think what you said, Mr. Chairman, was right. It is not so much how much we spend but how much we spend of what we've got.

I know you didn't want to hear this, but I am going to say it anyway. [Laughter.]

Just talking about the Trust Fund is a very good example of monies that we do have but which we are not looking at spending. It appears that what the Administration wants to do is to increase that upwards of $20 to $21 billion over the five year period to do what they have been doing over a protracted period of time, that is showing a lower deficit. I think that the people of this country who drive on our highways and pay the taxes and who expect more out of this are getting the short shrift.

And I think, Mr. Chairman, as I stated to you earlier, that I am hoping that we will be able to do something with that surplus fund and that we will be able to utilize that in instances where economically depressed areas could benefit. Whereby, if we adopt the Administration's direction and where we may end up with going to 25 and 30, up to 40 percent, particularly in that 40 percent area, that the very areas that will need that are going to be the ones that will least be able to afford it. And that we could take, at least on a needs basis, the surplus from the Trust Fund and utilize it in such a way that it would help them to make up the matching monies that are necessary in order to bring the projects into their area, which would ultimately help them to enhance their economic opportunities and enjoy what some of the other parts of the country are enjoying.

I am looking forward to that and seeing what we can do. And I am looking forward to hearing the testimony of our colleagues.

Mr. MINETA. Thank you.

Our colleague, Mr. Brewster from Oklahoma.

Mr. BREWSTER. Thank you, Mr. Chairman. I would like to thank the committee leadership for holding this hearing. I appreciate the opportunity to express my views and the concerns of the people of Oklahoma's third Congressional district.

As this committee moves forward with consideration of the Administration's surface transportation budget proposals, I would like to urge my colleagues to examine the surface transportation needs of this Nation and compare them with the Administration proposals.

In the case of Oklahoma's third Congressional district, which is a very rural area, the Administration proposals do not give the needed attention to maintaining roads and bridges. One of my greatest concerns is the proposed Urban Rural Block Grant Program. For the Administration to replace the current primary, secondary, and urban system programs with a single urban rural program is, I feel, an unwise move and contributes little to maintaining our roads and bridges.

The current 75 Federal/25 State matching ratio would be changed to a 60/40 State matching ratio. The Administration should recognize the fact that many of our States are simply unable to generate enough revenue to provide the matching funds necessary to put our total Federal apportionment to work. Increasing these States' ratio from 25 percent to 40 percent does little to relieve this problem.

It is time to recognize the deficient condition of our urban and rural collectors and our urban and rural arterials. We must provide necessary funds to ensure the American people you can get from point A to point B without being routed around bridge C and detour to by-pass road D.

I would like to thank the committee leadership for providing me the opportunity to express my concerns. I would like to thank my colleagues for the leadership they have provided and will continue to provide on this critical issue.

I look forward to today's testimony and the opportunity to question the witnesses on the issues of concern to Oklahoma and the district I have the honor to represent.

Thank you.

Mr. MINETA. Thank you very much.

At this time, I would like to submit for the record the prepared statements of our colleagues from Illinois, Mr. Costello and Mr. Poshard.

[The prepared statements of Mr. Costello and Mr. Poshard follow:]

**OPENING STATEMENT**

**BY U.S. REP. JERRY COSTELLO, ILLINOIS**

**SUBCOMMITTEE ON SURFACE TRANSPORTATION**

**HEARING ON THE AUTHORIZATION OF THE POST-INTERSTATE**

**SURFACE TRANSPORTATION PROGRAMS**

**APRIL 10, 1991**

Mr. Chairman, today we are here to further inquire into the future shape of our country's surface transportation policy. The hearings to date have been very useful, and I look forward to hearing from today's witnesses.

There are several provisions in the Administration's proposal which concern me, and which I believe merit more of this Committee's attention. I hope that today we can examine the impact of the Administration's proposals to alter labor protection provisions. In addition, I am concerned about UMTA's administration of provisions to encourage privatization. Several members of the transit community have expressed to me their view that UMTA's pressure for privatization goes far beyond Congressional intent, and often results in project delays.

Thank you again, Mr. Chairman, for convening us today.

REMARKS OF CONGRESSMAN GLENN POSHARD
SUBCOMMITTEE ON SURFACE TRANSPORTATION
10:00 a.m., 2167 RAYBURN BUILDING
APRIL 10, 1991

MR. CHAIRMAN, I AM PLEASED TO BE HERE THIS MORNING TO HEAR MORE ABOUT THE ADMINISTRATION'S PROPOSED BUDGET AND THE SURFACE TRANSPORTATION REAUTHORIZATION. THE HIGHWAY BILL IS A ONE WHICH DIRECTLY AFFECTS THE DAILY LIVES OF THE VAST MAJORITY OF AMERICANS, AND I AM GLAD TO BE A PART OF THE PROCESS.

I BELIEVE THAT THE EMPHASIS ON AN INTERGRATED NATIONAL TRANSPORTATION SYSTEM IS VITALLY NEEDED, AND I APPLAUD BOTH THE COMMITTEE AND THE ADMINISTRATION FOR THE WORK BEING DONE TO MOVE IN THAT DIRECTION.

COMING FROM A VERY RURAL AREA, I AM INTERESTED IN RURAL PUBLIC TRANSPORTATION PROGRAMS AND INITIATIVES WHICH WOULD IMPROVE AND EXPAND SERVICE IN RURAL AREAS. I'M LOOKING FORWARD TO A GOOD HEARING, AND I APPRECIATE THAT OUR WITNESSES ARE HERE BEFORE US.

Mr. MINETA. At this time, I would like to now call on a very distinguished colleague with whom I was elected in 1974, Tom Downey.

If you would proceed on your own, Mr. Downey.

## TESTIMONY OF HON. THOMAS J. DOWNEY, A REPRESENTATIVE IN CONGRESS FROM NEW YORK

Mr. DOWNEY. Thank you, Mr. Chairman. Having had the privilege of serving on the other side of the witness table, I will try and make sure that my remarks are short and sweet since you have a long panel of witnesses today.

My concerns are a narrow focus of what you will be considering. They have to do with the transportation needs of the elderly. Mr. Chairman, listening to your opening statement, I was struck how the three items that you talked about fit very nicely in the concerns that the elderly have.

First of all, the needs are there, you said. They certainly are. If you take a look at the problems that the rural and the suburban elderly have, there is a myriad of services available to many of our elder citizens, but the opportunity to get to those services is not there.

Title III of the Older American Act, which is a catch-all spending program for the States, in some States they use almost one-third of the budget just to provide the opportunity for the elderly to get to services.

The second point you made in your opening statement, Mr. Chairman, is you said how we spend the money is as important as how much we spend it on. And I couldn't agree with that more. The reality is that in a world of diminished resources, how we spend money is critical. And coordination of what we spend it on is equally important.

Section 16(b)(2) of the Surface Transportation Act provides grants to not-for-profit agencies for capital—buses, vans—to provide transportation. If you can in your consideration of your omnibus bill require the coordination from the Department of Transportation to the Department of Health and Human Services on the transportation needs of the elderly—marry Title III with 16(b)(2) services—it will get the sort of synergistic effect that we need in terms of providing additional help to this one segment of the population.

I hope you would also, Mr. Chairman, consider a whole mobility strategy for the elderly. The elderly, and most Americans, view transportation as a fundamental right. Most of the Founding Fathers viewed this idea of mobility also as an important right of Americans.

Lastly, let me just say that H.R. 1079, the Mobility Assistance Act of 1991, of which I am a co-sponsor, addresses all of these needs clearly and effectively. So during the course of your deliberations, as you think about the special needs of special organizations, please consider the fact that if the elderly are to use the services that we richly provide under other sections of law, they have to be able to get there. Right now, they are not getting there.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much, Mr. Downey.

Mr. Bilbray.

Mr. BILBRAY. Thank you, Mr. Chairman. By the way, as a member of the Aging Committee, I would like to associate myself with Mr. Downey's statement. It is so correct and so needed.

Mr. MINETA. Sorry, Mr. Bilbray.

Mr. Downey, before you get away, could I ask one quick question of you?

Mr. DOWNEY. Sorry, Mr. Chairman.

Mr. MINETA. No, I would just like to ask since you are supporting our very fine colleague, Congressman Rahall in the H.R. 1079, the Mobility Assistance Act of 1991, when do you think your GAO report will be ready?

Mr. DOWNEY. In June, Mr. Chairman.

Mr. MINETA. In June?

Mr. DOWNEY. Yes, Senator Adams and I asked for the GAO to do a study.

Mr. MINETA. I am really looking forward to the results of that, and I do hope that we will have the opportunity to share in that report. That may be a very enlightening issue for us. The problem is if that's going to be June, we may have marked up on our bill. But we will have to take a look at that.

When you talk about the elderly, there are elderly who are able-bodied versus elderly who are in need. And so I am wondering to the extent how do we get those services to the elderly who really are in need?

Mr. DOWNEY. Coordinating that, Mr. Chairman, with local agencies, which have a remarkable insight into who in the community needs the services, is the way to handle that. And leaving wide discretion among the States and the localities as to how they spend this money I think is also appropriate.

Let me just mention to some of the other members of the subcommittee who may not be aware of this, I am the chairman of the Human Services Subcommittee on the Aging Committee, which Mr. Bilbray may have mentioned. We spend a lot of time on this question not only of services, but how to most appropriately utilize these services. If you take a look at the various aging agencies, they have a very good idea of who is in their community, who needs the help, and how they need the help. And you could even tailor, though I suspect this is somewhat more controversial, the services to those who need it and require a small payment from those who use services who can afford to use those services. I think that would be completely appropriate. Sometimes that becomes administratively difficult to do, but I think it makes some sense to do in terms of making scarce dollars go further.

Mr. MINETA. Mr. Laughlin.

Mr. LAUGHLIN. Thank you, Mr. Chairman.

Mr. Downey, when you conducted your hearing in January 1991 for transportation for America's elderly, in that hearing did you address the transportation needs of the elderly in just the cities or did you address rural also?

Mr. DOWNEY. Let me just say that we addressed the needs of the elderly across the country. In the body of my remarks, I talked about the suburban and the rural elderly as being the most in need. The rural elderly, as far as we could tell from our hearing,

are probably the most critically under-served group. There, transportation is absolutely critical to their being able to use any service that the area and agencies provide. So that has got to be one of your principal focuses.

Mr. LAUGHLIN. Who should we contact on your staff to get a copy of that study and report?

Mr. DOWNEY. Well, we will make that available to the members of the subcommittee. Later on in the afternoon you are going to hear very compelling testimony from a woman who testified before my subcommittee on this subject that you are concerned about. She will detail in chapter and verse the needs and how you can be of help.

Mr. LAUGHLIN. Thank you very much.

Mr. MINETA. Thank you very much, Mr. Downey.

Mr. DOWNEY. Thank you, Mr. Chairman, and thank the members of the subcommittee.

[Mr. Downey's prepared statement follows:]

STATEMENT OF TOM DOWNEY

I am pleased to present testimony this morning before the Subcommittee on Surface Transportation on legislative proposals for surface transportation programs.

As the Chairman of the House Select Committee on Aging's Subcommittee on Human Services, the issue of transportation as a human service and as a human right continues to be a great concern of mine. Transportation is a vital lifeline for older Americans and a critical factor in their ability to maintain their independence. Lack of transportation services undermine the effectiveness of the programs that serve the elderly and the disabled.

The passage of the 1970 amendments to the Urban Mass Transit Act (UMTA) of 1964, which added Section 16, marked the beginning of special efforts to plan, design and set aside funds for the purpose of modifying transportation facilities for improved access by the elderly and disabled.

Last year marked the 25th anniversary of passage of the Older Americans Act, which has had a major impact on the development of transportation for older persons, and which falls within my Subcommittee's oversight jurisdiction.

Under Title III of the Older Americans Act, States are required to spend an adequate proportion of their funds on three categories: Access services, which include transportation; in home services and legal services.

In fiscal year 1989, nearly 7 million persons were recipients of transportation services under the Older Americans Act. Approximately 10 percent of Older Americans Act funds are used for transportation services.

Finally, twenty years ago this year, the 1971 White House Conference on Aging authorized by the Older Americans Act and called by President Nixon introduced the issue of transportation as a senior issue; the 1981 White House Conference identified transportation for the elderly as a priority issue.

The last time the issue of transportation for older Americans was addressed, prior to this year, by the House Select Committee on Aging was in 1986, when the Subcommittee on Human Services held a hearing entitled, "Elderly Transportation: 1986 and Beyond."

At that time, Subcommittee Members heard testimony from witnesses that contained mixed messages. There was a sense of accomplishment that existing programs were working to serve seniors, and a sense of frustration that there are still so many older Americans who are entitled to transportation services, and who are not receiving those services.

I cannot emphasize enough the importance of transportation in providing access to all other social services for the elderly. The best designed service will only have a limited impact if elderly clients cannot reach the service site. Once you lose your ability to get from place to place, you begin to lose your independence.

Now, five years later, we are once again addressing the issue of mobility and specialized transportation as ways to access needed resources in order for many older Americans to remain living independently within their communities. Some of the issues that have surfaced as concerns and problems in the past are still with us. The need for increased funding, coordination of programs, the targeting of beneficiaries, changes in funding patterns, the very real differences that exist in rural and urban transportation needs, the absence of reported data, as well as the concern about safety of older drivers are among some of those issues.

While we know that there are other Federal mechanisms that provide transportation opportunities for our Nation's elderly, such as the Social Services Block Grant, the Community Services Block Grant, and to some extent, Medicaid, the ones I have mentioned this morning all have something in common -- they are currently being reviewed for reauthorization by Congress.

That is why on January 29, 1991 I held a hearing called, "Transportation in the Nineties: Keeping America's Elderly Moving." Recommendations from my hearing might be extremely useful to this Subcommittee as you consider legislative proposals for surface transportation, especially H.R. 1079, the Mobility Assistance Act of 1991, introduced by my good friend Nick Rahall. This legislation is a constructive first step at reaching a more balanced distribution of Federal transit assistance and a targeting of those dollars to the most in need, specifically the transportation dependent. H.R. 1079, also addresses capital needs, including 16(b)(2) and operating needs looking at both underserved and unserved areas of this country. This bill, if passed, would have significant implications for the elderly and will help to focus national transit policy so that it includes the elderly as a top priority.

It is my hope that we might work together to develop strategies for creating a national policy on mobility and transportation for all Americans. I think that this has to be a unified effort, and one that not only reaches out to Congress, and the Federal Government, but to the private sector as well.

In that light, I, together with Senator Brock Adams, Chairman of the Senate Committee on Labor and Human Resources Subcommittee on Aging, and former Secretary of Transportation, have requested a joint study by the General Accounting Office identifying the principal barriers that local and area service providers are experiencing in providing transportation to their clients, and to propose solutions for overcoming those barriers. Once this study has been completed, I will be happy to share the results with you.

Thank you again for allowing me the time to share my concerns with you. I look forward to working together with you over the coming weeks and months.

Mr. MINETA. Mr. Bilbray, your statement will be made a part of the record. So if you would proceed in your own fashion.

## TESTIMONY OF HON. JAMES H. BILBRAY, A REPRESENTATIVE IN CONGRESS FROM NEVADA

Mr. BILBRAY. Thank you very much, Mr. Chairman. I appreciate the opportunity to address the subcommittee as you begin this difficult process of consideration of the reauthorization of the Surface Transportation Act.

I would like to commend the committee members for their strong support of our highway program. The funding level that the committee presented to the Budget Committee attempts to adequately fund our Nation's highway infrastructure above the $16 billion the Administration is proposing.

For those of us who represent the West, we are deeply concerned over the proposal to change the funding formula for highways. Basing the distribution of funding on population may work well on some issues, but not on large yet sparsely populated States like Nevada.

If roads in a particular State were used only by the residents of that State, then the Administration's position would be valid. But that is not the case. Nevada is visited by millions of tourists annually from every State in the Union who either drive their vehicle or rent a car.

Further, Nevada serves as a bridge State which suffers from traffic from commercial trucks transporting goods from one State to another. This adds up to roads that are in need of repair and upkeep gives us tremendous problems on the destruction of our road system.

To ensure that the highway infrastructure meets the needs of those traveling in Nevada, I am seeking support from the subcommittee for several proposals that will improve the movement of traffic in the Las Vegas area.

Chairman Mineta visited southern Nevada last Congress and I understand again just in the last few weeks he visited Southern Nevada. As the Chairman is aware, and I am sure the members of the committee are aware, Nevada is the fastest growing State in the Nation. Clark County, where Las Vegas is located, has a net growth of 4,000 citizens a month. I saw figures the other day that were presented to me that by the early 21st century it is estimated that the greater Las Vegas area will have a population in excess of 1.9 million people. So it will be a major center in this country. Starting out when I was born there they only had 5,000 people. So you can see what that kind of growth has done. And I am not that old. [Laughter.]

Figures released by the Commerce Department indicate this growth will continue through the 21st century. Who knows what the size of Las Vegas will be by the beginning of the 22nd century.

This tremendous growth has seriously strained the State's transportation infrastructure. The transportation system in southern Nevada is 10 years behind in meeting the travel requirements of the population. To update Nevada's highway system will cost $4.5 billion over the next decade. And when you think that our entire

State budget per year is $1 billion, you can understand why that is of concern to the people of our State.

Nevada's elected officials have worked aggressively to redress the shortfall. In fact, our own population voted in southern Nevada for massive tax increases to help fund the transportation in southern Nevada.

As I mentioned earlier, Nevada is a bridge state. Our survey of our Department of Transportation states that 80 percent of the trucks that travel over our roads neither start in Nevada or terminate in Nevada—they pass through our State on the way to California or from California to someplace else. This does tremendous damage, as this committee knows, on the infrastructure of our State. And even the outside roads, the small roads on the side, 30 percent of those trucks that travel over those roads neither originate in Nevada nor terminate in Nevada.

What we are asking this committee to consider is two particular programs—the I-15/U.S. 95 Interchange, where two Interstate Highways come together, called the "Spaghetti Bowl" because it is so enmeshed with different ways to get on and off that particular structure. This was built in the 1960s and certainly was projected to be able to handle the traffic till the turn of the century in southern Nevada. That has turned out to be totally inadequate. Even our most progressive prognosticators never dreamed that the southern Nevada growth would be what it is today.

The Nevada Department of Transportation is looking at this Interchange and planning changes that have to be made. We are asking the Government to commit $10 million for each year of five years toward this program. The total cost of this project will be $80 to $100 million and the remaining funds will be made up by the Nevada State Department of Transportation.

The second project we are asking for is $8 million for the initial link of a beltway around Clark County. This is desperately needed on our plans. The first link would be tied to McCarran International Airport with Interstate and urban arteries. This would be a massive, better than a several billion dollar project to take us all the way around the valley into a beltway. We are asking for help from the Federal Government in that project.

Again, I would like to thank the committee for considering these projects. I know that the former chairman came out to our city, Mr. Howard, and I know that Mr. Anderson has also visited us, and Mr. Mineta has. I see other members of the committee, like chairman Roe, who have been out there for other problems in the past. We appreciate the members of the committee that do visit our fair city, and hope that more members will be able to visit us and see our transportation system.

Thank you.

Mr. MINETA. Thank you very much, Mr. Bilbray.

Any questions of Mr. Bilbray?

If not, thank you very, very much. Having visited, as you've indicated, the Spaghetti Bowl Interchange and seen the I-5, I-15, I-95 problems there, as I understand it, you say the total cost is about $80 to $85——

Mr. BILBRAY. It is $80 to $100 million, of which we are asking for nearly $50 million in Federal help on that. We are putting our

money where our mouth is in Nevada. Like I said, the voters actually voted in massive tax increases because the gridlock that is developing in Nevada is becoming very serious.

Mr. MINETA. What's the State gasoline tax in Nevada, do you know?

Mr. BILBRAY. I think it is around 20 cents a gallon, but I am not 100 percent sure.

Mr. MINETA. Do any of the sales tax dollars go towards anything other than general funding?

Mr. BILBRAY. They do now. That's one of the votes that was made by the people of southern Nevada. They voted an increase in sales tax and that money is now geared toward transportation.

Mr. MINETA. I notice that there was 9 percent sales tax that you have in Nevada.

Mr. BILBRAY. I don't think it's 9 percent, I think——

Mr. MINETA. Oh, I'm sorry. No, no. I am sorry.

Mr. BILBRAY. It was 6 and we voted an increase in that.

Mr. MINETA. It was 6, that's right.

We welcome our very distinguished full committee chairman. We are pleased to have you here, Chairman Roe.

The CHAIRMAN. Thank you, Norman Mineta, the distinguished chairman of our subcommittee. You're doing an excellent, outstanding job overall, not only the hearing aspect, but the transportation program of the Nation.

I would like to ask a particular question which I would like to get on record. One of the proposals that is emerging out the Administration's proposals, is based upon the point of view that the states and the locals should pay more money; the matching levels should be reduced and the locals—meaning the states and the cities—should be putting up more funding. You made the point of view in your opening presentation that the State of Nevada, which I'm alerted to, has been doing quite a bit of that to begin with.

Is the State of Nevada in a position, in view of what the Administration has projected as far as local participation, to tax themselves additional funding to meet the needs? When you start talking about $4.5 billion, that's probably 25 percent of the entire allocation for the Nation, and I don't say that disrespectfully, because it is——

Mr. BILBRAY. No, but we're not talking about one year, Mr. Chairman. We're talking that over a number of years.

The CHAIRMAN. I understand that. But do you feel that the States can be putting up more funding than they're doing now?

Mr. BILBRAY. Well, I think that depends State-by-State. You have got to remember that the State of Nevada is 87 percent owned by the Federal Government. What that does is take 87 percent of our property off the tax roles. Because of that reason, we have a very, very difficult time. We have most of these highways that are running entirely on public lands the whole length of their distance, sometimes 400–500 miles, never touching, except rarely, a piece of property owned by any individuals within the State. So we don't have a good property tax base to look at because when you only own 13 percent in either State or private ownership, probably 6 or 7 percent of that is State parks and items like that, so you prob-

ably have 7 percent in private ownership. So we are very limited on what we can do with property tax.

We can certainly raise the sales tax, which we have done, to help fund it. We have raised the gasoline tax to where we're one of the highest in the United States. We continue to do this sort of thing, but we're reaching a point where at what point do we reach a point where we break the back of the people of the State. If 100 percent of our State was owned by the people of the State of Nevada, like you find in many Eastern States, I would say that we could share the burden around through the property tax fairly. But when 87 percent of the State is owned by the Federal Government and we have tried repeatedly to get the Federal Government to release some of that land back to us to help us be able to put that into private ownership, the Federal Government refuses.

The CHAIRMAN. I wonder if the Chairman would give me one more second. What I am trying to get at, and I think we have to start to develop in these hearings particularly as members are testifying, is that the Administration's proposal calls for a system of highways of national importance, national significance, of which probably 65 percent of the funding would be allocated out of the monies that are allocated each year for that purpose. So if we are just going to do that, there are not going to be enough resources—and the Administration has recognized that, too—to be able to do what ought to be done in America that is needed for the transportation system of the country. Therefore, one of two things have to happen. Either we have to go the route of saying, well, yes, the States have got to put up 50 percent more of the funding or the Federal Government has got to be responsible for more of the funding. That's where we're coming from.

I think it is important to establish at the very beginning of these hearings that the assumption that State after State after State testifies, including my own, and says we need $3 billion, we need $4 billion, when the total amount of funding is $16 billion next year, at least allocated by the Budget Committee at the moment, this is time for America to look up and the Congress to say we should be providing more resources to be able to build the infrastructure of the Nation.

Mr. BILBRAY. Well, absolutely, Mr. Chairman.

The CHAIRMAN. Would you vote for that support?

Mr. BILBRAY. Absolutely. And I've done it in the past and will continue to do it in the future.

The CHAIRMAN. I would note that Nevada is one of the very best members we have. [Laughter.]

Mr. BILBRAY. Thank you. And I would also oppose taking Highway Trust Funds and using them for any other purpose but on the highways and infrastructure of our country.

The CHAIRMAN. I thank the distinguished chairman.

Mr. MINETA. Any other questions of our distinguished colleague from Nevada?

If not, we thank you very much.

Let me now call on a very distinguished member of the California delegation from the 19th Congressional district, our colleague, Bob Lagomarsino.

Bob, if you would like to bring your two Commissioners with you, if they are here, and introduce them to the panel, that would be fine.

**TESTIMONY OF HON. ROBERT LAGOMARSINO, A REPRESENTATIVE IN CONGRESS FROM CALIFORNIA, ACCOMPANIED BY BOB H. JENNINGS, COMMISSIONER, OXNARD HARBOR DISTRICT, AND RAYMOND E. FOSSE, COMMISSIONER, OXNARD HARBOR DISTRICT**

Mr. LAGOMARSINO. Thank you, Mr. Chairman.

Mr. Chairman and members of the committee, thank you for this opportunity to once again report to you on the port access project at the Port of Hueneme in Ventura County. I have with me this morning two commissioners from the Port, Bob Jennings, on my left, who has served as a commissioner for 31 years; and Captain Ray Fosse, who was elected as a commissioner last November.

I compliment you, Mr. Chairman and members of the committee, for the difficult job you are setting out to do to develop a surface transportation bill. I know it won't be easy; there are all kinds of tough issues, we've heard some of them already this morning, but I am confident that you will be able to come up with a bill that we can all support.

Last July 2, I testified at the field hearing you held in Long Beach. In my statement, I endorsed the concept of legislation to specifically enable improved intermodal operations at ports. I mentioned a port access/intermodal project initially studied by the Southern California Association of Governments in 1986. The Port of Hueneme, the Cities of Oxnard, Port Hueneme, and Ventura, and the Ventura County Transportation Commission support the conclusions of the report and agree on the priorities for constructing and improving critical transportation corridors in the plan.

The Naval Construction Battalion Center at Port Hueneme, along with the Naval Ship Weapon Systems Engineering Station, the Naval Air Station, Pacific Missile Test Center, and Air National Guard at Point Mugu all played critical roles in Operation Desert Shield/Desert Storm. And the Port of Hueneme will play an important role in the demobilization. All the truck traffic generated by the Port and these related naval bases currently travels on local roads through these three cities to reach the major transportation corridor in Ventura County, Highway 101. The truck traffic generated by these facilities creates environmental, safety, and economic problems.

The port access study identifies solutions to these problems, and I am hopeful that your bill will provide some Federal resources to implement the plan. I request that you include a provision in the bill which will enable some portion of the highway program to use Federal funding to implement port access/intermodal programs or to demonstrate the economic, environmental, and safety benefits accruing from improved port access in a region served by the port and two major Navy installations.

Thank you for consideration of these proposals. And thank you, Mr. Chairman.

Mr. MINETA. Thank you very much, Bob.

Let me ask, in the Administration's bill, what they have done is to say that certain ports and major defense facilities can be put under the national highway system as part of a priority. Do you know whether or not this would qualify under that as providing access to a nationally significant defense-related facility?

Mr. LAGOMARSINO. I certainly think it would because, as I mentioned, we have three major military bases—two Navy bases and an Air National Guard base that was just constructed about a year ago.

Mr. MINETA. Do you know whether or not this specific piece is in the map that was submitted by the State of California to the Federal Highway Administration in the Department of Transportation.

Mr. LAGOMARSINO. Yes, I am told it was.

Mr. MINETA. That it was part of the national highway system?

Mr. LAGOMARSINO. That's my understanding.

Mr. MINETA. Okay. Fine. Well, thank you very much, Mr. Lagomarsino.

Any other questions?

The CHAIRMAN. Mr. Chairman.

Mr. MINETA. Our distinguished chairman of the full Committee on Public Works and Transportation.

The CHAIRMAN. First of all, I want to welcome you, Bob, for your valid testimony and the strong support that you have rendered over the years for this committee.

I had a chance to talk to some of your folks yesterday, when they visited with me on this very important issue. The point that was developed—which was a very strong point and I think it ought to get into the record—is that this port is a unique port in the sense that it is not totally devoted to containerized shipping, it is more general cargo, as I understand.

Mr. LAGOMARSINO. That's correct.

The CHAIRMAN. I think that's a terribly important point to make. We visited recently out in Long Beach and we visited in Los Angeles, of course those are two of our really major containerized ports as you know. I want to make it clear that it is not necessarily in that kind of direct competition with Port Hueneme. What does that mean? How does that translate in Indian, "Include us in the highway bill." [Laughter.]

Mr. LAGOMARSINO. Sir, it means "beautiful lady."

The CHAIRMAN. Beautiful lady. All right, that gets you fifty points right there. [Laughter.]

But I think it is important to clarify the issue as far as ports in this country are concerned in the intermodality point that the distinguished Representative from California is speaking to. That we should not have our transportation system Balkanize it if we are going to get the optimum yield out of those ports and are going to be more competitive, particularly the type of port it is, the intermodality, the interrelationship to the rest of the transportation system, is extremely important. So it is not just a question of getting a road in there, it is a question that you mentioned in your testimony, the economic dynamics of what we're trying to achieve with the freight coming in.

So therefore, Mr. Chairman, if I may, when the committee discusses and starts to get into the point of intermodality—that's

flexibility we're talking about—that you consider that to be a critical issue as far as this area of the country is concerned. Would that be a fair comment?

Mr. LAGOMARSINO. Oh, absolutely.

The CHAIRMAN. I thank the distinguished gentleman.

Mr. MINETA. Other questions of our distinguished colleague from California?

If not, thank you very much, Congressman Lagomarsino, and Mr. Jennings and Captain Fosse.

And, without objection, I would like to insert into the record at this point a statement received from Representative Elton Gallegly of California.

[Mr. Gallegly's statement follows:]

THE HONORABLE ELTON GALLEGLY

STATEMENT TO BE SUBMITTED FOR THE RECORD
SURFACE TRANSPORTATION SUBCOMMITTEE HEARINGS
on the
REAUTHORIZATION OF SURFACE TRANSPORTATION ACT
HOUSE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

APRIL 10, 1991

CHAIRMAN MINETA, MEMBERS OF THIS SUBCOMMITTEE, THANK YOU FOR THIS OPPORTUNITY TO SUBMIT TESTIMONY IN SUPPORT OF A VERY IMPORTANT TRANSPORTATION PROJECT LOCATED IN MY CONGRESSIONAL DISTRICT AS WELL AS MY COLLEAGUE'S, CONGRESSMAN BOB LAGOMARSINO. THIS SUBCOMMITTEE HEARD FORMAL TESTIMONY ABOUT THE PORT OF HUENEME ACCESS PROJECT LAST SUMMER WHEN VENTURA COUNTY SUPERVISOR SUSAN LACEY APPEARED BEFORE YOUR FIELD HEARING IN LONG BEACH. SINCE THAT TIME, THE LEGISLATIVE BODIES OF THE FOUR LOCAL GOVERNMENTS ASSOCIATED WITH THE PROJECT HAVE FORMALLY ACCEPTED A REPORT FROM THE VENTURA COUNTRY TRANSPORTATION COMMISSION (VCTC) RECOMMENDING SPECIFIC CONSTRUCTION OR IMPROVEMENT PROJECTS WHICH WILL IMPLEMENT CRITICAL ELEMENTS OF THE PLAN.

MR. CHAIRMAN, I KNOW THAT YOU AND YOUR COLLEAGUES ON THIS SUBCOMMITTEE HAVE DEVOTED A GREAT DEAL OF TIME AND ENERGY GATHERING AND EVALUATING MANY DIFFERENT POSSIBLE COMPONENTS OF THE NEXT SURFACE TRANSPORTATION BILL. AS A FELLOW CALIFORNIAN, I KNOW THE TREMENDOUS IMPACT YOUR DECISIONS WILL HAVE ON THE MANY TRAFFIC PROBLEMS WE HAVE IN SOUTHERN CALIFORNIA. I KNOW THAT YOUR BILL WILL ADDRESS THE METROPOLITAN TRAFFIC CONGESTION ISSUE. AS WE BOTH KNOW FROM OUR EXPERIENCE AS MAYORS, THE ROADS IN AND AROUND CITIES CARRY TREMENDOUS AMOUNTS OF LOCAL, REGIONAL, AND CROSS COUNTRY TRAFFIC. MANY OF THESE LOCAL HIGHWAYS ARE CRITICAL TO REGIONAL ECONOMIES AND THE NATIONAL DEFENSE MISSION OF MILITARY FACILITIES.

THE PORT OF HUENEME PORT ACCESS PROJECT IS AN EXAMPLE OF A TRANSPORTATION PROJECT WHICH HAS NATIONAL AS WELL AS REGIONAL SIGNIFICANCE. I KNOW THAT SEVERAL OF OUR LOCALLY ELECTED OFFICIALS FROM VENTURA COUNTY HAVE DISCUSSED THE IMPORTANCE OF THE PORT ACCESS PROJECT WITH YOU AND YOUR STAFF OVER THE PAST TWO YEARS, AND I AM HOPEFUL THAT YOU WILL INCLUDE FUNDING IN THE SURFACE TRANSPORTATION BILL FOR THE PORT ACCESS CORRIDOR IMPROVEMENTS.

THE PORT OF HUENEME, THE POINT MUGU MISSILE BASE AND THE NAVY'S CONSTRUCTION BATTALION BASE (SEABEE) ARE VERY IMPORTANT TO THE ECONOMY OF THE AREA AND MUST BE SERVED BY A ROADWAY SYSTEM WHICH REFLECTS THEIR IMPORTANCE TO THE AREA. I REQUEST THAT A PROVISION BE INCLUDED IN THE BILL WHICH ENABLES A DEMONSTRATION OF THE INTERMODAL IMPROVEMENTS RECOMMENDED IN THE PORT ACCESS STUDY.

THANK YOU.

Mr. MINETA. At this time I would like to call forward a panel made up of very fine colleagues of ours from Ohio and Indiana, Congressman Paul E. Gillmor of the 5th district in Ohio, Congressman Jim Jontz of the 5th district in Indiana, Congresswoman Marcy Kaptur of the 9th in Ohio, and Congresswoman Jill Long of the 4th in Indiana.

All of your statements will be made a part of the record. And who would like to proceed with the initial statement?

Mr. Jontz.

Mr. JONTZ. Mr. Chairman, I think that our panel has determined that we will work from the West to the East.

Mr. MINETA. All right. Then go East.

**TESTIMONY OF HON. JIM JONTZ, A REPRESENTATIVE IN CONGRESS FROM INDIANA; HON. JILL L. LONG, A REPRESENTATIVE IN CONGRESS FROM INDIANA; HON. PAUL E. GILLMOR, A REPRESENTATIVE IN CONGRESS FROM OHIO; AND HON. MARCY KAPTUR, A REPRESENTATIVE IN CONGRESS FROM OHIO**

Mr. JONTZ. Thank you, Mr. Chairman. I sincerely appreciate your accommodating this statement this morning from myself and from our panel.

I would like to ask for the committee's consideration of the authorization of a project that we call the Hoosier Heartland Industrial Corridor, which would seek to make U.S. 24 from Lafayette, Indiana to Fort Wayne, Indiana a modern four-lane highway.

Mr. Chairman, my election to Congress came after the formulation of the most recent Surface Transportation Act and I was not for that reason able to come before this committee at that time. But we have been fortunate that some $5.95 million for preliminary engineering and land acquisition for two segments of this highway have been approved. At this point, we come before the committee to request $20 million for authorization for the construction phase of the project.

Mr. Chairman, Indiana has a very ambitious highway improvement program and the Hoosier Heartland Industrial Corridor is a major component of the program. We have new lottery revenues in our State which make this sort of program possible, but the Federal funding certainly plays a critical role in moving this project forward on the State's agenda. Total construction costs for these two particular segments that would result in the completion of the project from Logansport to Fort Wayne would be $103 million, so the $20 million is about 20 percent of that.

Mr. Chairman, the need for this project results from the fact that the cities that are linked by this corridor lack a modern transportation system; they are basically railroad towns that have been left behind economically. Many local efforts for economic development have been frustrated from the lack of a four-lane highway connecting these cities with the commercial centers of Fort Wayne and Lafayette. This project would allow those towns to grow as well as addressing the very serious safety concerns which result from the inadequacy of this road.

Mr. Chairman, I do appreciate your consideration. I am pleased to be a part of this panel which addresses more comprehensive transportation needs across northern Indiana and into western Ohio.

Mr. MINETA. Thank you very much, Mr. Jontz.

Proceeding eastward to Congresswoman Jill Long.

Ms. LONG. Thank you, Mr. Chairman and members of the subcommittee. I thank you for the opportunity to testify today.

I echo Mr. Jontz' request for Federal assistance for the Hoosier Heartland Industrial Corridor, which lies to the west of Fort Wayne, Indiana. I am also pleased to be here, together with Mr. Gillmor and Ms. Kaptur, in support of Federal assistance with regard to the funding of a feasibility study to assess improvements on U.S. 24 east of Fort Wayne to Toledo, Ohio—which is referred to as the Fort-to-Port Corridor.

The Hoosier Heartland Industrial Corridor would provide a needed four-lane link west of Fort Wayne, which is in my Congressional district, to Lafayette, in Congressman Myers' Congressional district; the largest portion of this crosses Congressman Jontz' district in north central Indiana. The Fort-to-Port Corridor would also provide a four-lane link from Fort Wayne to Toledo, and this corridor extends for 11 miles within my Congressional district to the Indiana/Ohio border. The largest section of this corridor crosses Congressman Gillmor's district in northwest Ohio, and then continues on to Toledo.

Mr. Chairman, over the last 30 years the safety to motorists and the economy along U.S. 24 have suffered considerably from transportation problems. As more four-lane roads and major interstates have been built, large highways have developed into the primary freight distribution networks throughout the country. However, there is one exception. Fort Wayne and Toledo are among the 100 largest cities in the United States and yet one of the few pairs without a four-lane connection.

As the importance of railroads for hauling freight has waned, larger and more hazardous trucks have increasingly been utilized to transport freight. Along U.S. 24 to the east and west of Fort Wayne, larger and heavier vehicles must use the narrow, winding, two-lane roadways, if they use them at all.

While the cities of Fort Wayne, Lafayette, and Toledo continue to grow, the smaller cities and towns in between have been adversely affected by the inaccessibility created by poor roadways. This area is composed of farms and factories, spread out over open countryside, which are connected primarily by a patchwork of meager, rural roads. The communities along these two corridors have tried to promote economic development despite these transportation shortcomings. These communities are often overlooked by companies because the region lacks modern transportation routes. As the road system exists now, companies would have to be wary about this roadway's current inability to accommodate the transportation needs of labor, supplies, and distribution.

Furthermore, the State of Indiana and the State of Ohio have recently submitted U.S. 24 to the U.S. Department of Transportation as a road to be designated as a Highway of National Significance.

Mr. Chairman and members of the subcommittee, highway improvements to the Hoosier Heartland Industrial Corridor and assessing the feasibility of improvements to the Fort-to-Port Corridor are important safety and economic steps toward the revitalization of a depressed area in rural Indiana and Ohio.

Thank you, Mr. Chairman.

Mr. MINETA. Now proceeding further east to our colleague, Mr. Gillmor from the 5th district in Ohio.

Mr. GILLMOR. Thank you, Mr. Chairman, and members of the subcommittee. I appreciate the opportunity to appear before you today. I want to join with my Ohio and Indiana colleagues in requesting funding for a feasibility study for the improvement of U.S. Route 24.

The largest stretch of U.S. 24 runs through my district and it crosses four counties of northwest Ohio. Actually, it ties together the two largest cities in this region of the country—Fort Wayne, Indiana and Toledo, Ohio. The push to expand U.S. 24 began on a much smaller scale, with the construction of a bypass around congested Waterville, Ohio. That project spawned a capacity study of the eastern half of the route and the results revealed that traffic will double in the next 20 years.

In addition, the roadway carries 23 to 30 percent truck traffic, which is an unusually high share, particularly for a route that in many places is two lanes, winding, and it is dangerous. According to the Ohio Highway Patrol, between 1985 and 1989, a total of 26 people died in 1,036 traffic accidents on U.S. 24 in this area.

The residents of Toledo, of northwest Ohio, and of eastern Indiana deserve safety on the region's only major east-west route. Moreover, the economic benefits of developing this corridor also add to the need for its improvement. One example is that greater accessibility and ease of transportation would add to the appeal of the region to auto manufacturers and allied industries, which are very major industries in this area and have been suffering in recent years. Secondly, this area is a major farm area and improving U.S. 24 would aid agriculture and the food product industry by improving the ability of such businesses to ship their goods on an east-west route.

Improvement of U.S. 24 is a priority for Ohio's State legislators and is endorsed by local organizations. I want to enthusiastically lend my support to that of my colleagues testifying this morning, so that we may present a unified case in requesting $300 thousand for the feasibility study necessary to launch the U.S. 24 project.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you.

Now to our colleague, Congresswoman Kaptur of the 9th district in Ohio.

Ms. KAPTUR. Thank you, Mr. Chairman of the subcommittee, Chairman of the full committee, and members of the committee. I consider it a real honor to appear before you this morning.

I wish to lend my support also to the feasibility study of $300 thousand for the Route 24 project. Basically, this roadway currently runs along the Maumee River between Ohio and going into Indiana. It is probably an old cowpath or Indian path and over the years has been overwhelmed by traffic. I would ask the commit-

tee's consideration to place this on the National Highway System as a major step toward consideration of the funding of the highway.

It is interesting to note that both Fort Wayne, Indiana and Toledo, Ohio are among the 100 largest cities in the United States, and this particular segment of roadway is one of the few pairs without a four-lane connection. I also wanted to reiterate what my neighbor and colleague, Paul Gillmor, has said about the importance to the automotive and agricultural industries of this particular segment of roadway.

Also, from a very selfish standpoint, our community has been working very hard to create a Heritage Corridor of national significance along the Maumee River section in Ohio in my district. One of the problems in doing that is trying to get the traffic away from the Riverfront, which is a real conflict, and we have been working with the U.S. Fish and Wildlife Service in this regard. So this particular segment of roadway being moved onto a four-lane highway away from this area which will likely be designated a National Heritage Corridor would be most helpful.

I fully support the efforts of my Indiana colleagues, Congresswoman Long and Congressman Jontz, and appreciate their leadership on this as well.

I have several other items I would like to testify on, and so at the appropriate point, Mr. Chairman, my colleagues may wish to be excused.

We appreciate your consideration.

Mr. MINETA. Let me ask about U.S. 24. Mr. Gillmor, you have indicated that this has the high priority for Ohio's State legislators in the region. I was wondering, is this on let's say a five-year capital improvement program or some kind of a priority listing for the State of Ohio Department of Transportation, or have they included this also on the map that the State of Ohio might have submitted to the Federal Highway Administration as part of the Highways of National Significance?

Mr. GILLMOR. It was my understanding, and Congresswoman Kaptur I think would agree, that it is.

Ms. KAPTUR. Yes, Mr. Chairman. I would be happy to state for the record that our local metropolitan planning organization, TMACOG, has placed this improvement on its list of priorities submitted to the State of Ohio and all 11 of the Ohio State legislators in northwest Ohio have agreed that this is a top priority and the project was ranked as first priority by the Greater Toledo Area Growth Commission.

Mr. MINETA. And will the State of Ohio be putting together their own list of priorities as a result of these submissions then from the area legislators?

Ms. KAPTUR. That's right. And we expect this will definitely be right at the top.

Mr. MINETA. And this will be one of the top projects. Fine.

Any other questions?

The CHAIRMAN. Mr. Chairman.

Mr. MINETA. Chairman Roe?

The CHAIRMAN. I want to thank the panel for splendid testimony. I know all of you have been very strong supporters of the transportation program throughout the country.

But I want to raise the horizon of the debate a little bit, starting with our good friend, Jim Jontz, that he set the stage for all of your testimony and you seem to have followed along in that direction—but I think, for the record, it seems to be wrong in the country if you haven't been blessed with a deepwater port or a navigable river, for example, geographically, or in the early history of the country that a railroad wasn't built through your area, particularly in the central part of the Nation—and this was very carefully brought out by Glenn Poshard when we had a hearing out in St. Louis recently, that the rest of the country is then left behind economically. So really for the areas of the country that don't have natural geographical items that help them in their economic development from a transportation point of view, that your highway transportation system is essential to the economic development. And I think that point ought to be made. I think that parts of the country have been left out from economic dynamics. I wrote a note to myself on the competitiveness of the industry in the area. They are not going to locate there unless you have adequate transportation.

Fundamentally, transportation creates the foundation of the new wealth of this country or the jobs and the opportunity. I think we have to stress that more. So it is not the idea that we're coming to the committee and saying alone we need to expand this highway by two lanes, or we need another route out in that area. What we are coming and saying is that part of America is being left behind economically as the country goes in the future, unless you have adequate transportation. Is that a fair comment to make?

Mr. JONTZ. Mr. Chairman, you have put it as eloquently as I have heard. Towns like Wabash, Peru, Logansport in Indiana actually started as riverports on the Wabash and Erie Canal. Then they became railroad centers as the rails stretched to the west. But, of course, the transportation today is different, and without four-lane connections to other cities, like Fort Wayne, their economic future is very cloudy. So we literally left behind a number of very important communities, certainly in my district and in numerous other districts around the country, unless we provide that connection with the modern highway. And you have stated very well the importance of these sorts of projects to the economic future of these communities.

The CHAIRMAN. So we're saying that the citizens that live in the areas that do not have natural geographical or amenities of that nature are dependent upon what transportation can achieve for their economic growth. Is that a fair comment to make?

Mr. JONTZ. Absolutely.

The CHAIRMAN. Okay. Thank you, Mr. Chairman.

Mr. MINETA. I now call on my colleague from Ohio, Mr. Applegate.

Mr. APPLEGATE. Thank you very much.

I was just going to ask one question of my colleagues. How long is this corridor, if you wish to call it that, from Toledo to Lafayette? And are you talking about an improvement or relocation of

the entire area or parts of it, or is it four-lane at any parts of it now?

Ms. LONG. Yes. Without adding up our various figures in the districts, I can't give you an answer on the total length of it, although we can submit it for the record. But part of it is four-lane. Much of it in my district is four-lane, some of it in Congressman Jontz' is four-lane.

Mr. APPLEGATE. So you are not talking about the whole thing; you are talking about portions that you want to relocate or improve?

Ms. LONG. That's right.

Mr. APPLEGATE. And what you are looking for is a $300,000 authorization for a feasibility study, which of course does not seem to be a very high amount of money; and for the purpose for which you hope that it will serve, I think that it certainly would be very useful. I can agree with my distinguished Chairman, Mr. Roe, that transportation does play such an extremely important role when we're talking about economic development. When anybody is going to come into an area, as anybody knows if you are trying to get them in, they are going to be looking at transportation as one of the very important criteria. A good transportation system, a good educational system, a good tax base, and a good attitude of the people are what they look for. And if you don't put all of those together, forget about it because they just aren't going to come in. But transportation is right at the head because they have got to be able to get their goods out of there and into market. And I think it is very important.

But it always comes down to the question as to where do you put transportation monies. You put it where the people are all moving in. We're losing in our area—like Ohio, we're losing our political base because the population is going into other areas. So do you push this money into these other areas to try to help them meet the growing needs, or do you try to put it back into the other areas to enhance the economic growth so as to give them an opportunity. In the case of Ohio and I think perhaps Indiana, we have been donor States for so long—in other words, we are throwing a lot more out than we're taking in——

The CHAIRMAN. Would the gentleman yield?

Mr. APPLEGATE. Sure.

The CHAIRMAN. I think you are making—and that's the point I tried to develop with this distinguished panel—I think you're making an extremely important point that has to be made during this whole set of hearings we're having in the sense of when we talk about not spending our resources. Investing the resources of this country in the infrastructure program, in the transportation program, and we start talking about highways of national significance, even though I come from a highly urban State, that frightens me a bit as far as Ohio is concerned, and Indiana is concerned, and Montana is concerned, and the Dakotas are concerned, and so forth, because how we determine what the scope of those Highways of National Significance is going to be is going to use up 60 percent or 65 percent of the funding. So there is going to be very little left unless Congress makes—and as Norm Mineta is working on so vigorously—makes some very major decisions as to what kind of re-

sources are going to be put here. There is going to be very little left to get back into the States that need the kind of help you're talking and the panel is speaking to.

So I think that the criteria of the Congress ought to raise; the new horizon ought to be saying that the idea of being able to have parts of America participate in the economic development and provide jobs and opportunity for their people ought to be part of the fundamental premise or criteria that we're dealing with. That it ought not to be—if we're talking about a transportation system for the next 10 years and the 21st century—it ought not to be based alone on just patching and filling and repair of the highways that were built and to abandon the rest of the country. I think that's the strong point you're making, and I think the gentleman is correct.

Mr. APPLEGATE. I thank the Chairman for making that point. He articulated it extremely well and he gets back, Mr. Chairman, to the very thing I was talking about before. These areas, in dire need of all of this are the very areas that are losing their industrial base or population and, therefore, do not have the total ability to be able to meet that so-called attractive program that has been thrown out by the Administration on the 60–40 basis. I mean, if it is $1 million, it sounds good if they are going to give you $600,000 if you come up with $400,000. But if you are in a depressed area, and a lot of areas in Ohio and up in that area may well be too, where are you going to get the $400,000?

That's what the problem is and that's why I think we should tap that surplus, and on a needs basis set up a criteria by which we can tap into that so if it is going to be a 60–40, those certain areas that need it, that have been hurt, can say come up with 20 while the State or the local would come up with the other 20. And I think that makes sense and that is something that I am going to be working on.

But I want to commend you for what it is that you are trying to do. I support it.

Mr. MINETA. If there are no further questions of Congressmen Gillmor, Long, and Jontz, let me——

Mr. VISCLOSKY. Mr. Chairman.

Mr. MINETA. Mr. Visclosky.

Mr. VISCLOSKY. Just for the record, because much has been made during the last several months about local and State support for projects, I might ask my colleagues from Indiana about the State commitment to the Hoosier Heartland project.

Mr. JONTZ. Yes, in fact, the State does have in its construction program the Wabash to Huntington and the Logansport to Peru segments which would be completing the four-laning of the highway from Logansport to Fort Wayne, with construction hopefully to begin in 1993 for the one segment and 1994 for the other, depending on revenues. We are requesting that a $20 million authorization over the five years, which would be $4 million for each of five years, and that is of a total construction cost of $103 million for these two segments.

Mr. VISCLOSKY. Great. Great. In terms of my colleagues from Ohio, I might point out on a personal note that I can still remember my second month in office Congresswoman Kaptur was kind

enough to visit northwest Indiana to see a steel mill for herself. And I have a high regard, Mr. Gillmor as well as Ms. Kaptur, for your commitment in terms of industrial and economic development, and certainly would also lend my personal commitment not only to the Indiana project, but also to the important roadway in Ms. Long's district.

Thank you very much for your appearance.

Thank you, Mr. Chairman.

Mr. MINETA. Any other questions of the panel? Otherwise, we will dismiss all those except for Congresswoman Kaptur who, I believe, wishes to proceed with her statement.

So, Marcy, you may proceed with your statement.

Ms. KAPTUR. I thank you, Mr. Chairman and members of the committee. I recognize that you are weighing the most significant changes to the process by which the Federal Government funds both highways and mass transportation since the creation of the Interstate System almost 30 years ago. I will submit my full comments for the record, but there were a couple of other points I wanted to make in order to be an ally in your efforts to move this bill in a comprehensive manner.

The proposal the Administration has offered I think provides a good framework, but in certain ways misses the mark, as Congressman Applegate was indicating, when it deals with problems in metropolitan America and also in certain growth corridors.

The first point I would like to make there deals with the point he was raising regarding the Federal-local match issue. All of my local highway people and mayors and county commissioners and engineers have come to see me on this point. The major issue that they have talked to me about is the increase in the State and local match. Basically, no changes in our opinion should be made in the current Federal-local matching ratios for both highway and mass transit programs, certainly not for older areas of the country where unemployment remains high and infrastructure needs surpass the ability of local and State governments to respond fully. In our region, because we are the heart of manufacturing America, we are currently undergoing a recession, and in our communities our local governments are having to cut money from their budgets. I can tell you for a fact that our city of Toledo has had problems even making the 25 percent match much less being able to find 40 percent, as proposed by the Administration.

In addition to that, and I am speaking on behalf of all of our local officials, the matching ratios should be 90–10 for the National Highway System to include only the 3R program, which is the current matching ratio for the Interstate System. The matching ratios for the National Highway System fourth R, Reconstruction program and for the Urban/Rural program should be 75–25, with the matching ratios for the Bridge program and the Mass Transit program at 80–20. That's what they feel comfortable with.

Secondly, Mr. Chairman and members, I did want to mention that Ohio is a minimum allocation State. The Administration's proposal eliminates minimum allocation. Supposedly, the new distribution formula manages the problem satisfactorily, but we do not know that for certain.

Therefore, our communities' representatives would recommend that the Minimum Allocation should be increased from 85 to 90 percent. The Emergency and Discretionary Funds should not be subtracted from the State's Minimum Allocation. Further, we would recommend that research on the proposed formulas should be undertaken to ensure that Minimum Allocation States such as Ohio receive equitable shares.

I would now like to move on to another point dealing with the National Highway System itself. The Administration is proposing a new National Highway System of 150,000 to 165,000 miles. The Administration has proposed the 150,000 mileage limitation which, in effect, is not sufficient to provide adequate funding for the most important non-Interstate routes serving regional centers, airports, cross-region movements, and ports, and I do represent a major port on Lake Erie.

My concern here is that we may be about to build the "Son of Interstate" when the real needs are not so much in inter-city travel along, but in movement within our regions and within our urban areas.

We would recommend that the National Highway System be based upon functional classification and vehicle miles of travel. And we recommend that the mileage of the NHS system should be increased so as to include approximately 3 percent of the rural mileage and 8 percent of the urban mileage. This would, in essence, split the Principal Arterial system into two parts—the National Highway System and Principal Arterials.

Fourth, I wanted to mention that there should be two separate and independent categories of funds for the Urban and Rural program, and each should be established based on the criteria of population, lane miles, and area.

Fifth, in the area of mass transportation, I would like to applaud the committee's recommendation of $6.7 billion for mass transit. There is a need in my community for sure to continue the Federal operating assistance. I can tell you that if it were discontinued, our local transit authority would have to begin an immediate reduction in service in order to accommodate that loss. Operating assistance should be retained; in fact, it needs to be restored to the level that it was back in 1981.

And if I might direct the committee's attention to one very small but important section of the bill which deals with charter operations for transit authorities. I would ask your consideration of an amendment to permit a public operator to do some charter work in their own community. This position is supported by the American Public Transit Association. Without a change in the law, my local authority is prohibited from doing charter work but literally has to go through a private operator in order to do that.

Sixth, I would like to mention the role of Metropolitan Planning Organizations, very important to us in establishing our own highway planning and development priorities. Over the last two decades, many more Federal requirements have been placed on these authorities; however, only a half a percent of PL funds allocated to the Metropolitan Planning Organizations are allowed. In fact, the amount of money allowed to them has been cut by half. I would like to recommend to the committee that it consider an increase in

funding to these Metropolitan Planning Organizations of 2 percent of the annual combined highway and mass transit programs. My testimony indicates in lengthy terms all of the new requirements placed on these organizations and why we are asking for this special consideration.

Finally, Mr. Chairman, I would like to move again to some of the projects of most significance to my particular region of the country. Toledo, Ohio is a major port city that sits at the western basin of Lake Erie. In fact, from the Fort Wayne area, all of the roads and railroads come up into our Toledo area. I am going to mention four projects that I would ask the committee's consideration of.

The first, and this is a major one, involves the replacement in our region of one of the two remaining lift bridges on the National Interstate System. There was a story in the paper yesterday you will also be considering one here in the Washington area, and the article said it was the last remaining lift bridge on an interstate. Wrong. There is one in Toledo, Ohio, and we need your attention to that one.

We are the major coal shipping port on Lake Erie and we are a major agricultural and manufactured goods exporting port as well. We are the third largest rail switching center in the country. The bridge I am talking about is a part of I-280 and it was first opened in 1957. It is a single span bascule lift bridge that is over 30 years old and is required to lift around 1,000 times a year. It is the most incredible thing you've ever seen because this particular segment of highway connects Detroit, Michigan, Windsor, Ontario—the traffic goes north from Ohio into Michigan, and also south down to Dayton/Cincinnati, as well as trips that go east to Cleveland, and along Route 2 and the Ohio Turnpike.

All the traffic that flows through this area is hampered every time this lift bridge has to lift, as well as because of the boat traffic that comes out of our Maumee River which goes into the Lake. A major national highway has to have a lift bridge on it and it creates major congestion problems in our areas.

The current I-280 segment with the lift bridge has a design capacity for a daily traffic capacity of 50,000. It currently carries about 80,000. And by the year 2010, it is anticipated that it will have to carry 96,000 average daily traffic count. So it is already over capacity and needs to be rebuilt anyway.

We are asking for funding from the committee initially to undertake the cost of environmental studies on options for this river crossing. We don't know whether it should be a high level bridge, whether it should be a tunnel, and we need $1 million to help the local community do environmental studies. They are already doing their feasibility studies and the testimony summarizes all the money they've spent on this already. We estimate the total cost of this project ultimately could be anywhere between $100 and $350 million, but we first need to start with the environmental studies. That is the top priority of our community and our region.

The second priority I would ask your attention to would be funding in the amount of $300,000 for railroad corridor studies. We are the third largest rail center in the Nation and most of these railroads feed into the port and serve local manufacturing and regional manufacturing.

Railroads have always been an important part of our section of the country. Ohio is a very industrial state. At one time, eight major railroads served our city. But even in this post-merger era of today, four Class I carriers and one regional line serve Toledo. The Conrail main line crosses the Maumee River and we also serve as a major Amtrak route between Chicago and points east.

Our local MPO has been identifying significant rail corridors and six have been selected as high priority for detailed study—these are listed in the testimony—and funding is now needed to do a detailed analysis for each of the six corridors with a team for each corridor. We have got to grade separately, we've got to relocate spurs and lines. The request of the committee would be to help us proceed in this rail corridor study area.

Thirdly, another request is in railway-highway crossings. We are especially hard hit because we are the third largest rail center in the country with a number of rail-related deaths. The testimony summarizes how many there are, and 80 percent of these fatalities were at crossings with only a standard railroad crossbuck and most were in rural areas.

My understanding is that the Administration's bill repeals the Railway-Highway Crossings program along with an authorization of funding. I would just please ask the committee if you could continue to keep a separate program that would guarantee funding for railroad crossing improvements, it would mean a great deal to my area.

Further, and the testimony goes into this in detail, on reflectorization. New reflective material for rail cars is being developed that is expected to have a little bit better retention of reflective intensity, be more resilient to dirt and easier to clean. I would encourage the subcommittee to review all efforts in reflectorization because of the number of rail accidents. Canada has required railroad cars to be reflectorized for over 30 years. And a three-sided reflector has been designed by the Conrail team at the main rail yard in Columbus, Ohio. And I understand that the FRA, the Railway Administration, is now testing this device in Pueblo, Colorado. I would like to ask the committee to do whatever is in its power to get better reflectorization on these cars because we have accidents every week, very significant ones, and there ought to be more that should be done in this area of reflectorizing the cars. If we can land a man on the Moon, there ought to be a way that we can reflectorize trains in the United States to try to cut down on accidents.

Finally, the last item, which is a fairly small one, deals with the whole issue of Federal signage on highways. This is trying to identify, in order to deal with competitiveness and get communities to be able to have people come into the communities, some of the major significant farmers markets, museums, and so forth that are currently in those communities.

Dealing with the Federal Highway Administration on signage, I would encourage the Highway Administration to be flexible when it considers sign regulations on Federal highways. I would like to advocate and ask the committee's help that the following types of signs be eligible for Federal funding on all construction projects. First of all, construction zone and maintenance signing, detour signing, replacement or upgrade of all regulatory signing to include

replacement of overhead sign structures. We estimate that many important economic developments in our communities, such as our farmers market, loses thousands of people a week because of inadequate signage that comes off the major Federal highways.

I would very much appreciate the committee's consideration in all of these areas. And I thank you very much for my lengthy testimony and wish to submit the remainder of it for the record.

Mr. MINETA. I want to thank you very, very much, Congresswoman Kaptur, for your very comprehensive and detailed testimony on these projects. It shows that you have really studied not only the specifics of the projects that you have presented but compared them to the Administration's bill that is pending before us as it relates to the Surface Transportation Assistance Act for 1991.

Let me just ask with regard to your testimony on the river crossings. Under the Administration bill, they would permit the use of Federal Aid Highway funds in conjunction with toll revenues for the construction of toll facilities. I am wondering would the use of Federal Aid Highway funds along with toll revenues provide a sufficient funding source for the construction of the Maumee River crossing?

Ms. KAPTUR. Mr. Chairman, that's a very good question and the testimony details that issue. To date, the feasibility studies that have been done by the local community have indicated that toll revenues would not be sufficient, that major Federal funding would be needed for the construction of a major river crossing such as this one. So the tolls are somewhat unrealistic in view of the placement of this particular facility. Tolls would not be sufficient to cover the long-term costs of construction.

Mr. MINETA. Your point about Metropolitan Planning Organizations and their importance is recognized in the Administration bill, and I think we will go further than they have because one of the keystones I think of this legislation that we're talking about is flexibility. But the way to make flexibility really work is to have good, strong regional planning agencies. I think we're going to do more to try and encourage the technical assistance that many of the MPOs and councils of governments are going to need in order to make flexibility a workable solution in addressing those local needs.

Now the portion dealing with Federal Railway Administration would, of course, deal mostly with the Energy and Commerce Committee, although your point is well taken about the highway rail grade crossing program. That has been eliminated in the Administration program and that is something that I don't believe we will be doing in our own legislation here in the House. So the issues as they relate to reflectorization would probably more validly be addressed to the Federal Railway Administration through the Energy and Commerce Committee.

I want to thank you again for your very fine testimony and the points that you have made in there.

Ms. KAPTUR. I thank you, Mr. Chairman, Chairman of the full committee, and members.

Mr. MINETA. Chairman Roe?

The CHAIRMAN. Well, I, too, share in the comments by the Chairman of the subcommittee in thanking you for exceptionally good testimony.

I think that the one point that is clear, you spoke to the issue of the regional planning issue, which I certainly concur with and I think Norman has come right on that. But let me play the Devil's advocate here. It seems to me if we are talking about flexibility and intermodality, it reminds me of the work that's going on in California in the Alameda corridor, which is very analogous to what you are talking about—the harbor being there, there are three different rail lines involved, there's 123 grade crossings, there is a trucking issue involved—and the State of California has coordinated that so that they've got a whole plan as to how to work that out, if I'm making any sense to you. It seems to me that the State ought to be looking to the point of view if we're going to build a new bridge, how does that affect the cargo involved in the Toledo port, what are we doing in the Toledo port, what is the expansion of the Toledo port as far as depth of channels are concerned, the river traffic, and so forth, so that you have a whole program going as far as improving the Toledo port and that also includes the rail aspect of it. Do I make sense to you?

Ms. KAPTUR. Yes, Mr. Chairman, you do.

The CHAIRMAN. In other words, there ought to be, I think, a master plan for the Toledo port that brings in these different issues. I believe that we have got to speak in this legislation so that we're no longer Balkanized; we don't have transportation here and aviation other here and then ports over here. I think they are all one and the same from my point of view. So I would hope that we can start to move in that direction.

I, too, want to thank you for your splendid testimony.

Ms. KAPTUR. Mr. Chairman, I really support what you say. One of the realities at the local level is, we were asked earlier by the Chairman did our State indicate that Route 24, which was the other project we were supporting, was it a top State priority. The State is just in the process of getting its full priority list together. These will be on it. But just the technical job of assembling the paper at the local level from all these different entities and the few staff people that are available locally to work on this in the local highway office—and I am talking about the TMACOG office—they couldn't even get the rail corridor studies finished. I mean they are just overwhelmed with what they have to do. You are exactly right, they need to go into the intermodal type of plan. I think they have just sort of been rowing their boat so hard to avoid the high——

The CHAIRMAN. Then what you are saying is, that even at the local level, so to speak, the capability isn't there unless we provide the resources to be able to do that.

Ms. KAPTUR. I think so.

The CHAIRMAN. I thank the Chairman.

Mr. MINETA. Any other questions of our colleague? If not, thank you very, very much, Congresswoman Kaptur, for your presentation.

Ms. KAPTUR. I thank the committee and look forward to working with you on this.

Mr. MINETA. Absolutely.

[Ms. Kaptur's prepared statement follows:]

TESTIMONY
The Honorable Marcy Kaptur
Subcommittee on Surface Transportation
Committee on Public Works and Transportation
April 10, 1991

Mr. Chairman and Members of the Committee, I welcome the opportunity to testify before you regarding the proposed Surface Transportation Act. I recognize that you are weighing the most significant changes to the process by which the federal government provides funds to the surface transportation system, both highways and mass transportation, since the creation of the Interstate System almost thirty years ago. The proposal of the Administration is a good framework which does contain many laudable objectives and tends to improve on the delivery system of federal funds to states and local governments to meet national objectives. However, it misses the mark when it deals with managing the transportation problems in urban America.

When the federal government first became involved in the surface transportation system in the early 1900's, it was to solve issues which involved a major segment of its population, the rural population by "getting the farmers out of the mud." Today, the United States is primarily composed of urban centered metropolitan regions. Modifications are needed to more adequately meet the needs of the majority of our population in the United States who live in metropolitan areas, and to adequately meet the needs of rural America, as well.

FEDERAL/LOCAL MATCHING RATIO

The major issue which has been raised in my district relative to this bill, is the increase in the local and state match which would be required under the Administration's proposal. No changes should be made in the current federal/local matching ratios for highway and mass transit programs, certainly not for older areas of the country where unemployment remains high and infrastructure needs usurp the ability of local and state governments to respond fully.

The proposals by the Administration would shift undue financial burden on states and local governments, force additional local taxes and/or diversion of funds from other state/local priorities, and/or allow some units of local governments to avail themselves of the federal funds. In particular, during this recessionary period I would like to note that the City of Toledo has had to balance its budget by cutting $17 million and by reducing its services and laying city employees off. Today, and even in better times, Toledo has had problems with the existing match of 25%. It could not find the funds to match at 40% as proposed by the Administration. Now, the Administration indicates that it is reducing federal red tape in this proposal. A year ago, I proposed to do that. Local officials cannot afford to trade promises for less red tape for real dollars of local match.

The matching ratios should be 90/10 for the National Highway System to include only the 3R program, which is the current matching ratio for the Interstate System. The matching ratios for the National Highway System fourth R (Reconstruction) program

and for the Urban/Rural Program should be 75/25, and the matching ratios for the Bridge Program and Mass Transit Program should be 80/20.

MINIMUM ALLOCATION, EMERGENCY, AND DISCRETIONARY FUNDS

Ohio is a minimum allocation state. We provide more highway taxes to the federal government than it gives back to us. Fortunately, a few years ago, Congress passed a minimum allocation of 85%. The Administration's proposal eliminates Minimum Allocation. Supposedly, the new distribution formula manages the problem satisfactorily, but we do not know that for certain.

Therefore, the Minimum Allocation should be increased from 85% to 90%. The Emergency and Discretionary Funds should not be subtracted from a State's Minimum Allocation. Research on the proposed formulas should be undertaken to ensure that Minimum Allocation States such as Ohio receive equitable shares.

NATIONAL HIGHWAY SYSTEM

The Administration is proposing a new National Highway System (NHS) of 150,000 to 165,000 miles. In the exercise conducted in 1990 in which the states and Metropolitan Planning Organizations worked with the FHWA in identifying the National Highway System, there were three levels of National Highway System proposed. They were Basic, Secondary and Optional Systems which contained 3%, 5%, and 9% of the road mileage, respectively. As a result of this, the Administration has proposed the 150,000 mileage limitation which is, in effect, the Secondary System. In urban areas, this is not sufficient to provide adequate funding for the most important, non-Interstate routes serving regional centers, airports, cross-region movements, and ports.

My concern here is that we may be about to build the "Son of Interstate" when the real needs are not in inter-city travel but in movement within our regions and within our urban centers.

The NHS system should be based upon functional classification and vehicle miles of travel. USDOT guidelines provide that 2-4% of the rural mileage should be on the Principal Arterial System and that 5-10% of the urban mileage should be on the Principal Arterial System.

I am recommending that the mileage of the NHS should be increased so as to include approximately 3% of the rural mileage and 8% of the urban mileage be included in NHS. This would, in essence, split the Principal Arterial System into two parts: NHS and Principal Arterials.

In developing the NHS in the urban areas and in urban connectors, MPOs should be involved in defining the criteria to select the system and in selecting the system. State DOT's should also work with local elected officials through rural

regions where they exist. Mileage allocated for each state should be sufficient to support the national goals. The urban/rural split should support our nation's character.

THE URBAN/RURAL PROGRAM

Relative to the Urban/Rural Program, there should be two separate and independent categories of funds for the Urban and for the Rural Program. Each should be established based on criteria of population, lane miles, and area. The Urban Program should be based on a process administered locally by the MPO through a cooperative process involving the state, local elected officials, and operators of public transportation.

I support the proposal to minimize federal control over projects in the Urban/Rural Program through a block grant approach with controls through the Transportation Improvement Program. However, we need to be sure that we do not in the future load down the transportation programs with endless mazes of regulations. As I said a year ago, one of the major complaints which I hear from my local officials and the general public on federal aid highway funds is that there are too many rules and regulations which result in the projects costing too much and taking too long to plan and to build. The federal system of collecting highway dollars is very efficient. We need to make changes in the next transportation bill so that we can deliver federal highway dollars more efficiently and effectively. The Administration has addressed these concerns. Now we need to make sure that we do not slowly slip back into a morass of regulations.

MASS TRANSPORTATION

Mass transportation is vital in our urban areas and serves significant needs in rural America. It provides transportation to the elderly and persons with disabilities. Mass transit also provides the mechanism to improve our air quality, conserve energy, and improve our environment. Yet, the Administration is proposing increases in the funding of highways, with small increases in funding of public transit. I applaud the Committee's recommendation of $6.7 billion for mass transit. Furthermore, there exists a need to continue the federal operating assistance within the program. If operating assistance were discontinued in Toledo, the Toledo Area Regional Transit Authority would have to begin an immediate reduction in service to accommodate that loss. Operating assistance must be retained -- in fact, it needs to be restored to the level of 1981.

The section of the bill which deals with charter operations needs to be amended to allow a public operator to do some charter work in their own community. This position is supported by the American Public Transit Association. For example, in my home community of Toledo, the local authority needs to do charter work but it has to go through a private operator. The public operator

does the work, but the private operator receives the profits. This is very unfair for the public operator and the party that wishes to charter a service.

METROPOLITAN PLANNING ORGANIZATIONS

Metropolitan Planning Organizations, which were first created by the federal government three decades ago, have grown and are now maturing. There are many different types and styles. But in all of our urban areas, they provide the mechanism by which the state and federal government can work with local elected officials and the way that local officials can work together to manage ever complicated urban and regional problems. Therefore, I want to congratulate the Administration for its recognition of and expanded role for the nation's Metropolitan Planning Organizations. However, once again we do not put the funding where we put the emphasis. Over the last two decades, the half percent PL funds allocated to the MPOs has decreased in value by at least 50%, while the planning regulations and requirements have continued to increase and will increase more under the new bill.

Planning and programming in the nation's Metropolitan Planning Organization obligate such diverse activities as: meeting requirements of the Clean Air Act; seeking innovative solutions to urban congestion and energy conservation; accommodating new MPOs designated as a result of the 1990 Census; incorporating the new data from the 1990 Census into regional data bases and transportation models; assisting in planning regional paratransit systems required under the Americans with Disabilities Act of 1990 and the U.S. Department of Transportation Regulations; supporting the states in the development of pavement management, bridge management, safety management, and congestion management systems, as called for in the new bill; assisting the states in the designation of a National Highway System (NHS) and new functional classification of highways as called for in the USDOT reauthorization proposals; strengthening the coordination of transportation planning with land use planning; the emphasis on multimodal considerations, and the consideration of transportation related air quality problems as called for in the new bill.

NORTHWEST OHIO TRANSPORTATION PROJECTS OF SIGNIFICANCE

There are five transportation projects in Northwest Ohio of significance from the federal prospective. They are (1) the replacement of one of the two remaining lift bridges on the national interstate system, (2) the construction of a new four lane expressway connecting two of America's cities over 100,000 which will provide competitive advantages both to our auto industry and agriculture sector, (3) the planned improvement of urban railroad corridors so as to make the highway system safer and more efficient, to improve the efficiency and safety of the railroad system, and for the overall improvement of our

competitive advantage in the transportation system, (4) funding for railroad highway crossings improvements in rural areas and (5) proper signage on highways to improve the accessibility to areas of importance to a particular community.

NEW MAUMEE RIVER CROSSING

The Maumee River is the largest tributary which flows into Lake Erie. The River is an asset to the continued vitality of the Toledo area and Northwest Ohio. It provides the area with a transportation link to world markets and recreational opportunities all year round. However, the River also bifurcates the areas and is a major impediment for surface transportation: local, interstate, and international.

Toledo is the major coal shipping port on Lake Erie and a major exporting port for agricultural and manufactured goods. This region also is the third largest rail switching center in the nation. The I-280 (Craig Memorial Bridge) was opened in 1957. It is a single span bascule lift bridge that is over 30 years old and is required to lift around 1,000 times a year. When this facility was built, it was to serve both as a replacement for an old bridge and for traffic between Detroit and the Ohio Turnpike. It preceded the Interstate System, and unfortunately, the Saint Lawrence Seaway. Therefore, a lift bridge was decided to be more economical than a high level bridge. The bridge serves local traffic and provides for inter-city movement from Detroit, Windsor and points north and to Dayton, Cincinnati and points south as well as trips around the tip of Lake Erie to Cleveland and points east via State Route 2 and the Ohio Turnpike, I-80/90 at Gate 5.

The I-280 Bridge serves both of these trip purposes by virtue of its location and design. The bridge and I-280 directly connect the Ohio Turnpike and I-75. However, the Bridge also has interchanges located directly on either approach for two major Toledo streets: Summit Street and Front Street, which serves the Port of Toledo. Merge-weave sections for the interchanges on to the bridge are substandard and inadequate because of the close proximity of these streets.

The bridge carries four travel lanes and has a design capacity of about 50,000 Average Daily Traffic (ADT) and a breakdown capacity of 80,000 ADT. A bridge tender employed by ODOT is on duty 24 hours per day in a control tower on the northern approach. It is one of only two lift spans on the Interstate system in the United States; the other is the Woodrow Wilson Bridge in Washington, D.C.

There are more than 60 openings per month for 9 months of the year. The nature and design of the Craig Bridge present three separate types of inadequacies which negatively impact the area and interstate travel which justify the construction of a crossing of the Maumee River. These are delays and costs associated with the following:

- the opening of a lift span bridge on a major limited access facility;
- inadequate traffic carrying capacity of the bridge; and
- increased maintenance required for a structure of this type and age. Maintenance problems are compounded because the bridge is now carrying heavier truck traffic weight loads of 150,000 pounds, as cargo moves to our Port and railroads.

FUNDING SITUATION

Funding is needed to assist the local entities in undertaking the cost of the environmental studies on the options for crossings, the next step in the process. I would like to request that the Committee consider authorizing $1 million for this purpose.

FY 1992 Environmental Studies, partial cost.....$1,000,000

Without any federal assistance, local governments in the Toledo area and the Ohio Department of Transportation (ODOT) already are undertaking a $585,000 Feasibility Study for a new crossing of the Maumee River to replace the aging lift bridge on I-280. The City of Toledo, the City of Oregon, Lucas County and the Toledo-Lucas County Port Authority are each contributing $90,000; the Toledo Metropolitan Area Council of Governments (TMACOG) is contributing $175,000, and ODOT is contributing $50,000. The study is being conducted by TMACOG. The study was started in March 1989 and will be completed in October, 1991. The environmental studies are expected to start this fall with anticipated completion in 1994. Federal assistance will also eventually be required for engineering and construction. Keeping this in mind, I would like the record to show support for this project and hope that it will be a priority for the federal government. Costs for the project are estimated to be between $114 million and $361 million depending upon the location and whether it is a bridge or a tunnel. The Maumee River Crossing Task Force looked into tolls to finance the bridge but found that this route was not feasible on its own to pay for the crossing.

Futhermore, a process needs to be established to expedite environmental and related studies, detailed engineering, and construction to show that with local, state, and federal governments working closely together, a project can be completed in a reasonable length of time. (see Appendix)

HISTORY AND WORK TO DATE ON A NEW RIVER CROSSING

In December, 1988, the TMACOG Year 2010 Transportation Plan was adopted. It provides an areawide guideline for transportation investments over the next twenty years. The 2010 plan concluded that the foremost priority of the region was to immediately start planning for a new river crossing situated

somewhere from I-280 downstream to Maumee Bay. Building a new facility would require continuing cooperation among the many government agencies and groups directly involved. This includes all levels of government, local agencies, authorities, organizations, the private sector, neighborhood groups, and the public at large. TMACOG has assumed the responsibility of coordinating this effort among these groups and initiating a new Maumee River crossing feasibility study.

After the adoption of the 2010 Transportation Plan, TMACOG started the initial steps for a feasibility study of a new river crossing over the Maumee River. The objectives of the Maumee River Crossing Feasibility Study are to undertake a preliminary planning, engineering, and financing study so as (1) to select the location of a new river crossing of the Maumee River downstream from the Craig Memorial Bridge (I-280), including replacing the Craig Memorial Bridge, and (2) to determine how to fund the project, including all types of federal state, local, and authority funding, public and private, toll or free. The study is being undertaken with a consultant team under the supervision of TMACOG staff with guidance from the TMACOG Maumee River Crossing Task Force. This task force has representatives from the five state and local groups which provided the funding, the Toledo-Lucas County Planning Commission, the private sector, neighborhoods, and environmental organizations.

The Task Force worked quickly to lay out a timeline for the project which included searching for and selecting an engineering firm to produce the Feasibility Study. By March of 1990, the nationally known firm of Figg Engineering with a team of specialists, including the local firm of Dansard, Gronke and Long, had been put under contract.

Prior to selecting a firm for the study, the Maumee River Crossing Task Force held its first set of public meetings in November of 1989 to announce and explain the feasibility study. A second set of public meetings in February 1990 allowed the public and private sector and citizens to suggest all of the possible alignments for a new river crossing. A month after the consultants were under contract, the Task Force conducted a field review workshop which detailed the Feasibility Study and included a tour of the potential crossing corridors.

During the beginning of the study, corridor limits were established and alignments that went out into the Maumee Bay were excluded. These posed too many obvious environmental and wetland problems, potentially high cost and reduced traffic flow. The public and private sector were again asked to participate in public meetings during August, 1990 to develop guidelines for selecting the best routes. Afterwards, more potential alignments were deleted from the study due to their location in the middle of neighborhoods, a park, hazardous waste sites, wetlands and so forth.

The alignments that were left were presented at a set of

public meetings in September, 1990. As a result of the public input, the Task Force chose five sites to study in depth. Next on the Feasibility Study list was a look at the ways of financing a new river crossing. Until this time, the feeling was that tolls could be used to finance the project. After a financial workshop in November, 1990, the Task Force and consultants found that none of the alternatives could be paid for by using tolls alone. A partnership between local, state, and federal funding would be necessary.

This funding objective has since led to a number of other changes in the project, the most critical being to closely align the current study with ODOT guidelines for developing new highway projects which were developed to meet the requirements of FHWA. Conforming with ODOT's guidelines means that detailed environmental impact studies will be conducted on all feasible alternatives, including the "no build" option. Selecting the implementing agency and the method of funding will be delayed until completion of the environmental impact studies in three years. Contract revisions with the engineering team were necessary and completed in late March of this year.

WHAT IS NEXT

Public meetings continue. The outcome of the financial workshop, how that has changed timelines for the study, and assessing the remaining alternatives remain the main topics of discussion. Once these meetings are completed, the consultants along with the Task Force will take all of the information gathered and use it to select the best corridors for a more detailed analysis. This step of the feasibility study should be done in the fall of 1991.

TMACOG and its Task Force would like to start the environmental studies in August of 1991. Between the start of the environmental studies and the completion of the Feasibility Study, the Task Force plans to have another set of public meetings. This will be used for the final update on the Maumee River crossing project before going into the next steps -- producing an Engineering Source Document and Environmental Impact Statement for each feasible alternative and its connectors; identifying the lead agency; and selecting the best method of funding a new crossing.

U.S. ROUTE 24 HIGHWAY CORRIDOR

The following funding is needed to start a vital highway link between two major metropolitan areas, Toledo and Fort Wayne:

FY 1992 Feasibility and Economic Studies.....$300,000

U.S. 24 joins two high growth corridors -- the western part of northwest Ohio with northeast Indiana. However, U.S. 24 is

primarily a two lane, winding, and dangerous road that follows the Maumee River. TMACOG is working with the Maumee Valley Planning Organization (MVPO), and the Northeast Indiana Regional Coordinating Council (NWIRCC) to undertake studies for the improvement of U.S. 24. This is being done through the "Port to Fort Organization", a committee of each of these regional organizations, which is composed of the counties, municipalities, chambers of commerce, businesses, school districts, labor organizations, farm organizations, and citizen organizations along the route.

TMACOG has placed this improvement on its list of priorities submitted to the State of Ohio. All eleven of the Ohio State legislators in northwest Ohio have agreed that this is a top priority. The project was ranked first priority by the Greater Toledo Growth Commission. During the exercise on defining a possible National Highway System, both Ohio and Indiana placed U.S. 24 between Toledo and Fort Wayne on the National Highway System. I would advocate this placement on the National Highway System as well as a major step towards consideration of funding for this highway.

Several sections of U.S. 24 are currently congested, and traffic forecasts indicate congestion on much of the route within twenty years. Much of the route is two lanes with a large number of curves as it winds along side of the Maumee River. There is a heavy volume of truck traffic today. Fort Wayne, Indiana and Toledo, Ohio are among the 100 largest cities in the United States and one of the few pairs without a four lane connection. The improvement of U.S. 24 would greatly enhance safety, improve access along the entire route and promote economic development with the retention of jobs and expansion of job opportunities in northwest Ohio and northeast Indiana.

In June, 1990 the Ohio Department of Transportation announced that it would cooperate with TMACOG in the preparation of a feasibility study for improvements to State Route 24. That study is now underway, but it is proceeding very slowly. Because of a lack of funding, it relies on the existing staffs of ODOT and TMACOG. It includes a baseline study from north of Waterville to the Ohio/Indiana State Line with such information and data as studies of existing and projected traffic volumes, car/truck ratios, and highway capacity and aerial photos. Some work has been started.

Development of this project would achieve several benefits to the citizens of northwest Ohio, northeast Indiana, and the United States as a whole. First, it would make our domestic auto suppliers more competitive in the international markets by enhancing existing industry and making it more competitive for additional industries. The improvement of this route would provide for additional locations for automotive allied industries which are locating close to major automobile manufacturers now located in southern Michigan, northeast Indiana, and northwest Ohio.

Second, an improved U.S. 24 could provide for enhanced opportunity to ship final food products to foreign markets. Northwest Ohio is one of the major farming areas in the State of Ohio. One of the goals of the new Administration in Columbus is to improve the advantage of Ohio's agricultural industry, and therefore that of the U.S. relative to exporting. It is our advantage to add Value Added agriculture business. Food products can then be processed and shipped increasing employment domestically. Location of such industries requires better transportation. A few are located in the area now. Improving transportation and promoting these businesses would provide for the opportunities to increase jobs in the area and export of finished food products, particularly to Canada.

Third, the construction of this highway will provide opportunities to preserve and enhance the natural environment along the Maumee River and to preserve and protect our historical heritage in the area. Construction of a new, four lane divided roadway will probably mean that that roadway will be placed away from the Maumee River. The River is designated as a scenic river, and there is interest by the Maumee Heritage Corridor Commission and the Department of Natural Resources to enhance and preserve the area along the River. This area contains a large number of wetlands and woodlots which are an asset to our environment and which could be expanded. It also includes the remnants of the old canal which connected Lake Erie to the Ohio River. Furthermore, the U.S. Fish and Wildlife Service has identified the Maumee Valley Corridor of historical, cultural and recreational value. Any expansion should take into account the value of this corridor and all efforts should be made to maintain its aesthetic value. Any negative impact on farming areas will hopefully be offset by the increase in value of the crops produced to the value added industries which could locate in the area.

RAILROAD CORRIDOR STUDIES

The Toledo metropolitan area is located at the western tip of Lake Erie and at the mouth of the largest tributary to Lake Erie. Transportation has always been a vital part of the area's economy. Railroads became a major part of the region's transportation system as the City grew and this region developed into an industrial center and a major lake port. At one time eight major railroads served the City along with a terminal railroad owned jointly by the other rail companies. Even in the post merger area of today, four Class I carriers and one Regional line serve Toledo. As mentioned, it is the third largest rail hub in the United States and it has one of the highest traffic density rail segments in the country. The Conrail main line crosses the Maumee River. This line also serves major Amtrak routes between Chicago and points east. In addition to the railroads, Toledo is developing a major transportation hub with major Interstates, I-75 running north and south and I-80/90

running east and west, the Port of Toledo and Toledo Express Airport which will soon serve Burlington Express.

With respect to the railroad system in Toledo, TMACOG identified the following problems: traffic delays; accidents; inefficiency in rail movements; funding; negative effects on economic development; deregulation; labor; and consolidation of railroads.

TMACOG decided to approach the railroad problems through identification and analysis of railroad corridors. The corridor approach looks at a number of railroad crossings as a group and improvements can be recommended as a group.

One of the most efficient and effective ways to approach managing rail-highway grade crossing safety issues is to review all street crossings of a rail line along a continuous segment of track and to develop a package of comprehensive improvement projects to cover work at several crossings. It is also possible to address other highway-rail concerns along the segment at the same time. Included would be efforts to bring about the closing of low traffic volume and/or dangerously configured street/railroad grade crossings. This helps to improve safety at railroad crossings in the corridor by minimizing the number of low volume and/or dangerous crossings. This helps to improve the efficiency of railroad operations in the corridor. Alternative highway-rail improvements could be investigated in relation to the needs of the local community with regard to overcoming any negative impacts of the railroad, such as emergency services.

Corridor analysis is a team effort consisting of the concerned railroad officials, local, and state officials, planning agencies representatives, the private sector and citizens. Therefore, it allows good communication between the various groups and results in more efficient solutions and negotiations. Finally, this approach allows various parties to negotiate a combination of specific solutions within the corridor such as the closing of some streets across the railroad, lights and gates, and grade separations.

After reviewing all of the railroad corridors in the Toledo area, six corridors were selected as high priority for detailed study. The corridors were selected based upon a set of criteria developed by the TMACOG Railroad Task Force, the only such task force in the United States. It is composed of local officials, industry representatives, railroad representatives, planners, and economic development representatives. Criteria included corridor length, number of rail crossings, number of port channel crossings, number of highway crossings, total Average Daily Traffic on all highway crossings, number of major streets, number of trains, number of fire districts, number of grade crossing accidents, train speed, economic development potential, funding, number of potential street closings on each, stability of the corridor, local commitment, and chance of success.

Having identified the corridors, funding is now needed to do a detailed analysis for each of the six corridors with a team for each corridor. It is estimated that this would cost approximately $300,000. The result would be a set of solutions to be implemented through existing public and private funding.

The following funding is needed to undertake a detailed planning study of six railroad corridors.

FY 1992 Six Railroad Corridor Studies.....$300,000

Corridor 1 - CSX-East Toledo/Oregon
Corridor 2 - CRC-Airline Junction West
Corridor 3 - CSX-Perrysburg
Corridor 4 - NS-Maumee
Corridor 5 - NS-Oregon
Corridor 6 - CRC-Vickers to Stanley Yard-East Toledo/Northwood

RAILWAY-HIGHWAY CROSSINGS

My district in Northwest Ohio has been especially hard hit by a large number of rail-related deaths because of its location as the nation's third largest railroad hub. Northern Ohio leads other areas because of its concentration of busy train tracks and fast trains, including Amtrak passenger trains. Freight traffic which formerly moved through central and southern Ohio has been rerouted onto Conrail, CSX Transportation and Norfolk and Southern Railway tracks through northern Ohio. In Ohio, there were 404 accidents at railroad crossings in 1989 and 310 in 1990. Of these 404 accidents, 66 people were killed and of the 310, 58 people were killed. Nationally, in 1989, rail accidents at railroad crossings reached 6,525 and in 1990 the figure was at 5,663. Of the 6,525 accidents, 801 people were killed and of the 5,663, 691 people were killed. While I am very encouraged by this decrease in numbers nationwide and statewide, I remain disturbed that Ohio ranks second only to Texas in the number of accidents at railroad crossings.

In early 1989, there were several accidents in Northwest Ohio that brought this issue to the forefront. Eighty percent of the fatalities were at crossings with only standard railroad crossbucks. In order to find an answer to this problem, I have been working with the Public Utilities Commission of Ohio (PUCO) which has jurisdiction over railroad crossings. It is the PUCO's contention that any crossing with only crossbucks is an unsafe crossing. With current state and federal funding, the PUCO is able to fund 75-100 railway crossing improvements per year. I want to commend the PUCO for its efforts and role in identifying dangerous crossings. In 1989, there was a change in state law that gave the PUCO the authority to rank order grade crossing safety improvements. The Ohio Department of Transportation was allowed to continue to accept and allocate federal money and keep its authority to spend federal funds to fix crossings. But, one

of the difficult hurdles that the PUCO has to deal with is that its paperwork must go through ODOT before it goes to the Federal Highway Administration. This extra loop delays action on actually arriving at the construction stage of railroad crossing improvements.

It is my understanding that the Administration's bill repeals the Railway-Highway Crossings Program along with an authorization of funding. The President's proposal allows for the states to use up to 10% of the money for the national highway program for highway safety improvements and up to 5% of their annual apportionment of Urban and Rural funds to be used for highway safety improvements or for the elimination of rail-highway crossing hazards.

I would argue that a program be retained that would provide sufficient funding to states for railroad crossing safety. There should be a separate program which actually guarantees funding for railroad crossing improvements.

There are several crossings in my district which have been the source of accidents and fatalities. I would like to bring these crossings to the Committee's attention: a Conrail crossing at County Road FG, one mile west of Delta in Fulton County (DOT 509 496 R); a Conrail crossing in Wood County on Ayers Road, west of Bradner Road (DOT 509 144 R); a Conrail crossing at Fulton County Road 10, two miles west of Delta (DOT 509 499 S); and a Conrail crossing at Fulton County Road 4, four miles west of the Fulton-Lucas County border (DOT 510 806 K).

REFLECTORIZATION

Several of my constituents have contacted me about the use of reflectors on trains and crossbucks. The placement of reflectors on sides of freight cars would make the cars easier for a motorist at a rail crossing to spot at night. Reflectors could serve as strobe lights which would warn oncoming car traffic. Furthermore, the PUCO supports further research and development of technology on reflectorization.

From the Chairman's letter to me, dated June 29, 1990, I understand that the Federal Highway Administration has recommended that trains include reflectors while the Federal Railroad Administration has been unwilling, at this point, to establish such regulations that would require reflectors on trains. The railroads have resisted adding reflectorized striping due to what they consider inordinate costs, using the rationale that most collisions between trains and cars are the fault of the motorist. In 1982, the FRA analyzed the use of reflective material on railroad freight cars. The results of the tests indicated that there was a sharp decline in reflective quality a short time after installation. The FRA study concluded that few, if any, accidents are likely to be affected by reflectorization; the costs far exceed the benefits; and other

approaches to the crossing safety problem such as public education are far more effective.

From what I understand from Mr. Gilbert Carmichael, FRA Administrator, the 1982 report is to be updated this year at which time the FRA will re-examine its policy in this matter. Just recently, I was told that the FRA tested the reflective material in Pueblo, Colorado and plans to shift to a demonstration program on an operating rail system. The FRA has indicated that a new reflective material is being developed that is expected to have better retention of its reflective intensity, be more resistant to dirt and easier to clean. Perhaps, this technology will prove more successful while at the same time less expensive and, in effect, change the FRA policy with respect to reflectorization. I would encourage the Subcommittee to review all efforts in this area. According to the Ohio Department of Transportation, Canada has required railroad cars to be reflectorized for over 30 years. Canadian law permits grants to be made from the Railway Grade Crossing Fund towards the cost of the installation of reflectors.

A three sided reflector has been designed by a Conrail team at the main railyard in Columbus, Ohio. It consists of a three-sided, multicolored reflector mounted at a lower level than the standard railroad crossbucks. The reflectors catch the light from an approaching locomotive and reflect it toward motor vehicles at driver eye level, and also reflect the vehicle's own lights back at the driver. Conrail has declined to use the warning device before the Federal Railroad Administration clearly demonstrates its effectiveness. Mr. Gilbert Carmichael, the FRA Administrator, in a letter to me dated September 27, 1990, indicated that he was encouraged by the reflector's potential effectiveness but indicated that the device was in its early stages of development and testing. I was encouraged to learn that FRA is now testing this reflector device in Pueblo as well.

I would like to conclude by saying that I believe that the railroad-highway crossing issue is an important one which deserves full support. I would advocate that a separate railroad-highway crossing program be maintained to ensure that proper dollars are allocated to our states to deal with the problems of keeping crossings upgraded and as safe as possible. A separate program also raises the significance of the safety problem. Finally, I would encourage the FRA and the Committee to support organizations such as Operation Lifesaver which is dedicated to eliminating rail-highway crossing crashes through public education and enforcement and further studies on reflectorization to determine its usefulness.

SIGNAGE ON FEDERAL HIGHWAYS

Mr. Chairman, one last note, I would like to bring to the Committee's attention the problem that communities have with proper access to facilities of importance to the community.

There are several alternatives to deal with this situation including realigning streets and highways to improve the access. However, one of the most economical ways to help this situation would be to include proper guide and informational signage on highways.

I would encourage the FHWA to be flexible when it considers signage on federal highways. While this may seem like a small problem, effective signs can be extremely helpful for a community's economy. In my own district, a very popular Farmer's Market is located in downtown Toledo. The Farmer's Market provides a significant part of the income of local farmers who utilize the Market in addition to providing the low cost nutritious food to the consumers of the City. In fact, it is estimated that products brought to the Farmer's Market represent 25% of that particular farmer's crop. The Toledo City Council recently voted to appropriate $190,000 for remodeling work and enlargement of up to 40 stalls. On busy summer weekends, 5,000 people may visit the Farmer's Market. The problem with the Market's location is that motorists cannot see it from the incoming expressways. The expressways are elevated which obscures the Farmer's Market from view. Furthermore, the Market is surrounded by a creek on one side and a warehouse on the other which prevents direct access. According to the City of Toledo's Division of Parks and Forestry, the Farmer's Market loses the business of 500-1,000 people a week because of inadequate access. There needs to be direction off the interstates as to what exit will deliver motorists as close to the Farmer's Market as possible.

Furthermore, I would like to advocate that the following types of signs be eligible for federal funding on all construction projects: construction zone and maintenance signing; detour signing; and replacement or upgrade of all regulatory signing to include replacement of overhead sign structures.

Thank you, Mr. Chairman, and Members of the Committee for your consideration of my testimony.

## APPENDIX

### 1. Lift Delays

It is very difficult to quantify the extent of the negative economic and social impacts that result from the lifting of the Craig Bridge. In an attempt to convey some idea of the problem, estimates were compiled based on 1990 lift data.

The maximum traffic delay from a lift was 46 minutes; the average delay throughout the year was 8.81 minutes. This 8.81 minute traffic closure on a major Interstate costs motorists a total of 86 hours of delay every time the bridge is opened. With 877 lifts during 1990 this means that, for the year, the total delay was 75,442 hours wasted. In addition to delay time, vehicle operating costs are incurred during delays. Assuming overall time costs of $11.00 per hour and operating costs of $2.60 per hour (somewhat conservative estimates) the traffic delays due to the lifting of the bridge cost over $1,025,000 in 1990. This cost of over $1 million is due to delays from lifts only.

Conditions in 1990 suggest that these estimates may be very conservative and costs have been and will be much higher. The year was a slow year for commercial, tourist, and recreational shipping on the river. In addition, there are other factors not considered which could be included and would raise the costs: diversion of traffic to local streets and other routes, increased commodity costs due to delays and uncertainties, frustration, emergency access considerations, etc.

### 2. Inadequate Capacity of the Bridge

The design capacity of the Craig Bridge is 50,000 vehicles per day. Traffic in 1990 already exceeded this level by over 15%. The bridge section of I-280 is today operating at or very near Level of Service which results in congestion and sporadic breakdowns during the day with unsafe and inefficient operations during peak periods.

Traffic forecasts for future years make it clear that this capacity problem will become even more severe. Work completed during development of the TMACOG "Year 2010 Long Range Transportation Plan" indicate that all of the area's river crossings will experience severe congestion. For the Craig Memorial Bridge it is estimated that in the year 2010 there will be an almost twofold increase in traffic volume above that of 1990, bringing volume to approximately 96,000 vehicles per day. Needless to say, the bridge cannot handle this; severe congestion and constant delays will occur as time goes on.

### 3. Maintenance Delays

The I-280 bridge not only presents capacity problems, but has been and in all likelihood will continue to be a maintenance problem for ODOT. Lane closings during repairs and heavy maintenance further reduce the capacity of the bridge and seriously impact the area. March 1986 emergency repairs required closing traffic on two of the four travel lanes. In November 1987 traffic was limited to one lane each direction for five months. In June 1988 traffic lanes were blocked sporadically for emergency repairs and the ship channel was closed for almost two weeks. In March 1989 replacement of lift span beams closed traffic to one lane in each direction for the summer season. Painting during the summer of 1990 narrowed the bridge. Scheduled and emergency maintenance work has cut the capacity of the bridge in half during the highest traffic volume months of the year for the past several years. During these closures ODOT has been able to upgrade many components of the bridge, however, the bridge is over 30 years old and is required to lift around 1,000 times each year. Another factor compounding maintenance problems is that the bridge is now carrying heavier Michigan truck weight loads of 150,000 pounds. This is necessary to allow Toledo's port and area businesses to be competitive and serve nearby Michigan markets as well. It would seem that prolonged lane closings similar to those of the past will continue to be necessary in the future to undertake maintenance and repairs.

4. Expedite Transportation Development Process

The federal government should designate this as a high priority project, and establish a process to expedite the project as it goes through the various development phases. Projects are normally expedited in two ways. First, they must be well managed. Second, within each state and federal agency, they must receive immediate attention when necessary. Of course, these need to be in place. However, I am recommending a third mechanism.

A team of officials representing the state and federal agencies which are involved with the project should be established to expedite the project. These officials should have the responsibility and authority to make decisions. Rather than an elaborate and time consuming network of written communications, this task force would be given the decision making responsibilities relative to state and federal laws and regulations. It would operate in an expeditious fashion and would need to meet in Toledo - a cost to the state and federal government in the short run. However, in the long run, the cost of the project could be decreased by expediting the project.

Such a team is modeled on the Management Teams which are operating in the Toledo area for many of our highway projects and which TMACOG uses on many of its projects and activities. The Management Team is designed to avoid the pitfalls of opposition by involving neighbors, business, industry and public officials in all planning stages of a project and maintain this involvement

throughout construction. Its goal is to make certain that all groups which are affected by a project are presented on the team.

Mr. MINETA. At this time I would like to call forward our colleague from Indiana, Congressman McCloskey, and our colleague from the 10th district of Virginia, Congressman Frank Wolf, a very valued member of the appropriations subcommittee and a person who has been instrumental in making so many improvements as they relate to transportation issues not only from a national perspective but from those of us who live in the northern Virginia area. Again, I would like to welcome our two fine colleagues.

Mr. APPLEGATE. Mr. Chairman.

Mr. MINETA. Mr. Applegate.

Mr. APPLEGATE. Mr. Chairman, if I may just interject at this moment. I would like to enter into the record a statement from the Governor of Ohio, George Voinovich concerning the reauthorization of the Surface Transportation Program. Unfortunately, he can't be here but he does address a couple of things. I would just name three, if it is all right. It will just take a second.

He does recommend increasing from 89 to 90 percent the Minimum Allocation for donor States, an area of which Marcy Kaptur has alluded to. It is my understanding that in the Administration's proposal they do not mention the Minimum Allocation and, in fact, does away with it. There is no way to know that this would be of any benefit at all, but it makes sense if we do have at least a minimum.

He recommends also a Minimum Allocation guarantee for mass transit funding. There is no guarantee that a State will receive any return on a gas tax for mass transit now. And he has recommended a 65 percent mass transit Minimum Allocation.

Finally, he supports the concept of a two-tier Federal Aid Program with a separate category for bridges.

He is concerned about the 60–40 sharing split, but he supports the 75–25 split for the National Highway System.

So there are a couple of things in there and I think it would be of very strong interest to the committee. Therefore, I submit his statement for the record.

Mr. MINETA. Without objection, so ordered.

[Governor Voinovich's statement follows:]

STATEMENT OF
GEORGE V. VOINOVICH
GOVERNOR
STATE OF OHIO

I am grateful for the opportunity to share some thoughts on what may be the most critical legislation to be considered in this First Session of the 102nd Congress -- reauthorization of federal-aid surface transportation programs.

Chairman Mineta, you and the other distinguished members of the Public Works Surface Transportation Subcommittee face a great challenge this year. You shoulder considerable responsibility for crafting legislation which will make the wisest use of federal, state and local governments' investments in roads and highway, transit systems and transportation safety programs. That investment totals in the many billions of dollars each year. Yours is no small responsibility, and it is one which I know the Subcommittee accepts conscientiously. There resides in your formidable challenge a great opportunity to help implement forward-looking policies which will help all Americans travel more freely, safely and conveniently; to work more efficiently and productively; to be more economically competitive in the world marketplace. In short, your work will have enormous bearing on the nation's quality of life for many years to come.

Clearly, I would like to do all I can to ensure that the people of Ohio will enjoy fully the transportation and infrastructure improvements this panel seeks to make in the national interest. Regrettably, the State of Ohio, and a score of other states, presently are not in a position to benefit fairly from existing surface transportation funding distribution policies, regardless of overall funding levels in the ensuing fiscal years. Like the highway funding allocation laws of the past 30 years, the present authorization program continues to place an unduly heavy burden on the federal donor states which this round of reauthorization must remedy. Ohio and the other 18 donor states are not fully reassured that the Bush Administration's reauthorization proposal will address these concerns. Indeed, our analyses of the Administration bill do not yet yield enough specific evidence

that historically heavy donor states should expect to receive the proper return on their transportation user fees.

This panel already has been alerted to Ohio's desire for a fairer return on its federal surface transportation investment. Last year, an impressive number of our State's Congressional Delegation appeared before this panel and illustrated, eloquently and convincingly, the degree to which Ohio suffers from unfair and outdated federal allocation formulas. My purpose in contacting the subcommittee is to report that donor states' unusually heavy burdens have not become any less pronounced in the past year. By necessity, donor states such as Ohio are seeking funding distribution reform more vigorously than ever before. Ohio, with its heavily-travelled roads, aging bridges and much-in-demand mass transit services, can no longer continue to be denied its fair share of federal funding.

In the new, post-Interstate era that is now at hand, there is a need for new nationwide policies which will serve all regions positively and fairly, enabling them to meet their unique transportation requirements while serving as important links in a coordinated national network. This will require a continued strong federal commitment of resources, primarily through the use of transportation user fees already collected and accumulating in the Highway Trust Funds. The integrity of these funds must be restored by spending them on their intended purpose, and by ending their diversion to other non-transportation purposes. On a related matter, I fully support the National Governors' Association recommendation to set an overall obligation ceiling of $16.5 billion for fiscal year 1992, a level fully justified by the Trust Fund's growing balance.

The concepts of program consolidation and increased flexibility for states and local governments are cornerstones of the Administration's reauthorization proposal. As a governor and former mayor, I can tell this committee that greater flexibility empowering state and local officials to be more responsive to their specific needs is most attractive. The proposed changes in federal-

state matching requirements raise serious concerns, however, which I will address later.

Ohio supports the concept of a National Highway System, and applauds the Administration's recognition of the national defense and commercial significance of certain roads, and the need to ensure a continued high level of federal financial support for these routes. Our preliminary analysis of the U.S. Department of Transportation's 150,000-mile illustrative system excludes several key highways in Ohio. Expansion of the system to a 180,000-mile plan likely would enable Ohio and other states to incorporate a sufficient number of additional miles of highway to produce a more complete network consistent with the Administration's and the nation's interests. For now, though, the overall size of the National Highway System can remain a topic for discussion between the Congress and federal highway officials. Our state transportation officials in Ohio are eager to work with Washington policy makers to produce the National Highway System which will best serve the interests of the entire nation.

Ohio has a long and proud history of active participation in ambitious undertakings which contributed to the greatness of our nation as a whole, particularly in the transportation arena. Over the past 34 years, an estimated $2.2 billion in federal highway taxes collected in Ohio have been spent improving highways in other states. But Ohio's spirit of cooperation and generosity is increasingly tempered by the need to ensure that Ohio's own citizens and industries might begin to receive a fairer proportion of the highway taxes collected within our borders. That will require revisions to existing funding formulas to more accurately reflect our transportation needs and the demands placed on Ohio's transportation systems. Allocation mechanisms which fail to note the significance of total lane miles (both rural and urban), vehicle miles traveled and fuel use do not adequately note the requirements of, or demands on, the surface transportation infrastructure.

The move to a more equitable funding distribution structure need not threaten those states which, unlike Ohio and other donor states, have long reaped more than they have sown into federal-

aid highway systems. I would support a new program containing assurances that no state would receive less in future years than it receives in 1991 apportionments, not including discretionary or special funding or Interstate construction funds.

At the same time, minimum allocation (MA) protection must be maintained, and the current MA guarantee should be increased to at least a 90 percent return. In addition, discretionary funding should be excluded from the MA computation. Present law unfairly prevents MA states from realizing discretionary funding benefits, as they lose a like amount of MA funds. This is an inequity which must change if donor states are to remain the vital, viable crossroads in a nationwide system.

Ohio's sacrifices have not been confined to highway matters. Historically, the State has been a heavy contributor to public transit efforts in other states. After receiving, on average, a scant 28 cents on each dollar paid into the federal mass transit account, Ohio is prepared to propose some sort of minimum allocation guarantee for transit. No such guarantee presently exists and the results clearly have been harmful for Ohioans. This Subcommittee has recognized the need for coordinated solutions to transportation problems. Mass transit, multi-modal choices are an important part of the equation. With the need to meet the new statutory requirements of the Clean Air Act and the Americans with Disabilities Act, it is inappropriate and inconsistent to tie Ohio's hands. We desire not only to comply with the new laws but to provide leadership for the entire nation as well. A mass transit minimum allocation of at least 65 percent would serve not just Ohio's but the nation's interest by reducing air pollution and highway congestion.

I support the concept of a two-tiered, federal-aid surface transportation program featuring a National Highway System and an Urban/Rural program. However, I am deeply concerned by the potential impact of the proposed reduced federal participation -- to 60 percent -- in the latter program. Ohio's commitment to strong state and local support of federal transportation projects is

unquestioned, witness two significant recent state gas tax increases (bringing the total tax to 20 cents per gallon) and the variety of local tax initiatives. But this Subcommittee, with its extensive knowledge of the challenges already confronting local governments, can certainly predict the hardship which the proposed 60-40 match would visit on most communities, especially those which are already economically depressed. I hope the Subcommittee will recommend at least a 75 percent federal participation level in the Urban/Rural program.

These are my reactions to the Administration's Surface Transportation Assistance Act of 1991. Like this Subcommittee, I am receptive to most of what the proposal seeks to accomplish, and I differ only on some of the methods prescribed for making the best use of our nation's investment in transportation infrastructure modernization. My recommendations are offered in order to notify this panel, and the Congress as a whole, of the great challenges which confront all states, and particularly those donor states like Ohio which presently carry an especially large transportation tax burden. Only by distributing that burden more fairly will the nation be able to achieve the coordinated surface transportation network on which America's continued prosperity will increasingly depend. I look forward to the opportunity to share with the Subcommittee and full Committee any additional thoughts or information which might assist in crafting this important reauthorization legislation.

Mr. MINETA. Now our colleague from Indiana, Mr. McCloskey.

## TESTIMONY OF HON. FRANK McCLOSKEY, A REPRESENTATIVE IN CONGRESS FROM INDIANA

Mr. MCCLOSKEY. Thank you very much Mr. Chairman, Chairman Roe, members of the committee. I appreciate your generosity and hospitality in allowing me to testify today.

First of all, I have a fairly extensive statement, Mr. Mineta, about two issues; one national and one regional specific. If I could have those two statements accepted for the record, I would really appreciate it.

Mr. MINETA. Without objection, so ordered.

Mr. MCCLOSKEY. Given the previous cooperation the committee has provided on my major concern and with consideration of the committee's time and expertise, I will be very, very brief.

Mr. Chairman, my two major concerns today are to continue to plug for a major four-way highway between Indianapolis and Evansville, and also to express the concerns of Indiana and other States about the present highway allocation formula as proposed in the President's legislation. I have been asked by Governor Bayh of Indiana and the State Department of Transportation Director Christine Letts to state their concerns as members of the Crescent Coalition that the present formula is very unfair to states such as Indiana and I might say California, and hopeful there will be reasonable accommodations made to address these concerns.

The Crescent Coalition and the State of Indiana feel that the factors used should reflect the extent and use of the National Highway System and the level of funding necessary to preserve it. Particularly, the factors used should be highway lane miles, vehicle miles travelled, diesel fuel consumption, and a more than reasonable Minimum Allocation guaranteed. As you know, the Administration calls for basing the National Highway System funding on land area, public road mileage, fuel consumption, and a low population density supplement. These factors do not maximize the allocation of limited Federal funds for national and area effectiveness and priorities.

I am sure many people on this committee and otherwise will have input into this issue, and I appreciate your concern.

I want to thank you, particularly, Chairman Mineta, for your help in previous years with the Evansville-Indianapolis highway. I have been guided by your advice and insight, as has Governor Bayh and State highway officials. As you know, they have been here previously testifying before this committee and meeting with you and other legislators and administration officials personally. To put it very simply, if you look at Indiana on a map, southwestern Indiana is the only sector of the State without significant north-south Interstate highway development. I will not go on and on about what that has meant for transportation between the Evansville area and the capital of the State in Indianapolis, and economic and community development throughout a very underdeveloped area of the country. Infrastructure investment in this area deserves a lot more attention.

The Governor, as you know, Mr. Mineta, has made this highway one of his highest priorities. You have suggested that we strongly consider and plug it in to our State's priorities, for example, under the Highways of National Significance. Already the State has spent $2 to $3 million on development of preliminary environmental and engineering studies on the northern leg between Bloomington and Newberry. The Governor has formally and informally talked of up to a $250 million long-range commitment. So I would just say we appreciate your on-going support and concern for this project.

In my testimony I have been asked by the State to suggest a $6 million allocation for continued work, particularly design work, in the northern area between Bloomington and Newberry, and also for $2 million to do design and related work farther south in the middle stretch of the proposed highway, between Newberry and Petersburg. There are many, many details and concerns otherwise stated in my testimony.

Mr. Chairman, you have been very cooperative. I think the State has outlined a very reasonable, prudent, and cost-effective strategy. We are obviously not asking for the Moon but basically solid and fair treatment. We would just appreciate whatever you and Mr. Roe and other members of committee could help on. It is very, very important to an underserved area of the country.

Mr. MINETA. Thank you very much for your analysis from Indiana's perspective of the Bush bill. Has the Indianapolis to Evansville I–69 been included as part of the State of Indiana's submission to the Department of Transportation for their Highways of National Significance?

Mr. MCCLOSKEY. Yes, I believe it has, Mr. Chairman.

Mr. MINETA. And it is my understanding that the Indiana Department of Transportation anticipates completing the design work for the first section of the segment of the highway between Bloomington and Newberry at a cost of some $16 million in 1993. Does the State propose using Federal Aid Highway funds for the design work, and, if so, how much will the State use?

Mr. MCCLOSKEY. Yes, yes. My understanding, Mr. Chairman, is they do. Indiana anticipates completing design work for the first section of the highway between Bloomington and Newberry to cost $6 million, the remainder of $2 million would go to the Newberry-Petersburg connection. I believe the total costs would be about $8 million additional. I believe you mentioned $16 million. We are talking about significant Federal help on this in coordination with an on-going State allocation and commitment.

Mr. MINETA. Any questions of our colleague from Indiana?

Thank you very, very much, Congressman McCloskey, for your testimony.

[Mr. McCloskey's prepared statement follows:]

April 10, 1991

STATEMENT OF CONGRESSMAN FRANK McCLOSKEY

I APPRECIATE THE OPPORTUNITY TO APPEAR BEFORE THE SUBCOMMITTEE TO VOICE MY CONCERNS ON BEHALF OF INDIANA AND OTHER STATES WHO WOULD BE TREATED UNFAIRLY UNDER THE BUSH ADMINISTRATION'S PROPOSED FUNDING FORMULA FOR ALLOCATING FEDERAL RESOURCES TO THE STATES FOR THE NATIONAL HIGHWAY SYSTEM.

BEFORE DELVING INTO THIS TOPIC, I WOULD LIKE TO RESTATE MY SUPPORT AND SOLICIT YOURS FOR A HIGHWAY CONNECTING EVANSVILLE TO INDIANAPOLIS. AN EXTENSION OF I-69 NOT ONLY LINKS INDIANA'S THIRD LARGEST CITY TO THE STATE CAPITAL, IT ALSO REPRESENTS A TREMENDOUS ECONOMIC BOON TO SOUTHWESTERN INDIANA AS WELL AS THE ENTIRE REGION. I AM SUBMITTING WRITTEN TESTIMONY WHICH DEMONSTRATES THE MANY BENEFITS THIS HIGHWAY WOULD PROVIDE, THE STATE OF INDIANA'S COMMITMENT, THE VAST AMOUNT OF COMMUNITY SUPPORT, AND THE LEVEL OF FEDERAL PARTICIPATION NECESSARY TO BRING THIS PROJECT TO FRUITION.

THE INDIANA DEPARTMENT OF TRANSPORTATION IS IN FULL SUPPORT OF FUNDING PROPOSALS SPONSORED BY THE CRESCENT COALITION - A GROUP OF STATES WITH WIDELY DIFFERING GEOGRAPHIC, DEMOGRAPHIC, ECONOMIC, AND VEHICLE TRAFFIC CHARACTERISTICS THAT ARE DEDICATED TO FINDING COMMON SOLUTIONS TO THEIR DIVERSE TRANSPORTATION NEEDS. AS YOU ARE AWARE, MR. CHAIRMAN, THE STATE OF CALIFORNIA IS A DRIVING FORCE WITHIN THIS COALITION.

THE COALITION BELIEVES THAT THE GUIDING PRINCIPLE FOR ALLOCATING FEDERAL HIGHWAY FUNDS SHOULD BE THE FAIR DISTRIBUTION OF MONEY TO THE STATES WHICH NEED IT THE MOST. THE FACTORS USED SHOULD REFLECT THE EXTENT AND USE OF THE NATIONAL HIGHWAY SYSTEM AND THE LEVEL OF FUNDING NECESSARY TO PRESERVE IT.

THE BUSH ADMINISTRATION'S PROPOSAL FOR BASING NATIONAL HIGHWAY SYSTEM FUNDING ON LAND AREA, PUBLIC ROAD MILEAGE, FUEL CONSUMPTION, AND A LOW POPULATION DENSITY SUPPLEMENT DOES NOT MAXIMIZE THE ALLOCATION OF LIMITED FEDERAL FUNDS AS A MEASURE OF THE EXTENSIVENESS AND INTENSITY OF USE OF OUR NATION'S

HIGHWAYS.

LAND AREA BEARS NO RELATIONSHIP TO EITHER THE USE OF THE HIGHWAY OR THE EXTENT OF THE ROAD NETWORK TO BE PRESERVED. THEREFORE, LAND AREA CRITERIA DOES NOT REFLECT THE FUTURE NEEDS OF THE NATIONAL HIGHWAY SYSTEM. LAND AREA CRITERIA NEEDLESSLY PROVIDES LARGE BUT SPARSELY POPULATED STATES WITH GREATER APPORTIONMENTS THAN IS WARRANTED. THE LOW POPULATION DENSITY SUPPLEMENT GRANTS EXTRA REDUNDANCY TO THIS INEQUITY.

PUBLIC ROAD MILEAGE CRITERIA UNFAIRLY ALLOWS TWO-LANE GRAVEL ROADS TO RECEIVE THE SAME MILE MEASUREMENT AS FOUR-LANE INTERSTATES. IN ORDER TO ADEQUATELY REPRESENT THE AGGREGATE HIGHWAY ROAD MILEAGE IN A STATE, ATTENTION SHOULD BE FOCUSED ON HIGHWAY LANE-MILES. INSTEAD OF COUNTING A 10 MILE STRETCH OF 4-LANE HIGHWAY AS ONLY 10 MILES UNDER THE ADMINISTRATION'S PROPOSAL, IT SHOULD BE COUNTED AS 40 MILES. LANE-MILES IS A DIRECT MEASURE OF THE SIZE OF THE ROAD NETWORK AND SHOULD BE USED TO REFLECT THE EXTENT OF THE HIGHWAY SYSTEM TO BE PRESERVED.

VEHICLE MILES TRAVELED SHOULD BE USED INSTEAD OF MOTOR FUEL CONSUMPTION FOR MEASURING THE LEVEL OF USE OF THE NATIONAL HIGHWAY SYSTEM. VEHICLE MILES TRAVELLED WOULD BE A DIRECT MEASURE OF THE MAGNITUDE OF TRAFFIC ON THE NATIONAL HIGHWAY SYSTEM, WHILE THE QUANTITY OF GASOLINE CONSUMED PROVIDES AT BEST ONLY A VAGUE GAUGE SINCE IT REFLECTS TRAVEL ON ALL ROADS NOT JUST THAT ON THE NATIONAL HIGHWAY SYSTEM. IN ADDITION, THE CRITERIA OF MOTOR FUEL CONSUMPTION IS COUNTERPRODUCTIVE TO OUR MISSION OF ENCOURAGING THE USE OF MORE FUEL EFFICIENT VEHICLES.

IN ORDER TO ASCERTAIN THE LEVEL OF FUNDS REQUIRED TO MAINTAIN OUR CURRENT HIGHWAY INFRASTRUCTURE, AN ACCURATE MEASUREMENT OF THE INTENSITY OF TRUCK TRAVEL IS ESSENTIAL. SINCE TRUCKS ARE PROPORTIONATELY MORE DAMAGING TO OUR HIGHWAYS AND ROADS, THE REVISED FUNDING FORMULA SHOULD DIRECT FUNDS TO THE STATES WHERE TRUCK TRAVEL IS MOST FREQUENT. NO FEASIBLE ALTERNATIVE BESIDES THE MEASUREMENT OF DIESEL FUEL USE, FOR WHICH DATA IS RELATIVELY ACCURATE AND EASY TO COLLECT, EXISTS FOR DETERMINING THE LEVEL OF

COMMERCIAL TRUCK TRAVEL. IT WOULD GIVE A MORE PRECISE SKETCH OF THE AMOUNT OF ROAD DAMAGE AND CONGESTION ON OUR NATION'S HIGHWAYS AND THEREFORE BETTER EVIDENCE OF WHERE FEDERAL FUNDS SHOULD BE FOCUSED.

A HIGHWAY FUNDING FORMULA BASED ON THE ABOVE-MENTIONED FACTORS - HIGHWAY LANE MILES, VEHICLE MILES TRAVELLED, AND DIESEL FUEL CONSUMPTION - WOULD EQUITABLY DISTRIBUTE FEDERAL FUNDS TO THE STATES FOR THE MAINTENANCE AND IMPROVEMENT OF THE NEW NATIONAL HIGHWAY SYSTEM. IN ADDITION, THE INCLUSION OF A MINIMUM ALLOCATION GUARANTEE OF AT LEAST 85 PERCENT WOULD ASSURE THE INDIVIDUAL STATES THAT THEY WOULD HAVE A CERTAIN LEVEL OF FEDERAL FUNDS WITH WHICH TO PLAN FOR FUTURE HIGHWAY CONSTRUCTION AND REHABILITATION.

THANK YOU FOR ALLOWING ME TO TESTIFY TODAY ON THE BUSH ADMINISTRATION'S FEDERAL HIGHWAY FUNDING PROPOSALS. I WILL BE HAPPY TO ANSWER ANY QUESTIONS WHICH YOU MAY HAVE.

## EVANSVILLE TO INDIANAPOLIS

THE BUSH ADMINISTRATION DESCRIBES HIGHWAYS OF NATIONAL SIGNIFICANCE AS ROADWAYS WHICH SERVE MAJOR POPULATION CENTERS, MEET NATIONAL DEFENSE REQUIREMENTS, AND FURTHER INTERSTATE AND INTERREGIONAL TRAVEL. THESE ROADS SHOULD SIGNIFICANTLY IMPACT MORE THAN ONE STATE AND BE VITAL TO THE NATIONAL TRANSPORTATION NETWORK. THE PROPOSED EVANSVILLE TO INDIANAPOLIS HIGHWAY FITS ALL OF THESE CRITERIA.

THE LACK OF A HIGHWAY CONNECTING EVANSVILLE AND INDIANAPOLIS HAS BEEN A SEVERE IMPEDIMENT TO ECONOMIC GROWTH IN SOUTHWESTERN INDIANA. THE STATE HIGHWAYS WHICH TRAVERSE THIS CORRIDOR ARE NARROW, WINDING, HILLY ROADS WITH LITTLE OPPORTUNITY FOR PASSING, AND WITH SIGNIFICANT AMOUNTS OF COMMERCIAL TRUCK TRAFFIC. AS A RESULT, NO PART OF THE STATE IS LESS WELL SERVED BY THE HIGHWAY SYSTEM AND NO AREA OF THE STATE IS FARTHER REMOVED FROM THE MAINSTREAM OF ECONOMIC DEVELOPMENT THAN THE RURAL COUNTIES THAT EXTEND ON A DIAGONAL BETWEEN INDIANAPOLIS AND EVANSVILLE. A NUMBER OF BUSINESSES HAVE BEEN RELUCTANT TO LOCATE IN THE AREA BECAUSE OF THE TRANSPORTATION PROBLEMS. OTHER ECONOMIC SECTORS, SUCH AS AGRICULTURE, HAVE BEEN CONSTRAINED BY THE LACK OF A SATISFACTORY NORTH-SOUTH HIGHWAY ROUTE.

IN A PRIVATE STUDY COMMISSIONED AS A FOLLOW-UP TO THE DONOHUE & ASSOCIATES TECHNICAL STUDY (MANDATED BY CONGRESS IN HOUSE REPORT 100-202 AND SENATE REPORT 100-198 OF THE UNITED STATES DEPARTMENT OF TRANSPORTATION'S FISCAL YEAR 1988 APPROPRIATIONS ACT), QUANTUM RESEARCH CORPORATION RE-EXAMINED DONOHUE & ASSOCIATES' FINDINGS AND DETERMINED:

1) AN IMPROVED, MORE DIRECT HIGHWAY HAS SIGNIFICANT BENEFITS FOR BUSINESS-TYPE USERS. SOME 750 BUSINESS EXPANSION JOBS AND SOME $850 MILLION IN ADDITIONAL DISPOSABLE PERSONAL INCOME WOULD BE GENERATED BY EXISTING BUSINESSES TO THE YEAR 2020. IN ADDITION, TOTAL OUTPUT WOULD INCREASE BY $2.5 BILLION, WHICH IS THE INCREASE IN STATEWIDE DIRECT AND INDIRECT PURCHASES BY BUSINESSES AND RESIDENTS.

2) THIS HIGHWAY WOULD GREATLY ENHANCE THE REGIONS' ABILITY TO ATTRACT FIRMS FROM OUTSIDE THE AREA ON THE STRENGTH OF OR AS INDUCED BY A NEW IMPROVED HIGHWAY. THE DIRECT BUSINESS ATTRACTION IMPACT IN ADDITION TO INDIRECT AND INDUCED EMPLOYMENT WILL PRODUCE UP TO 4,210 NEW JOBS IF THERE WAS ALSO A COHESIVE STRATEGY AND FULL COOPERATION BETWEEN LABOR AND BUSINESS AND A COORDINATED REGIONAL MARKETING PROGRAM FOR THE ENTIRE REGION.

3) BETWEEN THE YEARS 2000 AND 2020, THE THREE USER BENEFITS (TRAVEL TIME SAVINGS, CHANGES IN VEHICLE OPERATING COSTS, AND SAVINGS IN ACCIDENT AND INJURY COSTS) WILL PRODUCE AN AGGREGATE SAVINGS OF $1.08 BILLION.

4) THE BENEFIT/COST RATIO COULD BE AS HIGH AS $2.20 TO $2.43.

WHILE THE ABOVE-MENTIONED FINDINGS AND TESTIMONY PROVIDE AMPLE EVIDENCE OF THE ECONOMIC BENEFITS OF THIS HIGHWAY FOR SOUTHWESTERN INDIANA AND THE ENTIRE REGION, OTHER DOCUMENTATION SHOULD BE CONSIDERED.

THIS HIGHWAY REPRESENTS A POTENTIAL SEGMENT OF A NORTH-SOUTH LINK BETWEEN THREE NATIONS: CANADA, MEXICO AND THE UNITED STATES. AN EXTENSION OF I-69 FROM DETROIT, VIA INDIANAPOLIS, EVANSVILLE, MEMPHIS, AND SHREVEPORT, TO HOUSTON WOULD CONNECT INTERNATIONAL PORTS ON THE GREAT LAKES AND THE GULF OF MEXICO. IT WOULD PROVIDE ACCESS FROM WESTERN KENTUCKY AND WESTERN TENNESSEE TO INDIANAPOLIS, DETROIT AND ADDITIONAL POINTS FURTHER NORTH. INDIANAPOLIS TO EVANSVILLE REPRESENTS THE FIRST SECTION OF THIS VITAL LINK.

DUE TO PREDICTIONS OF A MAJOR EARTHQUAKE ALONG THE NEW MADRID FAULT BY THE YEAR 2000 AND THE RESULTING DEVASTATION IT WOULD WREAK ON CITIES SUCH AS EVANSVILLE, SIGNIFICANT FOCUS HAS BEEN PLACE ON EARTHQUAKE PREPAREDNESS. THE HEART OF ANY EARTHQUAKE RECOVERY PLAN LIES IN THE FAST MOBILIZATION OF DISASTER RELIEF TO THE STRICKEN AREAS. SINCE MOST OF THE NECESSARY SUPPLIES, EQUIPMENT, PERSONNEL AND OTHER EMERGENCY NEEDS ARE LOCATED IN AND AROUND INDIANAPOLIS AN INTERSTATE QUALITY HIGHWAY BETWEEN INDIANAPOLIS AND EVANSVILLE IS ESSENTIAL TO ENSURE A PROMPT RESPONSE TO SUCH A CATASTROPHE.

THIS HIGHWAY WOULD ALSO PROVIDE INTERSTATE ACCESS TO THE NAVAL WEAPONS SUPPORT CENTER AND THE ARMY AMMUNITION ACTIVITY CENTER BOTH LOCATED IN CRANE, INDIANA. THIS HIGHWAY IS IMPORTANT FOR PROVIDING DEFENSE ACCESS, CONTINUITY, AND EMERGENCY CAPABILITY FOR THE MOVEMENT OF PERSONNEL AND EQUIPMENT IN BOTH PEACETIME AND WARTIME.

LAST BUT NOT LEAST, THIS HIGHWAY REPRESENTS A DIRECT CONNECTION BETWEEN EVANSVILLE, THE THIRD LARGEST CITY IN INDIANA, AND INDIANAPOLIS, THE STATE CAPITAL. THE LACK OF ACCESS TO THE STATE CAPITAL ISOLATES THIS CORNER OF THE STATE FROM THE CENTRAL FOCUS OF INDIANA'S ECONOMIC, POLITICAL, AND SOCIAL ACTIVITIES. THIS CONNECTOR ROUTE ALSO WOULD PROVIDE DIRECT ACCESS TO BLOOMINGTON, WHICH IS THE HOME OF INDIANA UNIVERSITY AND OVER 33,000 STUDENTS.

PLEASE FIND ATTACHED TWO MAPS WHICH ILLUSTRATE THE INDIANAPOLIS TO EVANSVILLE CORRIDOR.

THIS LIST IS NOT MEANT TO BE EITHER COMPLETE OR COMPREHENSIVE. HOWEVER, IT DOES REPRESENT MANY OF THE MAJOR ARGUMENTS IN SUPPORT OF THIS PROJECT.

PUBLIC SUPPORT FOR AN EXTENSION OF I-69 FROM INDIANAPOLIS TO EVANSVILLE AND POSSIBLY TO POINTS FURTHER SOUTH IS NOT LIMITED TO SOUTHWESTERN INDIANA. SIX AMERICAN AUTOMOBILE ASSOCIATION (AAA) CLUBS AND ONE CANADIAN AUTO ASSOCIATION (CAA) CLUB, TOGETHER REPRESENTING OVER 2.8 MILLION MEMBERS, HAVE JOINED IN SUPPORT OF THIS PROJECT. THE CLUBS ARE: ALABAMA MOTORISTS ASSOCIATION, BLUE GRASS AUTOMOBILE CLUB (LEXINGTON, KY), AAA CHICAGO MOTOR CLUB, AAA HOOSIER MOTOR CLUB (INDIANAPOLIS), AAA MICHIGAN, AAA SOUTHERN INDIANA, AND CAA WINDSOR, ONTARIO.

IN RECOGNITION OF THE IMPORTANCE OF THIS PROJECT AND IN DEMONSTRATION OF ITS COMMITMENT, GOVERNOR EVAN BAYH AND THE STATE OF INDIANA HAVE BUDGETED $235 MILLION FROM HOOSIER LOTTERY PROCEEDS FOR THE CONSTRUCTION OF THIS HIGHWAY AND AN ADDITIONAL $5 MILLION FOR DESIGN WORK. THE STATE IS HOPING TO BEGIN CONSTRUCTION ON THE TWO FOUR-LANE PORTIONS OF THE HIGHWAY BETWEEN NEWBERRY AND BLOOMINGTON IN 1996. THE STATE ESTIMATES THAT THIS PROJECT WILL COST $790 MILLION TO COMPLETE.

THE STATE HAS BEGUN PRELIMINARY ENGINEERING STUDIES ON THE HIGHWAY SEGMENTS BETWEEN BLOOMINGTON AND EVANSVILLE AND HAS CONTRACTED ADDITIONAL STUDIES FOR THE TWO SEGMENTS BETWEEN NEWBERRY AND PETERSBURG AND PETERSBURG AND EVANSVILLE. THE STUDIES ARE EXPECTED TO BE FINISHED BY THE END OF NOVEMBER 1991 AT A COST OF $2.3 MILLION. IN ADDITION, NUMEROUS PUBLIC HEARINGS HAVE BEEN HELD BY THE INDIANA DEPARTMENT OF TRANSPORTATION TO DETAIL RECENT DEVELOPMENTS WITH REGARD TO THIS UNDERTAKING.

PLEASE FIND ATTACHED LETTERS FROM THE COMMISIONER OF THE INDIANA DEPARTMENT OF TRANSPORTATION, CHRISTINE W. LETTS, WHICH DETAIL THE STATE'S INVOLVEMENT AND SUPPORT FOR THE CONSTRUCTION OF AN INTERSTATE QUALITY HIGHWAY BETWEEN EVANSVILLE AND INDIANAPOLIS.

IN THE NEAR FUTURE I WILL BE ASKING CONGRESS TO ASSIST INDIANA IN ITS COMMITMENT TO THIS PROJECT. BY 1993, INDOT ANTICIPATES COMPLETING THE DESIGN WORK FOR THE FIRST SECTION OF THIS HIGHWAY BETWEEN BLOOMINGTON AND NEWBERRY AT A COST OF $6 MILLION. IN ADDITION, INDOT HOPES TO BEGIN THE DESIGN WORK FOR THE SECOND PORTION OF THIS HIGHWAY BETWEEN NEWBERRY AND PETERSBURG AT A COST OF $2 MILLION DURING THE SAME TIME PERIOD. THEREFORE, I WILL BE ASKING CONGRESS FOR $8 MILLION TO ASSIST IN THIS DESIGN WORK.

PLEASE FIND ATTACHED A LETTER FROM COMMISSIONER LETTS OUTLINING THE FEDERAL COMMITMENT DESIRED.

A COMBINED STATE AND FEDERAL COMMITMENT WILL HELP TO CONTINUE WORK ON THIS PROJECT WHICH IS VITAL FOR THE ECONOMIC DEVELOPMENT OF SOUTHWESTERN INDIANA AND THE IMPROVEMENT OF SAFETY CONDITIONS ON THE ROUTE BETWEEN EVANSVILLE AND INDIANAPOLIS. THE MERITS OF THIS HIGHWAY AS LISTED ABOVE WARRANT THE FEDERAL COMMITMENT NECESSARY TO BRING THIS PROJECT TO FRUITION.

February 1, 1991

The Honorable Norman Y. Mineta, Chairman
Subcommittee on Surface Transportation
U.S. House of Representatives
2350 Rayburn House Office Building
Washington, D.C. 20515

Dear Chairman Mineta:

I am writing to you to provide information on Indiana's position for the extension of Interstate 69 from Indianapolis, Indiana to Evansville, Indiana. I have attached correspondence with Congressman Lehman which will greatly detail the need and the importance of this extension.

I would like to also take this opportunity to provide additional information concerning Indiana's commitment to this project. The Indiana Department of Transportation has currently scheduled $235 million of federal and state funds for work on this extension. Currently being undertaken are 3 design studies at a cost of $2.3 million which will help locate the best route for this extension. Finally as part of our state biennium budget process we currently have budgeted an additional $5 million for design consultants. As you can see by these financial commitments we believe this project is vital to the economic development of Southwest Indiana.

If you desire further information please feel free to contact me. I believe that a joint effort between federal and state/local governments is the best way to see this project become reality.

Sincerely,

Christine W. Letts
Commissioner

December 19, 1990

The Honorable William Lehman
Chairman, Subcommittee on Transportation
Committee on Appropriations
United States House of Representatives
Washington, D.C. 20515

Dear Chairman Lehman:

The Federal Highway Administration (FHWA), via a July 19, 1990 letter to you from Mr. T.D. Larson, submitted its report on the results of the "Southwest Indiana Highway Feasibility Study" to Congress. This was in response to House Report 100-202 and Senate Report 100-198 of the United States Department of Transportation's Fiscal Year 1988 Appropriations Act. The Indiana Department of Transportation (INDOT) managed the consultant-prepared feasibility study at the request of FHWA. I am writing in an attempt to clarify misconceptions that may have been left by the FHWA letter so that the record before Congress reflects a balanced view of this study and, more importantly, the underlying project.

The study was initiated in response to the lack of highways connecting major cities in Southwest Indiana (primarily Evansville, Indiana's third largest city) with the state capital, Indianapolis. The need for improved highways in this part of the state is partially reflected in the strong support for the project expressed at the thirteen public meetings held during the course of the study. Over 2,600 people attended these meetings, and hundreds of letters were received supporting highway improvements in Southwest Indiana.

In the FHWA letter Mr. Larson indicates that, based on the consultants' analysis, the proposed highways, including a freeway facility between Indianapolis and Evansville, are at best marginal from a cost-effectiveness standpoint. On behalf of the State of Indiana, I strongly disagree with this conclusion.

The study demonstrated that construction of a direct freeway route between Indianapolis and Evansville would generate $237 to $917 million dollars of economic benefits and between 2,165 and 3,384 new jobs. Based on the consultant team's recommended assumptions (five percent discount rate and the "realistic" set of economic growth conditions), the freeway route received a 1.23 benefit-cost ratio. While this ratio clearly exceeds 1.0, it should be pointed out that the consultants also prepared another set of assumptions based on the same discount rate but using a more "optimistic" set of economic growth conditions. Under this second set of assumptions the freeway route received an even better benefit-cost ratio of 1.54.

It is important to note that another nationally known consultant team, retained by the City of Evansville and Vanderburgh County and sponsored by the Greater Evansville Chamber of Commerce, reviewed the analysis and findings of the "Southwest Indiana Highway Feasibility Study." In this review, attached as an addendum to the study report your subcommittee received, the other consultant team found that the report was very conservative in its statement of benefits. They pointed out the following:

1. Benefits during construction from dollars contributed by state, local and private sources should have been included and would increase the benefit-cost ratio to 1.82 (1.51 under the study's lower set of assumptions);
2. The number of jobs generated by additional business expansion in the Evansville region appears too conservative. Additional jobs generated by highway induced expansion could raise the benefit-cost ratio to 2.07 (1.76 under the study's lower set of assumptions);
3. Economic benefits from outside Indiana should have been included since, at a minimum, Western Kentucky would also benefit from an improved north-south route to Indianapolis. Including out-of-state benefits could raise the benefit-cost ratio to 2.16 (1.82 under the study's lower set of assumptions);
4. Financing obtained from public-private partnerships has not been reflected in the study's final data and conclusions. By using a conservative figure of 10% of the total costs the benefit-cost ratio for public funds could reach 2.39 (2.02 for the study's lower set of assumptions).

As you can see from the above discussion, necessary yet minor changes in the study's assumptions and analysis could have significant impacts on the benefit-cost ratio and place it well in excess of 1.5.

Even though this project has demonstrated a positive benefit-cost ratio, a broader view than cost-effectiveness alone must be taken when deciding the future of these projects, particularly the facility to Evansville. Related to this, I would note that if cost-effectiveness had been the major consideration when the Interstate System (one of the most successful public works projects in history) was built, a number of segments would never have been developed.

The highway between Indianapolis and Evansville is needed to assure this part of our state greater accessibility to the rest of the nation, and thereby, lay the groundwork for future economic growth in Southwest Indiana. In addition, this highway should be part of a larger project to extend I-69 from Central Michigan (where it serves Lansing and Flint and also connects with I-94 serving Detroit) to Memphis. This extension would give the

industrial midwest a more direct connection to the growing markets and population of the mid-south and southwest, enhancing commerce and economic development in the Greater Detroit to Memphis corridor. This project is truly one of a national character.

I must also voice a specific objection to Mr. Larson's reference to "earlier studies", going back as far as 1966, which purportedly "found insufficient justification for construction". These "studies", many of which examined other corridors and focused on different issues, are wholly irrelevant to the study and currently contemplated project at hand. Congress recognized this when it commissioned the federal study. I trust you will properly ignore Mr. Larson's gratuitous and inappropriate reference to these outdated and irrelevant studies.

In addition to my concern that possible misconceptions raised by Mr. Larson's letter be clarified, I also wish to stress Indiana's commitment to the roadway from Indianapolis to Evansville. This commitment is reflected in Governor Bayh's testimony to Congress regarding future highway funding, which included the following excerpt:

> "Indiana has been, and will continue to be, a good partner for transportation projects in general. We have committed ourselves to long-range intermodal planning and identifying new transportation infrastructure funding sources. In addition, Indiana is being a good partner specifically for the Evansville-to-Indianapolis project. We are spending millions of dollars on location and preliminary environmental studies to further specify the route along the corridor that a $500,000 federal study last summer found had a positive benefit/cost ratio.
>
> We have placed in our program, and are fully developing for construction, a significant new four-lane segment of the route, which has an estimated construction cost in excess of a quarter of a billion dollars. My administration is committed to securing this funding, the Indiana legislature permitting, from the Build Indiana Fund and other state sources, if necessary. We are prepared to continue to provide our fair share of the financial commitment for this project but need our partners at the federal -- and to a lesser degree the local -- level to meet their partnership obligations so that an interstate quality facility can be completed between Indianapolis and Evansville."

Work costing millions of dollars is already underway on location and environmental studies for the Indianapolis to Evansville route.

In addition to the state's support for this roadway, it is also important to highlight local efforts toward developing the route. Currently, local entities in the corridor have organized a forum to develop local support and funding. This organization representing counties, cities, towns and other communities has been very active in working with all levels of government, whose cooperation is essential in development of this project. There is also local interest in creating a regional infrastructure authority to provide support for implementing the Indianapolis to Evansville highway.

As you know, it is not the job of any consultant to decide whether this road is built. Studies such as this are relatively new and will be useful in providing data to decision-makers. However, we must be very careful not to abdicate our decision-making to tables of numbers. While the study is helpful to decision-makers, its analysis is open to interpretation, and the final decision lies with elected officials at all levels of government, including the federal government. Indiana's state and local governmental officials are committed to this project and need the support of federal elected officials and federal dollars to bring about the Indianapolis to Evansville freeway. For this reason I appeal for your support and that of the subcommittee members for a financial commitment toward implementing the Indianapolis to Evansville freeway and the larger project of an I-69 extension to serve the Greater Detroit to Memphis corridor.

Sincerely,

Christine W. Letts

The Honorable Frank McCloskey
United States House of Representatives
127 Cannon House Office Building
Washington, D.C. 20515

Dear Congressman McCloskey,

Thank you for attempting to secure an additional $8 million from Congress to help fund the Indianapolis to Evansville highway.

As you are aware, the Department has entered contractive agreements with three different consulting firms for the purpose of determining the most feasible corridor for this route. After this phase is complete, the environmental and design process would follow. The total costs of these activities are currently estimated at $14.1 million. The additional $8 million in funding would be applied to continue this project and help complete further stages of development.

If you desire further information please feel to contact me.

Sincerely,

Christine W. Letts,
Commissioner

Mr. MINETA. We will then proceed with our colleague from Virginia, Mr. Wolf. Frank, I want to say thanks for all the help you've been to us on the appropriations committee. Your statement will be made a part of the record, and you may proceed in your own fashion.

## TESTIMONY OF HON. FRANK R. WOLF, A REPRESENTATIVE IN CONGRESS FROM VIRGINIA

Mr. WOLF. Thank you, Mr. Chairman. I appreciate your comments and I appreciate the opportunity to testify. This bill will probably be the most important bill to pass this Congress.

In 1956, we passed the interstate program to achieve unfettered mobility, an important goal for a free people. Now, 35 years, $111 billion, and 42,000 miles later, the American family can load up the station wagon and make an effortless trip to see grandparents and cousins in other parts of the country. As Americans have gravitated to the urban centers driving our country's economic engine—and my testimony will be mainly for the urban and the suburban areas—our interstate system has become the link back to their extended families.

Today, there is a new centrifugal force flinging families apart, and it's right in their own back yards. Traffic gridlock in urban and suburban communities is taking a toll on the American family that we haven't even begun to quantify.

In its last biennial report to Congress in 1989, the Department of Transportation noted that the overall status of the Nation's highways and bridges continued to improve, but that increased travel is making urban and suburban traffic congestion the primary threat to mobility.

In a survey of participants from the nationwide Transportation 2020 forums in 1989, 80 percent of the 20,000 respondents noted that traffic congestion was a major problem in their communities.

To deal with this problem, the DOT report indicated we would need an additional capacity of 11,000 to 15,000 lane miles or their equivalent, primarily in the Nation's larger urbanized areas. The report also noted that new construction alone will not solve the problem, but that we need a creative strategy combining better traffic management with improved mass transportation.

It is time to really get moving on congestion, particularly in the urban and suburban areas.

As we begin the process of reauthorizing the surface transportation program, the question this committee and Congress faces is: With the Interstate Highway System virtually completed, where do we go from here? The answer to that is clear. We must now take bold steps to unclog the Interstate highways in our urban communities nationwide. We must give back to American commuters the most precious commodity, more time to spend with their families.

That's why I have reintroduced H.R. 946, the Gridlock Relief for Interstates Program (GRIP), which is identical to S. 369, which has been introduced by Senator Warner in the Senate. Last year, we had 60 co-sponsors on the bill, including the distinguished Chairman, Mr. Roe, and it was strongly supported by a number of the urban and suburban newspapers in metropolitan areas.

Recognizing that the total solution to gridlock is not merely adding more lanes for more cars, the GRIP bill would also promote mass transportation. In addition to expanding the capacity of Interstate highways, funds authorized under H.R. 946 could also be used to acquire rights-of-way for construction of mass transit facilities and land for park-and-ride-type facilities. Also, GRIP funds could be used for construction of noise walls or other sound abatement devices. And if you are going to take somebody's back yard so people can get to work, then I think we have an obligation to protect those individuals in an environmental way to make sure that their house doesn't lose value and it is still a good place to live.

When I introduced this legislation in the last Congress, it struck a chord nationwide, marshalling support of dozens of local governments, industry groups, many colleagues in the House and the Senate, and newspapers around the country.

The nature of the traffic problems endured in this Nation's urban and suburban areas is well chronicled by the number and headlines that show a shocking descent into total traffic paralysis The costs associated with this congestion are tallied in stories about traffic accidents, lost worker productivity, extra gasoline consumption, and businesses that decide not to locate in a certain area because of inadequate infrastructure.

But how do we quantify the human costs of traffic congestion. The anxiety that comes with hours of daily commuting not only reduces worker productivity, it rips at the fabric of the family structure.

What is the price of missing an appointment? Missing your airplane? Missing your child's school play? Being late again to pick up your child at a day care center? These are frantic scenes played out daily in congested communities across the country and I believe they make a compelling case for a program like GRIP.

For example, funds provided under the GRIP bill could offer relief in the Washington, DC area by perhaps widening I–66 from the Capital Beltway to Prince William County where virtual gridlock occurs, bottlenecks on the Capital Beltway and other places like that. GRIP funds would offer the same potential relief to urban and suburban areas nationwide because traffic congestion is not unique to the Washington, DC area. It would address the congestion problems in Chicago, New York City, San Francisco, Philadelphia, Atlanta, Houston, New Jersey, and many other—not many, but all of the urban and suburban areas in the United States.

In closing, at last year's nationwide Transportation 2020 forums, witness after witness catalogued critical transportation needs in suburban and urban areas. For example, California witnesses cited $2 million daily in lost productivity and North Carolina, which is not a completely urbanized State, noted that every one of its cities with more than 100,000 citizens had recently passed a major transportation bond issue by overwhelming margins.

I firmly believe that GRIP represents the type of funding program desperately needed throughout the country, and I sincerely hope and urge that the committee put language in that will help the urban and suburban areas around the country to deal with this critical problem.

Again, I thank the Chairman for this opportunity to testify.

Mr. MINETA. Thank you very much, Congressman Wolf, not only your innovation in putting together GRIP, but also in terms of your testimony here today.

The problem I find is probably twofold. One is related to the Clean Air Act that we passed this last year. What you are focusing on is expanding the capacity of congested Interstates. The problem is that there are many urbanized areas which are not going to be in compliance with the Clean Air Act and they are probably going to have a very tough time of even attaining the goals of the Clean Air Act. So would it be appropriate in these areas to include construction of transit capital projects as eligible projects for congestion relief funds?

GRIP is a great acronym, but I am just wondering if we are just to concentrate on the Interstate congestion aspect of this whether or not we wouldn't be really adding to further gridlock. Would you consider broadening the range of roads eligible for GRIP funds where improvements off the Interstate on parallel arterials and city streets would have greater impact on traffic congestion.

Mr. WOLF. Personally, Mr. Chairman, yes, I would. And I also would urge that it be used to acquire the rights-of-way for the construction of mass transit facilities and also land for park-and-rides, as provided in the bill. It isn't just enough to expand, let's say the Beltway; you also have to be very aggressive in the area of mass transit and park-and-rides. So, yes, I would be open to something like this.

I think the people in urban and the suburban areas, in particular, are paying the gasoline taxes. So I think we should be as creative as possible. So, yes, I would be very open.

Mr. MINETA. Of course, you have struck a very sensitive chord on that aspect of it because those of us on this committee feel that though people are paying the user fee and that it is going into the Highway Trust Fund, unfortunately, because of the cap that's placed on us, the additional amounts that are being generated, for example, as a result of last year's budget summit agreement with the 5 cents additional gasoline tax, that we're not even getting the use of the 50 percent that's going into the Highway Trust Fund.

When the budget summit agreement was reached and they said 50 percent will go to budget deficit reduction, 50 percent to the Highway Trust Fund, we can't use the 50 percent going to the Highway Trust Fund, so from my perspective 100 percent is going to deficit reduction and the people are not getting what they bargained for—namely, transportation improvement—from the gasoline tax. I know you well understand that issue and, of course, are constrained by 302(a) and 302(b) provisions of the Budget Act when it comes to your work on the Appropriations Committee.

Mr. WOLF. Mr. Chairman, I agree with you. But I sense that may very well change once this committee passes a bill, and I honestly believe this will probably be the most important bill in this Congress. That's why I appreciate this committee moving so quickly and the Chairman's insistance on a long-term bill. There was some talk of a one-year extension or a two-year extension; that would be a guarantee that nothing would be done. But I think you are going to see change once there is a Highway bill in effect.

Mr. MINETA. That's why the Chairman of the full committee and I met with the Budget Committee Chairman, trying frankly to recover that 2.5 cents that's going to the deficit reduction. They said no, they didn't want to do anything to disturb the budget summit agreement of 1990. We got the same signal from the Administration in terms of not wanting to change the budget summit agreement, and that we would not be able to get access to that 2.5 cents that's going to deficit reduction. That's why we then had a meeting with the democratic leadership, including the Speaker, the majority whip, chief deputy whip, the vice chairman of the democratic caucus, and were able to make the case to them of going for an additional 5 cents on the gasoline tax with mandatory spending, making it an entitlement program so that we don't get caught in the same trap that we found ourselves in as a result of the budget summit agreement of 1990.

So, the needs are there without a doubt. In the 1960s and the 1970s we spent some 2.3 percent of GNP on our transportation network and today that has dropped to .4 percent, making us now number 55 in the world in capital investment in transportation. So what we're trying to do is make up for lost time, trying to get our transportation network into the position it should have been at this point as we really get prepared for the 21st century.

The Chairman of our full Committee on Public Works has just done yeoman work on this whole issue and I know that with the support of the members of the Congress on a bipartisan basis, and that's the case here on this committee, that we are trying to push for the most expansive program that we can find from and authorizing committee's perspective and then let the Budget Committee and the Appropriations Committee do their thing. But we don't feel constrained by any budget or appropriations constrictions. We feel we have got to do from an authorizing committee's perspective what has to be done.

So, to that extent, your suggestion of GRIP is a good start and I am just hoping that we might be able to expand on it in terms of allowing transit capital projects as eligible projects for congestion relief as well.

Thank you very much.

Mr. WOLF. Thank you.

Mr. MINETA. Does the Chairman of the committee or any others have questions for our fine colleague from northern Virginia, Mr. Wolf?

If not, again, thank you very, very much.

Mr. WOLF. Thank you, Mr. Chairman, members of the committee.

[Mr. Wolf's prepared statement follows:]

TESTIMONY

CONGRESSMAN FRANK R. WOLF

COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

SUBCOMMITTEE ON SURFACE TRANSPORTATION

April 10, 1991

Mr. Chairman, thank you for the opportunity to discuss surface transportation reauthorization, one of the most important challenges facing Congress since the Eisenhower era.

It was then, in 1956, that we undertook the bold initiative of linking this vast nation coast-to-coast with an interstate highway system. For commerce and defense security reasons, we needed this system, but there was another reason as well. Part of being a free people is unfettered mobility.

Now, 35 years, $111 billion, and 42,000 miles later, the American family can load up the station wagon and make an effortless trip to see grandparents and cousins in other parts of the country. As Americans have gravitated to the urban centers driving our country's economic engine, our interstate highway system has become the link back to their extended families.

Today, there is a new centrifugal force flinging families apart, and it's right in their own back yards. Traffic gridlock in urban/suburban communities is taking a toll on the American family that we haven't even begun to quantify.

Here is a very telling fact: If you get in your car and drive the 3,000 miles from the western edge of Fairfax County, Virginia, to the eastern edge of Los Angeles County, California, you will encounter far fewer backups than you would driving the 30 miles from the edge of either of those communities into work on any given weekday morning.

In its last biennial report to Congress in 1989, the Department of Transportation (DOT) noted that the overall status of the nation's highways and bridges continued to improve, but that increased travel is making urban and suburban traffic congestion the primary threat to mobility.

In a survey of participants from the nationwide Transportation 2020 forums in 1989, 80 percent of the 20,000 respondents noted that traffic congestion was a major problem in their communities.

According to statistics compiled by the Federal Highway Administration, in just the three years between 1985 and 1988, overall traffic delay from congestion grew by 57 percent.

To deal with this problem, the DOT report indicated we would need an additional capacity of 11,000 to 15,000 lane-miles or their

equivalent, primarily in the nation's larger urbanized areas. The report also noted that new construction alone will not solve the problem, but that we will need a creative strategy combining better traffic management with improved mass transportation. In other words, a strong intermodal system as you suggested, Mr. Chairman, in your statement earlier this year.

It is time to stop wringing our collective hands and take action as bold as that embarked upon 35 years ago.

**If we are to solve our transportation problems, we must implement that legendary Noah Principle. No more prizes for predicting rain. Prizes only for building arks.**

As we begin the process of reauthorizing our surface transportation program, the question this committee and Congress faces is: With the interstate highway system virtually completed, where do we go from here? The answer to that is clear. We must now take bold steps to unclog the interstate highways in our urban communities nationwide. We must give back to American commuters that most precious commodity, more time to spend with their families.

That is why I have re-introduced H.R. 946, the Gridlock Relief for Interstates Program (GRIP). Identical legislation, S. 369, has been introduced in the other body by our colleague, Senator John Warner.

GRIP would redirect $2 billion a year from existing funds to expand the capacity of heavily traveled portions of the federal interstate system in communities nationwide of more than 50,000 citizens. The formula for apportioning funds under this program would emphasize vehicle miles traveled, rather than lane miles, an adjustment made to the bill this year to more efficiently target the problem of traffic congestion.

Recognizing that the total solution to gridlock is not merely adding more lanes for more cars, GRIP would also promote mass transportation. In addition to expanding the capacity of interstate highways, funds authorized under H.R. 946 could be used to acquire rights-of-way for construction of mass transit facilities and land for park-and-ride type facilities. Also, GRIP funds could be used for construction of noise walls or other sound abatement devices.

When we introduced this legislation in the last Congress, we struck a chord nationwide, marshalling support from dozens of local governments, industry groups and our colleagues in the House and Senate. The legislation also garnered editorial endorsements from several of the nation's large newspapers such as The Atlanta Constitution and The Washington Post.

The nature of the traffic problems endured in this nation's urban/suburban areas is well chronicled by number and headlines that show a shocking descent into total traffic paralysis. The costs associated with this congestion are tallied in stories about traffic accidents, lost worker productivity, extra gasoline consumption, and

businesses that decide not to locate in a certain area because of inadequate infrastructure.

But how do we quantify the human costs of traffic congestion. The anxiety that comes with hours of daily commuting not only reduces worker productivity, it rips at the fabric of the family structure.

What is the price of missing an appointment? Missing your airplane? Missing your child's school play? Being late again to pick up your child at the day care center?

These are frantic scenes played out daily in congested communities across the country and they make a compelling case for a program like GRIP.

For example, funds provided under the GRIP bill could offer relief in the Washington area by being used to widen I-66 from the Capital Beltway to Prince William County where virtual gridlock occurs every day during rush hours. Bottlenecks on the Capital Beltway (I-495) could be eliminated.

GRIP funds would offer the same potential relief to urban/suburban areas nationwide because traffic congestion is not unique to the Washington metropolitan area. This program would

address the problem of traffic congestion in Chicago, New York City, San Francisco, Philadelphia, Atlanta, Houston, New Jersey and many other areas throughout the country.

At last year's nationwide Transportation 2020 forums, witness after witness catalogued critical transportation needs in suburban and urban areas. For example, California witnesses cited $2 million daily in lost productivity and North Carolina noted that every one of its cities with more than 100,000 citizens had recently passed a major transportation bond issue by overwhelming margins.

I firmly believe GRIP represents the type of funding program desperately needed throughout the country, and I urge that it be included as an amendment to the final surface reauthorization package we pass in the Congress.

Mr. Chairman, it is a daunting task facing this committee, and I thank you for the opportunity to provide input in this important issue.

Mr. MINETA. I think at this same time I will also call on our colleague Mr. Richardson, who has to go over to another committee, to testify at this same point.

So, Mr. Richardson, if you may proceed with your testimony.

## TESTIMONY OF HON. BILL RICHARDSON, A REPRESENTATIVE IN CONGRESS FROM NEW MEXICO

Mr. RICHARDSON. Mr. Chairman, thank you very much also for your courtesy in allowing me to testify at this time. I was here before and I did have a mark-up.

Mr. Chairman, I am going to be very brief because I know that this is the most constructive way to run a hearing and possibly even get favorable consideration from this committee. So I will simply stress that my main concern is a number of roads that are in desperate shape on some of my Indian Reservations in New Mexico.

There is basically in the Administration bill inadequate funding for many Indian roads. The results of a survey of 20,000 miles of Bureau of Indian Affairs roads are deplorable. Only 11 percent of the paved roads and 0 percent of the unpaved roads were rated as good, while 53 percent of the paved roads and an astounding 90 percent of the unpaved roads were rated as poor. Fair condition was given to only 36 percent of the paved roads and 10 percent of the unpaved roads.

The situation in my State reflects those found in the Bureau of Indian Affairs study. Mr. Chairman, in my State, we have over 7,000 miles of Indian roads on over 8 million acres of Indian land. What we are talking about is only 2,589 miles of these roads are paved. The remaining 4,438 miles are either gravel or dirt roads, and the majority of these, over 4,000, being dirt roads.

The level of funding that has previously been provided to address the roads of the Indian people of this country is truly inadequate. While the Administration proposal does include an increase in funding for Indian roads, a very slight increase, it simply isn't enough to bring their deteriorating and inadequate road system up to acceptable standards.

I would hope that in the course of dealing with this legislation, Mr. Chairman, that in the spirit that you have always had in holding hearings around the country, you come to some of these Indian Reservations to look at these problems. I am talking about the Jicarilla Apache State Road 537; I am talking about Pojoaque road improvements, the State of New Mexico has made this their top priority with you; the Alamo/Navajo road project, the U.S. 666 Navajo Reservation road project, the Fernando de Taos project, the Chaco Cultural National Historical Park access road, the Albuquerque Access Road, the Unser Boulevard Arterial Road, the Aztec/Colorado road project, the Raton/Clayton road project, the Pedestrian overpass in Tohatehi, and the Columbus/Anapra Road project.

Mr. Chairman, I know that you have a lot of requests from members of the Congress, and I know that you have got to decide on these priorities. I am just submitting these with appropriate documentation in the hope that you consider them. Again, Mr. Chair-

man, in Indian country and 20 percent of the population that I represent, we have a forgotten Nation. We are worried enormously about Iraq, as we should, about the Kurds, we're worried about Third World infrastructure problems in Eastern Europe. But, Mr. Chairman, I suggest that sometimes we turn and look at the lack of sanitary conditions, transportation, and opportunities for economic development for our Native Americans in our own country. For that reason, Mr. Chairman, I would urge that you favorably consider these requests and requests generally submitted by other members that have large Native American populations.

Thank you, Mr. Chairman.

The CHAIRMAN [assuming the chair]. I thank the distinguished gentleman from New Mexico for excellent testimony. I think the analogy made was very correct, and you can be assured the committee will take this into consideration and pursue some of the thoughts you have expressed here today. Thank you very much for being with us.

Mr. RICHARDSON. Thank you, Mr. Chairman.

The CHAIRMAN. Your statement will appear in full in the record.

Mr. RICHARDSON. And you will read it.

The CHAIRMAN. Oh, yes, you better believe I'll read it. You can go ahead if you want to go on to your other meeting.

[Mr. Richardson's prepared statement follows:]

APRIL 10, 1991

CONGRESSMAN BILL RICHARDSON
TESTIMONY BEFORE THE HOUSE
SUBCOMMITTEE ON SURFACE TRANSPORTATION

THANK YOU MR. CHAIRMAN AND MEMBERS OF THE SUBCOMMITTEE FOR THIS OPPORTUNITY TO TESTIFY ON THE REAUTHORIZATION OF THE SURFACE TRANSPORTATION BILL. SPECIFICALLY, I WOULD LIKE TO ADDRESS THE INADEQUATE FUNDING LEVEL FOR INDIAN ROADS AND SEVERAL PROJECTS OF IMPORTANCE TO MY DISTRICT.

INDIAN ROAD FUNDING

NEW MEXICO IS A RURAL STATE IN WHICH 25 DIFFERENT INDIAN TRIBES RESIDE. MOST OF THESE RESERVATIONS ARE LOCATED IN ISOLATED AREAS WHERE THERE IS LITTLE ECONOMIC OPPORTUNITY. IN ORDER TO PROVIDE ECONOMIC OPPORTUNITY TO THESE PEOPLE, IT IS ESSENTIAL THAT ADEQUATE ROAD SYSTEMS ARE CONSTRUCTED AND MAINTAINED.

HOWEVER, A RECENT SURVEY CONDUCTED BY THE BUREAU OF INDIAN AFFAIRS (BIA) ON THE NEEDS OF THE INDIAN PEOPLE, RATED THE CONDITION OF ALL 20,000 MILES OF BIA ROADS -- THE RESULTS ARE DEPLORABLE. ONLY 11% OF THE PAVED ROADS AND 0% OF THE UNPAVED ROADS WERE RATED AS GOOD, WHILE 53% OF THE PAVED ROADS AND AN ASTOUNDING 90% OF THE UNPAVED ROADS WERE RATED AS POOR. FAIR CONDITION WAS GIVEN TO ONLY 36% OF THE PAVED ROADS AND 10% OF THE UNPAVED ROADS.

THE SITUATION IN NEW MEXICO REFLECTS THOSE FOUND IN THE BIA STUDY. NEW MEXICO CONTAINS OVER 7,000 MILES OF INDIAN ROADS ON OVER 8 MILLION ACRES OF INDIAN LAND. OF THESE ROADS, ONLY 2,589 MILES ARE PAVED. THE REMAINING 4,438 MILES ARE EITHER GRAVEL OR DIRT ROADS, THE MAJORITY (4,249) BEING DIRT ROADS.

MR. CHAIRMAN, THE LEVEL OF FUNDING THAT HAS PREVIOUSLY BEEN PROVIDED TO ADDRESS THE ROAD NEEDS OF THE INDIAN PEOPLE OF THIS COUNTRY IS INADEQUATE. WHILE THE ADMINISTRATION'S PROPOSAL DOES INCLUDE AN INCREASE IN FUNDING FOR INDIAN ROADS, IT SIMPLY IS NOT ENOUGH TO BRING THEIR DETERIORATING AND INADEQUATE ROAD SYSTEM UP TO ACCEPTABLE STANDARDS. I RESPECTFULLY REQUEST YOUR CONSIDERATION OF A SIGNIFICANT FUNDING INCREASE FOR INDIAN ROADS OVER AND ABOVE THAT PROPOSED BY THE ADMINISTRATION.

I WOULD LIKE TO ADDRESS SOME SPECIFIC PROJECTS OF IMPORTANCE TO NEW MEXICO.

JICARILLA APACHE STATE ROAD #537

THE JICARILLA APACHE'S ARE IN NEED OF FUNDING TO CONTINUE THE UPGRADING OF 43.2 MILES OF STATE ROAD #537, WHICH RUNS THE LENGTH OF THE JICARILLA RESERVATION. OVER THE YEARS, HEAVY TRAVEL BY THE OIL AND GAS INDUSTRIES AND THE LOGGING, TIMBER AND CATTLE INDUSTRIES HAVE CAUSED SERIOUS DETERIORATION OF THIS ROAD. BY UPGRADING THIS ROAD THROUGH THE IMPROVEMENT OF THE PAVEMENT

CONDITIONS AND GEOMETRIC CHARACTERISTICS OF THE ROADWAY, RESIDENTS AND INDUSTRIES ARE PROVIDED WITH ENHANCED MOBILITY AND SAFETY. ADDITIONALLY, TOURISTS WOULD HAVE IMPROVED ACCESS TO NORTHERN NEW MEXICO.

THE UPGRADING CONSISTS OF SHOULDER WIDENING, SLOPE FLATTENING, COLD PAVEMENT RECYCLING, AND AN OVERLAY TO PROVIDE STRUCTURAL ADEQUACY. CURRENTLY, 11.5 MILES HAVE BEEN COMPLETED AND 7.1 MILES ARE UNDER RECONSTRUCTION. THE ESTIMATED COST TO COMPLETE THE IMPROVEMENTS OF THE REMAINING 24.6 MILES IS $18 MILLION.

STATE ROAD #537 HAS PREVIOUSLY BEEN FUNDED UNDER THE PUBLIC HIGHWAYS LANDS FUNDS. AS YOU KNOW, THE ADMINISTRATION'S BILL PROPOSES TO DELETE THIS PROGRAM WHICH WOULD ELIMINATE FUNDING FOR THIS ROAD. I RESPECTFULLY REQUEST THAT JICARILLA APACHE STATE ROAD #537 BE INCLUDED AS A DEMONSTRATION PROJECT, PROVIDING FUNDING FOR THE CONTINUED CONSTRUCTION OF THIS IMPORTANT ROAD.

POJOAQUE ROAD IMPROVEMENTS

IN POJOAQUE, U.S. ROAD 84/285, IS NEARING CAPACITY DUE TO THE DRAMATIC INCREASE IN POPULATION AND TOURISM THROUGH THE POJOAQUE PUEBLO, AND MAJOR ROAD-SIDE DEVELOPMENT CONTRIBUTES TO SAFETY HAZARDS. FURTHERMORE, IT IS POSSIBLE THAT SHIPMENTS OF NUCLEAR WASTE FROM LOS ALAMOS TO THE WASTE ISOLATION PILOT PROJECT AT CARLSBAD MAY BE TRANSPORTED ON THIS ROAD. AS A RESULT, THE INTERSECTION OF NM 502 AND U.S. 84/285 IS IN CRITICAL NEED OF ROAD IMPROVEMENTS.

THE PROPOSED IMPROVEMENTS INCLUDE ADDITIONAL THROUGH LANES ON U.S. 84/285, REBUILDING THE INTERCHANGE TO MEET MODERN URBAN STANDARDS AND IMPROVE OTHER INTERSECTIONS INCLUDING THE INSTALLATION OF TRAFFIC SIGNALS. THESE IMPROVEMENTS WILL ENHANCE BOTH SAFETY AND ACCESSIBILITY IN THIS VITAL CORRIDOR. THE ESTIMATED COST TO PROVIDE THESE IMPROVEMENTS IS $12 MILLION. I RESPECTFULLY REQUEST YOUR CONSIDERATION OF THIS PROJECT.

ALAMO/NAVAJO ROAD PROJECT

ANOTHER IMPORTANT ROAD PROJECT IS THE IMPROVEMENT AND COMPLETION OF NAVAJO 55 (a.k.a. NEW MEXICO ROUTE 169) FROM THE ALAMO NAVAJO RESERVATION TO INTERSTATE 40 VIA THE LAGUNA RESERVATION. THIS ROAD IS APPROXIMATELY 40 MILES LONG AND A MAJORITY OF IT IS UNPAVED OFTEN CAUSING DIFFICULT AND HAZARDOUS TRAVEL CONDITIONS. THIS PROJECT WOULD OPEN UP A NEW AREA FOR TOURISM AND ASSIST LOCAL RESIDENTS SUBSTANTIALLY BY PROVIDING DIRECT ACCESS TO THE NEW SCHOOL AT ALAMO, TO THE CANONCITO NAVAJO COMMUNITY AND TO THE ALAMO-CANONCITO-LAGUNA HOSPITAL.

THE ESTIMATED COST OF RECONSTRUCTION, WHICH INCLUDES PAVEMENT, DRAINAGE STRUCTURES, AND LEVELING AND STRAIGHTENING, IS $21 MILLION. I RESPECTFULLY REQUEST YOUR CONSIDERATION OF THIS PROJECT.

U.S. 666/ NAVAJO RESERVATION ROAD PROJECT

THE NAVAJO RESERVATION HAS SEEN A SIGNIFICANT RISE IN ITS POPULATION OVER THE PAST FEW YEARS. IN ORDER TO MEET ALL TRAFFIC SAFETY AND CAPACITY NEEDS, U.S. 666 FROM GALLUP TO YAH-TA-HEY INTERCHANGE AND NM 264 FROM THE YAH-TA-HEY INTERCHANGE TO THE ARIZONA STATE LINE HAVE BEEN EXPANDED TO FOUR LANES. HOWEVER, THE 15 MILES OF U.S. 666 FROM YAH-TA-HEY INTERCHANGE NORTH TO TOHATCHI HAS YET TO BE EXPANDED TO A FOUR LANE HIGHWAY.

APPROXIMATELY $15 MILLION IS NEEDED ADDRESS THE SAFETY AND TRAFFIC PROBLEMS OF THE NORTHERN PORTION OF U.S. 666. I RESPECTFULLY REQUEST YOUR CONSIDERATION OF THIS PROJECT.

FERNANDO de TAOS PROJECT

SAFETY IMPROVEMENTS ARE ALSO NEEDED ON APPROXIMATELY 12 MILES OF U.S. 64 THROUGH FERNANDO de TAOS CANYON EAST OF TAOS. U.S. 64 IS THE MAJOR EAST-WEST ROAD THROUGH NORTHERN NEW MEXICO. THE PORTION THROUGH FERNANDO de TAOS CANYON EAST OF TAOS IS VERY NARROW AND WINDING WHICH CREATES MANY SAFETY HAZARDS AND GREATLY REDUCES TRAFFIC CAPACITY.

IMPROVEMENTS TO THIS ROAD WOULD INCLUDE WIDENING AND TRUCK CLIMBING LANES IN VARIOUS LOCATIONS. THE ESTIMATED COST FOR THIS PROJECT IS $20 MILLION. I RESPECTFULLY REQUEST YOUR CONSIDERATION OF THIS PROJECT.

CHACO CULTURE NATIONAL HISTORICAL PARK ACCESS ROAD

THE CHACO CULTURE NATIONAL HISTORICAL PARK IS A MAJOR NATIONAL ASSET WHICH HAS VERY POOR ACCESS DUE TO ITS REMOTE LOCATION. THE NM STATE HIGHWAY DEPARTMENT HAS STUDIED MANY WAYS TO IMPROVE ACCESS TO CHACO CANYON AND HAS CONCLUDED THAT AN EAST-WEST ACCESS IS THE MOST PRACTICAL SOLUTION.

SPECIFICALLY, THIS PROPOSAL CONSISTS OF A NEW EAST-WEST CONNECTOR ROAD BETWEEN NM 509 AND NM 371 TO CHACO CANYON AND THE EXTENSION OF NM 509. THE ESTIMATED COST OF BOTH THE EXTENSION AND THE EAST-WEST ACCESS ROAD IS $25 MILLION. I RESPECTFULLY REQUEST YOUR CONSIDERATION OF THIS PROJECT.

ALBUQUERQUE SUNPORT ACCESS

THE ALBUQUERQUE INTERNATIONAL AIRPORT IS NEW MEXICO'S MAJOR AIRPORT. OVER THE YEARS IT HAS EXPANDED AND CONTINUES TO GROW. AS A RESULT, IMPROVED ACCESS IS NEEDED AND THE STATE OF NEW MEXICO BELIEVES IT IS BEST PROVIDED BY A NEW ROAD FROM INTERSTATE 25. THE ESTIMATED COST OF THIS NEW ROAD IS $9 MILLION. I RESPECTFULLY REQUEST YOUR CONSIDERATION OF THIS PROJECT.

UNSER BOULEVARD

THE ALBUQUERQUE AREA NEEDS IMPROVED ARTERIAL ROADS, ESPECIALLY ON THE WEST SIDE OF THE RIO GRANDE. UNSER BOULEVARD IS A MAJOR NORTH-SOUTH ARTERIAL CURRENTLY UNDER DEVELOPMENT. MORE THAN $11 MILLION HAS ALREADY BEEN EXPENDED ON THIS ROAD. AN ESTIMATED $35 MILLION IS NEEDED TO CONTINUE THIS ARTERIAL ROAD ON THE WEST SIDE OF THE ALBUQUERQUE URBAN AREA. I RESPECTFULLY REQUEST YOUR CONSIDERATION OF THIS PROGRAM.

AZTEC/COLORADO ROAD PROJECT

U.S. 550 FROM AZTEC TO THE COLORADO STATE LINE EXPERIENCES A HEAVY INFLUX OF TOURISTS DURING THE SUMMER SEASON. CURRENTLY THERE IS A FOUR LANE SECTION FROM FARMINGTON TO AZTEC. HOWEVER, U.S. 550 FROM AZTEC TO COLORADO HAS NOT BEEN EXPANDED TO HANDLE THE INCREASE CAPACITY AND ENHANCE SAFETY. THE ESTIMATED COST OF EXPANDING THIS ROAD TO FOUR LANES IS $12 MILLION. I RESPECTFULLY REQUEST YOUR CONSIDERATION OF THIS PROJECT.

RATON/CLAYTON ROAD PROJECT

NEW MEXICO HAS A SIGNIFICANT SEASONAL PEAK OF TRAFFIC ON U.S. 64/87 FROM RATON THROUGH CLAYTON TO THE TEXAS STATE LINE. SPECIFICALLY, IT IS USED AS A BRIDGE ROUTE BETWEEN TEXAS AND COLORADO BY SUMMER TOURISTS. THIS ROAD NEEDS TO BE WIDENED TO FOUR LANES IN ORDER TO MANAGE INCREASED TRAFFIC AND ENSURE SAFETY. THE ESTIMATED COST IS $35 MILLION. I RESPECTFULLY REQUEST YOUR CONSIDERATION OF THIS PROJECT.

PEDESTRIAN OVERPASS IN TOHATCHI

CHUSKA SCHOOL IS LOCATED ACROSS U.S. HIGHWAY 666 SOUTH OF TOHATCHI IN NEW MEXICO. U.S. 666 IS A HEAVILY TRAVELED HIGHWAY AND IS A DANGER TO STUDENTS WHO MUST CROSS IT TO GET TO SCHOOL. IN ORDER TO SAFELY TRANSPORT CHUSKA STUDENTS FROM THE SOUTH SIDE OF THE TOHATCHI COMMUNITY TO THE SCHOOL, A PEDESTRIAN OVERPASS IS NEEDED OVER U.S. 666. I WILL PROVIDE THE SUBCOMMITTEE WITH ADDITIONAL SPECIFIC INFORMATION ON THIS PROJECT AT A LATER DATE.

COLUMBUS/ANAPRA ROAD PROJECT

THIS 55 MILE, UNPAVED ROAD BEGINS IN COLUMBUS, NEW MEXICO AND CONTINUES EAST TO ANAPRA, NEW MEXICO. THIS ROAD IS IN NEED OF FUNDS FOR PAVING TO RELIEVE TRAFFIC CONGESTION IN JUAREZ, MEXICO, TO INCREASE ECONOMIC DEVELOPMENT FOR LUNA COUNTY, INCREASE SAFETY FOR THE BORDER PATROL IN THAT AREA AND PROVIDE FOR BETTER RELATIONS WITH MEXICO. THE ESTIMATED COST TO PAVE THIS ROAD IS $3.2 MILLION. I RESPECTFULLY REQUEST YOUR CONSIDERATION OF THIS PROJECT.

MR. CHAIRMAN, THANK YOU AGAIN FOR YOUR VALUABLE TIME AND CONSIDERATION OF THESE IMPORTANT ISSUES AND PROJECTS THAT HAVE A SIGNIFICANT IMPACT ON MY CONSTITUENTS AND THE STATE OF NEW MEXICO. I AM HAPPY TO PROVIDE ANY ADDITIONAL INFORMATION AND ANSWER ANY QUESTIONS.

The CHAIRMAN. Now we have with us the honorable Ben Erdreich from the 6th district of Alabama, and Claude Harris from the 7th district of Alabama.

Suppose we call on you first, Ben.

## TESTIMONY OF HON. BEN ERDREICH, A REPRESENTATIVE IN CONGRESS FROM ALABAMA

Mr. ERDREICH. Thank you, Mr. Chairman. In the interest of time, I would ask unanimous consent that my full statement be made a part of your record and I'll just summarize it.

The CHAIRMAN. Without objection, so ordered.

Mr. ERDREICH. I'm here today to urge that the proposed Northern Beltline Freeway and the modification of U.S. Highway 280, which are both in Jefferson County, Alabama, which I represent, be considered for inclusion in the surface transportation authorization bill.

There currently exists a partial Beltway, I-459, which connects I-59 to I-20. The Northern Beltline is a proposed extension, as I view it, of this Beltline. We have got a half a Beltline in the County. This would be a vital freeway addition to our metropolitan areas' economic growth and job development.

This Beltline extension, Mr. Chairman, has broad-base support among the elected officials in my County. Under the leadership of the Jefferson County Commission, local mayors and other officials are committed to this construction, but also they are committed to a plan for infrastructure improvements across the County and in the metropolitan region so that we can have a balanced pattern of development that we all want to see take place across this Nation.

Mr. Chairman, I would also, for the record, like to submit a white paper that was given to me by the County Engineer of Jefferson County, Mr. Jerry Drake. With your permission, I would ask that this be made a part of my submission of testimony.

The CHAIRMAN. No objection, so ordered.

Mr. ERDREICH. Mr. Chairman, aside from the economic benefits to the Birmingham metropolitan area, the Beltline would be an integral part of the National Highway System. It has been included by the State of Alabama in its preliminary Highway System of National Significance.

And also, Mr. Chairman, I would request that the modification of highway 280 also be included in your committee's surface transportation bill. That particular roadway has also been included by the State of Alabama as a Highway of National Significance. The modifications needed on that roadway are vital to eliminate congestion in the southern part of Jefferson County and beyond.

Finally, Mr. Chairman, two last points. I have got a letter that I'll just point out from the Highway Director of the State of Alabama, Mr. Perry Hand, who says that both the Northern Beltline project and the U.S. 280 project are on the State's list of critical needs for the State of Alabama.

In closing, I would add, Mr. Chairman, that this investment in infrastructure for our nation through highways like these two that I'm mentioning are not just a question of convenience for travellers. It is closely and intimately connected with how competitive

our industries are, how productive our economy is, how fast and how far we go in competing with our major competitors around the world.

I thank you for letting me submit this testimony, Mr. Chairman, and hope that we can have favorable consideration.

Thank you, Mr. Chairman.

The CHAIRMAN. I thank the distinguished gentleman for his splendid testimony.

The Chair now recognizes the distinguished gentleman from the 7th district of Alabama, Claude Harris.

## TESTIMONY OF HON. CLAUDE HARRIS, A REPRESENTATIVE IN CONGRESS FROM ALABAMA

Mr. HARRIS. Thank you, Mr. Chairman.

I want to thank you and the members of the committee for allowing us time to bring to your attention matters of special concern to our districts and to our State.

Just briefly, I want to say that highway officials in Alabama have mixed feelings about the Administration's highway plan. Our State is not a rich State; in fact, our budget is facing proration at this time. Under the Administration proposal as it now stands, Alabama would have to raise tens of millions of dollars in new revenue just to receive the same level of Federal funding. With the new matching formulas, much needed new construction and maintenance of existing ways will be become impossible for our State.

We have a number of highway needs, such as completion of Corridor X, linking Memphis and Birmingham, and completion of the I-459 Beltway around Birmingham to which Mr. Erdreich just alluded. He and I share common ground in that regard. These two projects have received funding in the past for different phases of work. Both are far from completion and continued support is crucial. In combination, these two projects have the potential not only to link two of the South's major cities, but through the Beltway connections of I-59 and I-65 and I-20 traffic can reach the Gulf Coast, Chicago, and anywhere on the Eastern seaboard. These two projects will be a tremendous economic stimulus to a very depressed region.

My other major priority involves study and engineering monies for an additional bridge over the Warrior River at Tuscaloosa, Alabama. The two existing river bridges have become major bottlenecks, mixing heavy local traffic with through traffic from U.S. 43 and U.S. 82. One bridge is nearing its design capacity and the other one has already exceeded it. Traffic projections done by both the State Highway Department and the local governing bodies show future growth far beyond what the existing structures can handle. Some preliminary funding was provided by this committee for this project last year and I want to thank you for that. We are now at the point that funds are needed to establish the most feasible route for the third bridge, and I am requesting that the committee authorize $350,000 for that purpose.

Again, let me thank you for your time and your consideration.

The CHAIRMAN. We thank both of the distinguished gentlemen from Alabama for your fine testimony. If there are no further questions, your prepared testimony will be put in full in the record.

We greatly appreciate your being with us today.

Mr. ERDREICH. Thank you very much, Mr. Chairman.

Mr. HARRIS. Thank you, Mr. Chairman, and thank the committee.

[Mr. Erdreich's prepared statement and reference material follows:]

STATEMENT OF

THE HONORABLE BEN ERDREICH

before the

SUBCOMMITTEE ON SURFACE TRANSPORTATION

OF THE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

Wednesday, April 10, 1991

10:00 a.m.

MR. CHAIRMAN, I AM HERE TODAY TO REQUEST THAT THE PROPOSED NORTHERN BELTLINE FREEWAY, AND THE MODIFICATION OF U.S. HIGHWAY 280 IN JEFFERSON COUNTY, ALABAMA, WHICH I REPRESENT, BE CONSIDERED FOR INCLUSION IN THE SURFACE TRANSPORTATION AUTHORIZATION BILL.

THERE CURRENTLY EXISTS A PARTIAL BELTWAY, I-459, WHICH CONNECTS I-59 TO I-20. THE NORTHERN BELTLINE IS A PROPOSED 41 MILE HIGHWAY DESIGNED TO COMPLETE THE LOOP AROUND THE BIRMINGHAM AREA BY BEING A NORTHERN EQUIVALENT TO I-459. THE COMPLETION OF THIS FREEWAY IS VITAL TO OUR METROPOLITAN AREA'S ECONOMIC GROWTH AND JOB DEVELOPMENT. DURING THE PAST 20 YEARS, THERE HAS BEEN TREMENDOUS ECONOMIC GROWTH AND DEVELOPMENT IN THE SOUTHERN AND EASTERN SECTIONS OF JEFFERSON COUNTY, ESPECIALLY ALONG THE I-459 CORRIDOR. THE SOUTHERN PORTION OF THE COUNTY HAS BEEN IN SUCH HIGH DEMAND THAT DEVELOPMENT HAS SPILLED OVER INTO ADJACENT SHELBY COUNTY. WITH COMPLETION OF THE NORTHERN BELTLINE, THE IMPETUS FOR FURTHER DEVELOPMENT WOULD EXTEND INTO NORTHERN JEFFERSON COUNTY AND THE ADJACENT COUNTIES OF WALKER AND BLOUNT.

THE NORTHERN BELTLINE HAS BROAD BASED SUPPORT AMONG THE ELECTED OFFICIALS IN JEFFERSON COUNTY, WHO, UNDER THE LEADERSHIP OF THE JEFFERSON COUNTY COMMISSION, ARE NOT ONLY FIRMLY COMMITTED TO ITS CONSTRUCTION, BUT ARE COMMITTED TO PLAN FOR INFRASTRUCTURE IMPROVEMENTS IN ORDER THAT A MORE BALANCED PATTERN OF DEVELOPMENT CAN TAKE PLACE.

MR. CHAIRMAN, I WOULD LIKE TO SUBMIT FOR THE RECORD A WHITE PAPER DEVELOPED BY MR. JERRY DRAKE, DIRECTOR/COUNTY ENGINEER OF THE JEFFERSON COUNTY DEPARTMENT OF ROADS AND TRANSPORTATION GIVING THE SUPPORTING JUSTIFICATION FOR THE NORTHERN BELTLINE.

MR. CHAIRMAN, ASIDE FROM THE ECONOMIC BENEFITS TO THE BIRMINGHAM METROPOLITAN AREA, THE NORTHERN BELTLINE WILL BE AN INTEGRAL PART OF THE NATIONAL HIGHWAY SYSTEM. THE BELTLINE HAS BEEN INCLUDED BY THE STATE OF ALABAMA IN THE PRELIMINARY HIGHWAY SYSTEM OF NATIONAL SIGNIFICANCE. BY CONNECTING THE MAJOR INTERSTATES OF I-20, I-59, AND I-65, THE PRIMARY FEDERAL HIGHWAYS IN THE METRO AREA, THE APPALACHIAN REGIONAL COMMISSION CORRIDOR X HIGHWAY FROM MEMPHIS TO BIRMINGHAM, AND THE TENNESSEE-TOMBIGBEE WATERWAY, THE NORTHERN BELTLINE WILL FACILITATE TRAVEL, ACCESS TO JOBS, AND COMMERCE THROUGHOUT THE ENTIRE NATION.

I WOULD ALSO LIKE TO REQUEST THAT THE MODIFICATION OF U.S. HIGHWAY 280 ALSO BE INCLUDED IN THE SURFACE TRANSPORTATION AUTHORIZATION BILL. U.S. HIGHWAY 280 IS A FEDERAL PRIMARY HIGHWAY THAT EXTENDS FROM MY DISTRICT IN BIRMINGHAM, THROUGH THE SUBURBS OF SOUTHERN JEFFERSON COUNTY. THE RESULTING GROWTH FUELED BY HIGHWAY 280 HAS CREATED SEVERE TRAFFIC CONGESTION PROBLEMS ALONG THE 280 CORRIDOR. A COMMISSION WAS FORMED AT THE STATE AND LOCAL LEVEL TO DEVELOP POSSIBLE SOLUTIONS TO THE CONGESTION PROBLEM ON U.S. 280. SEVERAL RECOMMENDATIONS WERE MADE INCLUDING WIDENING THE ROAD IN PLACES, ADDING NEW TRAFFIC SIGNALS AND RAMPS.

HIGHWAY 280 HAS ALSO BEEN INCLUDED BY THE STATE OF ALABAMA AS A HIGHWAY OF NATIONAL SIGNIFICANCE. THE MODIFICATION OF U.S. HIGHWAY 280 WILL SERVE TO REDUCE THE TYPE OF CONGESTION THAT IS ESTIMATED TO COST INTERSTATE COMMERCE MORE THAN $35 BILLION A YEAR. MR. CHAIRMAN, LIKE THE NORTHERN BELTLINE, THE MODIFICATIONS NEEDED FOR U.S. HIGHWAY 280, WILL, IN CONJUNCTION WITH THE HIGHWAY SYSTEM IN THE BIRMINGHAM METRO AREA, PROVIDE BENEFITS TO THE NATION BY PROVIDING GREATER OPPORTUNITIES FOR BUSINESSES AND THE PUBLIC TO ACCESS MARKETS IN CITIES THROUGHOUT THE NATION IN A MORE EFFECTIVE AND EFFICIENT MANNER.

FINALLY, MR. CHAIRMAN, THE NEED FOR INVESTMENT IN THE INFRASTRUCTURE OF OUR NATION THROUGH HIGHWAYS LIKE THE NORTHERN BELTLINE AND HIGHWAY 280 ARE NOT JUST A QUESTION OF THE CONVENIENCE OF TRAVELERS. IT IS CLOSELY CONNECTED WITH HOW COMPETITIVE OUR INDUSTRIES ARE, HOW PRODUCTIVE OUR ECONOMY IS, HOW FAST AND HOW FAR WE GO IN COMPETING WITH OUR MAJOR COMPETITORS AROUND THE WORLD.

I THANK THE SUBCOMMITTEE MEMBERS FOR THE OPPORTUNITY TO TESTIFY THIS MORNING, AND URGE YOU TO INCLUDE THE PROPOSED NORTHERN BELTLINE, AND THE MODIFICATIONS FOR U.S. HIGHWAY 280 IN THE SURFACE TRANSPORTATION AUTHORIZATION BILL.

March 1991

## NORTHERN BELTLINE FREEWAY

## BIRMINGHAM, ALABAMA METROPOLITAN AREA
## (SUPPORTING JUSTIFICATION)

### Background

In September 1988, the U.S. House of Representatives authorized $675,000 for "expenses necessary to carry out the Alabama Feasibility Study as authorized by section 350 of the Department of Transportation and Related Agencies Appropriations Act, 1988, Public Law 100-202, as amended". Local match in the amount of over $500,000 has been provided to conduct the environmental assessment, economic analysis and engineering for a Northern Beltline Freeway.

By early 1992, a final environmental impact statement is scheduled to be completed in which a feasible alternate will be identified.

### Feasibility

During the past 20 years, new growth and development in the Birmingham Metropolitan Area has been concentrated primarily in the southern and eastern portions of the urban county (Jefferson). The southern portion of Jefferson County has been in such demand that development has spilled into northern Shelby County for the past decade.

Growth in the northern and western portion of the County has occurred at a slower rate in comparison to the southern and eastern areas, inhibited by the lack of an east-west highway (such as the Northern Beltline), land held in large ownership, mining activity in the area, topographic constraints and utility availability.

A "loop" around the northern part of the Birmingham Urban Area will result in a complete beltway which will link suburbs with other suburbs just as high-speed multi-lane radial routes now link suburbs with the central area. Local elected officials, under the leadership of the Jefferson County Commission, are committed to plan for infrastructure improvements, such as water and sewer, in order that a more balanced pattern of development can take place.

Though suburban traffic congestion and traffic demand make the proposed Northern Beltline Freeway feasible, the real demand for this type of highway project is economic

vitality. For example:

- Access to the Tennessee-Tombigbee Waterway via Port Birmingham would be provided.
- The industrial potential of the area would be significantly enhanced, especially in northern Pinson Valley and in the vicinity of Port Birmingham, Appalachian Regional Commission Corridor X and the Northern Beltway.
- The impetus for development would extend beyond Jefferson County into southern Blount and Walker Counties.
- The urban image of the Birmingham Area would be enhanced with the perception of an adequate interstate system complete with a beltline to funnel traffic from the downtown area. No longer would the Birmingham Area be one of the few major urban areas in America with "half a loop".
- Many of the now isolated communities would be presented with new opportunities for survival.

## Compatibility With DOT National Transportation Strategy

The Department of Transportation goals for the reauthorization of the Surface Transportation Act include (1) a stronger partnership among federal, state and local governments, (2) creative ways to apply the time tested user fee principle and (3) more private investments. These goals are supported in the proposed Northern Beltline in that the Birmingham Area is committed to use multiple sources of funding in order to develop this project.

For example, the Northern Beltline has been included by the State of Alabama as a secondary level roadway in the Preliminary Highway System of National Significance. This commitment by the State of Alabama could be supplemented by the proposed state developmental highway program, recently announced by the Governor. In addition, although a toll facility will not generate sufficient funds to construct the facility, tolls could possibly be combined with some other source of funding to form a realistic funding package.

## What is Required

The documented shortage in "primary and urban" funding for non-interstate roadways has resulted in some major developmental roadways within the Birmingham Area, including the Northern Beltline, to be essentially unfundable.

Including the project as a line item in the next Surface Transportation Act should be pursued to supplement the options of local government funding, state funding and toll road funding.

The CHAIRMAN. Our next witness is the Honorable David Dinkins, Mayor of the City of New York, to be accompanied by Lucius Riccio, Commissioner of Transportation of the City of New York.

Due to the fact that we've kept the Mayor waiting for an hour, I think we can wait five minutes for him. He's on his way down.

Charles Rangel is here.

The Chair wishes to recognize the distinguished Mayor from the great City of New York, the Honorable David Dinkins. And for the initial courtesies extended by the committee to you, on behalf of the committee, the Chair defers to the Chairman of our Water Resources Committee, the Honorable Henry Nowak from the State of New York.

Mr. NOWAK. Thank you very much, Mr. Chairman. It certainly is a pleasure to welcome to the committee David N. Dinkins, who is, of course, the Mayor of the great City of New York. Being Mayor of the City of New York, as many have said before this, is the second toughest job in the country—and some would even dispute that.

Mayor Dinkins has received his bachelors degree in mathematics and further received his law degree from Brooklyn Law School and was in private practice for over 20 years. In addition to that, he also has a long history of public service to prepare him for the tasks he now faces. He has been Manhattan Borough president, a State assemblyman, president of the Board of Elections, and City Clerk. Probably though the best preparation he had for being Mayor of New York City was his service in the United States Marine Corps.

As Borough president, he used his position to address many problems, most prominently the problems in education, and also he used that position to promote a great deal of economic development.

I think the Daily News best summarized our witness when it stated the following: "It is in the vital and tangibles, personal style, warmth, generosity of spirit, and magnetism that Dinkins stands out. He exhibits a natural innate sense of fairness and compassion. There is in David Dinkins a deeply rooted civility, and that is the essence of effective and human leadership."

I want to welcome the mayor to the committee and certainly look forward to hearing his remarks.

Thank you, Mr. Chairman.

The CHAIRMAN. The Chair thanks the distinguished gentleman from New York.

The Chair wishes to recognize my good friend, Charles Rangel, who is one of the very important members on the Ways and Means Committee and is also chairman of our Narcotics Committee, and one of my great friends here in the Congress.

From the State of New York, the Honorable Charles Rangel.

Mr. RANGEL. Mr. Chairman, thank you so much for this courtesy. The Congress has every reason to be proud of the Interstate Highway System that under your leadership has progressed to where we are today. Now, we find our infrastructure in serious trouble, our roads, our tunnels, our bridges. Whatever problem we have in the City of New York exemplifies what's happening around the Nation.

So we want to get on in listening to the Mayor that represents the greatest city, New York; a guy that is sensitive to the problems

of people as well as roads, a friend of mine, and I am anxious to hear his testimony.

Thank you so much, Mr. Chairman.

The CHAIRMAN. I thank the distinguished gentleman from New York. I, too, echo sentiments expressed. I had a chance to meet with Mayor Dinkins earlier today, and I want to now welcome you to our committee.

Mr. Mayor, you may proceed at your will.

**TESTIMONY OF HON. DAVID N. DINKINS, MAYOR, CITY OF NEW YORK, ACCOMPANIED BY LUCIUS RICCIO, COMMISSIONER OF TRANSPORTATION, CITY OF NEW YORK, AND JUDY CHESSER, DIRECTOR, CITY OF NEW YORK WASHINGTON OFFICE**

Mayor DINKINS. Let me thank you all, Mr. Chairman, Congressmen Nowak and Rangel. By way of full disclosure, I could say that Congressman Rangel is my brother, so he says nice things because it is all in the family.

The CHAIRMAN. If the gentleman would yield from the great sovereign State of New York and the Mayor of our great city, I didn't want to blow the bubble from the representatives from the great State of New York that have just had the pleasure of introducing you, but I think it would be appropriate now for me to remind them that the distinguished Mayor was born in Trenton, New Jersey. [Laughter.]

The distinguished Mayor's father lives in Trenton, New Jersey now. He constantly reminds Governor Florio to be sure to take care of "Dad."

We have lent him to New York for a reasonable period of time and when he gets things straightened out over there, then he is welcome back to the great State of New Jersey.

I just want to get that little remark in there.

Mayor DINKINS. I am grateful. Thank you all so much. I really thank you for the opportunity to testify this morning on the reauthorization of our crucial Federal highway and transit programs. I am joined this morning by Doctor Lucius Riccio, who serves with great distinction as our Commissioner of Transportation of the City of New York, and Judy Chesser, who runs our office here in Washington, known well to all of you I am sure.

As Mayor of this Nation's largest city and perhaps the busiest center of commerce and communication in the entire world, one of my major concerns is transportation—ensuring that New York City's nearly eight million residents can get from one place to another with the greatest possible ease and efficiency.

As a time of severely limited public resources, meeting this responsibility can be a daunting task. And as we prepare to enter the 21st century, our needs in this vital area have become increasingly complex.

New and comprehensive Federal legislation demands that we balance our desire to improve mobility with our need to protect the environment from dangerous auto emissions, and our need to make communities more accessible to those with disabilities.

As our troops return from months of bitter conflict on the sands of the Persian Gulf, we must strive to reduce our dependence on

foreign oil, to loosen the grip of foreign dictators on our Nation's economy. We must begin to repair our Nation's crumbling infrastructure which is suffering from decay and neglect after more than a decade without a national transportation policy. I need not tell this subcommittee that the work that needs to be done for the maintenance and repair of our bridges, tunnels, tracks, and roads has left our transportation system lagging far behind that of other countries.

Amid these tremendous challenges, I am delighted that this subcommittee recognizes the need for a cohesive national strategy for transportation, and is approaching the issue with great seriousness and determination.

As this subcommittee is well aware, our Nation needs a much larger transportation program to meet the rapid growth and increasing congestion in our Nation's metropolitan areas. Indeed, recent census data indicates that nearly 90 percent of our Nation's growth in the past ten years has occurred in metropolitan areas with more than one million residents. Today, more than 77 percent of the Nation's population lives in metropolitan areas.

Despite the growing needs of urban America, I believe that the Bush Administration's proposals will have a devastating impact on New York and other cities that rely on mass transit. These proposals would shift our Nation's transportation programs into reverse at a time when we must move forward.

The most disturbing and regressive aspect of the President's program is that it favors our Nation's highways at the expense of mass transit. Astonishingly, the proposals reward automobile use and gas guzzling, while States and cities that strive to be more efficient and environmentally sound by encouraging the use of public transportation are essentially punished.

As highway funding would jump from this year's $14.1 billion to $20.3 billion in fiscal year 1996, transit funding will merely inch from $3.25 billion to $3.4 billion during the last year of this five-year reauthorization, an increase that will barely keep pace with inflation. And that's still far below the 1981 all time high of $4.66 billion.

At the same time, this program would slash all mass transit operating assistance to cities with more than one million residents. The bitter irony is that these are the cities whose need for these funds is the greatest. New York City's Metropolitan Transit Authority stands to lose $93 million per year—I think you will be hearing later today perhaps from Mr. Stangl—and our Department of Transportation will lose $7 million per year. Perhaps that will be hard-pressed to replace.

In the past two months, the Bush Administration has touted the flexibility of this plan. Theoretically, we can transfer our highway funds to mass transit, and vice versa. But while every penny of a State's transit funds can be transferred to highways, a paltry 30 percent of highway funds can be transferred to mass transit.

And these transfers do not take place on a level playing field. Since the Federal Government will contribute 75 percent of the funds for State and local highway projects but only 60 percent of the funds for transit programs, this proposal actually makes mass transit more expensive.

This reduction in matching funds is another classic example of the Federal Government shifting its traditional responsibilities onto State and local governments, without giving us the money to pay for them. Along similar lines, the Bush Administration has also proposed the elimination of all General Fund support for transit. All funding would be shifted to the mass transit account of the Highway Trust Fund. In the long run, this will only make it easier for the Federal Government to reduce even further its commitment to mass transit. Such an underhanded tactic should be rejected out of hand.

By thwarting our efforts to expand transit programs, these proposals will make it virtually impossible for localities to comply with the Federal Clean Air Act and the American with Disabilities Act. Indeed, by advancing a transportation policy that conflicts with its own environmental and equal opportunity policies, the Federal Government is flattening its own tires.

Let me be very clear on this point. I fully support greater funding to rehabilitate our Nation's highways. However, mass transit is essential if we are to reverse the growing congestion and pollution that plague our cities and our entire country. We need to reduce dramatically the number of automobiles occupied by only one person. We need to shift some of the 100 million commuter vehicles off of our congested highways, and encourage these commuters to use mass transit. Right now, cars account for 85 percent of all commuting, and most households have more automobiles than members of our workforce. What is even more distressing is that over two- thirds of our workforce travel to their jobs along highly congested roads and highways. Given these conditions, our so-called rush hour isn't very much of a rush.

To address this proliferation of cars solely by focusing on highways is to forsake prevention for a costly and not very prudent cure.

The solution we think is clear. The Federal Government should increase mass transit funding to $6.2 billion per year, the level recommended by the House Committee on Public Works. This would help to expand transit programs, reduce our reliance on cars, fossil fuel, and crowded highways, and ultimately save us money.

On this issue, the statistics speak for themselves. In New York State, public transportation reduces our fuel consumption by 1.33 billion gallons each year. Every additional 1 percent increase in our ridership would save another 7.5 million gallons. Transit programs are not a drain on our treasury; they are a sound investment in our economic and environmental future.

Moreover, in addition to increased mass transit funding, Federal matching funding for both highway and transit programs should be kept at their current levels so that we can meet our needs and not create a monetary incentive to forsake mass transit for highways.

We also recommend that transit operating assistance be continued for cities with populations over one million. The large and comprehensive mass transit systems of cities such as New York, Washington, Chicago, and Boston are truly national treasures serving millions of visitors and business people from around the country, indeed, around the world. In fact, New York City's transit system and commuter railroad serve roughly 33 percent of all mass

transit users nationwide. These valuable networks must be supported and nurtured by our Federal Government.

I realize that these measures would not be inexpensive. But the Federal Government can find a large part of the money right away by following the suggestion of this subcommittee and placing the entire national gasoline and all related taxes, at their current levels, into the Highway Trust Fund, and releasing the funds for transportation purposes. That way, those who use our roads can help pay for them rather than help to close the deficit.

The highway portion of this new plan receives much more generous funding than mass transit. But the Administration proposal would have a crushing impact on our environment and would be inequitable to our Nation's cities.

First of all, despite the fact that urban centers hold about 15 percent of all roads eligible for funding under the National Highway System, the Federal Government has decided for no apparent reason that urban roads can comprise not more than 6 percent of any National Highway System program.

My reasons for opposing this artificial limit are simple—it is unfair, and quite frankly I don't think it makes sense.

According to the Administration's plan, funds under the National Highway System will be distributed according to a highly questionable formula—70 percent of which will be based on a State's gas consumption. Under the proposed urban-rural system, funding will be based entirely on gas consumption.

In effect, these new and regressive formulas reward gas guzzling while penalizing the energy conservation that the Bush Administration claims is such a high priority. This sends absolutely the wrong message to our people and our local governments—the more gas you use, the less cash you lose. Indeed, one wonders whether Saddam Hussein knew about this pro-gas policy when he invaded the oil fields of Kuwait.

New York State currently has the lowest per capita gas consumption of any State in the country, and in New York City gas consumption is about one-fifth of the national average. We are extremely proud of our record of efficiency, and it is ridiculous to penalize us for it. The fact is, these new formulas would cost our State $100 million per year. A more equitable formula could be developed by using factors such as infrastructure need, population, and highway miles.

I am also dismayed that the Bush Administration proposes to end the Federal aid to the Urban Systems program, the only source of direct transportation aid to our nation's cities. This means that although our transportation needs are in many ways greater than those of the rest of the State, we are not guaranteed any aid whatsoever and must appeal to State officials for every penny.

There are a few small bright spots in the Administration's highway proposals. I am pleased that, for the very first time, the Federal Government will help to cover highway operating expenses through the Congestion Relief Program. And I applaud the continuation of the Interstate Trade-In program, which will ensure that New York City not lose the funds earmarked for the abandoned Westway project. But much more needs to be done.

I believe that the Federal Government should establish a special Metropolitan Transportation program to meet the needs of urban and suburban areas. It is an idea based on common sense. We hold most the people and suffer most of the congestion. Of course, a significant rural program is necessary as well.

Just as critically, we need a substantial commitment to preserve our Nation's interstate system by resurfacing, restoring, rehabilitating, and reconstructing this $129 billion national investment.

It is important for me to address the bridge component of the Bush Administration's program. I am certain the subject of New York City's bridges needs no introduction. The poor state of our bridges has received widespread media attention in recent months. The facts are sobering. We estimate that about 56 percent of the 874 bridges we operate are structurally deficient. That is the result of many decades of neglect and insufficient funding, especially at the Federal level. This problem extends far beyond New York. The United States Department of Transportation estimates that 40 percent of all the Nation's bridges are structurally deficient or functionally obsolete.

Despite a few press reports to the contrary, New York City has not fallen down on the job of bridge maintenance. Our Department of Transportation has a world class maintenance and repair team. I am proud to report that the Federal Highway Administration recently visited New York to review our inspection and repair procedures and gave us very high marks.

Over the next ten years, we are dedicated $3 billion to bridge reconstruction, including $1 billion for the East River bridges alone. Unfortunately, we cannot meet this challenge by ourselves. I urge the subcommittee to allow the use of Federal funds for bridge maintenance. Ultimately, this is a constructive and far-sighted approach. After all, decades of deferred maintenance allowed our bridges to deteriorate in the first place. An aggressive maintenance program can preserve a bridge almost indefinitely at a far lower cost than rebuilding it every 30 to 40 years.

Ironically, by allowing Federal funds to be used only for reconstruction, Washington offers localities an incentive to let structures decay until they must be reconstructed at a much higher cost with the help of Federal funds. So I urge the members of the subcommittee to alter this proposal in order to allow these funds to be used for critical maintenance efforts.

Finally, allow me to raise two important issues that concern the construction of highways as well as bridges. In New York City we have found that the Federal design standards for Federally funding highway and bridge construction are cumbersome, outdated, and impractical. The fact is the Federal Government applies the very same standards to both small, rural towns and densely populated cities, while the needs of cities are clearly unique. Large cities require greater flexibility to meet our complex design needs. And I hope that the subcommittee will help us develop a less cumbersome design process.

Federal law also requires that construction contracts worth more than $50,000 be awarded through competitive bidding. I believe that we can save a lot of time and money, without sacrificing quality, by using our own public employees for these projects.

In closing, I cannot overemphasize the importance of these programs to New York City, and to localities across our country. After all, transportation is the very foundation of modern society and one of the most basic responsibilities of government. If our roads and bridges are not safe and secure, if our transit networks do not run smoothly, if our people cannot move freely between their homes and their workplaces, then we will have created a society paralyzed by indifference.

I am grateful for the work of this committee in addressing this problem, which has been neglected for far too long. I look forward to working with you to devise solutions that use our limited resources creatively and that meet the needs of all Americans.

I will be happy now to take your questions. And I thank you so much for this opportunity.

Mr. MINETA [resuming the Chair]. Mr. Mayor, thank you very much for your testimony. I apologize for not having been here for your entire presentation. I was at another committee meeting offering an amendment on another bill that is important for our consideration.

Mayor DINKINS. Your distinguished colleague received me in grand fashion.

Mr. MINETA. Absolutely. Absolutely. And I just want to say that your outlook, your view, is one that is very much appreciated and respected by the members of this subcommittee. I think I can speak for the chairman of the full committee in saying that we do appreciate the fine work that you're doing.

Mr. Mayor, the legislative proposal to reauthorize the surface transportation programs of this Nation would, in any event, probably state that there must be adequate State and metropolitan planning programs for properly analyzing and evaluating transportation projects. I am wondering what recommendations can you provide for enhancing this State and metropolitan planning process, given your own experiences in your jurisdiction.

Mayor DINKINS. Well, I would hope that they would take into consideration some of the observations that we have made. I believe that as go our cities, will go this Nation. This is not to exclude the suburban areas. As a matter of fact, a national survey we had done pursuant to a meeting of so-called summit of many urban mayors, we did a survey that shows that suburbia understands the import of our cities as much as those who reside in cities. If the Nation is not supportive of our cities, the Nation will be in even further difficulty. So that we need the kind of help of which I speak.

And we need especially, for instance, to have the flexibility I mentioned in my prepared text; to be able to transfer monies between those designated for highways and be able to use that for mass transit if we so wish. The flexibility needed is just not there; there is a limitation on how much can be transferred to mass transit. In the City of New York, that makes a big difference.

The CHAIRMAN. Would the gentleman yield?

Mr. MINETA. Absolutely.

The CHAIRMAN. I think that the Mayor is striking an extraordinarily important point and one we've talked about quite intensively on this committee. I don't want to break the continuity of your

thinking, but I think there are two points that you're making having to do with flexibility. I think that the committee has to spell out very clearly what the committee means by flexibility versus the point of the flexibility that is talked about by the Administration.

It seems to me that if the people of the respective states are paying the taxes, which they are through the gasoline taxes, they ought to have the right to speak to the issue. It seems to me that at least half of the funds allocated to States ought to have total flexibility where you, as the Mayor of the city, could be able to switch from one to the other, depending on what the needs of your city or the State is. Is that a reasonable point to make?

Mayor DINKINS. Indeed, it is. I had the privilege of chatting with you earlier and you and I certainly are in concert in that regard. It is illogical, to say nothing of unfair, not to permit a jurisdiction to use the monies as it sees fit, especially given that the monies come from taxing the constituents of that jurisdiction in the first place.

While I am at it, another area of concern is that monies that flow to cities come directly to cities and not through States. That's an area of great concern.

The CHAIRMAN. Well, if the gentleman will yield on that, if I can have another minute, Norman, please. We have been finding in some of our visits in the larger cities throughout the country, that they have been coming back and expressing the concern of having to wait in line or be in concert with whatever the State administration is to be able to meet their need. They are suggesting, for example, maybe there ought to be some kind of sub-allocation made to urban centers over one million or five million, whatever the case may be. Would you think that that's reasonable to pursue?

Mayor DINKINS. Yes. Because of our size, we have peculiar problems, and I like to believe that we're important to the Nation. I, not that it is peculiar to me, but I would hope that most people agree, that this committee would agree, that we're not really competing with one another, we cities of the United States; but it really is a global competition. If we're going to be able to compete with Tokyo and London and Paris in a variety of disciplines, we have got to maintain ourselves.

Not far from here there is a group meeting today to talk about tourism. As those in New York City who would argue for the need to maintain our museums and cultural institutions, and they are not wrong, as they compete for scarce dollars, they make the point to me that nobody comes to New York to go skiing or look at the Alps. And they're absolutely right. We are a communications center, we are a financial center, we are a cultural center, and given the situation in Europe these days, New York City is really the gateway to this Nation in many respects, and not just to benefit the City and State of New York, but the surrounding region certainly and beyond. So we think it makes sense. We think it is fair. And we think it is in the interest of all of the people of our country, and not simply those of us who happen to reside in New York City.

The CHAIRMAN. Norman, I have just one more.

Mr. MINETA. Yes. The Chairman may proceed.

The CHAIRMAN. I have just one more question because I have another thing I have got to do in a minute. The point has been made, and you made it very well in your testimony, but I think if you would just exchange a view with me for a moment, is this idea of consolidating and getting the housekeeping in order and then eliminating the urban aid program and eliminating the rural program simply to get the house in order. It seems to me along the line that what the Administration comes back in, and Secretary Skinner recently made the comment. He said there is no more free lunch from Washington. I took umbrage with that on the point of view that it is not free lunch from Washington; it is our money in the first place.

But the point I want to make is they say there should be a broader participation on local levels—meaning States and cities—in their participation. You made that point, and I think if they are talking about changing the percentage of 80 percent matching to 60 percent on that section. So, if the Government comes back to you and says, well, Mr. Mayor, we will be providing lesser money under lesser formulas, but if you want to be able to use that money, you have to raise more money locally in the city. How do you do that? I understand there is a substantive deficit, as is the case in New Jersey. How do you tax people more in the city?

Mayor DINKINS. Well, obviously, we resist that greatly. To say that there has got to be a greater contribution by the city and State to get the money from the Federal Government is to penalize us greatly. The proposals, as I recall, my notes suggest, that the State and local match for the Urban and Rural program would grow to 40 percent from what is now 25 percent. The Bridge program would go from 20 to 25 percent. And for transit, it would grow from 20 to 40 percent.

The CHAIRMAN. So New York City loses.

Mayor DINKINS. Oh, it loses greatly. They say if you put up $1 million, we'll give you $10 million. We say, but we don't have $1 million. They say, but we're going to give you $10. That does not increase our ability to have $1 million. It is sort of like if they are selling elephants two for a quarter and you don't have any quarters and, moreover, don't need any elephants, it is not a good deal for you. [Laughter.]

The CHAIRMAN. Let me just round it out. Just out of curiosity, maybe the Commissioner might know this, does New York City get credit for the expenditures that are made by port authority?

Mr. RICCIO. No, we do not.

The CHAIRMAN. I am just trying to say something here. If the Chair would yield for a minute. I think this is the most telling point that could be made here this morning. When the Mayor speaks of the greatest city in New Jersey—it shows you where I'm coming from, we'll do a little annexation here. [Laughter.]

Mr. MINETA. It's that football team you're thinking about. [Laughter.]

The CHAIRMAN. Well, football he loses on, City he wins.

The point in question, which I think ought to be made part of the record, is that just recently between the State of New York and the State of New Jersey, there has been quite a debate, as you know, viz the point of view of raising the cost on crossing our bridges.

And it has raised millions of dollars which, as I recall, the figure comes somewhere to the tune of infrastructure expenses around $20 billion, that sticks in my mind but it is probably more than that. But whatever the case may be, the two states and the two metropolitan areas that are taxing themselves to do that infrastructure work—which is transportation work, which is bridge work, which is monorails in the Newark Airport, and so forth—is not credited to our taxing ourselves. The Administration comes back and says, too bad, we'll change the formula, it will shrink the amount of dollars; but if you want to get more dollars, you have got to tax yourselves additionally.

I think that point ought to be strongly made where there are port authorities—such as we have and which I know is unique in the northeast, but it is also in the rest of the country—I think we ought to be given some kind of attention and credit for that issue.

Mayor DINKINS. We certainly agree with that. There is not appropriate recognition of the contribution that we do make. So it is not as though we're not trying to help ourselves; we are. We think the assistance that we request from the Federal Government is appropriate for us to request. And we think that we should be fairly treated. We don't think that the suggested changes do that.

The CHAIRMAN. I thank you very much, Mr. Chairman. Mr. Mayor, thank you for your courtesy.

Mr. MINETA. Mr. Mayor, having served as mayor of San Jose some time ago, I know that at least in those days I had always thought of cities as being creations of State governments but, after serving as mayor, believe we're sort of treated as illegitimate children by states. In any of our negotiations with the State, from a local perspective, we were "over the barrel." I am wondering if that still is something that you have to face in the relationship with the State of New York. Is this something that you find as you still converse with your other fellow mayors as a condition that still exists?

Mayor DINKINS. My friend and colleague, Representative Molinari, is amused, wondering to herself how will he answer this. Recognizing that we face a $3 billion gap in our budget for the upcoming fiscal year 1992, and our State has a $6.5 billion deficit for the budget that they should have adopted commencing April 1st, and some of the money that we need we will get from the State, which budget they have not yet agreed upon, the two houses of the State legislature and the Governor are in three camps with respect to that; so with that preface as I respond to your question. I believe that every opportunity that we have for monies to come from the Federal Government directly to the cities, that should be the case. And, I might add, it is the position of the U.S. Conference of Mayors, of which I am a member. I have had the privilege of testifying here before Congressional committees heretofore making that point, as, indeed, I alluded to it today.

I believe that the states do not give us now as much assistance as we should get. An example, in an area unrelated to this committee, is education. The State education formula gives the City of New York about 33 percent of the money the State sends forth to localities, but we have 37 percent of the State's students—the difference is $388 million annually. Our Governor recognizes this inequity

and, I am confident, joins me in a desire that this be addressed, but it is not easily achieved. What has happened over the years, as this point has been made, the State has sort of found a little more money and everybody got a little more. But this obviously doesn't address the question of inequity.

Mr. MINETA. In the Administration's bill, they're establishing a Bridge Maintenance program and a Pavement Management System, putting that requirement on the states. Do you think that kind of a program should also be required of local governments in terms of a Bridge Maintenance program and a Pavement Management program?

Mayor DINKINS. Let me yield to my expert, the distinguished Doctor Riccio.

Mr. MINETA. Doctor Riccio, please.

Mr. RICCIO. Thank you. We believe that such programs are very good things. We are disappointed that although in the legislation that we would have to set up a bridge management system, there is no funding to do that. On the pavement management side, we have taken a leadership role in that area. In New York City, we probably have the world's largest pavement management system monitoring the conditions of our roadways. We would like help in doing the same sort of thing with the bridge management system, if, indeed, that's a prerequisite to receiving Federal funds.

We have, as the Mayor mentioned, been reviewed by the FHWA engineers and they have given our inspection and our repair procedures a clean bill of health. But the requirements of the bill to build a management system for bridges would require substantial investment and we would like assistance on that also.

Mr. MINETA. Would you want that as a direct program or as a pass-through to the states?

Mr. RICCIO. Yes, we would like it as a direct program. As the Mayor said, any opportunity to do direct programs would be a good thing. The one direct program that currently exists is the one that we have used extensively to do much of our bridge rebuilding. By not having that complete control over those funds, we might lose the flexibility that is being talked about here to really devote the dollars that we get to the problems that we face—our biggest problem, namely, our bridges.

Mr. MINETA. Thank you very much.

Congresswoman Molinari?

Ms. MOLINARI. Thank you, Mr. Chairman. Let me officially welcome the Mayor and Mr. Riccio and Ms. Chesser for appearing here today. Our Mayor has been a very thoughtful national advocate on behalf of the needs of the city since I've been privileged to represent my community. I want to welcome you and thank you once again for making this extraordinary effort.

That being said, allow me to don my parochial hat, and I alluded to some of my concerns in a meeting that was held earlier. While I totally agree with all of the tenets that you have put forth today relative to the City of New York and your needs relative to the national agenda, I find myself in much that same stepchild's position relative to the people that I represent, certainly in Brooklyn and of course on Staten Island.

We talk about a level playing field and we then come to the Federal Government and ask for more aid for mass transit—and we have discussed this with both the UMTA and DOT, this is not a mayoralty initiative by any means—different things to encourage mass transit, and, in some cases, as your predecessor had recommended in the City of New York, rather draconian measures to encourage mass transit, all of that being a very environmental and social benefit. Then you come to a place like Staten Island where you say we want to encourage you to take mass transit, we may increase your totals to take mass transit, we'll do all we can to facilitate mass transit, cut down on the not so rushed rush hour you allude to in your testimony. Yet, when people in Staten Island say how do I do it. There is no solution that we can advance at this point. We don't have subways. We have an inadequate private bus structure, an inadequate city bus structure.

What do we do from a Federal level, trying to keep the flexibility that Chairman Roe alluded to? How do I protect the people that I represent, giving the city the flexibility without mass transit options?

Mayor DINKINS. Needless to say, the more assistance the city gets, the greater the ability of the City of New York to address the problems of Staten Island. As you know, unfortunately now we're faced with a tremendously severe budget situation so that we look at ways to produce revenue, some decrease of services, increasing the cost of some services, and some of this, as you know, adversely impacts Staten Island. Some money is fungible. The more we get, the better able we are to address some of those problems. That may be not a full and satisfactory answer, but it is a fact. I am certainly mindful of the situation with respect to Staten Island. The ferry, you can blame us for, the bridge is another kind of circumstance.

But you are appropriately concerned with Staten Island, as a matter of fact, as am I. As you know, my position is that under no circumstances will there be succession. I will stand in the way of the bulldozers or do whatever is required because I see Staten Island and its 400,000 or so persons as a very important and significant part of our city.

Ms. MOLINARI. We thank you for that. It is probably not bulldozers; we'll probably just attempt to explode the Narrows Bridge.

Mayor DINKINS. I understand.

Ms. MOLINARI. I appreciate your answer, Mayor, and I know I put you in a difficult position with that question. I just felt it was my responsibility to remind you and get your recognition as we move through this very difficult process to consider the people who don't have mass transit alternatives. And as that money hopefully successfully increases and is funnelled from the Federal Government to New York City, that we not only look at the subway system, but also at increasing some bus transportation alternatives.

Mayor DINKINS. Yes. On the question of the express buses, as you know, we are making some efforts in that direction. The distinguished Borough president is very helpful. You have a passing familiarity with him. But what you say is certainly so and not at all unfair to raise; you are right to do so, and I acknowledge it and will do all that we can to ease that.

Ms. MOLINARI. Thank you, Mayor, and I look forward to working with you and the members of this committee to provide a fair and safer city and Staten Island.

Mayor DINKINS. Thank you.

Mr. MINETA. Mr. Nowak.

Mr. NOWAK. Thank you very much, Mr. Chairman. Let me thank the Mayor for coming down at this time. I think it is very helpful for the Mayor of the City of New York to come and visit and spend the time, as you have, with the leaders, especially on this committee, as we look forward to formulating this bill.

I think a lot of the arguments that you've presented us with this morning in our brief meeting and later expanded on here for the general committee's information is going to be very helpful. A lot of it has been very rationally put together, and I think, based upon the facts that you present, it will be very helpful.

The Chairman mentioned the bridge problem. I can remember back ten years ago when we were developing a highway bill and there was a cap of 8 percent, of which any State shall receive money of the total rehabilitation bridge fund, that we raise that to 10 percent to bring some equity especially in New York, and I think New York City and all over the State. And that has worked out well but it still doesn't solve the whole problem of looking at needs in a State. And it was interesting to read an article that was in the paper, and if I could, I ask unanimous consent that this article by Marty Tolchin describing 69 percent of the bridges reported deficient in New York City and going through the statistics; if we could get that, Mr. Chairman, I would so move. I think it describes that problem very well.

Mr. MINETA. Without objection, it is put into the record.

[The referenced article by Mr. Tolchin follows:]

Submitted by N...

V, APRIL 2, 1991 B3

# 69.3% of Bridges Reported Deficient in New York City

4/2/91

By MARTIN TOLCHIN
Special to The New York Times

WASHINGTON, April 1 — Almost 70 percent of New York City's 2,027 bridges are no longer able to carry the loads for which they were designed because of deteriorating decks, supports or superstructures, according to city and state data compiled jointly by two nonprofit research groups.

In addition nearly half of the state's 18,829 bridges are similarly deficient, the groups — the Road Information Program in Washington and the Crisis Program in Albany — said in a report in February. Both groups compile and publish information on highway transportation issues.

"New York City has by far the worst bridge deterioriation problem in the state, both in the proportion of the problem, 69.3 percent, and in sheer numbers, 1,405 deficient bridges," the report said.

### Problem Acknowledged

The study showed the dimensions of a problem acknowledged by city and state officials. Investigators for the New York City Council last month found dozens of city bridges that were so deteriorated that gaping holes had opened in their decks and steel beams. Some bridges, they said, were being supported by wooden pillars that must often be replaced because homeless people steal them and use them for firewood.

A total of 47.9 percent of the state's bridges are structurally deficient, according to the study. Long Island had the lowest percentage of deficient bridges of any region in the state — 255 of 847, or 30 percent.

Michael Francese, the State Department of Transportation's regional director for New York City, blamed decades of neglect for the plight of the city's bridges. "There was virtually no maintenance in the 50's, 60's or 70's," he said.

More than half the defective bridges are undergoing renovation, he said, adding, "I have over $1 billion in construction going on right now in New York City on bridges and highways."

### City Has 2,027 Bridges

Of the 2,027 bridges in New York City, 76 are over water, 329 are used by railroads, and 1,011 are over land. Most of the remainder are in parks, serve subways or are private pedestrian bridges.

A total of 796 are maintained by the city, 619 by the state and 612 by other jurisdictions, including railroads, private groups, the Port Authority of New York and New Jersey and the Triboro Bridge and Tunnel Authority.

Joseph DePlasco, a spokesman for the city's Department of Transportation, said: "This is a national problem. The country can learn a lot from New York City, because we have the oldest infrastructure in the country."

The Federal Highway Administration last year reported that 68.2 percent of the state's bridges were either structurally deficient or functionally obsolete, compared with a national average of 50 percent. New York ranked first among states with inadequate bridges, Connecticut third with 61.6 percent and New Jersey 28th with 33.8 percent.

### Obsolete Bridges Counted

Federal estimates of defective bridges were higher than the estimates made by New York City and New York State because they included not only bridges that were structurally deficient, but also those defined as functionally obsolete. Such bridges have lanes that are deemed too narrow or approaches that are too sharp.

The worst bridge, Mr. DePlasco said,

> Deterioration in New York City is 'by far the worst' in the state.

is the Miller Highway, a badly rusted portion of the West Side Highway from 59th to 72d Street. "Until recently, it was never maintained, never painted," Mr. Plasco said. The bridge is being renovated with Federal and state funds.

Nearly as bad, Mr. DePlasco said, is the Franklin D. Roosevelt Drive near 23d Street, where a motorist was killed when a slab of concrete fell from the viaduct. The Queensboro Bridge between midtown Manhattan and Queens, is also in serious disrepair.

Most of the city's land bridges are 50 to 60 years old, Mr. DePlasco said, adding that the oldest land bridges in the country are in Central Park.

The city has earmarked $1 billion for the renovation of the four bridges over the East River. The work is to be completed by the end of the decade.

The new study also found that 50 percent of the 6,000 miles of roads maintained by the city were in poor or fair condition, while 65.3 percent of the 147 miles maintained by the state in New York City needed improvements.

Mr. NOWAK. We also had the opportunity to talk with Mr. Riccio about some of the innovative things that New York City is doing. And I think the programs which have started and we had a discussion about—natural gas vehicles, electric vehicles, and what is coming in the future of this program. But we really need to solve some problems not of the Mayor's making but that have taken 30, 40, and 50 years to develop. In every community in this country, money is put in budgets for operation of and paying the salaries of the essential services, and always the maintenance of public infrastructure was postponed until Mayor Dinkins has come forward and realized this. And I hope to make that a part of this bill, where you can use this money to maintain so we won't have these astronomical costs as we start to rehabilitate. I think your program should be incorporated along with the differences that you mentioned. You mentioned the matching shares. I think that's important to get a good well-balanced system.

I just wanted to make those brief remarks, and I look forward to working with you in the months ahead as this bill develops. Again, thank you for your appearance here, Mayor.

Mayor DINKINS. I thank you. May I publicly thank you for the assistance that you have given heretofore in raising that cap from 8 or 8.5 to the 10 percent that it is now, albeit that we would like it higher. But were it not for initiative, that perhaps would never have happened, and we're grateful.

On the question of the percentage of our bridges that are in difficulty, if I may, I would like the Transportation Commissioner to speak to that. I think we've requested a correction of that report that you just read into the record; that number is higher than the fact.

Mr. RICCIO. First off, the report that article was based on did not say that the bridges were not capable of supporting the weight that they were originally designed for, as that opening paragraph says. We have asked for a correction. It should say that they are structurally deficient according to certain engineering standards.

It also refers to all of the bridges in New York City, not just the ones that are under the jurisdiction of the City of New York. That's why the Mayor mentioned 56 percent of our bridges are deficient. There are other bridges in the city also that bring that number higher.

Thirdly, that report used a different standard for what is considered structurally deficient. On the commonly used engineering point system that goes from 1 to 7, with 7 being in excellent condition, most jurisdictions use 4.5 as the cut- off, that below 4.5 means structurally deficient. That report used 5.0. So that number came in higher.

Obviously, bridges are a national problem. We have a very serious problem in New York State and New York City. If I just might say for the record, I am told that there are 150 bridge collapses a year in the country. But we, in New York City, have not had a bridge collapse since 1973 and that's because we have a first class inspection and repair program that avoid these kinds of problems. So it is a national problem; we recognize and face the difficulty, as you have stated so eloquently, that has been created over many, many decades, much due to the incentives in prior legislation. So

we look forward to new legislation that will take away those disincentives.

Mr. NOWAK. Thank you.

Mayor DINKINS. While you're at it, why don't you just mention what was spent.

Mr. RICCIO. Yes. I guess the issue also came up that New Yorkers spend a fair amount on its infrastructure. We estimate over the next ten years that on bridges alone over two-thirds of the dollars that will go into our infrastructure rebuilding will come right from New York City residents, and that in 1980, 57 percent of the infrastructure dollars going into the New York area were Federal dollars—57 percent in 1980—that's dropped to 35 percent in 1990. If that trend continues, there is no way we're going to be able to get our roads and bridges in a state of good repair in the next decade.

Mr. NOWAK. If I could just take a minute, Mr. Chairman and respond. We have got some $17.6 billion in the Highway Trust Fund that could be moved into obligation and actual construction. If we do get, as the Chairman suggested many times, that 2.5 cents back, we could start to build into our system better formulas, the flexibility that you desire, and finally start to make an impact at least in catching up to this severe problem that is out there.

Again, thank you for the information.

Mr. RICCIO. Thank you.

Mr. MINETA. The distinguished gentleman from California, our chairman emeritus, Congressman Anderson.

Mr. ANDERSON. Thank you, Mr. Chairman.

Mayor Dinkins, there is a growing sentiment on this committee that if we, as a Nation, can make the needed to commitment to win a ground war in the Persian Gulf in only 100 hours, we should surely be able to make the commitment to reinvest in America's infrastructure. However, the current Administration, like the previous administration, has withheld billions of dollars in highway construction to mask the size the of the Federal deficit. And although some persons have accused this committee that our favorite form of transportation is riding the President, I would only say to them that we must make the needed commitment in our infrastructure before it is too late and beyond repair. And to those bean counters at OMB who criticize us for pork barreling, I say out of deference to our late Chairman Jim Howard, he explained that pork barreling spelled backwards is infrastructure. [Laughter.]

I don't have to question you, Mr. Mayor. I just congratulate you on taking the time to appear before our committee and telling us first-hand what's needed to get the job done and get America moving again. I want to thank you very much for being here.

Thank you, Mr. Chairman.

Mayor DINKINS. Thank you, sir.

Mr. MINETA. Congresswoman Norton.

Ms. NORTON. Mayor Dinkins, I just want to indicate what a pleasure it is to have you before this committee. Mayor Dinkins brings incredibly deep knowledge not only of his own city but of urban problems, incredibly deep experience and ability in dealing with urban problems in the toughest city to run in the United States. I just want to personally salute you for that.

Mayor DINKINS. I thank you and say that while I am pleased with your success here in Washington, we miss you in New York.

Ms. NORTON. Thank you for that, Mayor Dinkins.

I regret that I was not here to hear your testimony, I was at another subcommittee meeting. In this city, in the mid-1970s, I don't know if you had the opportunity to ride on our subway, Mr. Mayor, but when I was a New Yorker I, of course, had many opportunities to ride on that subway, this is a new subway, and it wouldn't be possible had it not been in the mid-1970s for the fact that the metropolitan region here, not just the District of Columbia, gave up over $2 billion worth of highway construction funds to build the metro rail system. We have great difficulty with what the Administration is doing with the concept of flexibility. What it means is, at least in this city or in this region, that you would be forced to make decisions based not on long-term planning but on the short-term availability of funds.

Did your testimony indicate any equivalent amounts that New York City has been able to convert from the highways to mass transit?

Mayor DINKINS. I didn't speak about the specific amounts, but I made the point that the absence of flexibility is a very severe problem for us. We have the need to transfer monies from highways to mass transit, and this plan permits monies to be transferred back and forth but puts a ceiling on that amount that can be transferred from highways to mass transit I think at 30 percent. That is a very severe problem for us.

Ms. NORTON. Thank you very much, Mayor Dinkins.

Mayor DINKINS. Thank you.

Mr. MINETA. Mr. Mayor, let me thank you very much for taking time from your own busy schedule to come and really give us good testimony relative to your perspective on the surface transportation issues. Let me say that you are well represented by Ms. Chesser here in D.C., and we look forward to working with Doctor Riccio.

But I would like to have you convey a message to a very good friend of mine, Doctor Lee Brown. He, as you know, was a sergeant on our police department in San Jose while he pursued his ph.d. studies at UC-Berkeley, and he went on to greater heights from hours of service on our department. We love him dearly in San Jose. We would love to have him come back to San Jose at some point.

Mayor DINKINS. Only to visit though. [Laughter.]

Mr. MINETA. He is an outstanding person, and if you would convey my personal thanks and greetings to Lee, please.

Mayor DINKINS. I'll be certain to do that. We respect him highly and I am increasingly fond of him. He is doing an excellent job under very difficult circumstances. It must be that early training he got in your city.

Mr. MINETA. Great. Thank you very much.

Mayor DINKINS. Thank you, sir.

[Mayor Dinkins' prepared statement appears on page 719.]

Mr. MINETA. At this time, I would like to call forward a panel made up of distinguished folks representing the American Public Transit Association. I would like to call forward Larry Dahms, a

member of the APTA Legislative Committee, Executive Director, Metropolitan Transportation Commission, Oakland, California; Vickie Shaffer, a member of the APTA Legislative Committee and Small Operations Steering Committee, and general manager of the Tri-State Transit Authority, Huntington, West Virginia; Kenneth M. Gregor, vice chairman, APTA Legislative Subcommittee on Federal Funding, and general manager of the Metropolitan Atlanta Rapid Transit Authority, Atlanta, Georgia; David L. Turney, APTA vice president for Associate Members, chief executive officer, LUMINATOR, group executive, Mark IV Industries, LUMINATOR, Plano, Texas; and Shirley DeLibero, a member of the APTA Legislative Committee, and executive director of the New Jersey Transit Corporation, Newark, New Jersey, and accompanied by Jack Gilstrap, executive director, American Public Transit Association.

The full statement will be submitted as part of the record for this subcommittee.

Larry, if you will proceed.

**TESTIMONY OF LAWRENCE DAHMS, MEMBER, APTA LEGISLATIVE COMMITTEE, EXECUTIVE DIRECTOR, METROPOLITAN TRANSPORTATION COMMISSION, OAKLAND, CA; VICKIE SHAFFER, MEMBER, APTA LEGISLATIVE COMMITTEE AND SMALL OPERATIONS STEERING COMMITTEE: GENERAL MANAGER, TRI-STATE TRANSIT AUTHORITY, HUNTINGTON, WV; DAVID L. TURNEY, APTA VICE PRESIDENT, ASSOCIATE MEMBERS, CHAIRMAN, ASSOCIATE MEMBER BOARD OF DIRECTORS: GROUP EXECUTIVE, MARK IV TRANSPORTATION PRODUCTS, PLANO, TX; SHIRLEY A. DE LIBERO, MEMBER, APTA LEGISLATIVE COMMITTEE: EXECUTIVE DIRECTOR, NEW JERSEY TRANSIT CORPORATION, NEWARK, NJ; AND KENNETH M. GREGOR, MEMBER, APTA LEGISLATIVE COMMITTEE: VICE CHAIRMAN, FEDERAL FUNDING SUBCOMMITTEE: AND GENERAL MANAGER, METROPOLITAN ATLANTA RAPID TRANSIT AUTHORITY, ATLANTA, GA**

Mr. DAHMS. Thank you, Mr. Chairman. You already got me started well because you introduced my associates and so I won't have to do that.

Before I start, I would like to call your attention to, and would submit for the record, a packet of editorials from newspapers around the country that speak to the question of the Administration bill and the extent to which it is helpful to the transit industry. These editorials do find some flaws in that proposal, which are parallel to some of the points that we will be making today.

Let me begin, and then following me will be Vickie Shaffer and the other associates here from the APTA group.

We offer to you today an ambitious proposal for the reauthorization of the Federal transportation programs as follows:

To begin, we propose restoring Federal transit funding to where it was a decade ago. That is $6.5 billion in inflated- adjusted dollars.

Second, we ask for growth over five years so the transit program would reach $11 billion by the last year of the reauthorization.

In the process, we ask that Congress eliminate the bias against transit in matching ratios and other requirements.

APTA's program makes sense because transit is a fundamental part of the solution to several problems affecting America's quality of life and economic health. These include:

Energy. Transit's role in achieving energy independence is more compelling than ever before. Every commuter who switches from driving alone to transit saves 200 gallons of gasoline per year. If 10 percent of urban auto trips were replaced by transit, we would save over 300,000 barrels of oil each day.

Clean Air. New clean air mandates make transit use more important than ever. Without strong Federal encouragement for transit, single occupant vehicle use will continue to soar and so will our pollution.

Mobility. Successful implementation of the Americans with Disabilities Act depends upon adequate funding for transit. Transit is key to mobility for millions of senior citizens. For people with limited incomes, transit can be the difference between a decent job and unemployment.

Congestion. Transit should be advanced whenever feasible as an alternative to gridlock that threatens our cities and suburbs.

And finally, competitiveness and productivity. Not only does transit offer an alternative to gridlock, every $10 million invested in transit capital generates 770 jobs and $33 million in business revenues. Every $10 million invested in transit operations will support 960 jobs and create $30 million in business revenue.

The stakes could not be higher as Congress establishes a new surface transportation policy. We can no longer pretend that State and local governments can make up for Federal funding cuts. Public transit needs more Federal funding for both capital and operating costs. A strong Federal program will enhance energy independence, improve air quality, expand the mobility options of all citizens, reduce gridlock, and make Americans more productive and competitive.

Our detailed proposal is included in the written submission that you referred to, but let me elaborate just a moment on a few key points.

Back to the funding levels. In the past ten years, Federal transit funding has been slashed in half. We urge Congress first to restore what has been lost and then to increase funding to serve the growing American economy. We applaud the leadership of your committee and the subcommittee for the five-year $34.5 billion transit proposal.

Relative to funding sources, currently transit is funded from both the Mass Transit Account and from General Fund Revenues. The Administration proposes to eliminate General Fund support for transit. APTA agrees with your leadership that the Trust Fund balance should be spent down, and we appreciate your recognition that continued General Fund support is absolutely essential as well.

And there needs to be a balance. There should be an equal cost sharing formula for highways and transit. The Administration's proposal would provide much higher Federal shares for highways than for transit, thus creating further incentives to build highways

instead of transit. APTA proposes to eliminate modal biases and allow State and local governments to make objective decisions about transportation investments. We strongly oppose "alternatives analysis" when they are applied only to transit. There should be a single decision process that employs the appropriate level of analysis for choosing highway or transit investments.

And finally, flexibility. Flexibility is desirable, but becomes operable only if certain conditions are met, such as the assurance of equal access to both and State and Federal funding, comparable matching ratios, a single decision process. Further, flexibility is not relevant or even desirable if it threatens maintenance of existing systems, be they transit or highways.

Once again, we applaud your committee's boldness in identifying higher transportation investment targets. Program structure improvements as suggested by the flexible investment concept, as an example, can only be achieved when program levels are increased. The higher levels proposed by your committee offer the dual benefit of needed funding and structural advancement.

That concludes my brief remarks. The next representative from the industry is Vickie Shaffer, the general manager of Tri-State Transit Authority from Huntington, West Virginia.

Ms. SHAFFER. Mr. Chairman and subcommittee members, in addition to serving as general manager of TTA in Huntington, I also have the good fortune to be on APTA's Legislative Committee, their Small Operations Steering Committee, and I am the State delegate for the Community Transportation Association of America (CTAA).

Public transit is a vital service and an important public policy issue in small urban communities as well as rural America. I am here today to sort of present that side of the story.

Let me praise my Congressman, Nick Joe Rahall of West Virginia, first of all, for his introduction of H.R. 1079, the Mobility Assistance Act of 1991. Mr. Rahall's bill adopts many of the recommendations of the Community Transportation Association of America and goes to the heart of the issues most important to transit in small urban and rural America. I support both H.R. 1079 and the totals of the APTA reauthorization proposals. In contrast to the Administration's proposals, both APTA and CTAA would restore mass transit to its proper priority in your plans to reinvest in the American infrastructure.

Six points are particularly important to small operators.

First, section 9 and section 18, funding for capital and operating assistance to small urban and rural transit systems, must be increased. At the very least, the historic cuts in mass transit funding must be restored to ensure that service is not lost.

We must reinvest in our infrastructure. We must reach out to rural America and provide transportation where none exists today. Mass transit is our best hope for ensuring that these folks have jobs, adequate medical care, and participation in the social fabric of these rural communities. In small urban and rural America, we are not fighting congestion. We are fighting isolation.

Second, operating assistance. Large and small operators do not exist without it. All the capital investment over the years in our buses and our trains and our stations and our garages is without

merit if we park the trains and we park the buses. Operating assistance is your capital investment insurance policy.

At TTA in Huntington, Federal operating assistance today meets one-quarter of our operating expenses. We estimate that the Administration's proposal would reduce operating assistance to 4 percent or less of our budget. TTA would not be there long after that.

Third, flexibility. We're worried about this flexibility business. It may very well have a role in larger urban areas, as so eloquently represented by New York City. But if the smaller transit systems of this country are forced to compete with the highway interests, we'll lose every time. We would like to see this committee create a threshold that would exempt small urban and rural systems from flexibility. We won't ever get any of the money that is needed for highways and bridges. We need you to make sure that the highway fox stays out of our hen house.

Fourth, designated recipient status. Along with the mayors of this country, transit operators in urban areas under 200,000 population urge you to retain our status as direct recipients of Federal grants. The current law works and it should be retained. It ain't broke, don't fix it.

Five, please don't give the governors the authority to distribute section 9, section 18, and section 16(b)(2) funds as if they were all one pot or a block grant. The goals of your Federal program will wash out if such a process is approved.

Six, there are many small operators providing service in large urban areas today. They must comply with Federal requirements that apply to the large transit systems in that area, however burdensome those regulations may be. Please be sure to consider the difference between the two as you promulgate your policy initiatives.

Our local constituents in Huntington, West Virginia have clearly expressed support for mass transit. It is very important to a community that has overwhelmingly approved dedicated property taxes for TTA in five elections since 1982. We cannot ask them for more money. Urban transit receives no State operating assistance in West Virginia. That isn't going to change in the near future. Many small operators face the same state and local fiscal constraints when we evaluate the shell game that the Administration's proposes as a mass transit policy.

Bus service, mass transit, has a vital and legitimate role to play in the economic and social fabric that we weave for our smaller urban and rural communities. We are depending on you to tailor a suit that also fits the little guys.

I thank you very much for this opportunity.

Mr. DAHMS. Mr. Chairman, our next speaker is David Turney, from Mark IV Transportation Products, Plano, Texas.

Mr. TURNEY. Mr. Chairman, I am David Turney, group executive of Mark IV Transportation Products, a major operating segment of Mark IV Industries, Inc. Mark IV is a $1.2 billion New York Stock Exchange public company in the Fortune 500. My role in APTA is that of vice president of the Associate Members. I am chairman of the Associate Member part of APTA.

APTA has more than 500 associate members. Associate members are the suppliers of the goods, the services, and the equipment that

enable the public sector to provide the mobility to the public of this country.

Associates have member companies in most States in the U.S. and in foreign countries. Tens of thousands of employees are involved. My own company has major business operations or outlets in seven states, Europe, and Japan. Your actions on reauthorization will have a direct economic impact on this Nation through the associate members.

It is a pleasure and a privilege to appear before this vital subcommittee. I take special note on the honor of addressing a subcommittee including the honorable Greg Laughlin and Pete Geren from my great State of Texas, and also the distinguished John Paul Hammerschmidt, who has roots in the great State of Arkansas which neighbor and mirror my own roots and family.

As a private sector operating person in this country, I am upset over the continual bashing that American industry has taken over productivity. A well-kept secret is the fact that our industry is shipping products all over the world where we have a fair, free, and open market in which to do so. But that is seriously at risk, Mr. Chairman. You and this subcommittee hold the keys to helping us deal with that risk. People sitting in traffic jams instead of efficiently moving to work constitutes a very dangerous and rapidly increasing threat to productivity in this Nation. If people can't get to work with reasonable time and effort, how on earth can they possibly be productive.

The cost of congestion was $9 billion in 1984. It will exceed $50 billion in the year 2005—that is, unless we legislate into existence an innovative transit reauthorization bill like that advocated by APTA. Every bus full of passengers takes 40 cars off the streets; one rail car vehicle eliminates over 75.

Give us a good transit bill and we will give you industrial productivity gains. Over 70 percent of our U.S. population lives in areas where the air quality fails to meet the minimum health standards set here in Washington. That condition is growing worse despite more complex and costly gadgets to control the tailpipe emissions. We have to increase the average number of people travelling per vehicle if we are serious about dealing with that problem.

Some areas of our country are facing restrictions on use of the automobile—maybe even alternate days, or days in which restriction might even be a prohibition of use of the automobile. When that happens, a public revolt is going to occur as people realize that we have allowed the paving of America for automobile use to paint us into a corner so filled with pollution that we can't breath. When you work for a reauthorization bill similar to what APTA has advocated, you not only help us increase productivity, you also help us improve the environment.

Transit inventories and investments are a bargain. Major urban highways can cost $100 to $200 million per mile. Busways, to move high volumes of people, cost one-tenth of that amount. Even heavy rail can cost less. On top of that, every dollar invested in transit helps solve the problems of pollution, congestion, productivity, mobility, and dependence on foreign oil. That's a bargain. Tell me,

where else can one dollar invested apply so simultaneously to touch all of those problem areas?

Let me briefly mention the Buy America provisions of the present law. We urge you to leave it as is. The changes enacted in 1987 only recently passed the rulemaking. We need time with the present Buy America provisions before we consider further changes. And there is still a large percentage of the world out there where the markets are simply not open to our products thanks to discriminatory trade practices.

The present law levels the playing field. I urge you to leave it as it is. The Administration's proposal to selectively waive the statute with respect to certain countries is just not acceptable to private industry. I don't want the future of my company being traded like a pawn by the Administration.

APTA associate members strongly support a reauthorization program in a $34-$40 billion range, as already proposed by the leadership of this committee and by APTA. Lower funding will not allow us to do our job. And funding has to also have—and this is a very important, Mr. Chairman—a much higher degree of stability and predictability than in the past. This cut-it-every-year mentality of past administrations sends the wrong signals to corporate America. It sends the signals that transit is not the place for private investment. Give us a $34-40 billion program and reauthorization, give us stability and predictability, and vital private sector dollars will gravitate to transit to help the public dollars provide the public with mobility.

Again, I want to impress on you that I am deeply honored to have this opportunity to address this distinguished subcommittee. I am at your disposal. Thank you.

Mr. DAHMS. Mr. Chairman, the next testimony will be by New Jersey Transit executive director, Shirley DeLibero.

Ms. DELIBERO. Thank you, Mr. Chairman and my Congressman Roe and members of the committee for allowing me testify today. I am Shirley DeLibero, the executive director of the New Jersey Transit Corporation. New Jersey Transit is New Jersey's Statewide public transportation agency which provides commuter rail, light rail, commuter bus, and local bus service to approximately 400,000 daily riders.

And effective and efficient mass transportation is essential in New Jersey and the Nation if we are to sustain economic development, improve air quality, and reduce foreign oil dependence. New Jersey, like many other States, is confronting with traffic congestion and air pollution problems that threaten our overall quality of life.

Governor Florio and other State officials recognize that a stable and expanded mass transit system is the keystone to promoting mobility and reducing the dependency of the single occupant vehicle. Governor Florio, in his State fiscal year 1992 budget request, has provided sufficient funds to hold fares at New Jersey Transit at current levels. In addition, his budget recommends approximately $200 million in State capital assistance, which is a 300 percent increase compared to fiscal year 1988.

Our efforts in New Jersey will go for naught unless the Federal commitment to mass transit is increased. APTA's reauthorization

proposal builds on the existing program to ensure that the Federal role is strengthened, and that transit will be a full partner in the intermodal transportation system that we need in the post-Interstate era. In sharp contrast, the Administration's proposal would undermine the ability to develop a comprehensive and intermodal transportation system since mass transportation would be underfunded and the resources are not there to address the most urgent mobility needs of this Nation.

APTA proposes that the Section 3 program continue to provide funds for fixed guideway, rail modernization, and bus needs. In contrast, the Administration proposal would eliminate Section 3 bus program, transfer the rail modernization element to the Section 9, and cap new starts at $300 million in the first two years, $380 million for the next two years, and $400 million in fiscal year 1996.

We oppose this drastic revision of the Section 3 program. It grossly underestimates the need for new start, rail modernization, and bus programs. I can tell this committee that the Administration's proposal would severely curtail New Jersey's ability to maintain its bus system and, with the limitation placed on new starts, would seriously curtail New Jersey's ability to address emerging mobility needs within the growth areas of the State.

As it concerns rail modernization, APTA's proposal is designed to better accommodate the needs of the eight historic rail systems than does the Administration's proposal. The APTA also recognizes the need to address the rehabilitation needs of new systems over the coming years. The Administration's proposal would significantly hurt the older rail systems' ability to eliminate deferred maintenance backlogs and return to a state of good repair. It would also come at a time when older rail systems must spend millions of dollars to meet the Americans with Disabilities Act mandates.

APTA proposes to retain the existing Section 9 formula program at even higher funding levels. We continue operating assistance to all transit systems.

It is hard to imagine a more counterproductive policy than the Administration proposal to eliminate operating assistance for urban areas with more than one million people, the people who really need transit. This would require fare increases or service reductions in the very places where pollution, congestion, and gridlock are the most serious.

For example, the elimination of $35 million in operating assistance to New Jersey Transit would result in a 17 percent fare increase. More than 8.5 million additional auto trips would be made on New Jersey highways as a result of this fare increase. What this would mean for New Jersey is more pollution, more congestion, and more foreign oil consumption. This increased pollution would occur at a time when New Jersey is struggling to meet Federally established clean air mandates.

Although the $35 million in Federal operating assistance is a small share of our budget, approximately 6 percent, it is crucial because without it we will have to increase fares or reduce services, something that our Governor has tried very hard to avoid this year. It would come at a time when the State is hard-pressed to de-

velop an air quality plan to ensure compliance with the Clean Air Act.

Federal operating assistance for all transit systems is essential to maintain and operate the Nation's transit infrastructure. APTA's proposal is designed to ensure that transit can fulfill its role in achieving national goals for cleaning up the air, enhancing mobility for all citizens, reducing congestion, saving energy, and improving productivity.

There is one point that I would certainly like to bring up, and I think it says it all. If you look at the highway bill and you look at the transit bill, the five-year transit appropriation, the total amount of dollars is equal to 80 percent of one year, 1996, highway dollar allocation. I think that says it all.

In conclusion, I would like to say that APTA's proposal retains the existing Section 3 and Section 9 programs, including operating assistance. We have also included constructive changes that will enable the transit industry to be a vital link in a national transportation system.

This concludes my testimony, and I thank you for the opportunity.

Mr. DAHMS. Mr. Chairman, our next testimony is from Kenneth Gregor, who is the general manager of MARTA, Atlanta, Georgia.

Mr. GREGOR. Mr. Chairman and members of the subcommittee, first permit me to emphasize that the transit industry is not unmindful of the continuing deficit crisis our Nation faces. Before this industry has approached Congress, many of our systems have increased fares, cut staff, reduced service, and frankly taken other actions to get our financial houses in order.

Secondly, history indicates that it is Congress which has provided the leadership and direction to public transit. This has been particularly true in the past ten years and we are grateful.

In the past year, two major pieces of legislation were enacted which significantly impact our industry—the Americans with Disabilities Act, and the Clean Air Act Amendments of 1990.

After struggling with these two bills, the transit industry ultimately embraced them and supported them.

Access to public transit for Americans with disabilities and senior citizens is a significant step in enabling those citizens to have mobility which brings greater access to jobs, church, and other activities. But it will require that rail and lift costs for buses and rail car will approximate one-half billion each year. Paratransit service costs will likely be another billion each year.

As APTA has testified to the Public Works Committee last year, the Americans with Disabilities Act of 1990 will require significant compliance costs for transit.

The Clean Air Act Amendments of 1990, if adequately enforced, will play an essential role in the reduction of air pollution, particularly in our urban-suburban environments. The amendments are predicated on the fact that the surest way to diminish mobil-generated pollution is to reduce the vehicle miles travelled in single occupant vehicles. For instance, when one commuter uses transit, that precludes the emission of 9 pounds of hydrocarbons, 63 pounds of carbon monoxide, 5 pounds of nitrogen oxides, and 1 pound of particulates per year.

We applaud the Clean Air Act Amendments of 1990, but they will also require over $100 million annually for particulate traps and increased fuel costs. Congressional aid is essential.

Also, APTA proposes that 3 percent of the Federal program be set aside for research development, training, and human resources.

In conclusion, we urge you to adopt a program that restores Federal transit funding to where it was ten years ago, $6.5 billion in inflation-adjusted dollars, that maintains essential General Fund support for transit, that preserves operating assistance for all transit operators, that grows over five years so that the transit program reaches $11 billion in the last year, and that gives us a level playing field through equal matching ratios and balance requirements for transit projects and highways.

With your positive response on these points, transit will be a full partner in our Nation's transportation future. Our industry is ready and willing to help our Nation save energy, clean up the air, provide mobility for all citizens, and maintain economic productivity.

Thank you.

Mr. MINETA. Thank you very much, Mr. Gregor, and the other members of the panel, for your fine testimony.

Any other statements, Mr. Dahms?

Mr. DAHMS. Let me just note, Mr. Chairman, that you have heard from a cross-section of representatives of the industry, and we also have in the audience Rick Simonetta, the general manager from Columbus, Ohio; Howard Breen, a board member from Kansas City, Missouri; Howard Gates, a board member from Rochester, New York; Mary Evelyn Bryden, staff, and Tom Fortune, a board member from Orange County, California. The attention you are giving to transit is very much appreciated and we have sort of turned out to show how much we do appreciate it.

Mr. MINETA. Very well. I agree with many of your recommendations regarding the elimination of Federal obstacles to the funding of new start rail projects, such as streamlining the excessively burdensome alternatives analysis process to more closely parallel highway planning. Nonetheless, because the new start program is discretionary in nature, we will need to provide UMTA with some way to rank these projects.

I was wondering how would you assess the relative value of various new start criteria for assessing the merits of new start projects?

Mr. GREGOR. Let me respond from my perspective, Mr. Chairman. I think one of the criteria that ought to be used is local policy and State support for transit. When I say that, I am talking about what willingness on the part of the business community and the governmental community is there to support folks taking transit in contrast to commuting by single occupant vehicles. For instance, if states would be willing to offer employees such incentives as subsidized transit as they are willing to provide for subsidized parking. Items of that nature to get not only as we require now a financial commitment, but a moral commitment in policies established by the State and local governments which are written and ratified and adopted by the governments. That is one of the criteria that I would suggest beside some others.

Mr. MINETA. Any other panelist?

Ms. DELIBERO. I would like to add to what Mr. Gregor said. I think one of the concerns that we have with the way UMTA determines new starts is based on its $10 cost per additional new rider. I think that's a fine criteria, but you have to look at what else is in concert with that. If you continue to have unlimited highway funds, you don't have specific things as the whole municipality planning together so there is restricted parking, then you're never going to build the ridership that warrants the criteria that UMTA uses to acknowledge whether a new start is credible or not. So I think it takes all of that in concert. The more we supply money and allow more to highways, it kind of defeats the transit purpose.

Mr. MINETA. What about the requirement there cannot be more than one project being considered in a corridor. To what extent does that stymie the planning process to give you the ability to look at what you really ought to be doing to try and address the local needs?

Ms. DELIBERO. I can speak on that because we have two projects right now. We are working very closely with UMTA because we now have the Waterfront project in New Jersey and we are also looking at the Newark Growth Connection, which will supply transit from the Newark area to the airport, which may be another one that we'll be coming to UMTA for new start. We feel very strongly that we should not be confined to one project. If two projects makes sense, provide the ridership, and bring the economic growth to the area, we don't think that we should be confined to one project.

The CHAIRMAN. Will the gentleman yield on that point?

Mr. MINETA. Absolutely.

The CHAIRMAN. It just boils my blood. The connection between the pods at Newark Airport are being paid, in the main, by Port Authority. Am I correct on that pretty much? I am talking about the monorail.

Ms. DELIBERO. The circulator in the Airport itself, yes.

The CHAIRMAN. But the ability to be able to make a connection a quarter of a mile—I am thinking by the Budweiser Brewery there—to the Pennsylvania Line, which is the main North-South line on the East Coast, under the present rules we can't do it that way because you are not supposed to have two programs. Which really gets to the point, and you come back to yourself and you say, why should some stupid, idiotic rule that somebody laid down 20 years ago—that's what this new bill is all about—why shouldn't the States be able to make those kind of determinations. I think that's the point that has to be stressed. And I think you are absolutely right. I don't see any artificial—I am taking part of Norman's time, I've got 60 million more questions. But be that as it may, I want to make that point. I think that is a personification of what is wrong in the basic program as we're going.

I thank the Chairman.

Mr. MINETA. One thing, you never have to worry about where the Chairman's thoughts are leading you. But the problem I think, Mr. Chairman, as you allude to, is the fact that that same restriction doesn't apply to highway projects in terms of multiple projects being considered at the same time. So why this kind of an artificial limitation as it relates to mass transit.

I would like to ask the panel why APTA supports the continuation of a bus facilities discretionary program under Section 3 which is substantially higher than the $50 million annually proposed by the Administration. How do you envision that UMTA will allocate these funds, and why would APTA not favor distributing more of these funds by formula?

Ms. DeLibero. Could you repeat that question, please. I'm sorry.

Mr. Mineta. First of all, it relates to the discretionary program under Section 3. I am wondering why you support the continuation of a bus facilities discretionary program under Section 3 which is substantially higher than the Administration's program, and would you consider going to a formula distribution of these funds rather than under the discretionary part as we find it now?

Ms. DeLibero. Actually, we do support it because on the facilities and bus facilities, presently we get roughly $26 million for the buses. As we go on, our concern is that the buses are more sophisticated now. If we go to what is happening in the next—with the new bill—on the fuel, on the changing of the fuel, it looks like we are going to trap oxidizers or compressed natural gas or some other alternative fuel which is going to be a very costly commodity for all the transit properties. The compressed natural gas buses run about $250 million, if that's the way we go. Each fueling station at each one of our facilities, in order to have compressed natural gas, run about $1 million per facility to have fast fueling. I know, I just went through this when I left Dallas and had put together a whole program prior to coming to New Jersey Transit. So it is a very expensive commodity. We would like to keep it separate rather than in the formula. I think it better satisfies the needs of the transit authorities.

Mr. Dahms. Mr. Chairman, I think you've seen there's been some lumpiness in the bus program as well, especially when new maintenance facilities have been required. And further, where the new starts program serves a community that looks to expansion with rail, there needs to be something comparable for growing communities looking for expansion with buses. So it is really a question of those places where there is lumpy needs, they are beyond the formula program, you would need some discretionary program.

Mr. Mineta. Let me ask about this whole issue of distributing rail modernization funds on the basis of historic share versus some other formula, such as rail modernization needs analysis. How would rail modernization funding winners and losers vary under these two formulas?

Mr. Dahms. Well, you're looking at three of us who have been discussing in a friendly manner this issue. I will start with Ken and I'm sure Shirley wants to comment too.

Mr. Gregor. I think from our vantage, and I, of course, represent a new start community, it has been our feeling that the rail mod folks are going to have to work out some arrangement very similar to the new starts where we put together programs and we have to sell our individual programs to Congress and the earmarking process and to UMTA. So we have basically indicated that from our perspective the rail mod folks are simply going to have to work it out like new starts.

Let me defer also to Shirley, who represents I think one of the rail mod cities.

Ms. DELIBERO. We are trying to keep it friendly as we discuss how we're going to allocate the dollars. New Jersey Transit is unique. I get 11 percent whether I go historic share or whether I go formula. So we kind of are in the middle. I think that historic share can be used, but we have to look at the years and parameters. That's one of the things that we're looking at. We don't believe that any of the big 8 that have the rail modernization programs should suffer. I really appreciate, having come up through the ranks through a maintenance background, the need for the infrastructure to continue to improve and to overhaul and to keep our equipment up to speed because if you don't do your maintenance and have these programs, then your operating costs will soar. So we are having some difficulty trying to figure out which way we go, but we believe that this group will look at the fairest and most equitable way of distributing the cost.

Mr. MINETA. Any other thoughts?

Mr. DAHMS. On that issue or——

Mr. MINETA. On that issue.

Mr. DAHMS. I think I just share with Ken and Shirley. The Bay area also has an interest in this and it's a little bit like changing a program absent an increase of funding the hold harmless interest. In this case, the industry, going all the way back to 1981 before the 1982 act, had agreed to the new starts and the rail mod as being distinct and at that time did not anticipate the new starts operators eventually needing the rail mod money. Now some of those operations are getting old and anticipate needing the rail mod money. So the challenge then is how do you start to squeeze those once new systems that are now needing rail mod into it without disadvantaging the older systems. If the numbers can be high enough, it is not a problem; if they can't be high enough, then the industry has something of an internal disagreement. That's why you have probably heard a lot about the question of should it be a formula and, if so, what should the formula be.

Mr. MINETA. Does the increase in Section 3 funding with the transferability increase that to any degree?

Mr. DAHMS. It seems to me that if the numbers could approach the numbers that your committee has been advocating, then some accommodation would probably readily be taken care of.

Mr. MINETA. Thank you.

Mr. Emerson?

Mr. EMERSON. No questions, Mr. Chairman, thank you.

Mr. MINETA. Chairman Roe.

The. CHAIRMAN. I want to thank the panel for excellent testimony. And I want to devote a little time to Vickie Shaffer's observations in the rural area. I think you made a very telling point. Then someone brought up the point of the bias to transit. I don't think we have really defined what we mean by transit. We have created a prejudice in this country that when you start talking about anything other than highways that people have different definitions. So I think we have to redefine. And I give that challenge to you, as far as the organization is concerned. What do we mean by mass transit? What do we mean by public transit? People apply different

connotations, different understandings. Do you understand what I am trying to say?

I think one thing this legislation ought to come back and do, and very clearly, it ought to come back and say, yes, we have highway--nobody is fighting with the highway issue, we need that. But by the same token, the mass movement of people, however we want to define that, is equally as important as the other, and there shouldn't be that relationship. Now why does the Administration come back and insist upon keeping the funding flat, so as to speak, for mass movement of people, I don't know, and particularly in view of the President's speech when he came back in the Joint Session of Congress and made the point that the two most important domestic issues were transportation and energy. If we're going to be able to improve the energy situation, one of the things we ought to be doing is getting our people out of their automobiles, one person automobiles—we've been through that a hundred times—and then be in a position of saying we ought to be using mass transit of any kind that we can think of to achieve that goal. That's the first statement I want to make.

I think we have a challenge trying to raise the horizon of this whole debate. We have got to come back and say to America and to the Congress this is not a debate between highway transportation and people moving in mass vehicles. That isn't the debate at all. You've brought in the issue very clearly and very concisely, you all did, on the point of view of the air pollution issue, the handicapped issue. So there are other criteria that now exists and hopefully that this committee, as we unfold this, will bring the new criteria which Congress created. Congress created those new bills; they created the Clean Air Act, they created the handicapped bill, and so forth. So I would think that the challenge, and I would like you to start to look at that, is how we come back and say there is no longer a debate between "people movers" and "moving people", if I am making any sense to you. And I think we have to just cast that aside once and for all and be done with it. And that goes to the flexibility issue that Chairman Mineta has been speaking to eloquently over the country in the last month at least. If we put the two issues and we say there is one transportation system, it is up to us and our respective States to determine how we wish to apply an element of that transportation system to meet our specific needs. Do I make any sense. We have to raise that whole issue.

It seems to me also, Mr. Turney, you made an extremely important point, in my judgment. You came back and you said, hey, guys, look at a different thing. I am not running a transportation system, per se, but I am called upon as one of the major support organization of the country in this particular field and have X number of people working for me and so many people are dependent upon what we're doing. So basically, what you're really coming back and saying—and this is another point that ought to be made—that if we're talking about the economic dynamics of transportation, we're not just talking about the person that runs the vehicle or the person who collects the tickets, the whole bit; we're talking about a very substantive economic infrastructure that's needed to support this operation. That creates X numbers of jobs, hundreds of thousands of jobs, and capital. So when we start talk-

ing about the mass transit issue in comparative relation to just highways, we're talking about a huge economic segment of the country. Is that a fair statement to make?

Therefore, when we start talking about whether people are paying a nickel more for gasoline—which is one point I want to raise and intend to raise ad infinitum until we get it passed, we're coming back and we're saying, and Norman made this point earlier, that there is no way the funding is going to be made available; there aren't enough resources as presently constituted unless this committee and the Ways and Means Committee and the Congress increases that level. Congress has got to come back and say that you need at least $6 billion. If Congress starts making a decision of providing adequate funding, that is going to change the determination that this committee makes on levels of formulas and so forth and whatever involved. And I think you were answering that point, Ms. Shaffer, when you came back and said if we had more money in the till it would give us chance to balance that arrangement as far as the so-called Big 7 transportation people are involved.

But I want to thank you for indulging me and letting me get that off my mind at the moment. But I do think we should try to raise the debate and no longer divide it. It doesn't exist anymore, let's end that.

Mr. DAHMS. If I might respond just for a moment. The Congressman certainly has picked up on the main thrust of our comments. We may seem a little bit schizophrenic because Mr. Turney makes the point that for transit itself we need to have some level of stability. And there we're looking especially in the Section 9 formula to be increased to make sure that we can maintain the——

The CHAIRMAN. Can I interrupt you?

Mr. DAHMS. Yes, sir.

The CHAIRMAN. One of the mistakes "we" can make, and I use the "plural" not the "royal we", one of the mistakes "we" can make in unfolding this document that is going to direct the transportation system in the future is concentrating too much on formula. If I were running my State and the formula relationship was 90-10, as a Governor of my State, I would have to go for the 90-10 even if it meant building more highways, versus the point of 60-40 on mass transit even though 60-40 on mass transit may be right. We have to raise the level of the debate so we're no longer talking about what they did in the past in percentiles and so forth, because that isn't going to be what the debate should center on. Do I make any sense to you?

Mr. DAHMS. Yes, sir.

The CHAIRMAN. Well, I hope we can start to use some of that.

Mr. DAHMS. All I was saying is that just as in the Interstate System on the highway side there is a commitment to make sure that it is maintained, the transit industry feels strongly that there needs to be a commitment to maintain the system and that the $3 billion level that the Administration offers is so low that it wouldn't even maintain the system much less offer the kind of flexibility that people have been speaking to.

The CHAIRMAN. If the gentleman would forgive me again and yield. We have 250 million people in the country. What's going to happen in the next ten years? Will there be another 20 or 30 mil-

lion people? What are you going to maintain for that? The thesis around here is we have to maintain—no effrontery to you—we have to hold here, we have to hold there. I think the point that Norman made, that why should there be a division between systems of transportation. Why should it be there in the first place. We have got to change the mindset of the Congress and the country. Why should there be a highway system of significant importance—by whose definition? And how does it affect my State? Let me be a little pedantic. How does it affect my State? If you are going to use 65 percent of that money to maintain the Interstate System, then I want to know what is going to happen to the rest of that money or how much of that Interstate System is within my State. Because I'm surely going to be shortchanged on any transportation system in New Jersey if they are going to be maintaining that system and to do that thing. That's assuming that the country is static—there is no growth, there is no change in regional growth, there is no change in port development, there is no change taking place any place at all. Am I making any sense to you?

Mr. DAHMS. Yes, sir.

The CHAIRMAN. So the people have been testifying already today are coming back and saying, yes, but put us in the intermodality issue, put us into focus and make us part of the highways of national significance. So I can see a thing developing here, and rightfully so, that in order to get my port project, my accessibility intermodality approved, I have got to be considered in Highways of National Significance otherwise I am going to have to wait ten years because there is no money in the bill to build it in the first place unless we increase the funds.

Mr. DAHMS. I think transit wants to be part of the growth as well. Certainly, if the numbers can be made large enough on the transit side, that's fine; and if they can't be made large enough on the transit side and the so-called Urban and Rural program can be made large and then flexible so that the transit has access to that when it can be shown that a transit expansion will do the job better than the highway expansion, then certainly that's what we want to do.

The CHAIRMAN. I thank the distinguished Chairman.

Mr. MINETA. I want to follow-up just a minute. I am wondering to what extent has APTA, through the Legislative Committee, approached the Budget Committee in terms of what's going on in the budget resolution. Because every time we turn around we get told you can't do that because of the budget summit agreement, or whatever. So we have sallied forth with our own program in terms of what we requested in amounts. I think to a certain extent we see the handwriting on the wall right now with some of the penciled figures that we have seen on what they are advocating, what the Budget Committee is going to be suggesting for highway and mass transit programs, and they are very, very far short of where we were. As I understand it, the Budget Committee is looking at $4.7 billion at the end of fiscal year 1996; whereas, we were looking at $6.5 at the end of that fiscal year period. That's a big difference. So I am just wondering what you've been hearing from whatever efforts you've been putting forth.

Mr. DAHMS. To begin with, we have been hearing the same thing that you've enunciated. APTA did ask its membership to follow-up immediately with the Budget Committee based on the information that you took to the Budget Committee. In our case, I know from the MTC, we communicated with representatives of the Budget Committee from our region and I believe others around the country have as well. We certainly appreciate the difficulties that can be created if the Budget Committee doesn't come up with some larger numbers.

The CHAIRMAN. Will the gentleman yield?

Mr. MINETA. It's your time, Mr. Chairman.

The CHAIRMAN. There is a shell game here, too, you know. And the shell game goes that because of some supposed agreement Congress made that we would have to have a budget cap, therefore everything stopped in the world. That doesn't make any sense. Because if you are going to be able to provide the resources you people need, you have got to move ahead. Now this committee is faced with a responsibility. And with Norman Mineta and John Paul Hammerschmidt and myself and Bud Shuster, we have said, having nothing to do with partisan politics, we have said to the Budget Committee that we disagree with you. We think you are wrong. Our job is not to fit a transportation system into that budget scheme at all; our job is to produce what is important for the country. And now one closes the circle on that and comes back and says to ourselves, if that's the case, then we're going to need help. It isn't good enough for you to testify—and I am not coming down on you—it is just not good enough to testify. You have got to go back to your respective States and you have got to say "stop it". If you want the money, we have got to get the votes on the floor of that House.

I was particularly impressed with our visitation in the last week out in Oregon, Washington, and California, and was pleasantly surprised on the enormous public support for people movers, for mass transit, in all three of those States. I got to thinking to myself that on the East Coast, as much as we fought for years, as you know Shirley, to keep it going, the people on the West Coast are now determining how that direction should go.

So I would hope—if I may Mr. Chairman, one more moment — is to come back and say to you folks we've got to figure out how we can get the Congress to agree with what we're talking about and we're going to need some votes there. Pardon me for saying it. I'll probably be unpopular tomorrow morning on the floor of the House but too bad, I happen to believe that's true.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much.

Mr. Rahall?

Mr. RAHALL. Thank you, Mr. Chairman.

I have a prepared statement to submit now for the record, and then I would like to have a discussion with this panel.

[Mr. Rahall's prepared statement follows:]

STATEMENT HON. NICK J. RAHALL, II (D-WV)

We have heard, Mr. Chairman, testimony from the experts on the reauthorization of the Urban Mass Transit, or UMTA, Programs.

In holding these hearings, we are recognizing the past, present and future needs of transit-dependent segments of our population, such as the elderly, the low-income, the disabled and the isolated.

As most of you know, I have introduced H.R. 1079, the mobility assistance act, which is intended to provide mobility for those transit-dependent people I have just mentioned.

Welcome all of our expert witnesses today, and especially a most personal welcome to Vickie Shaffer of the Huntington, West Virginia Transit Authority. Vickie is a nationally recognized expert on small urbanized and rural transit needs. I thank her for coming.

I also welcome Connie Garber, who is testifying on behalf of the Community Transportation Association of America, and in her own right is transportation director for the York County Community Action Corporation in Sanford, Maine. Connie is an expert on rural transportation needs throughout the country and will provide us with some details on what rural transit demands of the future are likely to be, and she will have some statistics to back up that need. Welcome Connie.

Mr. Chairman, I will not take up your time with an extended opening statement. I think H.R. 1079 speaks for itself, and I take this opportunity to thank the 12 members of this subcommittee who have cosponsored the bill, along with 20 others, bringing the total of cosponsors to more than 30. I am pleased to be able to say that the Select Committee on Aging is also supporting the Mobility Assistance Act.

My district is, for the most part, rural in nature. Yet 56 percent of rural counties throughout the State of West Virginia are unserved when it comes to public transit.

Briefly, Mr. Chairman, the Mobility Assistance Act will dramatically increase the share of Federal assistance going to nonurbanized areas, as well as for small urbanized areas. Also, it will provide a special program for helping transit authorities to comply with the Americans with Disabilities Act, and it will provide for the coordination of transportation-related social and human services programs in order to better serve the rural elderly, the rural poor, and the low income individuals who make up 42 percent of rural populations.

Not everyone, Mr. Chairman, lives in large or small urbanized areas. They live in rural areas, frequently in isolation, deprived of the opportuntity to visit doctors, go grocery shopping, or get to jobs.

Connie Garber will give us more details on rural transit needs in her testimony, as Vickie Shaffer has. I believe that others testifying here today are prepared to give us their views of H.R. 1079 as well.

The Mobility Assistance Act was carefully crafted, Mr. Chairman. It has as its orginal goal one that would expand and improve transit opportunities for the disenfranchised who live in rural and small urban areas. We are at a crossroads this year in the reauthorization of transportation programs, where we can gear up for the 21st century by bringing transit into the 20th century. It is time to bring all our populations into the mainstream of society by allowing them to travel freely and easily, with the knowledge that they will have every chance to move about in their communities and beyond.

I thank the chair.

Mr. RAHALL. I would just like to personally welcome Vickie Shaffer from the Tri-State Transit Authority in Huntington, West Virginia. She is an expert, as is all the panel, I might add, from their testimony here today, in small urbanized and rural transit needs. I understand, although I missed her testimony because of a lunch with Secretary of Interior Lujan, that she did speak about the Mobility Assistance Act and I appreciate the support that's been expressed for this legislation.

I also want to associate myself with the points that the Chairman of the full Committee, Mr. Roe, was making. His efforts in all of these hearings to raise this level of debate are to be commended. He has certainly got the proper focus, as has Chairman Mineta, on the entire horizon, as Chairman Roe likes to refer to it, of our needs in this area and all of our transportation needs.

If the Chairman would excuse me, I would like to get parochial, as you might call it, for just a very brief moment and just mention one fact; 56 percent of rural counties throughout my home State of

West Virginia are for the most part unserved when it comes to public transit. We are trying to address the needs of our low income, the needs of disabled, the needs of our isolated, the transportation needs of our country, through many programs that Congress did create, as Chairman Roe has said. And I think this panel has addressed the past, the present and the future needs of our transit-dependent segments of our population, and I want to commend them for the way they have presented that testimony today.

Vickie, if I might ask you a specific question. As I understand in your testimony you talked about the flexibility that the Administration calls for in their highway proposal. That, of course, could translate into massive transfers of funds from transit programs to highway programs; certainly, it would be allowed under the Administration's provisions. This may be particularly attractive to large, urbanized areas, but my question is what is the effect of this in reality on rural and small urbanized areas nationally? How would it affect West Virginia, for example, to allow this flexibility and the permissiveness of this transfer of funds from transit to highway needs?

Ms. SHAFFER. I think I can speak of West Virginia with a lot of confidence. My colleagues have shared the same kinds of fears with me. In West Virginia, if our Governor is facing and he has a choice between building highways and bridges and building bus garages, we will work at an old garage and there will be a new bridge. This Congress has an intention of addressing a broad need of mass transit, not only in the largest urban areas.

Going back to what Chairman Roe was saying about highways and transit all being one program, we'll lose out to the highway folks. There will be just enough there to keep us running but in terms of improvement, and expansion, and problem-solving, we will solve it with bridges and highways. I would like to see the Section 9 money apportioned to small urban areas, the Section 18 money, the Section 16(b)(2) money absolutely exempted from any transfer to highways and bridges. Get the governors off the hook—don't even give them a choice in the first place—and protect us at the same time.

Mr. RAHALL. So you are saying for the large urbanized areas flexibility might work and allow them that flexibility, but provide an exception for small and rural areas, is that correct?

Ms. SHAFFER. Exactly. I thank you for making that clear. The mid-size, large urban areas, it makes sense. The problem there is more of an intermodal problem than we face in our own areas, and you have got a lot more money in the whole solution.

Mr. RAHALL. As you know, West Virginia pays some $10 million a year into the mass transportation account, yet, we only get, as I understand it, $765,000 back, which is less $1 million and we pay in $10 million.

Ms. SHAFFER. That's it.

Mr. RAHALL. Okay. Should we be giving serious thought then to requiring a minimum return, say 85 percent or 65 percent or whatever other percentage. Could we effectively utilize those dollars in the State if we had that minimum return requirement?

Ms. SHAFFER. Absolutely. We have a big problem with mass transit funding in this day and age. It is paying for operating assistance

in West Virginia. As you well know, we had to go to Section 3 for capital reinvestment, and once you have done that, you don't ever do that again. I think if we had a greater return on the mass transit account funds, either through formula—I would have to assume it would be through formula—or through some re-entitlement, as you say, back to the States, we would have a guaranteed reinvestment program in our facilities and our equipment. And you go back to what Mr. Turney was saying, there would be some broader, perhaps more guaranteed investment that they could look to in terms of long-term planning and what they can afford to put into plant and equipment. The percentage, I would defer to perhaps some greater and further discussion. I would certainly think somewhere between 65 and 85 percent. But, yes, sir, we can sure spend it and we sure have the need for it, no question.

Mr. RAHALL. Let me ask you this, and you may have spoke to this in your testimony which, again, I apologize for having missed, but what are the additional requirements of TTA that are going to come about now because of the ADA?

Ms. SHAFFER. We are going to have to lift equip all our buses. I don't know where we're going to get the money to buy the buses in the first place, much less the $15,000 additional to lift equip them; you may have neither one. Huntington, West Virginia is a non-attainment area in terms of EPA standards. I foresee in the next year or two perhaps one hell of a demand on that transit system and no increased funds to meet it. I don't know what that may come down to in Huntington. But I am particularly concerned about ADA. I want to do a good job with that and we are going to have a paratransit requirement, new equipment requirement, lift requirement. I want to get those people out. I think what we have found with our dollar ride in Huntington, that's been so neat, is that when you provide the transportation, suddenly all those handicapped people that didn't need it come out, and guess what? They do. That demand is growing on our system and we want to do it right. I am sorry folks, that takes cash. So I hope we will see that opportunity to serve that public.

Mr. RAHALL. Thank you. I didn't mean to exclude any of the other panel. Any other member of the panel wish to comment?

Mr. DAHMS. There is one concern. Just as flexibility probably works in the medium and larger areas and not as well in the smaller areas, so that has to be taken into account; so must we concern ourselves with whether we just look at the penny for transit from the 1982 act and whether it is distributed across all States, or whether we look at the whole gas tax number of 9 cents and how it is distributed across the States. From the transit point of view, I think we need to call attention to looking at the whole 9 cents as opposed to the 1 penny.

The CHAIRMAN. Will the gentleman yield?

Mr. RAHALL. Sure.

The CHAIRMAN. You are bringing some light here. You make a very good point. I personally, and now only speak for myself, have been reticent to jump into any tidying up of the bill in the sense of having like four accounts instead of seven or nine or twelve. We talk about flexibility in a much broader sense, in the sense of between mass transit, per se, for want of a better phraseology, and

the highway aspect of it. But what you are coming back and saying, if I am hearing you correctly, if you let that broad interpretation just stand unto itself and then you were to vitiate the specific matching programs for rural, that the rural people would be done in at that point. I think you have got a good point there. So fundamentally the relationship between flexibility now is drawn as it relates to the smaller programs, such as the rural program, you would have to keep that into focus so you would have "the flexibility," otherwise the smaller towns and communities and cities could be done in at the pass as far as funding is concerned because they have to come directly from the State otherwise. Point is well taken.

Mr. MINETA. One of the things that I detect in the bill that the Administration has put forward is the fact that they look at Federal, State, and local government, and anything that is going to go to local—whether it is general purpose government or specialty government—is going to go through the State. I think someone figures down there, whoever is making these domestic policy decisions, that Federal talks to State, and State talks to cities and local transit agencies. My experience, as I said earlier, was that cities are creations of State Government and so are specialty districts, but after that you get treated like illegitimate children and no one wants to deal with parentage. So here in this instance we are now dealing with a highway-mass transit bill where the money is going to be going from the Federal level to a governor, who then is going to allocate resources down to the city government, county government, or to a transit district. To me, that's just ludicrous to think of it in terms of stepping down in each of those instances.

And you see this I think also being reflected in what the Administration is talking about with Community Development Block Grant funds; that that $25 billion program will go to the governors. Now you are hearing the reaction of the National League of Cities, the U.S. Conference of Mayors, and the National Association of County Officials saying absolutely not, don't let CDBG go to the governors first before they get filtered down to local government. And I think that same template is being used here in terms of highway and transit funding. We really have to take a look at what is being done.

Again, let me thank all of you very, very much for your wonderful testimony and for the work of the Legislative Committee and the various subunits as they relate to Federal funding. You've been a very vital part of this total picture and an important part because of the role you played. So again, let me thank all of you for taking time from your own busy schedules to be part of this important dialogue as we try to put together this legislation. I appreciate it very, very much.

[Mr. Dahms' prepared statement appears on page 674.]

[Ms. Shaffer's prepared statement appears on page 954.]

[Mr. Turney's prepared statement appears on page 974.]

[Ms. DeLibero's prepared statement appears on page 713.]

[Mr. Gregor's prepared statement appears on page 741.]

Mr. MINETA. At this time the subcommittee will take a thirty minute break and we will reconvene at 2:45 p.m.

[Recess.]

Mr. MINETA. The subcommittee will please come to order.

At this time I would like to call forward a panel made up of Transit NOW: Bruce M. Fried, executive director, America's Coalition for Transit NOW; Carol Bellamy, managing director of Bear, Stearns and Company, Inc.; and Steve Heminger, vice president for Transportation, Bay Area Council.

It's good to have you here. Your testimony will be made a part of the record.

Mr. Fried.

**TESTIMONY OF BRUCE M. FRIED, EXECUTIVE DIRECTOR, AMERICA'S COALITION FOR TRANSIT NOW; CAROL BELLAMY, MANAGING DIRECTOR, BEAR, STEARNS & CO. INC.; AND STEVE HEMINGER, VICE PRESIDENT FOR TRANSPORTATION, BAY AREA COUNCIL**

Mr. FRIED. Just by way of introductions, Mr. Chairman, first let me express the appreciation of the Transit NOW Coalition to the Chairman and the committee for inviting us to provide some insight into our perspective. The Transit NOW Coalition is an organization comprised of over 140 national and local organizations, investment bankers represented here today, local business chamber organizations, also represented, but also environmentalists, labor organizations, electric utilities, aging groups; a whole host of interests. We are organized and committed to advocating a major increase in Federal funding for public transportation.

I was particularly pleased to be of assistance in constituting a panel that can raise several issues about the importance that public transportation for America's business community. And to that end, I was particularly delighted to be able to bring before the committee Carol Bellamy, who is a managing director with Bear, Stearns and Company, a leading investment banking firm. I'm sure it's well known to the committee that Ms. Bellamy was also the president of the New York City Council and formerly a member of the board of the New York Metropolitan Transportation Authority.

Also with me today is Steve Heminger. Mr. Heminger is the vice-president for Transportation for the Bay Area Council, which is a business organization made up of several hundred businesses from throughout the San Francisco Bay area.

Mr. Chairman, at this point I'd like to turn the microphone over to Miss Bellamy. I just note that attached to my statement was a list of Transit NOW organizations and a brief statement about the position the Coalition has taken with regard to reauthorization of the Surface Transportation Act. I'll be happy to answer questions after her testimony.

Mr. MINETA. That's great. Miss Bellamy, if you would go ahead, please.

Miss BELLAMY. Mr. Chairman, I appreciate this opportunity. As first indicated, I come wearing my hat as a member of the private sector and as a daily commuter on public transit to my business. I have had the opportunity in a past life to serve more directly with public transit as a board member for eight years of New York's Metropolitan Transportation Authority. You're going to be hearing later from our good new chairman Peter Stangl, and so I just mention that in passing.

My focus today, the focus of my comments will be the role that public transportation can play in addressing some of the crucial issues that our Nation faces from an economic perspective, and the importance of increasing, quite substantially, the investment by the Federal Government in the Nation's public transit infrastructure. More specifically, I'd like to touch on three points: the issue of productivity in this Nation, the issue of the balance of trade deficit, and, finally, the issue of our ability to compete in a one world global economy.

First, let me talk about something that as an investment banker I hope I know something about and that is investment. Our Nation's economic viability, it's competitiveness, and indeed it's productivity are jeopardized by our failure to invest in our infrastructure needs. You've had many numbers thrown at you, I'll just use one. In the last decade, Federal funding for public transit has declined by 50 percent. What does this mean? Perhaps the best known observer and researcher from the private sector, formerly associated with the Chicago Federal Reserve and now a leading scholar on the issue of the relationship of investment as it applies to productivity and economic issues, is David Ashauer. I would like to just offer two quotes from his work. Back in November, 1989, Professor Ashauer reported that 60 percent of the productivity slump in the United States can be attributed to the neglect of our poor infrastructure, pointing at public transit as key to that poor infrastructure. And more recently an article in the Wall Street Journal in March of 1990 he pointed out, "If public sector capital accumulation fails to keep pace with private sector capital accumulation, it can be expected that the rate of return to private capital will suffer, private investment will be depressed and private sector productivity growth will stagnate."

The bottom line is that in this Nation the investment in capital infrastructure by the Federal Government has been going down dramatically. Contrast that if you will with our competitors in this world. The level of investment in transportation infrastructure formation in Europe, for example, is simply astounding. Business Week reported about a year ago Spain's investment of $22 billion in a national rail network, West Germany's investment in an intercity high speed rail network, the Scandinavian countries are building Scanlink, which is a rail and road system connect, Switzerland is building the trans-Alpine rail tunnels and, of course the famous British and French "Channel". If I can jump from that part of the country to Japan, a 5.1 percent investment in public facilities by Japan equals a 3.1 percent annual productivity growth. Contrast that if you will with our Nation with a .3 percent investment in public facilities yielding a .6 percent annual productivity growth. Quite simply, America's chief competitors and our closest allies make significantly greater use of transit and they make a larger commitment to capital formation which encompasses transit.

Mr. Chairman, while obviously we in the private sector believe it is important to be attentive to the Federal budget deficit, we believe as well that a thoughtful policy of investment in public transit infrastructure will have significant benefit for the Federal budget and, indeed, in the long and short-term for the Nation's economic health.

Let me touch on two other issues, one of which has been touched on today. First, the issue of productivity. America's productivity is being severely hampered by the growing crisis in traffic congestion. It's been estimated that travel delays in the Nation's largest urbanized areas now cause 2 billion hours of time to be lost annually. To go to your State, Mr. Chairman, urban congestion in California results in $2 million a day of lost productivity. Closer to home here, on Washington's Capital Beltway, congestion costs employers $120 million in lost productivity each year. These are present figures. It's estimated that by early next century, delays are likely to be tremendously greater than they are today. Over the next 20 years, travel in urban and suburban areas, where more that half of our population resides, is projected to increase by more than 400 percent on freeways and more that 200 percent on other roads.

Productivity is not only affected solely by congestion. Workers who fight traffic experience significantly more stress than their colleagues who use transit. As an example, I would use the Long Island Expressway, otherwise known as the Long Island Distressway by those of us who are New Yorkers, to substantiate that. The negative impact of stress on workers' productivity and their health and absenteeism has been well documented. The point, Mr. Chairman, is that our Nation's productivity will continue to suffer unless congestion is significantly reduced. Public transportation and ride sharing services both offer the greatest opportunity to reduce congestion by increasing vehicle occupancy and by reducing the number of vehicle miles traveled.

Let me now turn to a point that I don't think has been touched on that much today and that is our trade deficit and relationship with energy and public transportation. I need not tell you, obviously, or any of the Members of Congress, that the Nation continues to suffer from deficits in international trading. In 1990, our trading deficit totaled $103 billion. Any analysis of this continuing trade deficit quickly reveals that the cost of imported energy, nearly all of which is oil, accounts for better than 40 percent of the trade deficit. Indeed, the United States imports more than half of the oil that we consume today. And a recent study by the Department of Energy suggests that by the year 2020, if there are no changes, it could be closer to 80 percent. We also know that transportation accounts for better that 65 percent of our nation's petroleum use. If we are to reduce our reliance on Federal oil suppliers, and thus reduce a major component of our foreign trade deficit, not to mention other problems created by our reliance on foreign oil suppliers, then we must reduce the consumption of oil for transportation purposes.

Increasing the efficiency of automobiles alone is not going to be enough to achieve a larger objective. Increasing average vehicle occupancy and reducing vehicle miles traveled must also be a key strategy in reducing our dependence on foreign energy supplies and improving our foreign trade balance. A recent National Energy Strategy report, released by the Administration mind you, points out this issue quite clearly, and I quote, "Studies and demonstration projects have consistently shown that mass transportation, car pools, van pools, and HOV lanes are the quickest, cheapest ways to improve transportation energy use and reduce commuter conges-

tion." Or to give again another simple example, during a single year a single transit bus rider saves over 100 gallons of fuel on simply a 5 mile daily commute.

Mr. Chairman, I applaud the leadership that you and your colleagues on the Surface Transportation Subcommittee are providing in recognizing transit's economic value to our Nation, in particular the five year transit funding recommendation that you've discussed earlier today that the committee made in it's submission of it's views and estimates to the Budget Committee. I'm here to tell you that our Nation's business community recognizes the important role that public transportation plays in our economy and urges the Congress to recognize this role by substantially increasing their investment in public transportation. And if I might say again, as somebody who comments on investment, this is one investment that I can assure you will result in increased returns.

Again, I thank you very much for the opportunity to appear before you today.

Mr. MINETA. Mr. Heminger, please.

Mr. HEMINGER. Mr. Chairman, my name is Steve Heminger, I'm vice president of Transportation for the Bay Area Council.

Miss Bellamy has touched on the importance of mass transit from a national business and economic perspective. I'd like to take a run at the same set of issues from a regional perspective from one of the fastest growing and largest regions in the country, the San Francisco Bay area in California. The Bay Area Council is a regional public affairs organization sponsored by over 250 major businesses in the San Francisco Bay area. We rarely become involved in Federal policy or legislation and then only under extraordinary circumstances. The first post-Interstate reauthorization of the Surface Transportation Assistance Act is just such an extraordinary occasion. We are also pleased to be a member of the National Transit NOW coalition and we're a proud sponsor of Transit NOW's Western Region Mobility Conference in February in San Jose, which you, Mr. Chairman, attended.

Each year the Bay Area Council conducts a regional poll to determine which problems most concern Bay area residents. This year, for the eighth year in a row, transportation was named as the region's number one problem. This longstanding public perception is firmly rooted in reality. A recent national research study by the Texas Transportation Institute ranked our street and highway network as the second most congested in the country. Traffic congestion also inflicts a terrible price on our region and its economy. Bay area residents are delayed in traffic nearly 100 million hours each year which is equal to 15 percent of the total day for the affected travelers. The economic value of this lost time exceeds $1.3 billion annually. Traffic congestion has forced many Bay Area corporations to relocate from central city areas to the suburbs and the outlying areas, which has caused a whole new set of transportation dilemmas. Still other companies have left the Bay Area all together. Expanded public transit is no cure-all for our region's mobility crisis, but without more and better buses and trains we don't stand a chance. Adequate funding for public transportation also is a critical component in the Bay Area's efforts to comply with Federal and State air quality mandates. The California Clean Air Act,

which is much stricter than it's Federal counterpart, will soon require thousands of employers in our region to institute trip reduction programs to discourage solo commuting by their employees. Business can and should encourage their employees to car pool and take public transit. I would make a plug here by saying that Congress could make that job a lot easier by enacting H.R. 1145 and S. 26, which would increase the allowable tax exempt fringe benefit for public transportation from $15 dollars to $60. But private employers cannot extend light rail lines or build HOV lanes, nor for that matter can our State and local governments unless Federal funds continue to flow to the Bay Area and other urban areas in the Nation. We do not, however, seek a Federal handout. Rather the Bay Area Council favors a continuation of the traditional Local/State/Federal partnership in transportation funding.

You should know, moreover, that your local and State partners in California have more than kept their part of the bargain. The chart attached to my testimony demonstrates the tremendous local and State commitment to public transit funding in the San Francisco Bay area, and you've heard earlier in the day from other Members of Congress and others who have testified to similar local commitments and State commitments throughout the country. Voters in our five largest Bay Area counties have approved a full 1 percent in additional sales tax to fund transportation programs and improvements. Last year, California voters approved a 100 percent increase in the State gasoline tax for transportation. In fact, our local and State resources have enabled the Bay Area to reach consensus on a $3.5 billion rail transit extension program that will seek less than 30 percent of total costs in Federal funding.

In espousing flexibility in Federal transportation funding, the Administration proposal certainly heads in the right direction, but it does not go far enough. What flexibility do local officials have if they must put up only 10 to 25 percent of the cost for a highway project but as much as 50 percent of the cost of a new transit line? What flexibility do they have if 100 percent of Federal transit funds are available for highway projects but only 25 to 30 percent of highway funds are available for transit purposes. A model for truly flexible funding is contained in California's gasoline tax package that was adopted last June. The State plan features an innovative flexible congestion relief program that earmarks $3 billion tax proceeds for State highway, local street or mass transit projects, whichever is most effective in reducing congestion in the particular local.

Finally, let me also express, Mr. Chairman, the Bay Area Council's appreciation to you and to Committee Chairman Roe for your leadership to public transportation. Your submission of a $6.7 billion funding mark to the House Budget Committee represented a quantum leap forward. We hope that the Administration and the Congress will work together in good faith, even if it takes longer than 100 days, to complete a reauthorization process worthy of being the first chapter in the Nation's post-Interstate transportation history.

Thank you.

Mr. MINETA. Thank you very much, Steve, for your fine testimony and for your participation today as well as at the February

meeting of the Transit NOW Coalition in San Jose. How do you think that local transit authorities could better coordinate with the business community in order to maximize transit use in urban and suburban areas? As I understand it now, where in the past we've had movement of people from the suburbs into the urban areas in terms of jobs, that it's really now getting to be a two-way street, literally, in that there are many people who live in the urban centers who are commuting out to the suburbs to their jobs. If that's the case, what can we do to get that match to utilize the transit system so that we can do it more efficiently, and where does the public and the private sector really fit in that role?

Mr. HEMINGER. As you know, Mr. Chairman, it's not only a case of what is called the reverse commute, people leaving the central city and going to the suburb for employment, it's also a case, in the Bay area, as I mentioned, of a number of companies relocating to the suburbs in an attempt to be closer to their employees. A lot of commuting now is suburb to suburb. The difficulty with that kind of commuting in terms of congestion and air quality concerns is that that is where transit is least developed and where car pooling and other kinds of techniques are going to be more heavily utilized, at least in the beginning, to comply with congestion relief mandates and air quality mandates.

I think that first of all we need to develop transit infrastructure in the suburban areas of the Bay Area and other urban regions to better serve the nature of the commute as it's been changing. I think we also need to devote more attention to the reverse commuting that's occurring and that you've identified. The private sector certainly has a role to play. The private sector, at least the corporations who have relocated to suburbs as I mentioned, their initial intention was to try to get closer to their employees, which is a noble objective. It's a way of trying to reduce the number of people who are traveling on the most congested corridors. But what has happened is that in doing so they have moved into an area that is very poorly served or not served at all by public transportation and thus have to deal with an area without infrastructure.

I'm sure we'll be full partners with you in seeking the funding and the planning that's needed to provide that infrastructure.

Mr. MINETA. Miss Bellamy, from your perspective is there any kind of a capital problem in terms of the ability of transit districts to get their capital or bonding requirements with what's happening in the marketplace?

Miss BELLAMY. The Tax Reform Act of 1986 obviously made some changes that created a few new wrinkles. But if you take a look at a number of the major transit systems in this country, what you've seen over the last several years is certainly a sophistication in terms of the quality of management and a combination of financing techniques that have been used, not just an increase in bond financing. And, again, perhaps if they want to, the NTA can talk about the service contracts based on legislative appropriation. You see out in California the voters of the State, as you know, saying that they're willing to tax themselves to create a revenue stream that can be utilized for financing. Certainly the market understands the use of financing for a variety of transit purposes. You see a number of States engaged in major transportation programs.

I think the raising of the capital is doable. Obviously, what the market takes a look at is the capacity of the local transportation agency to do that and, therefore, to the extent there remains a financing stream from the Federal Government as well as State and local government, that strengthens the credit that can be used in this case. That is certainly one role that the private sector can play. I think that what's been interesting to see in the last decade is the understanding of the private sector vis a vis public transportation, that it's not just all, if I might and I'm sorry for the pun, a one way street. For the private sector to flourish it needs to be able to move its workers to and from their jobs. It understands the importance of public transportation and it's become a much greater advocate for it, not just solely for purposes of influencing the market.

Mr. MINETA. One of the objectives I think of what we're trying to do is say what will this legislation do to help international competitiveness, our ability to compete, and productivity. What will this legislation do to help economic development by State and local government. In the urban centers, maybe 52 cents may be recovered from the fare box in terms of the operation of the system. On the other hand, in the rural areas it may be 25 cents. Does that impact in terms of the financial community saying, well, we're not going to be looking at the rural needs as closely as we might the urban needs because of that kind of fare recovery. Or do you say okay in the urban we'll require 110 percent-120 percent of coverage but in the rural area we'll have to go to 150 percent of coverage in order to issue a certain level of bonding?

Miss BELLAMY. The coverage requirement changes based upon different locations. An urban area that may be financially weak may require a higher coverage. Also, the private sector has not written off the need for adequate transportation in rural areas. Finally, when you say urban, urban has become very much urban-suburban. It's all come together. So again, I don't want to give you an across-the-board prescription in terms of what the coverage is because that really differs from transit agency and transit property to transit property. But I would say that I think there's an understanding that the development and availability of good public transportation is as important and can be as economically important to an area in a rural area as it is in an urban-suburban area.

Mr. MINETA. Mr Emerson?

Mr. EMERSON. Thank you, Mr. Chairman.

Miss Bellamy, you indicate that Japan, Germany, and Canada enjoy much greater levels of ridership when contrasted with the United States. Do these countries have commuter travel patterns that are similar to the United States, and how do they finance their system?

Miss BELLAMY. I quite honestly can't answer the first part of your question. I'd be glad to do whatever work we need to answer that question, but I would just be answering that off the top of my head.

The second part about what they do outside of the United States, and this is not something that we've just learned, the national capital infusion, or investment if you will, by countries into their transit systems has historically been much bigger than it's been in this

country. And so we're up against a historical trend. At the same time, these other nations have determined that it made good economic sense for them to do that and so that's what we confront. As we are increasingly not competing just one State against another State or one community against another community, but indeed we are competing on a one-world economy nation to nation, a corporate culture across many countries; then the leg up, if you will, that some of the other countries have with their infrastructure in place gives them greater strength in an area that makes it harder for us to compete in in terms of moving goods, in terms of communication, in terms of workers, in terms of being able to attract and keep and maintain and retain workers.

Mr. EMERSON. The Department of Transportation says that roughly 3 percent of the Nation's passenger trips are made on public transit. I'm curious as to what you think, even if we increase transit funding significantly, what could we realistically expect in terms of raising the national rider statistic?

Mr. FRIED. It's quite speculative to guess what the response would be. I think what we know from public opinion research conducted by transit now that a substantial majority of Americans want an option other than driving by themselves in their car. There's a real desire for other choices. The point is that to the degree public transportation is available, dependable, safe, and attractive it becomes an option that can draw people out of driving by themselves. It's going to take resources to make that happen.

Miss BELLAMY. If I might use just two quick examples, if you take a look at what's happened now in the Los Angeles area, when the Blue Line came on. As I understand, they were estimating at this point they would have a ridership of approximately 7,000 or so a day and they're already talking about 20,000 just on the blue line. If you take a look at the Portland, Oregon light rail system you see there was some concern before it came on line what the ridership would be. Now I'm sure we can find a couple of instances in which the ridership has not generated that much enthusiasm. But if you take a look at some of the newer systems, and then indeed if you take a look at some of the older ones that have been going through a renovation over the last several years, as we begin to understand the importance of not only building new systems but maintaining and rehabilitating our existing systems, you see people coming back.

Finally, we see as well an increasing use of public transit by our aging population because they do not have a way to be able to get to, for example, the doctor's office. If we want to maintain our elderly or aging population in their homes rather than having them in institutions, here's another way in which it makes sense from an investment perspective.

Mr. EMERSON. I think there has to be a very intensive reeducation factor in there too. I think we are just so unused to an effective mass transit system that we don't even think about it. We don't even think about it. We don't even consider it in most places in the country. We've got a good one in San Jose. Keep it going.

Mr. FRIED. I was just going to agree with you. Older people who grew up in areas where there were trolleys, such as here in Washington, in Miami, Los Angeles—which is now rebuilding light rail

systems along the same right-of-way that the "red cars" used to use—have a different, more positive view of transit. Older people are predisposed to transit because of that. People of my generation particularly those from non-transit communities, too often think of transit as the way "they" get to where they need to go.

To get back to your first question about commuter travel patterns in other countries—anecdotally, I think the situation in Toronto is instructive. Toronto has recently built a large sports arena with substantial capacity of 50,000-plus. There are 1,000 parking spaces there. There is a direct metro station at the arena. There is an incentive to take transit. The cost of gasoline in real dollar terms, in the United States now is actually less than it was in the 1950s. That is an incentive to drive. Obviously, if you look at Europe and Japan, there is a disincentive to drive by virtue of a much greater cost of gasoline there. By contrast, the cost of public transportation in Europe and Japan is substantially more reasonable and there is an incentive there for people to recognize their own economic self-interest.

Mr. MINETA. Let me thank you, Mr. Fried and Mr. Heminger and Miss Bellamy, for your help. Without a doubt, Transit NOW really has come in to existence at a very opportune time, and I really appreciate the private sector push on this whole issue because it seems to me there are many, many areas in which we are not going to be able to add another lane of highway. We are going to have to do it by getting increased use of transit, getting that one occupant per car, elimination of that kind of an issue. I think our surveys have shown that people are willing to spend 50 percent more in cost and 30 percent more in time if public transit is safe, reliable, and convenient. I think on that score, given what we have done in terms of passing the Clean Air Act and Americans With Disabilities Act, we really are at a crossroads right now where we ought to be emphasizing this shift so that we can move more people and actually move more goods on the roads at the same time. I think it's an opportune time to do it. Transit NOW is really participating at a critical period and I appreciate very much the work that all of you are doing.

Thank you very, very much.

Mr. FRIED. Thank you, Mr. Chairman. We look forward to being of assistance to you.

[Mr. Fried's prepared statement appears on page 730.]

[Miss Bellamy's prepared statement appears on page 666.]

[Mr. Heminger's prepared statement appears on page 745.]

Mr. MINETA. At this time I'd like to call forward a panel made up of Peter Stangl, chairman of the Metropolitan Transportation Authority, State of New York; Alan F. Pegg, general manager of Southern California Rapid Transit District; and Constance Garber, president, Community Transportation Association of America and Transportation director of the York County Community Action Corporation in the great State of Maine.

Peter, would you like to start?

**TESTIMONY OF PETER STANGL, CHAIRMAN, METROPOLITAN TRANSPORTATION AUTHORITY, STATE OF NEW YORK; ALAN F. PEGG, GENERAL MANAGER, SOUTHERN CALIFORNIA RAPID TRANSIT DISTRICT; AND CONSTANCE GARBER, PRESIDENT, COMMUNITY TRANSPORTATION ASSOCIATION OF AMERICA; TRANSPORTATION DIRECTOR, YORK COUNTY COMMUNITY ACTION CORP., ACCOMPANIED BY GEORGE RUCKER, RESEARCH AND POLICY DIRECTOR, COMMUNITY TRANSPORTATION ASSOCIATION OF AMERICA**

Mr. STANGL. Thank you very much for inviting me here today. Let me first tell you a little bit about us. The MTA is best known as the operator of New York City's subways and buses. We also run the two largest commuter railroads in the country, the Long Island RailRoad and the Metro-North Commuter Railroad. We run nine toll-producing bridges and tunnels. Our 13 million person service area covers parts of two States, 14 counties and some 4,000 square miles. We are in essence a large, complex multi-modal transportation network. The common thread that holds our organization is that everything we do revolves around moving people efficiently—not just subway cars, not just buses or trains or cars, but people. That is what I think the Surface Transportation Act should be about, moving people.

Since World War II our love affair with the car has shaped our cities, our government policies, and our spending. Roads have been in and transit has been out. Washington is not really the only problem in this regard. All of us bought into the automobile lifestyle and the end result was to starve public transportation for funds. In New York, the affects of decades of neglect became painfully clear by the late seventies. With a system on the verge of collapse, in 1981 we laid out a long term strategic capital rebuilding program, the largest, I believe, non-Federal public works renewal project in the country's history. We knew this task would take several decades and cost many billions. Today, after nine years, we can see wholesale changes in our services in our infrastructure. Our strategy has wisely, I think, invested Federal dollars to improve transit services in our region; increase our regional and, as some were saying, our international competitiveness, which is very important to us; help clean our air, although we have a long way to go; and reduce our dependence on imported oil.

Eighty percent of our subway cars, ninety percent of our buses, just about all of our commuter rail cars are new or overhauled. Two-thirds of the track in our 700 mile subway system has been replaced. Subway cars now average 30,000 miles between failures; seven or eight years ago they averaged 7,500. In short, we have made a lot of progress and as a result one of the main products has improved and that is our ridership. It has grown significantly in our region over the past seven or eight years. These improvements simply would not have come about, Mr. Chairman, without Federal dollars. They have made up just about one-fourth of the $6 billion that we will invest between 1982 through the end of this calendar year. The fact is that our job is nowhere yet complete. I invite you and the members of your staff and your colleagues. I would love to

take people around the system and show not only what we've done but what remains to be done because there is an awful lot of work.

We also don't come before you today with a tin cup looking to Washington to solve all of our funding problems. We will continue to do our share and we will continue to put our money where our mouth is, but it's no secret we're down here to secure more money for our transit network. We think it's in our interest to do so and we also think it's in the national interest to do so and I'd like to tell you why.

When I first looked at the Administration's proposal, my attention was immediately drawn to its call for substantial funding increases for Highways of National Significance. My first reaction, frankly, was what about us? I submit to you that the MTA is a transit network of national significance, and in fact great national significance, and there have been people who have appeared before you who are also operating systems that are very important. We in New York carry about one-third of all the transit riders in the country at some six million per day. While we understand the need to maintain and improve our region's roads, we are concerned about the ratio of highway funding currently at five-to-one jumping to seven-to-one against transit by fiscal year 1996.

The Administration simply repackages the same highway dominant strategy. It focuses on moving cars, not people. This, despite obvious trends that cry out for a new course of action, and I won't repeat them to you. We've talked about dependence on foreign oil. We've talked about traffic congestion. We've talked about the environment and all of those trends. They all seem to be in the wrong direction. Yet we still pursue the traditional highway solution to problems. Federal policy has fostered the disparity between highways and transit by increasing Federal highway aid while cutting transit aid. Since 1981, highway funding has risen 60 percent while transit has dropped by 30 percent, and that's before inflation. Special tax treatment for automobile allows tax free parking subsidies while transit riders are limited to $15 per month. My colleague from the previous panel pointed out that legislation is in to raise that to $60. That will be helpful. That will become an important marketing tool for us with the business community as well. So we think that's important.

The Administration's proposal does have a few short-term positives for us, but it's underlying principals I think are not good. In fact, it may be disastrous for all public transit providers and customers in the long term. I won't rehash what you have heard from others about the funding details of the UMTA program except to say that while transit dollars remain flat, highway funding soars by 40 percent. And I keep asking why. What little increase in transit capital funding there is comes at the expense of operating assistance and by rolling discretionary money into the formula program. Rather than provide new monies to cover the cost of the Americans with Disabilities Act and the Clean Air Act, it robs Peter to pay Paul by lifting $50 million of the existing funds for such purposes.

Eliminating operating assistance for cities over 1 million means, as you heard from the Mayor this morning, a $93 million cut for the MTA. This at a time when we, along with others, are trying to

cope with growing operating deficits caused, in part, by national recession, ridership declines and shortfalls in dedicated State subsidies. In short, don't eliminate operating assistance.

The proposal also substantially reduces Federal transit matching shares. Highways fare much better. State planners could be forced, I think I recall Congressmen Roe commenting on this this morning, planners could be forced to choose highway dollars over transit simply because they get more money that way. One of the more astounding suggestions in the proposal is the one that rewards higher gas consumption by sending more highway dollars. This would be silly if it weren't also so harmful. And it's particularly bad for New York, my State, the most energy efficient State.

Also, one of the bill's slickest concepts is funding flexibility. This is a difficult thing for me to say because the concept of flexibility sounds great. But as defined in this proposal, it abuses a concept that we and APTA have promoted. All of a State's Federal transit funds can be used on highway projects but only 30 percent of the highway funds can go to transit. We think that's unfair. We support flexible funding, but only after basic transit reinvestment needs are addressed and $3.3 billion only gets us half way there. When we reach an UMTA program level of roughly in the neighborhood that you and the Chairman have proposed, $6.7 billion, then let's talk flexibility. Let's get our basic needs taken care of.

Eliminating General Fund support for transit and switching the funding source to the mass transit account is similar to a shell game. I see that shell game occasionally on Fifth avenue. There is a guy standing up there with the shells and there is never anything under those shells when the people pick it up. That's what's going to happen here. We need to be concerned about that. While we believe in drawing down trust fund balances, we think that its coffers need constant and more substantial replenishment and General Fund support should be continued at least at current levels. If just these steps were taken, the UMTA program could easily be increased to $5.5 billion for fiscal 1992. We'd love to see the $6.7 billion in fiscal year 1992 that Chairman Roe requested from the House Budget Committee last month. This, as I said, gets to approximately the amount that APTA and the Transit 2000 study group identified as being the minimum needed to address current needs nationwide.

But we will never get to that level if we allow, as the proposal suggests, the new nickel per gallon gasoline tax, including the one-half cent for transit, to lapse in fiscal year 1995, one year before this reauthorization bill expires. Is it the intent to save automobile drivers one nickel for each gallon of gasoline? We already have the lowest gas tax by far in the industrialized world. The gas tax, the nickel should stay in affect for the full five years of the reauthorization period and beyond. And in fact, it should be broadened to provide additional revenues for the transit account. How? Well we could start by returning the two and one-half cents that was diverted from the Trust Fund for deficit reduction. That would be a good start. In addition, another nickel per gallon tax would hardly be noticed at the pump. We won't notice it the next time that prices are driven up as a result of some action in the Middle East.

45-155 O—91——20

The one positive aspect of the Administration proposal is that it reauthorizes the Interstate Transfer program at $160 million for the next two fiscal years. We were promised monies from this program in 1985 and we're pleased to see that commitment reaffirmed.

Let me make one final comment, Mr. Chairman, about what I think is an important symbol or message. The Administration proposal drops the word "urban" from UMTA's name. I understand that both UMTA and DOD suggested Federal Mass Transit Administration in line with other DOT agencies such as the Federal Highway Administration, the Federal Aviation Administration, the Federal Railroad Administration. The Administration may have felt that the word "Federal" implied too permanent a role in transit funding and deemed it inappropriate. Speaking on behalf of a transit system of national significance, an ongoing Federal role is not only appropriate, it's essential. We continue to need a Federal mass transit administration that will promote transit as an equal partner in reaching the goals of the national transportation policy.

Finally, let me say that I'm not suggesting that the reauthorization bill ignore other valid transportation needs, but I urge you to craft a bill that balances those needs with those of public transit and one that recognizes transit's vital contribution to obtaining national energy, economic, and environmental goals, and most of all, Mr. Chairman, the goal of moving people. We need your help.

Thank you very much.

Mr. MINETA. Thank you very much. Mr. Pegg.

Mr. PEGG. My name is Alan Pegg. I'm the general manager of the Southern California Rapid Transit District. Chairman Mineta, Congressmen Shuster, members of the subcommittee, it is truly a pleasure to testify before you today.

The reauthorization of the Surface Transportation Assistance Act provides the Congress with the opportunity to set the agenda for transit for the next five years. The Surface Transportation Subcommittee and the entire Public Works and Transportation Committee have shown through the recent proposal on transportation funding levels that you are committed to improving the transportation system of this country with mass transit as a major entity in that improvement.

I'm here to testify about the effects of the Clean Air Act, in particular, on mass transit systems. Every member of the subcommittee has received a copy of a study conducted by the SCRTD on the cost impacts of alternative fuels. A copy of the survey has been presented to the subcommittee to be entered into the record as attachment two. This survey encompassed 18 of the Nation's largest transit districts who collectively operate 22,000 of the 39,000 buses that will be impacted by the Clean Air Act. The results of the survey give us a clearer picture of the costs we face to implement the Act on the Nation's streets. Those cost figures appear on pages four, five and six of attachment two. In general, with regard to those costs, we know that it will cost an average of $190,000 today to purchase one diesel bus. The cost will increase by 7 percent to modify that bus for a particular trap. Add 25 percent for methanol and add 33 percent for every CMG bus. That's a range up to $254,000 per vehicle for compressed natural gas. To replace all 39 thousand

buses in the Nation's transit fleet affected by the Clean Air Act Amendments, the costs will range from $8 billion for particular traps to $9.9 billion for CMG.

Fuel costs. The survey also gives us an idea of the fuel costs of the new technologies. Extrapolated to the estimated 1 billion miles traveled each year by the Nation's fleet, the costs are estimated at $185 million for diesel, $228 million for particular trap, $240 million for CMG and $536 million for methanol. These estimates will be refined as more experience is gained and may also be influenced by market conditions and public policy decisions. Cost estimates for new fueling facilities vary widely depending on municipal codes, environmental regulations, and land acquisition requirements and prices. No national conclusions can be drawn at this point. However, new Federal regulations for underground fuel storage tanks will require significant expenditure of capital funds over the next eight years for all transit properties. For example, existing fuel storage at SCRTD will have to be either replaced or modified to meet these new fuel tank regulations. These costs are estimated to be $1 million per location or approximately $12 million for SCRTD's 12 operating locations.

Based on this information, the SCRTD estimates that it will cost approximately 15 percent more, or $1.05 to $1.15 million per new methanol facility, and a new CMG fueling station will be in the range of 313 percent more or $1.5 to $3.5 million. Reauthorization must contain a guaranteed continuation of operating assistance to the urban areas over 1 million people. These are the areas where the battles of congestion, clean air and accessibility will be hardest fought. Federal assistance is absolutely essential if we are to win this battle. As an example, removing operating assistance from our system would translate into an approximate 25 to 50 cent fare increase and would force a portion of our riders to other modes. If those people went to automobiles at the average occupancy ratio existing today, 3,000 tons of more pollutants would be created, a clear move in the wrong direction by the thrust of the administration proposal.

If operators are to meet the goals of the Clean Air Act as mandated by Congress, then I would strongly urge that language be approved in the reauthorization act that would make additional Federal funds available to offset the incremental cost of meeting the new clean air standards. While we cannot quantify those additional costs today for all transit operators, we at SCRTD know with a growing certainty that they will be significant and we know too from past experience that placing additional burden on the fare box will do precisely what we don't want to do.

Thank you very much for this opportunity to testify.

Mr. MINETA. Thank you very much, Mr. Pegg.

Ms. GARBER. Chairman Mineta, members of the subcommittee, my name is Connie Garber. I'm the transportation director for York County Community Action, Southern Maine. I also have the honor of serving as president of the Community Transportation Association of America. I am accompanied today by Dr. George Rucker, who is CTS's Research and Policy Director.

York County's transportation program, which serves an area of about 1,000 square miles with 18 vehicles, provides about 100,000

trips per year using about 20 different funding sources. Just like many others around the country, we're facing a critical juncture in the provision of community transportation. There are two opposing forces at work. On the demand side, we are seeing phenomenal increases in the number of elderly who cannot drive, the number of physically handicapped, mentally retarded who are being mainstreamed, and those looking for access to training and jobs, and growing numbers of unemployed and working poor without any personal means of transportation.

On the supply side we see the Federal and State Governments either level funding or decreasing their support for transportation services. This is usually in conjunction with more specific contractual targeting of the remaining available dollars most at risk, leaving unserved those not yet in a crisis situation. I know that these problems are not unique to Maine. CTAA's membership of approximately 500 rural, small urban, and specialized transportation agencies raise these issues across the country.

I particularly appreciate the opportunity to appear before you today since it allows me to highlight H.R. 1079, the Mobility Assistance Act of 1991. This is currently sponsored by 30 representatives, including 12 members of this subcommittee. CTAA believes that this is a much needed initiative which provides Congress with the opportunity to make some substantive changes in Federal transit policy and address the demand versus supply issue I've just mentioned. Our whole-hearted support goes to all of the bill's co-sponsors and particularly to Congressman Rahall for his leadership in this effort. CTAA urges you as strongly as we can to make all of the provisions of H.R. 1079 part of the final bill which you send to the full House of Representatives for action.

The most critical issue facing community transportation providers is adequate funding. The Mobility Assistance Act would increase the share of Federal transit assistance going to non-urbanized areas to 7.5 percent. I know that this morning Congressman Roe admonished us all not to deal with percentages but to look at the total transportation system and what we need to do to provide services to people. Yet the historic inequity where current legislation allocating 2.93 percent of formula funds, even including some additional dollars that have been allocated in the appropriation process of recent years, we are still looking at inadequate funding compared to approximately 36 percent of the total population living in areas receiving this minimal level of funding.

These percentages were first written into law at a time when the Section 18 program was less than four years old. No one had a very good fix on what the real level of need was. The initial funding was $75 million. This year, the funding level is $65.4 million for a 13 percent cut in current dollars. Despite this downward funding trend, the network of Section 18 agencies has roughly doubled in the past decade and the number of trips provided has nearly tripled. This was possible because of three things. First, the initial backlog of funding from the start-up years. Second, the availability of transfer funds from the Section 9 program. These two factors allowed actual expenditures in Section 18, between 1985 and 1989, to run 42 percent above the level of appropriation, offsetting to some extent the rising cost and declining appropriations and making it

clear that more Section 18 funding was badly needed. But the carry-over funds have been used up and the opportunity to obtain transfers is declining. The third factor was the postponing of needed capital investment in order to meet growing operating costs. The Section 18 network utilizes over 10,000 vehicles, yet UMTA statistics show that the program is replacing only about one-third of the vehicles yearly that it should be replacing. This means systems must operate with overage vehicles, higher costs, lower reliability and less safety.

The status of rural transit today is grim. Major geographic areas remain unserved and the service that does exist is stretched thin. More than 35 percent of the Nation's non-metropolitan residents live in counties that remain completely unserved by any Section 18 operator. For example, in West Virginia, as Mr. Rahall has pointed out, 56 percent of the rural counties are unserved. In Arkansas, more than two-thirds of the rural counties are unserved. Ohio and Pennsylvania, same story, 56 percent of counties unserved. North Carolina, 61 percent, and Virginia, 72 percent. In assessing rural transit need, we should consider some of the demographics. Section 18 providers report that 39 percent of their riders are elderly. A disproportionate share of the poor are found in rural areas. Section 18 providers estimate that more than 5 percent of their riders use a wheelchair or other mobility device.

The Mobility Assistance Act reflects a conservative set of funding proposals. A funding level of from $140 to $150 million is needed just to maintain the current Section 18 program and, as was eloquently pointed out, maintaining the current program assumes status quo in terms of where this county is and that certainly is not the case. It would take 1.5 to 2 times that level to extend those still minimal services to unserved areas or to restore the program's funding and service level to that available five years ago. That would still leave the mobility resources available to rural people only a fraction of those available to their urban counterparts.

I'd like to briefly discuss two final aspects of the Mobility Assistance Act. One is the Mobility Assistance Program which would earmark a share of the mass transit account funds to help meet the cost of complying with the Americans With Disabilities Act. This does not represent a proposal to put a price tag on the cost of ADA. It reflects a recognition that ADA mandates have to be met and that they will pose some additional cost. It seems appropriate that Federal transit programs share a portion of this increased cost.

The Mobility Assistance Program has another important objective, encouraging and assisting the development and implementation of coordinated transportation arrangements which can increase the effective use of all Federal Transit investments, including those made in connection with social service programs. We heard this morning from Congressman Tom Downey from New York that if Title 3 of the Older Americans Act were tied in with Section 16(b)(2) of the UMTA Act, more could be generated in terms of efficiency and effectiveness. I'd like to offer that there are a lot of opportunities available within the Federal bureaucracy for that kind of coordination, again, looking at transportation as a system rather than isolating one component from the other.

Another pressure on rural mobility comes from the more than 4,000 American communities that have lost intercity bus service in the last 10 years. The State Initiative Block Grant in H.R. 1079 represents a proposal that, as Federal transit funding rises in the years ahead, a modest share of the increase could be set aside as a source of flexible funding. There's my use of the word flexible. I think it's a little different to enable the States to react to pressures like that posed by the decline of intercity bus services and to prevent further isolation of rural America.

Finally, just a closing comment on the Administration's proposal to make highway and transit funds more flexible. I think we've heard from a lot of the people testifying today about the problems with flexibility, particularly Miss Vicki Shaffer when she talked about the issues in her area. I wanted to just add that there is a good purpose for Metropolitan Planning Organizations. They have the ability to bring local priorities to the forefront. However, MPO's do not exist outside of metropolitan areas. Mass transportation does. If you follow through on the Administration's proposal to allow MPO's to make decisions, you are basically leaving the rural areas out of the equation. We have no one advocating for transit rights without any MPO structure in place.

This concludes my statement. Again, on behalf of rural, small urban, and specialized operators, I would urge you to make major provisions of the Mobility Assistance Act a part of the Surface Transportation Act of 1991. Thank you for your time.

Mr. MINETA. Thank you very much, Connie, for your fine statement.

Mr. Stangl, you come with a great deal of experience from having been with Metro North where everyone was knowledgeable of your fine work, so I want to congratulate you on your recent confirmation at MTA, New York. I'm wondering do you have any specific ideas regarding how the subcommittee might reward those urbanized areas which currently have significant transit ridership or significantly increase their transit ridership and would otherwise be penalized under the Administration's highway funding allocation formula?

Mr. STANGL. I think that one of the things that I did mention, and I said it was difficult for me to do that, was to speak against flexibility at this point. The reason is that I think that the money levels are so low that I get very uncomfortable with the idea that the scarce transit dollars that we're getting now could be reduced by having those used for highway purposes. That is one thing that I think would be helpful. The other thing, and as I keep thinking about this and I keep thinking about the formulas. I can't escape coming back to, and this won't surprise you, more money. The reason is very simple. The more money we have, the less we have to fight with each other, the more it brings us together to what I think is a common goal. I know that the latter is an obvious one but that really does go a long towards solving some of the problems that this bill presents.

Mr. MINETA. Should there be any Federal transit funding on an incentive basis perhaps as an alternative to the existing bus and rail incentive which have been proposed to be dropped by the Administration?

Mr. STANGL. Some of that might be helpful. Some of that might relate, for example, to the percentage of costs that are covered by the fare box. Some of that might be related to how we're doing on ridership. Clearly one of our goals ought to be to increase the number of people that we are carrying, get them out of the automobile, and have a positive affect on all of these motherhood issues that we all agree on whether it's congestion, which costs an enormous amount of money, whether its productivity, whether it's clean air. We're a non-attainment area. We haven't been close to achieving our environmental goals since the 1970 act. Those are some examples of things that I sure would like us to try hard to respond to. It so happened that we have a fairly high recovery ratio in New York on the amount of cost that we cover out of the fare box. I think that that might be good for us.

Mr. MINETA. Thank you. I'd like to commend the Southern California Rapid Transit District on putting together the cost impacts of the 1990 Clean Air Act. Are you aware of any study along this line that's been done by UMTA?

Mr. PEGG. We have done a portion of the projects under UMTA funding and have submitted that data to UMTA. I believe that UMTA has supplemented that data by work with other transit properties, yes.

Mr. MINETA. Now I understand that the SCRTD is also exploring the electrifying of a portion of it's fleet. How would the cost of converting to an alternated fueled bus fleet compare to the cost of electrifying SCRTD?

Mr. PEGG. We are in the midpoint of a preliminary study on electrification and our current indication is that with longer lived electric vehicles generate an electric bus can be expected to run 18 years instead of the 12 that we see from a diesel bus. And that with some operating improvements, the long term costs of electric vehicles and alternately fueled vehicles are very similar. At this point we have not finalized the cost study of electric vehicles. We would expect to be wrapping that up this summer.

Mr. MINETA. Miss Garber, in your testimony you state that the Section 18 program is in a capital crisis because transit vehicles are not being replaced when they should be due to the demand on bus replacement funds by current operating costs. Should this subcommittee reduce the amount of Section 18 funds available for operating expenses in order to bring more local operating funds into the program; thereby, more closely balance the capital and operating aspects of section 18? On the other hand, if Section 18 funding is increased, how would this increased funding be allocated between operating and capital expenditures by rural transit operators.

Ms. GARBER. The Section 18 program has had a relatively small percentage of it historically going to capital purposes. I think in 1989, 80 percent of Section 18 funds went to operating costs. Two years earlier, it had been a little bit lower down at 69 percent of the funds going for operating. I know in the State of Maine, almost 100 percent of the section 18 dollars go for operating costs. The reason for that is that it is for many of the operators the only public, non-dedicated funds that we have available to cover operating costs.

In terms of capital replacement, and looking at a way to leverage additional local funds to generate the dollars needed to make that capital investment, I don't think, particularly in non-urbanized areas, that there is an ability to leverage much more in the way of local funds. In attending the New England tradition of town meetings lately, which is always an experience, what you hear in every town is about the crunch being felt at the local level as property taxes rise, and school budgets go up, municipal services, in terms of fire and police, have increased costs, and there are less and less available dollars. In fact, in the town of Sanford, I'm currently discussing with the board of selectmen just this issue. We're talking about a difference of $3,000 that we need for operating costs for a one bus system in the town. Three thousand dollars doesn't amount to a hill of beans in terms of some of the dollars you've had discussed before you today, but for the town of Sanford, it will make the difference between either having a bus on the road or not. There just are not the local dollars in local areas to be set aside for the capital match beyond what is now available. I would say that an increase in Section 18 dollars is the only way that we are going to free up other dollars to allow local, rural, and specialized operators to replace their aging fleets.

Mr. MINETA. As I understand it, under H.R. 1079, which is Mr. Rahall's bill, a significant new funding source would be provided to the inter-city bus industry from the mass transit account funds. Wouldn't increased funding for inter-city bus service conflict with the need to increase service within the rural areas surrounding small towns across the country?

Ms. GARBER. In fact, I think they're highly complimentary. I think in rural areas, particularly over the last couple of decades, you've seen more and more regionalization of services: hospitals, health care, a variety of employment and shopping centers have been set up regionally. The intercity bus service in rural areas is there to help meet that kind of a need. I don't think that there is any way that additional dollars would wind up being conflicting between small, rural operations that are trying to serve the in-town, the intra-town trips as opposed to the intercity trips that those buses would be available to serve.

Mr. MINETA. Very well.

Mr. Riggs.

Mr. RIGGS. Thank you, Mr. Chairman.

I want to thank the witnesses and I want to ask Mr. Stangl, that's a famous name in New York, do you spell it the same way? Are you related in any way to——

Mr. STANGL. No, but I have been very interested in building a commuter rail station at Yankee Stadium for the last few years and we're waiting for the Yankees to sign a long term lease with the city, and I'm a diehard Yankee fan if that means anything.

Mr. RIGGS. That sounds very prudent. They have the elevated subway there behind center field. Mr. Stangl, I want to get clear in terms of your personal viewpoint given your substantial professional expertise in this area. Are you opposed to the concept of flexibility if it would give more power to local transit planning authorities?

Mr. STANGL. No, generally I love the idea. I think that getting the right people to sit at the table to solve problems, whether they have to do with clean air or movements of people, movements of goods, is exactly the right thing to do. What I'm concerned about is that the level of funding is so low that there's nothing to be flexible about. That's my real concern. The idea of getting the decision-making at the local level is a terrific one but lets hold it off until there is enough money so that there is enough so that we're not squabbling. If you can't hold it off until then, let's at least level the playing field and get these cost sharing ratios back into balance.

Mr. RIGGS. Thank you. The problem is I guess I don't know when that day comes, when there is enough funding.

Mr. Pegg, this may not apply down in Southern California, but it certainly does up our way in Northern California. There seems to be a duplication of bus service where you have particularly in my neck of the woods, Sonoma County, you have a special district bus service, the Golden Gate District Bus Service, you have a regional or intracounty bus service, and a local bus service serving the same routes in many cases. Is there a real opportunity here for streamlining and consolidation to reduce the ultimate cost of bus service while at the same time maintaining the same levels of bus service?

Mr. PEGG. Well, if in fact you're talking about a situation such as you described, I'd have to conclude that there might be. In southern California we have only some very small route segments where there are duplicate services and generally we're looking at boarding ratios on the range of 60 passengers per hour. So you're looking at buses which are by any definition overcrowded. I think it depends very much on individual circumstances as to whether a consolidation organization really produces the kind of efficiency you're looking for. If there is capacity, then there is a realistic possibility. Without excess capacity, it's hard to see a big gain.

Mr. RIGGS. Thank you. Miss Garber, we hear a lot about unmet rural transit needs and I'm wondering if the time has come to create some baseline data, a database that could be used to really determine how severe that need is and whether that would be a worthwhile project for UMTA to pursue.

Ms. GARBER. That's a classic enigma I think in terms of all of the discussions that's been going on for years. I know that, I believe it was two years ago, that Congresswoman Olympia Snowe from Maine attempted to get a provision included to look at the numbers of elderly that were being served, the dollars going into just elderly transportation because each of these pieces is being treated at the Federal level as a distinct funding program. The big picture is very much unknown. I'm not sure whether or not a project undertaken by UMTA, unless it was given broad direction by this group or some other group, would wind up including all of the people that we see in our rural area as unserved.

A comment that was made earlier regarding provision of service to handicapped individuals, was that after a new service was provided, all of a sudden individuals who said they were not in need of service came forward and lo and behold they wanted the service. How do you define that group of individuals? If they've never had a service available to them, they've never come forward and said that they needed it, how do you designate them as an unmet need?

I think there are some data that are being compiled right now. CTAA is putting together some information under a contract with Health and Human Services to take a look at some of the programs such as Head Start, Medicaid and Title 3 of Older Americans Act. The service is being provided through those funding sources but I think it would be very worthwhile to have a better handle on who we need to serve.

Mr. RIGGS. Thank you. Thank you, Mr. Chairman.

Mr. MINETA. Mr. Rahall?

Mr. RAHALL. Thank you Mr. Chairman.

Let me ask you first Mr. Stangl. As I understand your concerns with the flexibility approach is that there is not enough money to really be worried about being flexible. Is that correct?

Mr. STANGL. Yes. With a transit amount of $3.3 billion if you look at the needs across the country, it doesn't come close to even helping us stay even. So to have any of those funds transfer to highway purposes strikes me as inappropriate right now. So I think that if you can get the funding level up, flexibility becomes something that is worthwhile, and I find it's difficult to say, I want you to know, Congressman, because the idea of having flexibility and having people make those tough decisions after looking at everything is one that I like.

Mr. RAHALL. If the funding is there——

Mr. STANGL. I've got a number, yes.

Mr. RAHALL. You say there still should be that flexibility, and the concerns of the small and urban areas then that they're going to lose out to highways is not a valid concern.

Mr. STANGL. I'm sorry. I'm not sure I——

Mr. RAHALL. What about the concern of the small rural areas? If there is that flexibility allowed to the States, that a governor's going to make a decision to go with the highway over a transit need.

Mr. STANGL. That's a concern, yes.

Mr. RAHALL. But you still favor that flexibility?

Mr. STANGL. I favor flexibility in the long term if the funding level is high enough, yes I do.

Mr. RAHALL. Let me ask you Miss Garber, and I understand you're accompanied by George Rucker today who first came to visit me last fall on the Mobility Assistance Act. Now you have mentioned in your testimony that operating per passenger mile went up 31 percent between 1985 and 1990. Is that correct?

Ms. GARBER. Right.

Mr. RAHALL. What are some of these costs to which you refer and how do they compare to costs in urban transit?

Ms. GARBER. Our operating costs. Particularly, the areas that rose in that time period had to do with traditional fringe benefit costs, workers compensation, health insurance, cost of fuel, cost of repairs. York County Community Action was looking at a cost of about 52 cents per passenger mile in 1989. According to Section 15 data collected by UMTA for that same year, they were looking at a cost of 41 cents per passenger mile for urban transit. I would say that we compare favorably.

Mr. RAHALL. Okay. You indicated that in the last half of the 1980's Section 18 expenditures were running substantially above

the appropriated level, thanks to carry-over funds and transfers Section 9. What was the peak expenditure for Section 18 program? When was it?

Ms. GARBER. The Section 18 program has definitely gone through a kind of roller coaster; 1984 was the highest level of obligation and that was $116 million. If you put it in today's dollars in terms of inflation that would be the equivalent of $154 million.

Mr. RAHALL. As you know, there's not been any sort of cap placed on operating assistance in the Section 18 program, although the Administration is now recommending that we institute one. Could you tell us how important operating assistance is in the Section 18 program?

Ms. GARBER. We have, as I said in the beginning of my testimony, a situation in York County where we coordinate 20 different funding sources, and yet a lot of the dollars that we're looking at are ones that are dedicated; they're under contract services for the elderly, services through Medicaid, services for the developmentally disabled. I think that the amount of money that we're looking at in Section 18 is a critical portion of the operating budget. I had mentioned that nationally 80 percent of Section 18 funds are being used for operations as a source for community action. It's a very small percentage of our operating costs. It does not come close to covering the 50 percent allowable level for Section 18 operating assistance.

Mr. RAHALL. Mr. Stangl or Mr. Pegg, would you wish to comment on that?

Mr. PEGG. Frankly, the Section 18 program is not one that applies in our urban area.

Mr. RAHALL. Okay. In your statement, Connie, going back to your testimony, you indicated that your UMTA funding has been cut in recent years and the social service funding has had to make up the difference. Could you indicate the relative importance of UMTA and other Federal funding to the budget's rural transit operator?

Ms. GARBER. I would say that it may be a relatively small dollar amount in my budget. I think that in terms of the national data, as I said, you have a maximum of 50 percent of an operating budget, but we're looking at most rural system having about 30 percent of their operating costs covered by Section 18. In my system it's closer to about 7 percent. The reason is it is as low as it is for my system is that we have a tremendous amount of Medicaid dollars which skews the percentages. We do a tremendous number of Medicaid trips.

Mr. RAHALL. Thank you. I have no further questions, Mr. Chairman. I do just want to commend Connie and the Community Transportation Association for the valuable input they've provided to me in drafting the Mobility Assistance Act. Thank you.

Ms. GARBER. Thank you.

Mr. MINETA. If there be no further questions, let me thank you again very much for your presentation here today.

[Mr. Stangl's prepared statement appears on page 959.]

[Mr. Pegg's prepared statement appears on page 909.]

[Miss Garber's prepared statement appears on page 735.]

Mr. MINETA. At this time I would now like to call on our colleague from Pennsylvania, from the 8th District, Mr Peter H. Kostmayer.

Congressman Kostmayer.

**TESTIMONY OF HON. PETER H. KOSTMAYER, A REPRESENTATIVE IN CONGRESS FROM PENNSYLVANIA, ACCOMPANIED BY MIKE BURKE, SENIOR ASSISTANT**

Mr. KOSTMAYER. Thank you, Mr. Chairman, very much, and I appreciate being permitted to be here this afternoon. I see my colleague, Congressman Schulze is here. Both Congressman Schulze and I unhappily have been to Pittsburgh this morning for the funeral for our senior Senator of the delegation there, so I know I speak for him when I express our mutual gratitude for coming in this afternoon. I know you've been here since early this morning and I won't take a very long time.

Mr. Chairman, if you picture a map of southeastern Pennsylvania, this is the city of Philadelphia right down here, and these are the Philadelphia suburbs. This is my district north of the city. This is Congressman Coughlin's district, Congressman Weldon's district is here, and this is Congressman Schulze's district out here. We are the four suburban Congressmen surrounding the city of Philadelphia.

This is the proposal I am here to talk about. This is a 53 mile line track which essentially would go from the New Jersey-Pennsylvania border, which is the Delaware River right over here, all the way down into Congressman Schulze's district. Now there is an existing track there now. This in not a brand new proposal. There is an existing Conrail track now that exists but it's simply rotting. There's nothing going on with it. What we'd like to do is spend about $100 million dollars, $75 million from the Federal Government and $25 million from the State Government to reconstruct that rail line. Most of it's still in pretty good shape to buy some rolling stock and hire some people to create a commuter here in the Philadelphia suburbs. Sixty percent of all of the commuting which takes place in southeastern Pennsylvania now takes place in the Philadelphia suburbs. There are fewer and fewer people going to work in the city and more and more people going to work who live in places like Morrisville, in my District over here, to King of Prussia, in Congressman Schulze's district. There is a tremendous need for that and this will take literally hundreds of thousands of cars off the highway. It's relatively cheap for $100 million. If you had to build a new start-up rail line of a highway of 53 miles here, it obviously would cost you a good deal more that $100 million.

In addition people who, for example live here in King of Prussia, who want to get to the city, generally drive now. If this were here they could hop on the train, take it up to this stop, and there's a line there going into the city. That takes place all over this part of State, so you're getting lots of people off the roads that way.

We think it's a very, very good proposal. We think it's very modest. It's enormously popular. It's supported in the area by all of our delegation, both parties.

This here, for example, I'll say one word about, is the area of Exton, Pennsylvania and route 30 which goes through Exton is very, very highly congested. A bypass is needed desperately there. Congressman Schulze is going to speak about that. Not only is a bypass needed, but if we can get people off the highway and get them onto this rail line, that would be very, very helpful.

The final thing I could say, Mr. Chairman, is that this whole system, SEPTA [Southeastern Pennsylvania Transit Authority) is in trouble. If we can begin to serve not only the folks downtown, but the folks out in the suburbs as well, I think we can create a relationship between people in the city and people in the suburban communities and make them both increasingly dependent on mass transportation. So we think it's a very good proposal.

I appreciate the opportunity to testify at this late hour, I know how weary you must be of putting up with this testimony while I'm here, and I hope that the Committee can support this. And I can certainly say that Mr. Schulze and I are going to support the Committee and everything it does when this bill comes to the floor. Amen.

Mr. MINETA. Thank you very much, Mr. Kostmayer. In your statement you say the concept of the cross-county metro is new to the Philadelphia area. What is it about the concept that is new?

Mr. KOSTMAYER. Well really what's new is that it's entirely within the suburbs. There really has been no system which operates entirely within the suburbs. This set the system like most mass transportation systems around the country has generally carried downtown to work and back home at night. This is intra-suburban. As I've said, more than 60 percent of all the commuting which takes place in the Philadelphia area now takes place exclusively within the suburbs and this would serve the majority of the people who live in southeastern Pennsylvania. In that sense, I'm told by transportation experts, that it would be the first system of that kind.

Mr. MINETA. You say the total cost is of about $100 million of which $75 million you're requesting of Federal funds.

Mr. KOSTMAYER. That's right, Mr. Chairman.

Mr. MINETA. How does SEPTA and the Department of Transportation anticipate proposing to fund the remaining cost to complete the project?

Mr. KOSTMAYER. The total cost remaining $25 million, ultimately inexpensive, $75 million would come from you, Mr. Chairman. The remaining portion would come from the State and from the localities. The four counties, Bucks, Montgomery, Delaware, and Chester would put up a portion of that $25 million and the Commonwealth of Pennsylvania would put up the rest. I met with Lou Giambicini, the head of SEPTA a couple of weeks ago. We talked about this. I think it's fair to say he was very excited and very supportive. They want to do this. This helps to sustain their system. This creates new business and new customers and new ridership and new revenue for a system is a deteriorating urban in lots of trouble. This is good news for SEPTA and it's very helpful to them and they want to be a part of it.

Mr. MINETA. Is the cross-county's metro part of SEPTA?

Mr. KOSTMAYER. It would be run by SEPTA, which runs all the commuter lines now going in and out of the city. All of these lines here are linked up. For example, all of these little towns, Chairman, you wouldn't necessarily be familiar with, would link up and we could get on the cross-county metro and then move into suburbs.

Mr. MINETA. Are the heavy black lines there what?

Mr. KOSTMAYER. Existing rail lines now. Existing SEPTA rail lines now. For example, if someone lives here in Newtown, they take the train all the way down here to work in Philadelphia—but fewer and fewer people who live in Newtown are working in Philadelphia, they're working in King of Prussia and they're now driving on the Pennsylvania Turnpike. Instead, they would come down here and take the train to King of Prussia. As I said 60 percent of the people that are commuting are now commuting that way rather than downtown and back home again.

Mr. MINETA. Thank you.

Mr. Riggs?

Mr. RIGGS. Mr. Kostmayer, how are you, sir? At the risk of getting into some sacred cows, I just want to make clear for my own edification, are we talking about a demonstration project here?

Mr. KOSTMAYER. Mr. Riggs, you can call it whatever you want. We are thinking of calling it the Norman Mineta Rail line.

Mr. RIGGS. A little far from home, though.

Mr. KOSTMAYER. This could be the Rahall Section right here. But you can call it whatever you want Mr. Riggs. We could name this small section the Riggs section right down here in Mr. Schulze's district.

Mr. RIGGS. Now this is an existing line.

Mr. KOSTMAYER. There's a Conrail freight line. Its called the Trenton bypass. In other words, it's always been for freight to move to Trenton, New Jersey right here on this Jersey side of the Delaware River around Philadelphia so it doesn't have to go through Philadelphia. If there's freight going from here to Harrisburg and west, instead of going through the city the Conrail line has taken it this way. The line is there. It's actually in pretty good shape. The smallest amount of this $75 million would be used to repair existing track. Most of it would be used to buy the rail cars and to hire people to drive the trains.

Mr. RIGGS. Would it continue to carry freight traffic?

Mr. KOSTMAYER. No, it would not carry freight traffic. That's why its not being used, it's not being used for freight traffic anymore. It's simply rotting.

Mr. RIGGS. Is there an actual legal agreement in place that has been worked out that would provide for the conversion?

Mr. KOSTMAYER. The answer to the question is no, but Conrail has indicated to us that they are prepared to sell it for a relatively modest price to SEPTA.

Mr. RIGGS. That figure is roughly in the $100 million——

Mr. KOSTMAYER. That is part of the $100 million.

Mr. RIGGS. In terms of a State-local match, you are saying that you are confident that the $25 million would be forthcoming from the Commonwealth and the local community served.

Mr. KOSTMAYER. That's right, and the four counties would put up a share and the Commonwealth would put a share of that 25 percent. I don't know exactly what the split is.

Mr. RIGGS. I see, and I want to get this clear one more time. The $100 million would in fact be sufficient funds to bring this service on-line. In other words, it would include an operating administrative component.

Mr. KOSTMAYER. Yes, we think that at the most we can have this operating and moving people by time this authorization expires in five years or sooner. See a lot of the work is already done. The track is there, the lands been acquired, that's why its so cheap, so very, very cheap, Mr. Riggs.

Mr. RIGGS. As demonstration projects go, it seems to be very cheap, thank you.

Mr. KOSTMAYER. Thank you, Mr. Riggs.

Mr. RAHALL. I have no question Mr. Chairman. Just to say to Mr. Kostmayer and Mr. Schulze that since we already have their commitments to support this bill on the floor, Mr. Chairman, and looking at the manner in which they delivered on the Philadelphia dockyards, this is a worthy project.

Mr. KOSTMAYER. Well, Mr. Schulze and I also wanted to mention to you that Congressman Murtha supports this very strongly.

Mr. RAHALL. Then we can fund it under the Defense Appropriations Committee.

Mr. KOSTMAYER. Thank you very much, Mr. Chairman, for allowing me to testify.

[Mr. Kostmayer's prepared statement follows:]

Statement of

THE HONORABLE PETER H. KOSTMAYER

before the

House Committee on Public Works and Transportation

Subcommittee on Surface Transportation

April 10, 1991

Mr. Chairman, I appreciate the opportunity to testify before you and the other members of the Subcommittee on the reauthorization of our nation's surface transportation programs.

As the Subcommittee begins planning for the nation's transportation needs into the 21st century, you will be considering the interrelated needs of efficient movement of people and material, the environmental implications of various transportation modes, and the economic and social impact of the nation's transportation infrastructure. The task before the Subcommittee is as difficult as it is critical to the nation's well-being.

I asked to appear before the Subcommittee, Mr. Chairman, in order to detail for your members an emerging problem that increasingly threatens transportation in my congressional district and many similar areas around the country. I also want to offer what I believe are some specific solutions to the problems in my congressional district which I think could be applied to other areas.

My district, which consists of Bucks and the eastern portions of Montgomery County, Pennsylvania, is among the fastest-growing areas in the nation. Both Bucks and Montgomery Counties are accessible to New York as well as Philadelphia business centers and are becoming increasingly popular among workers from both metropolitan areas.

The tidal wave of development we have experienced in recent years is now beginning to endanger the very qualities that have brought so many people and businesses to our area. The issues of overdevelopment, loss of open space and environmental protection now top the list of concerns of the majority of my constituents. The infrastructure of the region, in particular our transportation system, has in many cases become overwhelmed.

As dire as this situation is, it is not unique to my region. Suburban areas across the country, from the Northern Virginia suburbs outside Washington to Orange County, California, are experiencing an epidemic of traffic congestion. Automobiles have become the dominant, indeed the exclusive, mode of transportation in areas immediately surrounding cities. In the Philadelphia region, traffic congestion is constraining the very mobility that companies sought in the suburbs.

Unlike historical travel patterns, whereby virtually all travel was radial to and from the center of a major city such as Philadelphia, today's patterns are far more dispersed and suburb-oriented.

Two major demographic factors need to be recognized to understand this phenomenon. The population of the region has changed. The City of Philadelphia, long the predominant population center of the region, now represents only 40 percent of the population of the five counties of the southeastern Pennsylvania region. Fully sixty percent of the population now resides in the four suburban counties. Similarly, sixty percent of all work travel in the area is now intra-suburban. Second, while the City of Philadelphia continues to enjoy small incremental growth on a very large employment base, the suburban territory has blossomed into major employment communities totally independent of the City of Philadelphia.

SEPTA, the Southeast Pennsylvania Transportation Authority, currently captures very little of the cross-county market, since the new travel patterns are lateral and SEPTA's network has been built on historic, radial travel patterns. New employment center development has basically followed the pattern of express highways which have been built in the region. These employment centers are consecutively spaced about 6 to 10 miles apart from Morrisville in Bucks County to Downingtown in Chester County, roughly paralleling the Pennsylvania Turnpike and part of U.S. Route 202.

Happily, through an accident of history, a predecessor railroad of SEPTA and Conrail constructed a railroad line known as the "Trenton Cut-off." This line extends some 53 miles from Morrisville to Downingtown. It was originally constructed through suburban farmlands and relatively unpopulated areas, and was designed to move long-distance freight (not destined for Philadelphia) on a route bypassing the City to avoid coming into the then-congested railyards. In turn, the Pennsylvania Turnpike and US 202 were similarly developed as major highways that were routed around, rather than into the City. Like other major highways across America, these roads spawned major development and employment centers along them.

Today, in a continuous string of employment centers, one can point to Downingtown, Exton, King of Prussia, Norristown, Plymouth Meeting, Fort Washington, Willow Grove, Southampton, Oxford Valley, and the Morrisville/Trenton areas as major beneficiaries of these past public hignway investments. These same employment and development centers also happen to be immediately adjacent to this rail line which now rests comfortably parallel to the Pennsylvania Turnpike and part of US 202 for nearly its entire distance. The railroad alignment was built to high speed standards (80 mph or more) and is virtually free of grade crossings. As a by-pass rail line, there are also virtually no local freight customers.

The opportunity exists now to utilize this rail line as the first "cross county" passenger rail service, interconnecting these employment centers and providing transfer stations with eight of SEPTA's existing rail services for easy employment access, both from distant suburban locations as well as from Center City Philadelphia and the parts of the region which lie between the Cross County line and Center City.

Mr. Chairman, SEPTA has prepared maps which graphically demonstrate the major regional expressways and arterials which parallel and intersect the Cross County Metro Corridor: Route 1, I-95, Route 309, the Northeast Extension of the Turnpike (PA-9), the Schuylkill Expressway (I-76), the Pennsylvania Turnpike and Route 202. (I am including copies for your review).

With implementation of this Cross County Metro service, SEPTA would be able to create a series of intermodal transportation centers throughout the region. With a focus upon this particular cross county service, a series of intermodal centers would provide easy connections to all parts of the region using rail, bus, van or auto, very similar to the concept now in place at the Norristown Transportation Center and at 69th Street Terminal. These major intermodal transportation centers would have large park-and-ride lots for traditional commuters, with easy access from major roadways directly into the parking lot. In addition, these terminals would be focal points for a local bus system enabling riders to have quick, easy access from the station to the employment and shopping centers in the area and also to nearby residential centers, thereby providing mobility without the use of the automobile. Obviously, these intermodal transportation centers would also function as a transfer point for rail-to-rail commuters who might be headed outbound from the city and who are changing trains to the Cross County Metro to get to an employment center.

The concept of the Cross County Metro is new to the

Philadelphia area and perhaps even new to the United States. However, it is uncannily similar to the very same concept that has been utilized by highway planners in designing beltways around major cities in the United States to foster suburban travel. The Cross County Metro is really this same concept applied to mass transportation and it can have a far more beneficial effect on reducing road congestion than any other single investment that the public can make. Compact European cities thrive in spite of severely constrained auto use because they have built a network of radial and peripheral transit lines.

As an example of how the Cross County Metro is already affecting regional thinking, the Pennsylvania Department of transportation (PennDOT) has included the concept in the design competition for the I-95 Reconstruction Project and has specifically asked the competing consultant teams to focus on an intermodal transfer center in the Oxford Valley/Woodbourne area (near I-95, Route 1, and SEPTA's existing R-3 West Trenton Rail Line).

As another example of possible intermodal connections and of innovative financing, I call the Subcommittee's attention to a joint station concept being considered for the Exton area. SEPTA has already worked cooperatively with the developer of a proposed office park at Glenloch to plan for 500 parking spaces on the existing R-5 Paoli Line on a turn-key basis. SEPTA indicates that it would welcome the opportunity to explore a joint station or private sector partnership at this location on the proposed Cross County Metro Line. The need for the Cross County Metro is further enhanced by the proposed Exton By-Pass. Currently Route 30 is one of the most congested highways in the southeastern portion of Pennsylvania. The By-Pass proposed by Mr. Schulze addresses the critical problems faced in this area caused by automotive traffic. The Cross County Metro, in turn, would allow drivers quick access from this major arterial from the West onto the regional mass transit system. Similar opportunities exist along the entire corridor.

Conrail has already determined that a major portion of the Trenton Cut-Off line is going to be "downsized" resulting in removal of at least one track between Norristown and Downingtown, making that right-of-way available for the Cross County Metro. The alignment of the Cross County Metro is a high-speed, fully grade-separated, railroad with many of the employment centers being within walking distance of potential station sites. The potential also exists for SEPTA and the private sector to construct major new developments along the right-of-way, concentrating employment, providing a passenger base, and requiring far less utilization of land for parking than is currently the case in the suburban territory. The

proportion of land utilized for parking the suburban territory is one of the major causes of sprawl and also the major cause of congestion on the roads. This, in turn, results in some of the adverse environmental conditions experienced in the Philadelphia area. And, as you are aware, this region is one of severe non-attainment for Clean Air Act standards.

Mr. Chairman, I believe that a unique opportunity exists for the Subcommittee to take a bold and visionary step, a step that will simultaneously stimulate economic development, improve the environment, and add new vitality to one of the nation's oldest public transit systems.

The proposed Cross County Metro would operate on existing rail right-of-way. Consequently, the necessary Environmental Impact Analysis and preliminary engineering studies could be completed in short order. This process will be further sped by a $200,000 study of the Cross County metro currently being conducted by the Delaware Valley Regional Planning Commission in cooperation with UMTA and SEPTA.

Mr. Chairman, for $100 million the Cross County Metro can become a reality and it can do so during the five-year time frame of the reauthorization for the Surface Transportation Assistance Act. Because of the reasons I have outlined above and based on the funding formula in current law, Mr. Chairman, I would ask the Committee to authorize the full federal share of $75 million for this critically important project. It will be an investment that will bring near immediate benefits, both tangible and intangible, and can serve as a model for mass transit in the urban centers of our country.

In addition, Mr. Chairman, I would like to bring to the attention of the Committee a second possibility that could provide relief to our regional transportation problems.

The recent completion of Interstate 78 through the Lehigh Valley has spawned rapid growth--and increasing traffic congestion--in northern Bucks County. In particular, traffic in the vicinity of Quakertown, where the Northeast Extension of the Pennsylvania Turnpike and Routes 309 and 663 converge, is quickly reaching near gridlock conditions.

Mr. Chairman, the need for increased safety and decreased traffic congestion in the area calls for quick action. Therefore I would ask the Committee to authorize $1.6 million to fund necessary environmental studies and right-of-way evaluation for a Quakertown By-Pass. In addition to the By-Pass itself, this authorization would include money to study traffic signalization/improvement on feeder routes, intersection

improvements, and the possibility of building a Park and Ride facility at the intersection of Route 663 and the Pennsylvania.

Again, I thank you, Mr. Chairman, for the opportunity to testify today.

Mr. MINETA. At this time I'd like to call on a very fine colleague, Congressman Schulze of the fifth Congressional district of Pennsylvania. And as the other members of the Congressional delegation of Pennsylvania have all been at the funeral of our very fine colleague, the late Senator John Heinz, I'd like to have you go ahead and testify at this time.

**TESTIMONY OF HON. RICHARD T. SCHULZE, A REPRESENTATIVE IN CONGRESS FROM PENNSYLVANIA, ACCOMPANIED BY JOE KENNA, CHAIRMAN, CHESTER COUNTY BOARD OF COMMISSIONERS, AND BOB THOMPSON, EXECUTIVE DIRECTOR, CHESTER COUNTY CHAMBER OF COMMERCE**

Mr. SCHULZE. I thank you, Mr. Chairman. I share the sentiments of our colleague from Pennsylvania, Mr. Kostmayer, when he expressed his gratitude to you for allowing us to come in the afternoon because of this morning's events. I've got to tell you its with a heavy heart that we do make these presentations this afternoon but, perhaps the best way to honor Senator Heinz' memory is to renew our dedication to things like this. He was well-known for working for his constituents and doing what's good for Pennsylvania. As perhaps you know, he sometimes brought the Senate to a halt over what others would sometimes consider a minor issue. He is now revered for it.

With this in mind, I'd like to bring to the subcommittee's attention the greatest infrastructure concern of my Pennsylvania constituents and that is the Exton bypass. The Exton bypass is a great dollar value. It does everything a road construction project could do for a region. Mr. Chairman, in the interest of time I will ask that my full statement be placed in the record and I will not go into it in lengthy detail. We have discussed this issue before the subcommittee previously and, as you know, my colleague Mr. Kostmayer just referred to it in his testimony.

But I'm pleased to have accompany me today two of my very good and dear friends. One is Joe Kenna, who is the Chairman of the Chester County Board of Commissioners, and Bob Thompson, who is the Executive Director of Chester County's Chamber of Commerce. They will describe the project in detail and the level of private commitment along Route 30 and for the bypass. To start, I'd like to introduce to you Mr. Joe Kenna, who is the Chairman of the Chester County Board of Commissioners.

Mr. KENNA. Thank you. Mr. Chairman, members of the subcommittee, my name is Joseph Kenna, and I am the Chairman of the Board of Commissioners for Chester County. It is indeed a true honor and privilege to appear before this subcommittee.

I know that you have a very difficult task in creating the legislation necessary to reauthorize the Surface Transportation Act. Your task is particularly difficult in light of the fact that we are entering the post-interstate era. The direction you provide in this legislation will have profound impact on the mobility, safety, and economic development of our Nation for many years to come.

I appear before you today to request your special consideration on a project which is of the utmost importance to me, to the residents and businesses of Chester County, to the residents and busi-

nesses of southeastern Pennsylvania, Philadelphia, and Wilmington. The project that I'm referring to is commonly referred to as the Exton bypass. You have before you an information package which provides more detail and information than I could possibly cover in five minutes. The illustrations in this package attempt to provide geographical location while identifying issues and perspectives at regional, Interstate, intermodal and local levels.

In short, the Exton bypass is a proposed five mile relocation of U.S. 30 in the heart of Chester County, which is one of the fastest growing in Pennsylvania. U.S. Route 30 is most significant, non-toll, arterial west of Philadelphia. As you can see on the map, Chester County is located in the southeastern region of Pennsylvania and the area that we refer to for the Exton bypass is highlighted in red. From the package that you have before you, I'd like to highlight some of the more significant issues.

The bypass has unanimous community support, with an overwhelming priority from the entire legislative delegation in the county. With our written testimony are letters of support from all the State and Federal legislators in the county. The project would demonstrate an amazing consistency with the transportation policies of the Bush Administration as defined in the U.S. Department of Transportation document entitled, "Moving America." These are identified on a list and a map entitled "A Regional Perspective."

The project would significantly improve the regional mobility and access to public transportation, airports, and river ports. The maps on the Interstate and intermodal perspective explain these points. In fact, the five mile stretch of the Exton bypass would become the hub of intermodal transportation and, if Mr. Kostmayer gets his $100 million, that line would also link up in the area of the Exton bypass. We have bus lines, rail lines, and with the completion of this bypass clearly we would have the connection of the auto corridor. One of the things that people do not take quick notice of is that it would move people to use the Chester County airport, which would become a feeder airport to Philadelphia. Townships and private developers in the immediate U.S. 30 corridor have attempted to resolve some the traffic problems with major capacity improvements to U.S. Route 30. With a proposed commuter rail station and possibly with land and financial contributions to the bypass. The project is ready to go in 1992.

As we move into the post-Interstate era, the apparent next focus will be on Highways of National Significance. U.S. 30 certainly is categorically high on that list as it has been for over 200 years. Documentation of this is evident in the fact that U.S. Route 30 carries higher daily traffic volumes and higher truck volume than the nearest parallel Interstate, which is I-76. The Exton bypass is an integral link in the national network because it closes a five mile gap between three different limited access highways.

My intent today is to request your assistance in advancing the funds for the construction of the Exton bypass. While Pennsylvania Department of Transportation has been able to move the project through pre-construction stages, they have not been able to commit funding for the construction. I believe that $87 million, would expedite the construction, mitigate many of the suburban mobility prob-

lems, and improve the regional mobility in the Philadelphia metropolitan area.

This area is an area that I travel regularly and I will tell you from my own experience that the lack of this bypass has an economic strangle-hold on our county. The completion of this five mile route will open up the western part of our county for development.

I want to thank you for this opportunity to present this information and I wish you well in your deliberations. Mr. Chairman, I'll be glad to try to answer any question that you may have.

Mr. MINETA. Congressman Schulze, did you wish to introduce Mr. Thompson, as well?

Mr. SCHULZE. Mr. Thompson has a very impressive background, has been twice Commissioner of Chester County, and in fact, was the Chairman of SEPTA. So his background and knowledge of not only the geographical area, but of transportation problems is excelled by few. Mr. Thompson.

Mr. THOMPSON. Thank you, Dick. It's both a pleasure and an honor for me to be here to appear before the Subcommittee on Surface Transportation this afternoon. As a personal aside, both Congressman Schulze and I grew up within a few miles of the Exton crossroads in Paoli and we can both personally attest to the unparalleled growth and congestion that has resulted there. Honesty, however, compels me to point out that Congressman Schulze grew in an earlier era than I did.

The Chester County Chamber of Commerce is a grass roots business organization with about 2,600 members. The County Chamber, along with ten affiliate local chambers located throughout the County, is a strong advocate of the Exton bypass and there's a letter of support from the Board of Directors included in the materials you've been given. Representative Kostmayer has made an excellent presentation, as has Commissioner Kenna, in stating a need for the Exton bypass, this afternoon, fortified with some compelling information that was prepared by the Chester County Planning Commission. In addition to emphasizing that the Exton Bypass provides the missing link in the east/west toll-free limited access highway system on the East Coast, I want to make three points which I feel qualified this project for this committee's support and ultimately Federal backing.

First, is the unprecedented growth that's taken place in the area. If a picture speaks a thousand words, this exhibit is worth volumes. It portrays the growth and development that has taken place along the proposed bypass. The areas with the red overlay represent development that either has taken place in the past ten years or has been approved during that period of time. The yellow represents areas of proposed development. The 1990 census figures show a growth of 15,619 or a 38 percent increase in population in the municipalities immediately adjacent to the proposed bypass. Overall, the County's grown by 60,000 or about 17 percent during that period.

Areas overlaid in red represent 37,500 new daily trips through the Exton intersection. To put that into perspective, recent traffic counts reveal that Exton crossroads area is handling or attempting to handle twice the volume it was designed to handle. In reality, the intersection isn't handling the overload. The motorists who

know the area have come to find alternative routes which clog narrow side streets, parallel roads and cause further congestion.

The second point I'd like to make is the willingness of the private sector to participate in the project. We're not talking about pledges here. We're talking about actual expenditures of private capital to improve the highway infrastructure in the area. In West Whiteland Township alone, more than $6.1 million has been spent in private funds to widen and improve an already overburdened Route 30 and Route 100. In addition, township supervisors plan to establish a transportation improvement plan which calls for the use of another $6 million in private funds from the property owners involved. Meanwhile, area businesses have expressed a strong willingness to make in-kind, right-of-way, utility relocation, and direct cash contributions to the project.

Finally, we cannot overlook the opportunities for linking the various modes of transportation in the region through this project. Certainly Congressman Kostmayer could not have been a better introduction to our presentation. As you can see in this exhibit, the Exton Bypass offers an excellent opportunity to link a limited access highway with interstate rail, commuter rail, light rail, and bus lines.

The project would tie the bypass directly to the existing Exton railroad station which serves Amtrak's principal east-west artery and SEPTA's R-5 line, which links Parkesburg in western Chester County with Philadelphia, and Doylestown in Bucks County.

In addition, the bypass will tie directly with a station being built and financed totally by a local developer's funds to serve as an interchange point between the Amtrak-SEPTA mainline and the proposed SEPTA Cross County Metro light rail line, the line linking Downingtown with Bucks County, the line referred to earlier. This will significantly reduce congestion on the Route 30 corridor and intercept commuter traffic, which now overburdens Route 30, Route 202 and the Schuylkill Expressway on it's way into Philadelphia each day.

Finally, by relieving the congestion along the Route 30 corridor and the secondary routes paralleling it, the privately-owned Reeder Bus Company Service and SEPTA's Route 92 bus route will be able to operate more efficiently, attracting new ridership.

In conclusion, I have no doubt that former Pennsylvania Transportation Secretary, now Federal Highway Administrator, Tom Larson and other members of the Administration had Federal help for projects like the Exton Bypass in mind when they drafted some of the principles described in "Moving America: New Directions, New Opportunities." I hope you will agree.

I thank you very much for your time and I would be happy to answer any questions.

Mr. MINETA. Thank you very much, Mr. Thompson. Is this taking State Route 6030 and expanding that or is this a total new realignment of that State route?

Mr. SCHULZE. This is a total new road. It's not a realignment. It is a total new road, Mr. Chairman.

Mr. THOMPSON. The proposed route is where the red line is. The old 30 is——

Mr. MINETA. Where's the existing 30 then?

Mr. SCHULZE. That's the existing route 30. I think, Mr. Chairman, you did see some time ago a video that we had presented on this project which showed the massive congestion and so forth and as you know we've discussed it over the years. It's one that does have merit and we know that the committee will look favorably upon this meritorious proposal.

Mr. MINETA. In the submission by the Commonwealth of Pennsylvania, I'm not sure whether the Commonwealth submitted the map as part of National Highway system. Do you know whether or not this was included, if they did in fact submit a map as to what they envisioned for the Commonwealth of Pennsylvania for the National Highway System, as to whether or not this was included as part of that?

Mr. THOMPSON. This is part of that proposal. In fact, this is the PENNDOT's highest priority project in southeastern Pennsylvania.

Mr. MINETA. Now it is my understanding that PENNDOT has spent some $33 million on engineering designs, relocation of utility lines, and acquisition of right-of-way?

Mr. KENNA. Yes, all of that has been purchased to date.

Mr. MINETA. So what is the remaining cost to complete of this Exton Bypass?

Mr. KENNA. We are looking for the $87 million from the Federal Government.

Mr. MINETA. What is the total, if $87 million is what you're seeking from us?

Mr. KENNA. The total package is at this point, I believe, $117 million.

Mr. MINETA. That's roughly the 87 plus the 30 that has already been expended by the Commonwealth of Pennsylvania.

Mr. Riggs, do you have any questions?

Mr. RIGGS. I will just inquire as to whether or not this is an existing right-of-way. In other words, the right-of-way has been acquired.

Mr. KENNA. They have been acquired.

Mr. RIGGS. They have been. And you are making provisions for some sort of mitigation or compensation for property owners or business owners that would be affected by completion of this stretch of highway, closing of the gap so to speak?

Mr. KENNA. Yes. The State has been handling that. Most of that has already been completed.

Mr. RIGGS. This is currently a five mile stretch of surface street with traffic controls?

Mr. KENNA. Yes.

Mr. RIGGS. You want to build some sort of elevated freeway?

Mr. KENNA. It's a limited access highway and it will connect to other limited access highways. It's really the final piece of the puzzle in Chester County.

Mr. RIGGS. This isn't a toll road by any chance or not a proposal for a toll road?

Mr. KENNA. No.

Mr. RIGGS. Okay. Thank you very much.

Mr. MINETA. Thank you very much, Congressman Schulze and Mr. Thompson and Mr. Kenna, for your presentation.

[Mr. Schulze's prepared statement follows:]

Congressman Richard T. Schulze

Written testimony for the
House Subcommittee on Surface Transportation
April 10, 1991

Mr. Chairman: I want to thank you this afternoon for accommodating Members who paid their final respects to the Late Senator John Heinz in Pittsburgh this morning. Our bereavement is fresh and weighs heavily on our spirits. Perhaps the best way to honor the good senator, is to turn with renewed dedication to the business of managing our great nation.

It is with this in mind, that I bring to the subcommittee's attention the greatest infrastructure concern of my Pennsylvania constituents -- the **Exton Bypass**.

Unprecedented commercial and industrial growth in the rural and suburban areas between the port of Philadelphia and Lancaster have swollen surface transportation demands far beyond the capacity of U.S. Route 30 where it passes through Exton, Pennsylvania. West of Exton, Route 30 is a four-lane expressway. East of Exton, traffic flows on a modern highway with fully controlled access.

The 5.5-Mile segment of U.S. Route 30 which passes through the heart of Exton is the weak link in this highway of national significance. It is a transportation coronary of congestion and gridlock.

The solution is the Exton Bypass. It will complete the U.S. Route 30 corridor by connecting the Coatesville-Downingtown Bypass to U.S. Route 202. Sixty percent of the Route 30 traffic which staggers through Exton from stop light to stop light, neither originates or ends in Exton. Local and other pass-through traffic is forced into diversionary routes which swells feeder roads and arteries into gridlock. The Exton Bypass will whisk at least 60 percent of the current traffic along limited access highway.

The Exton Bypass will do substantially more than provide the much-needed relief of traffic congestion. The Exton Bypass also brings greater safety, ease of access to public transportation and commercial infrastructure to Southeastern Pennsylvania.

Currently, all trucks hauling between Philadelphia and Lancaster industrial region must rubberneck through Exton. Traffic studies have documented that 7,000 trucks traverse the intersection of Route 30 at Route 100 each day. Now compare this to the nearest Interstate, where only 5,000 trucks cross Route 100 each day! And to make matters worse, Route 30 chokes down to just one lane in several segments.

This condition has lead to a high rate of truck accidents which would be tremendously reduced by construction of the Exton Bypass. The Exton Bypass will also improve connections between private-vehicle commuters and public transportation. Two commuter trains, the Southeastern Pennsylvania Transportation Authority's R-5 line and Amtrak's Harrisburg / Philadelphia line, parallel the Route 30 corridor.

The Exton Bypass would funnel hundreds if not thousands of daily commuters into the southeast end of the proposed Cross County Metro rail, which connects the suburban ends of the SEPTA lines. By relieving the intense congestion in the vicinity of these stations, rail commuters will have more efficient access to rail and bus options which will dramatically reduce road traffic in the region.

In the meantime, would-be commuters resort to extraordinary detours to avoid the Exton quagmire, which blocks potential transit users from intermodal transfer points. Finally, by offering efficient movement of personnel and materials, the Exton Bypass will bring surface transportation infrastructure needs closer to current commercial demands and facilitate additional commercial growth.

The severe need for constructing the Exton Bypass has garnered broad and significant support. Private businesses have contributed about 10 million dollars for improvements along the existing Route 30, which will become the business loop after the bypass is completed. The Chester County Planning Commission has identified the Exton Bypass as its top infrastructure objective.

SEPTA's Louis J. Gambaccini, Chief Operations Officer and General Manager, expressed strong support for the Exton Bypass. He said it will serve as a model for future transportation projects in the nation, because of its effective integration of rail, bus and automobile transportation.

The Pennsylvania Department of Transportation has already spent 33 million dollars for engineering designs, relocating major utility lines and pipes, and has currently acquired about 90 percent of the needed rights of way. Lastly, Secretary Sam Skinner has publicly voiced direct support for constructing the Exton Bypass. With such broad support for building the Exton Bypass, I am hopeful of obtaining your support. (14)

In the meantime, the feeble link of U.S. Route 30 where it passes through Exton, Pennsylvania handles more daily and peak-hour traffic than the nearest Interstate, the Pennsylvania Turnpike!

(Schulze 3 of 3, written testimony, 4/10/1991)

With current federal budget constraints, only the most critical infrastructure needs should get priority funding. **The Exton Bypass exceeds that requirement.**

I urge continued commitment at all levels for support of this most worthy use of taxpayers' money. **NOW** is the time for constructing the **Exton Bypass!**

Dear Mr. Fasic:

With the State Transportation Commission's public hearing scheduled for January 31 to consider the Twelve Year Transportation Program, I wish to express my support of the continued effort to make the Exton Bypass a high county-wide priority and would like to see the project get underway as soon as possible.

Although the Exton Bypass is a high priority, there are other major prospective highway projects that become more feasible each year. Among them are the Rt. 41 Corridor and the upgrading of the intersection at Route 30 and the Airport at Valley Township.

I respectfully request that the Transportation Commission give serious consideration to Chester County's priorities so that progress can be made in relieving the traffic volume and congestion experienced by its residents and tourists who travel on our vital road network. Making travel throughout the county safe for the growing numbers of pedestrians and motorists is imperative.

Sincerely,

Noah Wenger

CHESTER COUNTY PA
PLANNING COMMISSION
JAN 22 1991

Dear Secretary Yerusalim:

I am writing to urge that the Exton Bypass project receive the highest priority status at the State Transportation Commission meeting on January 31, 1991. As you know, I believe that this project is crucial to the future economic wellbeing of Chester County and I have worked for many years to make the Bypass a reality.

Engineering and right of way work on the Exton Bypass has been underway for many years and is now nearing completion. I would urge that the priority status of the Bypass be reflected in the 1990 12 Year Plan by including full funding for construction in Years 1-4 of the plan.

It is indeed feasible that the engineering, right of way and utility relocation work on the Bypass could be completed within the next 12-18 months. Therefore, it is extremely important that PennDOT show its symbolic commitment to this project by allocating full construction funding in the first four years of the plan.

Thank you for your consideration of this important request. If you have any questions or I can be of any assistance to you, please do not hesitate to contact me.

Sincerely,

Earl M. Baker

Re: Exton By-Pass, Chester County

Dear Members:

This letter serves to voice my wholehearted support and request for this Commission's efforts to fully and immediately fund Phases 2 and 3 of the Exton By-Pass project in Chester County in the first four years of the upcoming 12 year plan.

As a new Chester County legislator coming off of a long, grassroots campaign, I can report to you the continuing existence of overwhelming sentiment and support by 155th District residents and business owners for the completion of this project as soon as possible. Many thousands from my District must cope with the congestion and safety problems in the Exton area on a daily basis. In light of the agonizing history in getting this project completed, I urge you to fully support and assist in its final completion. The cost of completion will certainly never be less than it is right now. Let's get it done!

Thanks so much for your considerations.

Very truly yours,

James W. Gerlach

CHESTER COUNTY P.C.
RECEIVED
JAN 24 1991
PLANNING COMMISSION

January 22, 1991

The Honorable Howard Yerusalim
Chairman, State Transportation Commission
1200 Transportation and Safety Building
Harrisburg, PA 17120-0028

Dear Howard:

The completion of the Exton Bypass is the most critical concern in the 156th District. Along with our citizens, the entire business, industrial and professional communities are united in expressing not only the need for the Exton Bypass, but also the urgency for including all three phases in the 1-4 year category.

I take this opportunity to thank you and members of the State Transportation Committee for the efforts in moving the Bypass project into position so that proper funding can be justified. We all know this project has been spread out over many years. During those years traffic has continued to increase and costs have risen immeasurably. It appears to me that now is the moment of truth when the State Transportation Commission can endorse the recommendations of the Chester County Planning Commission for completion of the Bypass in years 1-4.

Second only to the completion of the Bypass, I request your attention to the following projects:

1. The widening to 5 lanes of the PA 113 corridor with a jughandle at Route 113 and Route 100 and the widening of the bridge on 113 over the Turnpike.

2. Your attention is called to the project of the West Whiteland Township Highway Network Improvement Committee. This Committee is working under the Transportation Partnership Act. Funding for this project is needed because most of the improvement is to state roads.

3. The 4 local major intersection projects in East Goshen Township currently on the program. All need to be advanced as soon as possible with 352 and Paoli Pike and the 202 off-ramp signalization as top priority.

4. The West Goshen wide program - major improvements to several state roads.

5. There is an urgent need for a south ramp on Bypass 202 to connect with westbound PA 322.

Consideration of these requests is appreciated.

Cordially,

Elinor

Elinor Z. Taylor

Dear Howard:

Re: State Transportation Commission Hearing
January 31, 1991
Holiday Inn, King of Prussia

On January 31, 1991, your Commission will be conducting a hearing on important highway projects, including those for Chester County. Because of my involvement with several of those projects, I would like to request that you give a sense of urgency to the following projects:

1. W. Whiteland--Exton Bypass, phases 1, 2, and 3.

2. Tredyffrin--U.S. 202, widened to six lanes from I-76 to PA 252.

3. Phoenixville--Chester-Montgomery connector, phases 1 and 2.

4. Tredyffrin--PA 252 underpass of Amtrak bridge replacement.

With respect to item 1, I would respectfully ask that you move the entire project to the first four years of the Twelve-Year Program. This project involves a daily traffic flow of some 35,000 cars and, hence, may not appear to be as significant as other projects on the list. Failure to complete the entire project within the first four years will undoubtedly have a very detrimental effect on the further growth of that area. I am sure you have seen that area many times during the rush hour. What you see in the immediate vicinity of the intersection of Route 30 and Route 100 is only part of the problem. Because of the severe congestion, a considerable amount of traffic is inadvertently transferred to marginal roads in that general area which results in very serious traffic problems on those marginal roads. When the business people in the area surrounding the above-mentioned intersection recruit employees on an ever-increasing basis, they find it more and more difficult to attract people to the area because of these traffic problems. Everyone seems to know about them.

Item 2 above has been a matter of grave concern to me for the last several years. I would strongly urge that engineering and construction be commenced and completed within the first four years of the Twelve-Year Program. Needless to say, the traffic of 80,000 cars per day on that section of Route 202 is intolerable. For every conceivable reason this project should be on the front burner.

On item 3 above, the Phoenixville Spur is becoming more and more of a necessary project. With the location of two very substantial pharmaceutical firms in Upper Providence Township, this project becomes more urgent for adoption and construction in the first four years. Please give serious consideration to this project.

Item 4 above has been added to the bridge bill but it has not as yet been included in the Twelve-Year Program. The Chester County Planning Commission proposes that it be included in years 5 - 8 on the Twelve-Year Program. Because of the extreme urgency of this particular project, I respectfully request that it be included in the Twelve-Year Program for years 1 - 4. This is a very serious matter and the longer we wait, the more expensive it will be to achieve. The most serious complaints I receive are about this particular condition.

I would like very much to discuss with you some specific proposals for providing the necessary funding for all of these badly needed projects. Thank you for your consideration of these requests.

Sincerely,

Peter R. Vroon
Member
157th Legislative District

January 30, 1991

Howard Yerusalim, Chairman
State Transportation Commission
Room 1200 Transportation & Safety Bldg.
Harrisburg, PA 17120

Dear Howard:

As the State Transportation Commission begins its deliberations in order to update the Twelve Year Program, I wanted again to urge you to consider the following as high priority projects and worthy of moving up on the new program:

1. Exton Bypass, all phases, in the first four years of the 12 Year Program.

2. Relocation of Route 52 at Longwood Gardens. We need to move all phases of this project into the first four years of the 12 Year Program.

3. Route 41. Planning funds should be included in the first four years with construction in the second four years. The project would be from the Delaware state line to Chatham.

4. Two lane relocation of Route 322 southwest of the borough of Downingtown.

Of additional importance is the consideration and addition of the following to the Twelve Year Program:

1. Route 1 Bypass improvements.
2. Intersection of Routes 926 and 202. Widening and turning lanes.
3. Route 1. Turning lanes and signalization at Chadds Ford Elementary School.
4. Continued support for funds for the engineering study to improve the intersection on Route 30 Bypass and Route 113.

Thank you for your consideration in this matter. Your continued cooperation is appreciated.

Sincerely,

Joseph R. Pitts

[Mr. Kenna's prepared statement appears on page 773.]
[Mr. Thompson's prepared statement appears on page 971.]

Mr. MINETA. At this time I would like to call forward George Leitz, International President of the Transport Worker's Union of America, and Bob Molofsky, Amalgamated Transit Union. I appreciate your patience and forbearance for your long wait today. Your statements will be made a part of the record, please proceed.

## TESTIMONY OF GEORGE LEITZ, INTERNATIONAL PRESIDENT, TRANSPORT WORKERS UNION OF AMERICA; AND ROBERT MOLOFSKY, LEGISLATIVE DIRECTOR, AMALGAMATED TRANSIT UNION

Mr. LEITZ. Chairman Mineta, members of the committee, my name is George Leitz and I am international president of the Transport Workers Union of America. The TWU represents some 60,000 members involved in urban and intercity surface transportation. We represent bus, subway, and commuter rail workers in New York City, Long Island, Philadelphia, Houston, Miami, New Jersey, and a number of other smaller cities. We have a continuing interest in a strong and viable urban mass transit system. This is, in our view, the purpose of the Urban Mass Transit Act and the Surface Transit Assistance Act now being considered.

At the outset, I am pleased that after many years of recommending drastic and destructive cuts, the Administration at least is proposing a modest increase in assistance. I believe that significantly more assistance is called for if we are to restore public transit to a central role in our national transportation system. I am grateful that the destruction of urban transit assistance programs is no longer in the Administration's game plan.

Aside from arguing for an increase in funding levels, TWU has continuing concerns about the administration of the program which I will now discuss. On privatization, it is clear that UMTA, through its interpretations of Section 3(e)(8) and 9(f) of the act, as well as regulations published pursuant to these provisions, has sought to establish a bias in favor of contracting out and privatization by transit authorities. Indeed UMTA has, in essence, forced public authorities to justify performing their own work as a condition of assistance. In our view, the actual terms of the law do not permit this sort of presumption. Of equal significance, this is the exact opposite of how efficient private sector firms operate in relation to contracting out core functions.

For example, in our contract with American Airlines, we have a provision requiring the company to contract in at least as much work as it contracts out. Notably, UMTA has found similar restrictions on contracting out in transit contracts to be inconsistent with its privatization regulations. I doubt that anyone would contest that American has been one of the most successful airline enterprises over the past few years. By contrast, Texas-Air, which for years contracted out far more work than most carriers, is one of the least successful carriers. In other words, UMTA's presumption in favor of contracting out has not, in our experience, been a sound strategy in the private sector. In light of this, I cannot see why UMTA retains this sort of policy.

The true cost of UMTA's privatization initiative, though, is revealed in the Miami experience. In that city former administrator Ralph Stanley forced the authority to enter into what was known as the "Private Enterprise Participation" called the PEP project plan as a condition for receipt of rolling stock. The authority was compelled to contract out several well-traveled routes to Greyhound Corporation. The notion was that this experiment would show that private firms would operate more effectively and efficiently than the established public authority and, therefore, justify more contracting out.

The experiment eventually established the exact opposite point. Polls of the public showed great dissatisfaction with the service provided by Greyhound and far greater happiness with the work of our members in Miami. While the private company began with a significant labor cost advantage, that advantage was soon eliminated by the high accident experience, turnover, and absentee rates among the private drivers and mechanics. In short, while Greyhound paid its employees less, the Miami ridership got what Greyhound paid for, less effective service. And I might add what one rider in Miami said, "I didn't mind when the bus was a little late when it was operated by the authority, but now with the private company, it doesn't even come at all."

The ultimate cost of privatization, though, can be simply revealed by looking at the buses themselves. Greyhound walked away from the PEP project to return the buses to the Miami authority, stock paid for by the UMTA dollars, in a complete state of disrepair. Any proponent of forced privatization should be compelled to walk through the warehouse where the cannibalized, leaking, now unusable buses operated by Greyhound are kept. It will reveal in starkest possible terms the true cost of privatization. I also will say that the buses are unusable. The routes that they have operated on now have been turned back to the authority. The ridership on the PEP routes have found alternate transportation, and now the Authority must get the public to come back to ride them once again. It was a complete disaster.

Clearly, this policy is unworkable. TWU strongly recommends that Congress amend the act to require UMTA to remain neutral with respect to contracting out decisions.

On labor protection. To it's credit, UMTA has not proposed elimination of 13(c). However, we strongly believe that certain loopholes in the law should be closed. In particular, UMTA has proposed deletion of 13(c) for so called demonstration grants. Yet, many such grants represent significant privatization initiatives. In any case, I see no reason why an authority should be allowed to circumvent negotiations with the union on any Federal grant which may affect our members.

Drug testing. TWU remains opposed to legislation mandating the imposition of drug and alcohol testing, especially random drug testing, as a condition for the receipt of Federal transit grants. Over 80 percent of the urban mass transit industry is engaged in massive drug and alcohol testing, employing pre-employment, reasonable suspicion, post-accident, and other testing as part of a negotiated agreement or employee practices. We have such programs in New York and Philadelphia.

The Committee has not received nor has UMTA presented any evidence indicating a need to legislate any additional testing at this time. Indeed, the experience in the airline industry indicates that the cost of random testing programs far exceeds their value in removing drug impaired personnel from the work place.

Mr. Chairman, I thank you very much, and I will answer any questions that you have.

Mr. MINETA. Thank you very much Mr. Leitz.

Mr. Molofsky.

Mr. MOLOFSKY. Thank you, Mr. Chairman.

First, on behalf of my president, Jim La Sala, I express the ATU's appreciation to be here to discuss not only our comments on the Administration's program, but our recommendations for the reauthorization bill itself. We represent, as you know, 160,000 public transit employees in the United States and Canada. We appear here not only in concurrence with the TWU, but with the AFL–CIO and it's recently formed Transportation Trades Department. We have attached ATU and AFL–CIO resolutions in support of our statement. We support not only recent remarks by yourself, Mr Chairman and others on the committee, but witnesses here today in underscoring the compelling needs to increase and indeed expand our nation's mass transit operations. In almost every respect, from service, air quality, traffic congestion and energy conservation, it demands no less and we support that.

We have, as you know, prepared a fairly comprehensive statement outlining our concerns. At the front of it we have highlighted our major positions. Let me run through those, if I may somewhat quickly and briefly summarize some aspects of our testimony and then of course answer any questions.

As you can see, our 10-point program includes passage of a 5-year bill with expanded funding up to or over $6 billion by raising of the gas tax, if possible, and to pay for it; maintaining and increasing Federal operating assistance; retention of 13(c), Collective Bargaining and Job Rights with guarantees that they apply to all the capital, operating and specialized transit grant programs under the act; limitations on UMTA's privatization mandates and regulations to insure that the choice of public and private transit is a local decision, determined free from Federal regulations and guidelines.

We, the ATU, and indeed all of transit labor remain opposed to any new mandates involving random and other drug and alcohol testing; we also seek to retain the existing Federal-local share ratios; General Fund support, and lend our support to pending bills to eliminate the bias with respect to the taxation of employer provided transit passes.

When we look at the Administration's bill in comparison to our own program we are struck that while they have good intentions in seeking to increase and expand the program, their proposal before the Committee really falls short of what the Nation needs. They don't provide for any real increases in Federal capital funding. They seek sharp reductions in operating assistance. They would reduce the Federal-local share ratios, and maintain, of course, so-called competitive bid or privatization requirements in such a manner as to remove local decision-making regarding the selection of public and private providers.

With my remaining time, Mr. Chairman, I'd like to focus on basically three of the issues that I just mentioned, by providing some detail and background.

The first certainly has to do with the labor protection requirements under Section 13(c) of the act. While it's true that the Administration proposes no substantive change in those protection they do have in their proposal a series of provisions that would for the first time allow the Secretary of Transportation to waive their application to certain specialized transit grants, for example, the demonstration and privatization projects under Section 6, and possibly the expanded service operations for the elderly and handicapped. We have also recently identified what may be a question involving the flexibility program as well. We, of course, could not and will not support any legislation that removes the necessary and vital labor protection requirements to the programs funded under the transit act. I think you well know that our record in terms of the application of those projections has allowed for an extraordinary industry and labor partnership enabling the transit industry and it's services to expand and respond to changing needs over the last three decades. The record of administration under the Section 13(c) program has uncovered no real problems requiring any legislative changes in terms of the substance nor application of those programs.

As our testimony highlights, last year we processed almost 500 grants. In the ATU, processing time averaged only 13 days; and those grants involved the entire range of transit service operations that are now funded under the act—specialized transit operation, regular capital and operating assistance, para-transit, privatization elements, and other entrepreneurial and suburban mobility grant programs, etc. There is indeed no reason to make any modification in this area. We note also for the record and would refer you to some of the legislative history under the ADA Act, which underscored the Congress' desire that the labor protection requirements certainly should apply in ways compatible with the Act, allowing transit labor to implement these projections as services in response to that Act are funded.

The second area I would like to call to attention has indeed to do with the privatization area that president Leitz referred to. Despite repeated Congressional directives that UMTA remain neutral with respect to the choice by grant recipients, of public or private transit provides UMTA, through application of it's privatization circulars issued under sections 3(e), 8(c) and 9(f) of the act, has indeed established a preference for involving the private sector in public transportation.

Let me make our position fairly clear The question before the committee is not to eliminate or favor a public or private operation. The question is where the choice for public and private operations should lay, and that, I would advise the committee, should remain with the local decision-makers. UMTA should play no role in prescribing the conditions under which those transit agencies and potential recipients should evaluate their transit choices, nor the conditions for making those selections. The agencies are responsible for meeting community needs in a responsible and efficient way and they shouldn't have UMTA second guessing them.

only prescribing so-called fully allocated cost standards that skew the decision-making in favor of the privates and present false savings to those decision-makers.

We have proposed a series of suggestions to the committee urging, one, that the new bill direct UMTA to remain neutral with respect to the choices; two, that there should be an elimination of any requirements of the so-called fully allocated cost methodology in evaluating service choices; and three, that the local transit planning agencies should remain free to develop their own plans and programs without UMTA determinations as to how they've applied private sector initiatives in implementing those plans and programs. Like the TWU, our own experience in an increasing number of cities that have chosen to privatize has proved dismal and at times mixed at best. Recently the city of Denver, transit system contracted 20 percent of it's service and found that it's costs increased over $9 million above what it would have cost if the system had retained that service. There were serious and significant service, safety, maintenance problems, and employee turnover problems. We have presented a summary of some of those experiences as part of our attachments and can present the longer report at the appropriate time.

Finally, I would conclude with a quick note on the area of drug testing. Mr. Chairman, we remain opposed to any new mandates in this area. Transit labor, along with the industry itself has been responding to the use and abuse of drug and alcohol in the work place for 30 years, long before the Congress took it up as an issue. The record in our industry is an extraordinarily safe one. There has never been any contrary presentation to this committee, indeed UMTA when it was issuing it's original guidelines that were revoked following a court case, could uncover no evidence of a safety problem in the industry and presented no data in support of any new mandates in this area. Over 80 percent of the systems in the United States are already testing with major programs coupled with rehab, employee assistance programs that have been collectively bargained and implemented and we think that's the structure that should remain.

I would close as I began, in support of statements by yourselves and other witnesses that the ATU and transit labor stands in support of an expanded Federal mass transit program. We support efforts to increase the level of funding. I would be delighted at this point to answer any questions you might have regarding my testimony.

Mr. LEITZ. Mr Chairman, with me is my associate and my legislative director and counsel, Arthur Luby.

Mr. MINETA. Mr. Luby represents you very, very well, Mr. Leitz. We're very familiar with him and he does a good job.

Mr. Leitz, in your testimony, you state that 80 percent of the employers in the transit industry are currently drug testing their employees. Putting aside the issue of random drug testing, which I continue to have concerns about, would there be any advantage in having UMTA bring some national uniformity to the transit drug testing programs in existence across the country?

Mr. LEITZ. In mostly all our properties now the pre-employment is testing, the post-action is testing, the reasonable suspicion is test-

ing. We're having a great thing throughout the whole country on random testing now, but the facilities that we're using around the country now are not able to handle that mass testing and we're running out of laboratories. Some of the laboratories have not been qualified to do the testing, so at this moment to get a standard system around the country is a little bit too soon to evaluate that. In your own state of California we had a random testing in San Francisco which has been completed.

Mr. MINETA. What about the competence of the test, the results themselves?

Mr. LEITZ. My only experience with the competency of the test is that of New York City. They had to throw out all the tests and the people that they had discharged and were out of work for almost a year, they had to restore them to the job and pay them one year's back pay and it was very costly because they didn't know where the test belonged. They had their workers mixed up and everything else and they finally have agreed on a new laboratory. I hope that works out. Maybe my colleague, Bob, has had more experience with it.

Mr. MOLOFSKY. There has been some legislation pending in Congress to set some uniform standards for labs as they would administer testing. Some of the problems that we have had with the mandated proposals is that they would interfere with collective bargaining and negotiating rights that labor has under Federal and State law, which require that such programs be the result of negotiations among the parties. Mandates would interfere with that long-standing right to bargain.

Mr. MINETA. I don't think I'm talking about mandating. What I'm saying is that given the fact that there's already such a very large number of tests being done, and that close to, as Mr. Leitz said, 80 percent of the employees of the employers in the transit industry are now drug testing, should we do something about uniformity in the drug testing program in order to get away from that kind of maybe the competency of the people who are administering the tests?

Mr. MOLOFSKY. I think in that area that we would support your efforts. Absolutely. We would welcome it and we have argued in other committee forums about the need to standardize the methodology for testing and the lab controls and standards and safeguards to ensure that whoever might be tested is tested properly. That's, of course, a separate question from what might trigger the test in the first place, which is where we've had some concerns. And I gather your effort is in the area of assuring competence and quality when something triggers it, and that I can assure you would have our support.

Mr. LEITZ. I think that would be a perfectly appropriate initiative. I think the only fear that any of us would have is it be used for another mandate for random. Other than that, I think it is a good idea.

Mr. MINETA. That is not my interest at all in terms of any form of mandate.

Mr. Molofsky, in your statement you referred to the fact that the ATU has a record of processing more than 86 percent of the 13(c) arrangements presented to you within one month and I think

that's commendable that you've been able to do that in that kind of a period of time. Just out of curiosity, tell me about that 14 per cent. Would you give us an example of the kinds of circumstances surrounding the 14 percent and why those arrangements were delayed?

Mr. MOLOFSKY. Several reasons. First, they include grant applicants who were coming to the program for the first time. The majority of the certifications under the 13(c) program that are issued involve reapplication of previously negotiated capital and operating assistance 13(c) protection arrangements. Where a new applicant is coming in for a grant, for the first time, it would require the parties as Congress mandates to sit down and negotiate an amount that satisfies the act's requirements and have it subsequently approved by the DOL. That's number one.

The second reason, and again I think the 14 percent, if you look at the numbers, might involve 20 to 25 total projects, so I think that you have to keep that in perspective. There are a number of cases where transit applicants have sought to remove provisions that have been in their 13(c) agreements for 20 years, for no new or valid reason and that has lead to a briefing schedule and negotiations and decision-making process within the Department of Labor that can prolong the process.

The third area, of course, involves efforts by the parties to respond to what are unique needs raised by particular issues raised by particular grants. We may not be piggy-backing old arrangements, we may not be fighting or discussing or negotiating over removals. We may in some of those cases be seeking to secure arrangements under the auspices of the DOL for the appropriate types of projections that a particular grant would require. There are, I must tell you, a few occasions that UMTA has sought to involve itself in the 13(c) process without any legislative role and that on occasion has prolonged the process unnecessarily. That for us has been a problem, most recently in Phoenix and a few other cases. Of course the Congress has always mandated that that's the sole responsibility of the Department of Labor.

Mr. LEITZ. I've had two years experience before becoming International President, I was Director of the Transit Division and possibly in 10 years time, because all UMTA grants come before my desk, we only had trouble with two. One was worked out in Columbus, Ohio which was a pilot project and naturally we rejected, to the Miami project with Ralph Stanley.

Mr. MINETA. Mr. Riggs?

Mr. RIGGS. Thank you Mr. Chairman.

Mr. Leitz, I'm curious to get your views on this question of flexibility which has come up several times today and want to make sure that I understand your opposition to that aspect. Do you see a way we can have flexibility without providing for interchangeability between funding sources, between highway and transit programs?

Mr. LEITZ. Well in my long experience in transit on Federal operating assistance, public transit has always come out on the short end of highway funds.

Mr. RIGGS. We want to do something about that.

Mr. LEITZ. I hope you do. I think we should get a lot more money in transit. You're talking about flexibility there. They just don't have the funds. Where the need is out there, they just don't have the funds to start their own pilot projects, to get the people in the suburban area to come to work in the city because there is no public transit.

Mr. RIGGS. So you're concern is simply what you perceive to be a funding short- fall for transit. If we were to do something about that, if we were to make a significantly increased funding commitment to transit, then you wouldn't necessarily be opposed to the idea of flexibility and interchangeability between funding sources.

Secondly, you also expressed concerns regarding privatization. Does that just assume that mass transit or public transit is a losing proposition, something that always has to be subsidized with the taxpayer's dollar and can never turn a profit under private ownership and management.

Mr. LEITZ. I have been associated with public transit now some 43 years. I'm a bus driver. I started out in New Jersey with private companies. I would say to you that those private companies had the best management you ever wanted to see but they couldn't survive. If they couldn't survive in those times, I'm talking about the 1950s and the 1960s, then in the 1970s they had to go into the Transit Authority. No one can come into this industry today unless they cherry pick a line. They cherry pick one of the better lines. We have privatization today because of deregulation. If you go in Miami along Collins Avenue you'll see vans going up and down, what we call "Chippy Vans," scooping up people. Is that the kind of privatization we're talking about. I don't know any private operator that wants to come in without some good line that's now in existence. I thought deregulation was going to provide service where there was no service. I thought that's where the private operator would come in. Provide service to the public out in the rural areas or whatever you want. But that was not the idea of the private operator. The private operator wants to grab something that's already established by the authority. When you take that private line, then the authority needs more operating assistance when you take their profitable lines away from them.

Mr. RIGGS. To the other two gentlemen, do you see a role for private sector, private enterprise involved in providing public transit needs?

Mr. MOLOFSKY. Yes, the point we're making is not to eliminate any role for private sector in public transit. It exists and our unions represent public and private operations. I think the record should show in the studies of the Economic Policy Institute that we have attached to our statement, and experience in many cities which have sought to contract away existing services for their regional operations is that it doesn't always work. The problem that we are presenting to the committee is that UMTA should not be in the position of controlling or mandating those choices and that's the system now in place.

The Congress has repeatedly said that the proper role for the Federal Government should be to stay neutral in these matters. They should not mandate the cost accounting system that evaluates whether or not it's wise to do it. They shouldn't second guess

the local Section 8 planners and the Section 8 programs that come in as to whether they have done a good job or not. It is indeed a local decision to make for itself under it's own terms and we'll deal with those claims. That has not been the history and the practice of the program and that remains our problem and that's why the issues that we've raised in our testimony are targeted towards securing provisions again mandating that the Federal role be one of neutrality. not total elimination of one form over the other. That's not our interest nor our goal. We support 9(f) of the act which has called for the involvement of the private sector in the development of those programs. The way UMTA in its privatization guidelines has chosen to implement 3(e) and 8(d) goes well beyond what Congress ever intended, and has created preferences, mandates, controls, second guessing, and appeals processes that have prevented the local communities from making their own choices, and that's been our problem.

Mr. RIGGS. Thank you.

Mr. MINETA. Thank you very, very much for your testimony here today and we appreciate your participation.

Mr. LEITZ. Mr. Chairman, could I make one personal remark. The transit industry has changed and especially the urban transit where they take the people to work and they take them home and they used to take them shopping but now the shoppers go to the malls. The buses are utilized from sometimes 9:00 in the morning to 4:40 in the afternoon.

The transit authorities around the country used to charter work. They used to take Boy Scouts, Girl Scouts, senior citizens on charters and they used to pick up additional revenue and also the workers used to pick up additional money. Sometimes it meant millions of dollars to transit authorities. They didn't make the field level and they said that if you're receiving operating assistance, you can't do that if there's a private operator in the area. The private operator now does that charter work and then he comes in on an unregulated and he steals the passengers the day that he doesn't have a charter. I think that the Transit Authority should be able to utilize her equipment and their workers and do this charter work to bring additional monies which is so needed in the transit authorities today.

Mr. MINETA. Thank you very, very much, Mr. Leitz. Thank you Mr. Molofsky.

[Mr. Molofsky's prepared statement appears on page 870.]

[Mr. Leitz' prepared statement appears on page 865.]

Mr. MINETA. I would now like to call forward a panel made up of Mr. Alfred B. LaGasse, III, chairman, Coalition for Transit Opportunities and executive vice president of the International Taxicab and Livery Association; and Susan Perry, senior vice president, Government Relations, American Bus Association. The prepared statements of our two witnesses will be put into the record.

Mr. LaGasse, would you like to start first?

Mr. LAGASSE. Certainly.

**TESTIMONY OF ALFRED B. LaGASSE III, CHAIRMAN, COALITION FOR TRANSIT OPPORTUNITIES; EXECUTIVE VICE PRESIDENT, INTERNATIONAL TAXICAB & LIVERY ASSOCIATION, ACCOMPANIED BY JAMES Mc LARY, PRESIDENT, TRANSPORTATION MANAGEMENT SERVICES, INC.; AND SUSAN PERRY, SENIOR VICE PRESIDENT, GOVERNMENT RELATIONS, AMERICAN BUS ASSOCIATION**

Mr. LaGasse. Mr. Chairman, my name is Al LaGasse and I serve as chairman of the Coalition for Transit Opportunities. Founding members of the coalition include the International Taxi and Livery Association, of which I am the executive vice president, the American Bus Association, the National School Transportation, the United Bus Owners of America, the Airport Ground Transportation Association, and several private transportation companies These diverse groups have joined together to form this coalition to ensure our continued role for the private sector in meeting this country's public transit needs.

The Coalition's two specific goals are 1) to preserve the Urban Mass Transportation Act provisions 3(e) and 8(e) as written in 1964 and interpreted in statute and guidance by UMTA since that time and 2) preserve the more recent Charter Bus Regulations in their current form.

Sections 3(e) and 8(e) of the act simply call for the private sector to have a fair opportunity to provide services under contract to public transit authorities. There is no mandate that contracting take place and there are no quotas for contracting. There is no Federal guarantee that there will ever be a contract with the private sector. All that Sections 3(e) and 8(e) assure is that the private sector is given a fair opportunity to participate in the Federal Mass Transit Program. It should also be noted that when the public sector does decide to take advantage of contracting with the private sector, the public sector retains full control over the service by means of the contract. The public sector controls what services are contracted. They also control the standards and safety requirements and of course the fare.

The fact of the matter is that while there are no Federal mandates for contracting, the public sector has found it advantageous to contract. The numerous examples of successful contracting include: In Los Angeles, Price Waterhouse reported improved safety and service quality as well as a 50 percent savings on compatible contracted service. In the San Diego, since 1979, the competitive contracting has proven long term benefits. Since the introduction of contracting in San Diego, their savings relative to the average public transit industry's cost have exceeded $100 million. In the San Francisco Bay area, nearly 300 buses currently contracted for public transit service. In Dallas, more than 200 buses are under contract. In Seattle, Snohomish County is now saving more than 30 percent with its competitively contracted express services. Ridership has increased 100 percent in three years and service quality has improved. In Denver, a savings of 27.5 percent has just recently been projected for next year, based on a certified independent audit performed by KMPG Peat Marwick.

In addition to the financial savings, the Peat Marwick audit determined that services provided by private operator contractors were equal in quality and safety to those in public sector transit.

Mr. Chairman, we would like to introduce for the record, a complete copy of the Peat Marwick study.

[The referenced study "Performance Audit of Privatization of RTD Services" may be founds on p. 810.]

Mr. LAGASSE. Sections 3(e) and 8(e) of the Urban Mass Transportation Act provide public transit with a valuable tool and they provide private operators with an opportunity to do what we do best. The teaming of public and private transit operators has also proven to give the operators the best of both worlds, high quality service at an affordable price. We urge the Committee to leave Sections 3(e) and 8(e) of the Urban Mass Transit Act as they are.

The second issue of vital concern to our coalition is UMTA's charter bus regulation issued in 1987. This regulation states that if an unsubsidized operator were available and willing to provide charter service, then it should not be provided by publicly subsidized operator. Under certain circumstances such as a special event or a situation where no private carrier is able to serve the area, then the public authority would be authorized by UMTA to provide the service. The Charter Bus Regulation is working. The vast majority of public transit authorities are dealing with the regulation. In the four years that the current regulation has been in effect, complaints from the public sector have been minimal and for the most part they have been solved to the mutual agreement of the public and private provider.

Again, Mr. Chairman, we urge the committee take no action on UMTA's Charter Bus Regulation.

In conclusion, we're probably the only group that will appear before you today to address this committee and ask for neither an increased funding nor any language modifications. We simply request that the private sector provisions of the Urban Mass Transportation Act and their attendant regulations and guidelines be left as they currently are. This will allow the private sector to continue partnerships with public authorities, which will benefit the public transit riders.

At this time, Mr. Chairman, I would like to introduce Mr. James McClary. Jim is president of Transportation Management Services, a firm that manages and operates several para-transit and bus-transit services under contract to public authorities. He'll be available to answer any questions and get firsthand experience on private operator's contract with the public sector. Of course, Ms. Perry, here with the American Bus Association can handle the bus issues

Mr. MINETA. Very well.

Ms. Perry if you would like to go ahead with your statement.

Ms. PERRY Mr. Chairman members of the subcommittee, for the record my name is Susan Perry I'm senior vice president for Government Relations of the American Bus Association In addition, as Al said, ABA is a member of the Coalition for Transit Opportunities. Since he covered so well the competitive contracting and the charter bus regulation issues I will not cover them They are in

my written statement and I will be happy to answer any questions you have but I won't go into them at this time.

ABA is the national trade association of the intercity bus industry. We have several thousand members, some 700 of whom are bus operators engaged in intercity regular route, charter and tour, transit and commuter, and airport bus services. We appreciate your affording us the opportunity once again to be here today and to talk with you as you develop the surface transportation assistance act for this year.

Intercity bus, by way of background, is the only system of low cost intercity public transportation in this country and it is the intercity transportation network also for rural America. A report done by Robert R. Nathan Associates in 1989 entitled, "Federal Subsidies for Passenger Transportation—From 1969 to 1988—Winners Losers and Implications for the Future," pointed this out. Quoting from their report, "The intercity bus industry, despite the difficulties it has faced competing with the highly subsidized modes of passenger transportation, has continued to provide a critical transportation service to many Americans who have few, if any, alternatives." With your permission, I would like to submit for the record a chart from their report that details the demographic distributions of intercity passenger miles by transportation mode.

Despite the critical role we play as the primary carrier, and I think the chart that you will have shows this, of the old, the young, the poor and those in rural America, all of whom could be classified as transportation disadvantaged—at least transportation dependent—federal transportation programs have ignored us while heavily subsidizing competing modes. Only three-tenths of one percent of Federal transportation assistance over the 28 years covered in the Nathan Report has been received by the intercity bus industry while air passenger transportation received 49.3 percent and intercity rail passenger transportation received 11.6 percent. This imbalance, or the unlevel playing field that we've heard referred to a number of times today, has been a major cause of the steady decline in intercity bus service over the last several decades. Again, according to the Nathan Study, in 1960 intercity bus served more than 20,000 points in the U.S. In 1988 we served better than 10,000 and now we are serving just fewer than 10,000.

Much is being said currently about the benefits of intermodalism. Certainly members of the Executive Branch of the Government and of this committee have been particularly vocal on the subject. Given its flexibility, the intercity bus is uniquely suited to achieving the benefits of intermodalism. We provide public transportation on highways but we are capable of connecting to all other modes at airports, train stations and transit centers. Intercity buses therefore can serve as universal connectors in linking highway public transportation with transit systems, airplanes and trains.

We have several specific recommendations, which I would like to outline for you, which we believe the twin objectives of enhanced intermodalism and a strong low cost rural transportation system. The Administration has included some similar recommendations in its proposal and in addition to theirs, we have some recommenda-

tions of our own from the industry that we believe need to be included in any legislation that this committee comes up with.

The first of these is the inclusion of intermodal transportation centers as eligible projects for funding in the highway program. Multipurpose facilities could be located in the right of way adjacent to an interstate access ramp. They could include a park and ride lot and a small terminal, probably housing both intercity and local transit service. These centers facilitate intermodal connections to the fullest. They make both transit and intercity services more attractive. They encourage more productive use of the highways. As I said in testimony to this subcommittee last spring, the private bus industry would be a rent paying user of the facility, thus affording it some income. In return, we would receive a new safe and clean facility to use. We would be paying our own way to use the facility but we do not have available construction capital to build it.

Secondly, we recommend the inclusion of projects to enhance and support intercity bus service as eligible projects in any rural highway program. Now again, these were based on the delineations that the administration had in its proposal. States, we believe, should have the flexibility to use their rural highway money to fund projects to support intercity bus operation. Intercity buses serve as I said earlier just under 10,000 communities. Air and rail combined these days serve fewer than a thousand. If the statewide intermodal planning process recognizes intercity bus projects as high priority, then the state should be able to fund them under the rural highway program.

Third, our recommendation is the inclusion in the transit program of projects that facilitate the coordination and connection of intercity bus services with transit services. Language now exists in the UMTA Act. It merely needs to be extended and clarified, particularly in section 18 to include intercity bus and projects that coordinate intercity bus with other rural modes of transportation. Constance Garber, who testified earlier for the Community Transportation Association of America, described this in her answer to your question about intracity and intercity and would there be a conflict and she said it would be complementary services rather than conflicting or competing and that's what we mean in there.

Fourth, we recommend—and we went into this in the testimony last spring—provision of a federal standard of 45 feet for maximum intercity bus lengths. This enhances productivity by giving us almost a 20 percent increase in seating capacity and one-third more cargo space. Also, the provision would correct what we believe is an anomaly in existing law: that is that the same standards are provided for truck and bus weights and widths but length standards apply only to trucks. Buses, therefore, are left with a hodgepodge of state limitations that in effect limit them to a length of 40 feet while truck trailers, according to federal law, may be as long as 48 feet. Since we are engaged in interstate commerce, this particular lack of uniformity makes it difficult if not impossible to carry on our interstate business. Based on prototypes that have been redesigned and engineered from the ground up and are now built, we know that a 45 foot bus can meet all federal size, weight and safety standards. We recently have provided committee staff with a paper containing detailed information on the 45 foot proto-

type bus and we would be happy to meet with you and discuss it with you further and to bring the engineers and the manufacturers in to talk with you about it.

Having touched on the subject of uniformity, I would say just that we agree with the Administration's proposals for uniformity among the states in the matters of operating authority, registration and fuel tax. These again are in the administration's bill. We would like to be sure that we are included along with motor carriers of property in any such provisions that you might enact on these subjects.

Finally, my last point, we urge the provision of a 90 percent federal share for the development of high occupancy vehicle lanes as an incentive for this cost effective management tool which we believe would reduce urban congestion to a large extent. Intercity buses uniquely face congestion getting in and out of every single area in the country and we, therefore, see HOV lanes as the best and most cost effective way of alleviating this problem.

I thank you for your attention. I know the hour is late. I'll be pleased to answer any questions that you might have at this time. Thank you.

Mr. MINETA. Thank you very much, Susan.

Mr. LaGasse, in your testimony you referred to the private bus service that Cobb County, Georgia operates. Does the subcommittee need to ensure that some regional public entity such as MARTA, continues to coordinate regional transit service so Cobb County's private transit operator is not competing for riders with another private operator which MARTA might contract wit?

Mr. LAGASSE. If the planning process, the MPO planning organization, I'm not totally familiar with the MPO in Cobb County, but certainly the planning requirements would account for determining who operates in what area and make sure as came up earlier in the day that you don't have overlapping routes. You have effective utilization of the existing equipment. Does that address your concern?

Mr. MINETA. Well, it's just a question of whether of not there would be competition for riders and whether MARTA or that kind of a regional public entity would continue to be the coordinating center so that you don't run into competition.

Mr. MCCLARY. Mr. Chairman, in the Washington D.C. area, the Montgomery operates parallel in some cases. Alexandria does the same. Fairfax county does the same. And those are all coordinated through the local process through the MPO for the council governments and I believe there are enough other controlling agencies that would control that and eliminate the real need of controlling duplication.

Mr. MINETA. Ms. Perry, on page four of your statement, you say, "We recommend the inclusion of projects to enhance and support intercity bus service as eligible projects in any rural highway program." In the airline aviation business there is something known as the Essential Air Service. Is this essentially what you're alluding to? Some kind of essential bus service?

Ms. PERRY. It's an essential bus service, but I don't think like the Essential Air Service. We're not thinking of a direct subsidy as in EAS, but we're thinking more again on a contract basis. If States

were to see a need for this in their rural areas, they would offer it as a competitively contracted service and then they would end up awarding a contract to a private company or a public company, whoever answered the RFP or however it's awarded. It would be a contract situation rather than as, I understand it, an EAS that's just a straight subsidy. I don't think there's any contract involved. This would be a question of bidding on a contract to provide a particular service and then whoever won that bid would be awarded a certain amount where the contract with stipulations as to what that service is to be. So I think it's much less broad than EAS.

Mr. MINETA. About maybe three years ago there were a number of communities that lost intercity bus service. I know there were many communities in California that were seriously impacted by that. Do you think that with this kind of a program there may be the possibility of reinstitution of intercity service to some of those communities?

Ms. PERRY. Definitely. And it has. In New York State, for instance, there are some intercity schedules that are being supported by virtue of subsidy or contract by the State of New York. Now whether they are using Federal funds and syphoning them through, I don't know. But it is service that the State of New York decided needed to be run, that was necessary as part of its transportation program, and was not being run. So I think the answer to your question on California is, yes.

Mr. MINETA. Very well. Thank you.

Mr. Shuster?

Mr. SHUSTER. Thank you, Mr. Chairman.

I have a couple of tough questions for you. First of all, when you mentioned that the cost savings is due to contracting, are you really saying that the savings are realized because of a significantly lower labor wage level?

Mr. MCCLARY. Mr. Shuster, I can speak to that specifically. We have recently seen three public contracts; in all three cases, employees all received raises. Admittedly, they were making very low wages, it raised all of them. All three cases provided health benefits, which they did not have, and in all three cases they got vacation holiday pay, which they did not have. In all three of those cases, our prices were lower than the public sector bid.

Mr. SHUSTER. Let me ask you another one. Some have proposed that UMTA or the Federal Government be taken out of the local decision-making process regarding contracting out of service. Why do you oppose that local option to control?

Mr. LAGASSE. We don't oppose it. The decision is clearly made at the local level. There is no Federal decision as to whether or not a contract is issued. But what UMTA has done is simply put in certain procedures, guidelines, to assure a level playing field. We have some policies mandated at the Federal level—and I'll use the prior panel with Section 13(c), for example—when you add certain Federal requirements for certain types of protections, then you need other Federal requirements to balance it off. All we ask is for a fair chance and opportunity. But UMTA never mandates a contract we issue; that's simply not true.

Mr. SHUSTER. In the last day or so, Washington Metro has announced that it wants to eliminate 40 percent of its transit bus

service to save $11 million because, and I am quoting their release, "the public does not want to see 40 foot buses with only two or three passengers." Do you see any other solution that would allow some level of service to continue? Perhaps Ms. Perry would like to answer that question.

Ms. PERRY. As I understand it, and I only saw the press coverage of what Mr. Gunn was suggesting, there were duplicative routes. What he is trying to eliminate is duplicative routes which has long been a problem in the Washington area system even before the Metrorail but especially since Metrorail. That is my understanding of it, that that is what he is trying to do. That there are two or three passengers, whatever that figure was, that people are seeing on buses because they are duplicative or the headways are too short.

Mr. SHUSTER. What's wrong with offering a 16 passenger bus or a 11 passenger jitney?

Ms. PERRY. That's all right——

Mr. MCCLARY. If I may, sir. I am also chairman of the Private Providers Task Force here in Washington, D.C., and I am representing about 13 companies and over 400 vehicles. But we have been talking with WMATA, we have been talking with the jurisdictions, and we have made ourselves available to provide that kind of service. It is not the mainline service that we want to take over. We would be glad to go in and provide them alternative costing where we could operate smaller vehicles, with vans, with body on chassis vehicles, and those vehicles are available. And we do that in the area now and we would be in a position to continue it.

Ms. PERRY. If I may add, I think this is a perfect example of local decision-making and what the answers to the needs are locally.

Mr. SHUSTER. One final question. You've cited many positive experiences the cities have with regard to the competitive contracting process. But we have also heard opposite experiences occurring in other cities. To what do you attribute the difference between these positive stories and these negative stories? I presume they are both factual except there are different experiences in different cities. What's the difference?

Mr. LAGASSE. I am sure we can all answer that, but I'll take a stab at it, if I may. There was one example of not terribly successful private sector contractor and several many more examples of where they have succeeded. The contract itself, the document, the procurement process often outlines whether the system is going to be successful. If the public sector issues a bad contract, they may indeed get bad service. So it is important for UMTA and those of us in the private sector an APTA and those in the public sector to educate each other on what constitutes a quality contract that will assure quality service. Bad contracts do lead to bad service.

Mr. SHUSTER. Be more specific, if you would, please. Give me an example of a bad contract or a bad provision in a contract.

Mr. MCCLARY. Let me give an example of a situation that we're still operating in and it is not, in my mind, the kind of service that I want to operate. We took over a contract for a public agency and they had 21 vehicles that we had to assume. We have been operating that contract for going on four and a half years now. Three of those vehicles have been replaced, all of the vehicles have over

125,000 miles on them—I'm talking about vans, school buses basically—and we are spending tons of money holding that together because the vehicles haven't been replaced. It is a situation where we inherited something that was already there. If it had been our preference———

Mr. SHUSTER. But couldn't I argue—taking that example—couldn't I say, wait a minute, you guys entered into a contract. Why shouldn't you have looked at that and why shouldn't you have said we don't want this contract unless there are maintenance provisions that are spelled out in the contract.

Mr. MCCLARY. And we did and we offered to them an alternative of providing———

Mr. SHUSTER. I mean, if nobody put a gun at your head and told you you had to take the contract. You took a bad contract.

Mr. MCCLARY. Correct. And we offered them an alternative providing them brand new vehicles. They did not want to pay for it. And so, no, I am not complaining, sir. I am giving an exampl of———

Mr. SHUSTER. Then why shouldn't you, as a prudent businessman, reject it; say we don't want to do business.

Mr. MCCLARY. I could have walked away from it. I did not. I chose not to. To be honest with you, part of it was marketing strategy, it was my first entry into the State. I went into it with the idea that we would use that to build on. You are correct; as a prudent businessman, if I look at the bottom line, I should have turned around and walked away from it.

Mr. SHUSTER. Thank you.

Mr. MINETA. Mr. Swett?

Mr. SWETT. I have no questions, Mr. Chairman.

Mr. MINETA. Let me thank the panel for their presentation.

[Mr. LaGasse's prepared statement appears on page 806.]

[Ms. Perry's prepared statement appears on page 945.]

Mr. MINETA. At this time I would like to call on Mr. Douglas Korves, Douglas Korves Architects, New York. He's a member of the American Institute of Architects and the Livable Communities Coalition, and president of the New York State Association of Architects.

Mr. Korves, your statement will be made a part of the record. So if you would proceed in your own fashion.

**TESTIMONY OF DOUGLAS KORVES, DOUGLAS KORVES ARCHITECTS, NEW YORK; MEMBER, AMERICAN INSTITUTE OF ARCHITECTS AND THE LIVABLE COMMUNITIES COALITION, PRESIDENT, NEW YORK STATE ASSOCIATION OF ARCHITECTS, ACCOMPANIED BY AL EISENBERG, SENIOR DIRECTOR FOR GOVERNMENT AFFAIRS, THE AMERICAN INSTITUTE OF ARCHITECTS**

Mr. KORVES. Thank you, Mr. Chairman, and members of the subcommittee. My name is Douglas Korves, and today I am representing the American Institute of Architects and the Livable Communities Coalition. The Coalition is composed of 21 professional planning, design, environmental, and historic preservation organiza-

tions. If I may, I would like to submit a list of these organizations for the record.

I am an architect with my own firm in New York, and I am president of the 5,000 member organization of New York State Association of Architects.

I want to thank the Chairman for this opportunity to present our views on surface transportation reauthorization legislation.

Our message is simple. Federal transportation policies must be changed for the sake of our communities' future. This year's reauthorization offers an extraordinary opportunity to do it. The AIA and its coalition have developed the Transportation for Livable Communities Act, a copy of which I have also submitted for the record. This measure creates the framework for change by significantly strengthening the linkage between transportation and community planning and improvement.

Federal transportation policies have had enormous influence on the way our country has grown and developed. The Federal Highway Program, begun for national security, has helped bind the Nation together. It has ended the isolation of the rural areas, and fueled world class industries that provide employment to millions. Yet by giving full throttle to the automobile, these same policies have also helped create rampant overdevelopment that has depopulated downtowns and overcrowded the suburbs. Too often we have laid out our highways first and considered the effects on our communities and natural resources later We have turned farmlands into Interstates, wetlands into causeways, neighborhoods into freeways, and green belts into beltways. We have paved over our scenery and history, and we have blanketed our cities, suburbs, and even our national parks with smog. Low density development has sprawled over the landscape, imposing on us enormous dollar costs. But there has also been a social cost. Workers no longer live near their work; shoppers no longer live near their shopping. We have headed down the highway to the suburbs to experience the freedom of life on the open road, only to sit stalled in traffic on our way to work.

Without an end to the business as usual approach to this Nation's transportation needs, many localities will cease to function as livable places. If I may quote the chairman of the Washington, D.C. Task Force on Growth and Transportation, "We have seen the future and it doesn't work."

The Livable Communities Coalition believes there must be a better approach. This better approach starts with coordinated planning that makes transportation more than just an exercise in getting from one place to another. Good planning equals conservation. National policy should ensure that each transportation project is considered in light of its contribution to community livability and fits within the environment of the locality it serves. National policy ought to be concerned with moving people and goods—not just automobiles—and should care about what happens along the way.

Unfortunately, current law pays scant attention to transportation planning. In fact, the use of rock salt receives greater emphasis than planning. The Administration's surface transportation bill

is an improvement over the current law's almost total neglect, yet its provisions fall short.

Mr. Chairman, I would like to take the balance of my time before the subcommittee to focus on the Planning and Transportation Enhancement Act activities provisions of our legislation.

In our legislation, Title I would strengthen the link between comprehensive and environmental planning and transportation investment decisions. It would require State and local transportation plans to make the most efficient use of existing facilities, as measured by the movement of people and goods. An essential provision would require that State and local plans promote land-use patterns for residence and employment that makes mass transportation more attractive and feasible. This provision recognizes that high density concentrations of development instead of urban sprawl makes good transportation sense.

Our proposal also requires State and local transportation planners to demonstrate why alternative transportation modes are not feasible substitutes to any proposed expansions of highway capacity. After all, taxpayer's dollars should not be spent on new road construction if another form of transportation is a better idea. State and local officials should not be forced to choose road construction over other modes better suited to their constituents. Consistent with our concern that any highway project must fit its community and its environment, local transportation plans should also be required to conform to other established plans. These include housing, community development, historic preservation, land use, air and water quality and, specifically, the requirements of the Clean Air and Clean Water Acts. Particularly important, the plans would be expected to effectuate ways to reduce auto use in congested areas.

Title II establishes a new category of eligible activities for transportation funding, called transportation enhancement activities. Enhancement would include scenic and historic landscaping projects, demonstration projects to encourage excellence in the design or construction of transportation facilities, rehabilitation of historic transportation buildings, preservation of abandoned railway corridors, and acquisition of scenic, recreational, and historic sites or easements. These activities would be encouraged through a more favorable Federal match for those projects that incorporate them.

Mr. Chairman, there are two other titles. Title III would establish the National Scenic and Historic Highway System. The bill would set aside $25 million for each of the next five fiscal years for projects to protect and enhance highways, Federally funded and otherwise, that hold a special place in the Nation's history and culture. Title IV encompasses legislation to reform the Highway Beautification Act. Among other provisions, it would restore to State and localities the jurisdiction to remove nonconforming billboards.

Mr. Chairman, may I close with this analogy. Through the practice of my profession, we design and occupy buildings that fit into their environment. We are concerned with our buildings, their appearances, how they are landscaped, how they relate to other buildings, their scale, their context, and how they relate to their communities' histories and culture. We integrate these buildings into

the land use plans that govern them. Should we not have the same concern for those linear structures—our roads and highways? The Transportation for Livable Communities Act will assure that we do through a better planning process and community involvement. We hope that you will include this message in your subcommittee's bill.

Thank you.

Mr. MINETA. Thank you very much, Mr. Korves.

A major focus of the Transportation for Livable Communities Act of 1991 is to strengthen the planning process associated with the Federal Aid to Highway program. Under your proposal, what incentives would be available to the Federal Highway Administration to encourage coordinated planning among State and local governments?

Mr. KORVES. In our enhancement, we have some additional funding proposals. Specifically, we ask that there be Federal sharing up to 95 percent. We also say that for every $2 spent on planning enhancement that the Federal Government provide an additional $1, so that if a community were to spend $100 million on a highway of which say 80 percent would be a Federal share, if it spends another $10 million on planning enhancements—an astounding number to spend on planning enhancement—that the Federal Government would contribute an additional $5 million so eventually that participation by the Federal Government would be an $85 million participation.

Mr. MINETA. Under Title III, you would set aside $25 million a year for five years, but none of that could be used for highway construction.

Mr. KORVES. Each year for five years.

Mr. MINETA. But none of that could be used for actual highway construction?

Mr. KORVES. That's correct, Mr. Chairman.

Mr. MINETA. That would be used for what?

Mr. KORVES. We're proposing in our legislation the Secretary of Transportation would have the discretion to fund projects including the survey of highways for potential designation, acquisition, and rehabilitation of historic facilities related to national scenic and historic highway design, construction, and rehabilitation of landscaping and associated highway facilities, and the design and production of signage and educational and promotion materials.

Mr. EISENBERG. Mr. Chairman.

Mr. MINETA. Mr. Eisenberg?

Mr. EISENBERG. A little texture in answer to your first question. We are part of the Surface Transportation Policy Project and within their large bill that they are proposing there is some additional funding for planning activities above what would otherwise be provided. And while our bill does not pertain specifically to amounts of money other than that noted in Title III for the Scenic and Historic Highways, and doesn't specify a specific dollar amount for the transportation enhancement activities within Title II, the Surface Transportation Policy Project's legislation would provide the kind of funding that should go with the planning requirements that we anticipate and hope that the subcommittee will adopt with respect to Title I of our legislation.

Mr. MINETA. We have a number of proposals before us. One of them, as an example, as I recall, was to set aside 3 percent of the funds for bikeways, something of that nature, I don't recall the specifics. But it seems to me that many of these activities, like bikeways, are eligible under present Federal law. Do you have any idea why States and localities haven't taken advantage of that provision more than they have, given the fact that it is in the existing transportation laws?

Mr. KORVES. I think it might be, Mr. Chairman, because some of the provisions are vague and they are not clear. One of the things that we have requested in our legislation is that 8 percent of funding be used for transportation enhancement issues. I think one of the things that our planning initiatives offer here is the clear encouragement and opportunity of communities to study, if, in fact, they would prefer bike paths. I know in my summer home on Martha's Vineyard that is specifically something that was studied and although not covered by Federal funding, the State and the community did build bike paths in lieu of widening the roads and destroying historic roadways.

Mr. MINETA. Under Title II of your bill, you would create a new category of funding. Part of what I think is attempted also though, although we haven't put the specifics of what we want in a 1991 law, but in looking at the Administration bill as well as trying to think of what direction we're taking, it seems to me what we're trying to do is to consolidate and to reduce the number of categories, increase flexibility, so that we don't have more coffee cans of money for specific things. I am wondering what is it that you would be doing under your Title II that would not be eligible to be done under either present law or maybe what's in the Administration bill as it relates to reduction of categories and increased flexibility?

Mr. KORVES. I think that the biggest aspect of Title II is that it fits the planning into the context of the local community. It moves the community from a reactive position with the possibility of court order stopping a particular project later on in its development, to the community being proactive and being thoroughly involved in the input.

Mr. EISENBERG. Mr. Chairman——

Mr. MINETA. And you don't think that this would get into the kind of controversy we used to get into when I was mayor of Federal land use planning of any nature? That always becomes a bugaboo and I feel that especially today that there ought to be some closer coordination between land use planning and transportation planning. Yet, whenever I start getting close to that line, then I start getting some feedback as to whether or not we're not getting into Federal land use planning and whether or not that shouldn't be delegated to local entities. We saw just recently examples of good planning in the Portland area, where they have transportation corridors, growth belts, so that you have high density development along transportation corridors. They are doing that on a local basis. How do we do that without getting into this sort of Big Brother land use approach?

Mr. EISENBERG. Let me respond, Mr. Chairman, if I can. Th Portland example, and other examples—San Diego, Los Angeles, entire States in some cases, Florida——

Mr. MINETA. I would like to think also that has been done in San Jose in the last several years.

Mr. EISENBERG. Not to leave that out, for sure. We do have these kinds of activities going on all over the country. The fact of the matter is that when it comes, however, to Federal Highway projects, that kind of linkage between the transportation and the established plans—whatever those plans happen to be—simply doesn't exist within the expectation of law. If you examine Sections 134 and 307, the planning is virtually nonexistent, it is simply not there. And our point is that if a community has a land use plan, if a community has plans for providing a certain type of growth, certain kinds of recreational facilities, certain kinds of historic preservation projects, then the Federal Highway project that the locality is interested in implementing ought to respect what the community's plans call for. They ought to be linked. And the transportation project should demonstrate a number of activities.

Within that planning requirement, there is far more flexibility within this proposal than there would be in the Administration proposal because within that planning requirement under this act, communities can make the decision that they would prefer to have some other mode of transportation and, in fact, they ought to really demonstrate that new capacity—we're not talking about rehabilitation, we're talking about new capacity—should in fact be the transportation solution of choice as opposed to other modes. This linkage, in fact, is the key element of this bill—transportation linked to what communities are already planning.

You used the Portland example. An interesting aspect of Portland is that only 1 percent of the people in their suburbs use public transit to get downtown. So you have within that area that is considered a model for planning, you have a situation where you go further out and you find exactly what highway policies have done, which is to push the density out, push the people out, and then let them figure out how they are going to get back downtown in some reasonable fashion.

Mr. MINETA. But they were one of the first communities to abandon a highway route and say we want a transit corridor in that area. As I recall, that was done under the administration of a former Secretary of Transportation Neal Goldschmidt, who said we are going to tie the can to that highway, we're not going to build the highway but we're going to build a transportation corridor, a light rail system.

Mr. EISENBERG. But, again, our highway policies go back before that Secretary of Transportation. The fruit that we're harvesting now is seen in the Portland area, it is certainly seen in the Washington, D.C. area, it is seen in the New York area, it is seen in every major area of this country where there happens to be growth. Now that the communities have recognized that that is bitter fruit, they are trying to do other things to make things better.

Mr. MINETA. From a planning perspective, probably the programs and the policies of the Federal Housing Administration had

probably more to do than anything else with what happened in terms of suburbs being created because the developers or potential homeowners were able to get low interest loans and developers were able to build these communities all over the place without much semblance in the 1950's and 1960's of community planning.

Mr. EISENBERG. And it took a lot of Federal Highway money to make sure that people could get out to those lower cost houses.

Mr. MINETA. Sure. Plus our Water Quality Acts would say, okay, we'll build a sewage treatment plant, we'll build the sewer lines, and everything else. Those probably had more of an impact than what city councils were unfortunately not doing at the time.

You touched on something else. You testified that a net increase of almost 45,000 new billboards was recorded between 1986 and 1989. Yet, the Highway Beautification Act was really to try and contain that. Why do you think that the Highway Beautification Act really failed to control the proliferation of these billboards as was originally intended?

Mr. KORVES. I think the problem stems from the fact, or it might be contributed to by the fact that after 1983, the monies that were intended to be paid to stop billboard proliferation had been ceased. In that time, we have seen if I remember the numbers there have been a few hundred billboards taken down and many thousands put up.

Mr. MINETA. The other problem, Mr. Korves, with some of these figures, I'm not sure what the definition of a billboard is in those cases. Is it the Mineta's fruit stand, putting up a little sign, a little sandwich type stand sign, or is it really what we would consider a billboard in the strictest sense.

But in any event, you say that some parts of your recommendations are controversial. What would you consider to be the most controversial of the suggestions you are making and is there any way of minimizing those controversies or the hardness, so to speak, of those recommendations?

Mr. KORVES. I don't think controversy is an East Coast word. But I think if we were to say what is controversial, it is Highway Beautification Title IV section. I can understand why some people might identify that, the billboard part of our legislation.

Mr. MINETA. You would be supportive of the Administration's bill to allow amortization as a form of compensation?

Mr KORVES. Absolutely.

Mr. MINETA. Thank you.

Mr. Swett.

Mr. SWETT. Thank you very much, Mr. Chairman. It is a pleasure to be on this committee and to hear one of my professional colleagues, or prior colleagues, make presentation of what I think is a very necessary element to our public works and transportation discussion today on the Surface Transportation Act.

It seems to me in talking about these issues, Mr. Korves, that we are suffering in large measure by a lack of public relations in the area of planning as much as by a lack of planning itself. You have explained in great length and detail the need for coordination between communities and the surface transportation proposals that we will be encountering in the years to come. I think that you have made compelling arguments in that direction. I also believe that

we have just begun to explore the complexity of the issue, as my good colleague and Chairman, Mr. Mineta, began to explore when he asked you what was the most controversial or, as I would rather prefer to say, complex issue of the proposal that you've put before us.

I would like to explore that a little further, because I think that exploration could draw out the benefits of this coordinated plan approach which uses the talents of the planning community, and could show where those benefits ultimately would reside. We talked about Portland and the fact that only one percent of the community uses that transportation. How in other instances would we be able to assure ourselves a higher percentage of use, and would that assurance come through this coordinated planning, or is there some other method that accomplishes this goal?

Mr. KORVES. I think the assurance would come and would contribute in great part by the coordinated planning. I think we're going to be forced into coordinated planning if we don't choose it now, if one is to believe the statistics of the people that talk about congestion on highways and the freeways of Los Angeles moving down from their 31 per hour speed limit to 11 miles per hour by the year 2000. When we look at a National Energy Policy and we look at fuel consumption, I think we have to also look at our highways and the planning of them if we're going to have not only the consumption of fuel due to standing in traffic—billions of dollars and billions of gallons of fuel—but billions of dollars of time and lost productivity of this country, as people wait and try to get to work. I would like to think that the astuteness of our legislation will be assuredness. I would hate to think that we would have to live in a doomsday scenario of being frozen in place by our inability to plan our roads and our future.

Mr. SWETT. I want to explore what Mr. Mineta mentioned earlier regarding the impetus. I am intrigued by what is the chicken and what is the egg in this instance. Are we in the same situation we once were, where the location of housing was really the magnet that drew the highway to it as referred to by the Chairman, or do you feel that our situation now is that we should be placing our highways and letting our development expand along those routes? If you could comment on that, I would appreciate it.

Mr. KORVES. I think the model for that is not just the highways, I think the model is probably the transcontinental railroad. The railroad went in and the west was settled. I think of my own region, Long Island. I remember as a boy going out into Al D'Amato's territory on highways and seeing nothing but potato fields. I do think that the highway is the chicken and it laid the eggs of those little boxes all over the place.

One of the things that I do want to stress is that our bill doesn't necessarily say don't build roads. It doesn't say don't build roads; it does say let's look at all the possibilities and let's see why an alternative transportation mode doesn't work, and then let's build a road, whether that's a new road or a mitigation and redesign or enhancement of an existing road.

Mr. SWETT. Let's get onto a more pragmatic level and explore what happens if such a coordination of planning and transportation engineering doesn't take place. Give me your scenario of the

impact if we don't sink 10 percent of our highway funds into this kind of coordination.

Mr. KORVES. I think we'd probably all be sitting in traffic listening to our radios talk about why didn't we plan our way out of this gridlock ten years ago. I think gridlock is the answer to your question—I think just stagnation and lost man hours and working time.

Mr. SWETT. Is it a fair assumption that it would require 10 percent of our Trust Funds for highway improvement to be placed in the planning if we were to implement a program such as you have proposed?

Mr. KORVES. I think we have proposed a much smaller amount, it wasn't 10 percent.

Mr. SWETT. You're not going by architects' typical professional fees? [Laughter.]

Mr. KORVES. As you know, we have a Justice Department restraining order; we cannot talk about fees.

Mr. EISENBERG. If I may, Mr. Swett. There is a distinction between the amount for planning associated with Title I, it is actually a much larger bill that we endorse, and then a percentage set aside within Title II. Whatever amount is made available under this bill, there would be an expectation on a Statewide basis that there be 8 percent for certain kinds of activities—not the planning elements—but historic preservation, improved landscaping, and purchase of scenic easements, and demonstration projects for design excellence, and those kinds of things. Nothing on a specific project-by-project basis, but an 8 percent figure on a Statewide basis, not inconsistent at all, we believe, with what is enlightened practice today.

Mr. SWETT. To what extent are current projects utilizing this approach?

Mr. KORVES. I can think of one project that probably should utilize it. I happen to live in an apartment building that backs up on Trump City, better known as the Pennards, in Manhattan; in fact, my building is the Maginot Line of Trump City. But I am not an adversary of Mr. Trump. And I think of the current debate that is going on. There is I believe an $800 million Federal Highway allotment to rebuild the Miller Highway in place. Maybe Mr. Dinkins spoke of this this morning when he was here, or Ms. Bellamy, and they are talking about spending it when the plan and the land use that the community has finally convinced Mr. Trump is that that road should be built closer in, away from the river, back against a tall granite easement, and you should tear the highway down. But they are really trying to build the Miller Highway, spend the $800 million to do it, and then propose tearing it down in five years, only because it has to be spent and it has to be spent on rebuilding or new highways.

Mr. SWETT. It seems to me that the challenge that you have before you, and I think that it is a commendable challenge, is to be able to justify to the American people not only the tangible benefits that legislation of this nature would entail or produce, but also the intangibles, and those are the much more difficult aspects of any design-oriented profession to justify. I obviously, being of the same profession originally as you, am very empathetic to the legislation as you have put it forward. I think that in its application to

the different projects as they are produced across the countryside in the years to come, it is going to be imperative that there be a very clear understanding of the benefits that this approach brings to each community. And at this point in time we face tremendous budget difficulties, so the very first impact that we're looking at is on the dollar side. I don't offer this as anything new and unusual or enlightening information that you don't already know, but I am just trying to put into context the challenges that we here in Congress must face and the very basic level to which we have to take each of our problems down to in order to evaluate them.

As a proponent of legislation such as this, can you give me in one last summation the clear-cut benefits both in a financial sense and in terms of how they would benefit the quality of life if it were employed? It is considerably different than what we currently are able to see in projects of this nature as they are developed in the country today.

Mr. KORVES. I think there is a two or three part answer to that question. I think the first point is that we're going to get a better productivity in the commitment of funds. Because we are going to have the community planning, the community involvement, we're not going to have the redundancy that we now see sometimes in projects.

I think what's more important is it will result in livable communities. We are going to have a link between transportation and community planning, a link between transportation and land use. We are going to have planners looking at growth and development of communities and not just highways. I think the transportation enhancement sections that we have are going to result in more useful highways, more efficient highways, better use of our existing ones. I mean, we have planned a Nation of highways that we now have to go back and look at and almost in a mitigating way redesign them or enhance them. We have a Nation that I think in the next decade is going to be looking and reexamining how it lives. I think we may find people returning to the cities. I think we may find an older population asking is there some other way to get there besides driving, is there a simpler way than getting on the old expressway. I think as our Nation and our life and internal self-analysis is going to change in the next decade, I think we're going to have to look at what we have planned in the last generation and say, "What can we do for the next generation?"

Mr. EISENBERG. Mr. Swett, you did ask about examples. Look at the GW Parkway and you will see an example of a road that has been enhanced. Go out Shirley Highway and you will look at HOV lanes, lanes that have been provided to carry automobiles that have more than the 1.1 passenger to auto ratio that you have now, instead of building another lane for the one man, one auto situation. The former is an example of enhancement, the latter is an example of where somebody took a look at how the money was being spent and how to move people instead of vehicles and did the movement of people and not just the movement of vehicles.

Mr. KORVES. I would also like to just add that as an architect, I think we bring the perspective that maybe our first architect President—and I do stress first—Mr. Jefferson brought to every aspect of his life. Even though architects do not technically design the

highways, we design the spaces, the buildings, the towns, the communities that are connected by the highways. Architects ask about, and also concerned citizens have a very strong feeling and input into, the design of their communities. They should be as good as they possibly can be. We would like to bring that problem-solving ability and questioning ability to solving this transportation problem in the next decade. And if there is any additional information or any other help that we can offer the committee, as you know, Mr. Swett, we are only a phone call away and are more than willing to answer and give anything we can to your work.

Mr. SWETT. Mr. Korves and Mr. Eisenberg, I appreciate your testimony. I share your view and your vision of not only this piece of legislation, but of the role of architects in our society.

I appreciate the time allowed to me by you, Mr. Chairman, and I yield back to you.

Mr. MINETA. Well, one AIA against another AIA—not against, but discussing with another AIA. You can't interfere in that process. [Laughter.]

Let me at this point recognize my colleague from Georgia, Mr. Lewis.

Mr. LEWIS. Thank you very much, Mr. Chairman. Thank you for allowing me this time.

Mr. Korves and Mr. Eisenberg, I am delighted and very pleased to see you here. Like my colleague, Mr. Swett, I can say up front that I share your concern, I share your vision of what America should be as we move toward the 21st century. I have a copy of your statement and have read it. It is a superb statement.

I want to tell you that I am happy to see that your organization, the AIA, has recommended that the Vision Pollution Control Act of 1991, H.R. 1344, be made part of the reauthorization legislation. I believe that Title IV of your proposal is similar to the legislation that we introduced, almost identical to H.R. 1344. Some time ago, as you well know, I introduced the Vision Pollution Control Act. The legislation has gained broad bipartisan support. The Vision Pollution Control Act and similar billboard legislation has now been adopted by the Administration and the Surface Transportation Project and other groups. I would like for you to state in your view would you say that the support is broad for new legislation to regulate and to control the proliferation of billboards along our highways?

Mr. KORVES. Yes, I do.

Mr. LEWIS. Mr. Eisenberg.

Mr. EISENBERG. I don't think there's any question about it. If you look not only at the organizations that are supporting the legislation but the kinds of actions that you see occurring in locality after locality that take advantage of the authority they have, you see that they are saying, wait a minute, uncontrolled sign proliferation and livable communities do not go together. The Federal law, as you know as your legislation makes change in it, in fact restricts the ability of States and localities to take this issue under their control, as they ought to, because of the restrictions of Federal law that ties their hands with that cash compensation requirement, and as a result, where they are trying to clean up their environment, where they are trying to make more livable communities,

bring down the signage that really shouldn't be there, and that the law, in fact, anticipates should come down, wants them to take down nonconforming signs. They can't do it. And your bill and the Administration bill would, in fact, untie their hands in that regard.

Mr. LEWIS. Have you taken a position where these States, a State like mine, the State of George, are embarking on a policy that cut down trees or remove vegetation along scenic highways in order for people to get a better view of billboards.

Mr. KORVES. We would support your bill in that regard. In fact, I believe we have.

Mr. LEWIS. Thank you very much. Thank you, Mr. Chairman, and I yield back my time.

Mr. EISENBERG. Mr. Chairman, one final thing, if I might. For the record, in response to your concern about how billboards are defined, there is a Congressional Research Service report that in fact talks about the definition of billboards and then provides some very interesting information about the numbers of billboards in terms of the nonconforming ones that have been removed, the growth in signage over a period of time, and just what the figures are as best as can be determined.

Mr. MINETA. The only comment I was making was that I have heard so many variations on how many signs are out there, and I am just wondering whether or not it is Burma Shave sign as being counted also—well, Mr. Eisenberg, you're too young to know a Burma Shave sign.

Mr. EISENBERG. Actually, I'm glad you said that, but, in fact, I am not too young. I remember them well.

Mr. MINETA. The thing is I've heard all kinds of varying numbers on signs so I always wonder what definition is being used.

Well, let me thank you very, very much, Mr. Korves, for your fine presentation. Mr. Eisenberg, we always enjoy your work here on the Hill. So again, thank you very much to all of you at the AIA for your participation in this process. It is an important one and you play an important role and we recognize it.

Mr. KORVES. Thank you, Mr. Chairman.

Mr. EISENBERG. You've been very gracious. Thank you very much.

[Mr. Korves' prepared statement appears on page 775.]

Mr. MINETA. I would now like to call on a very fine friend who has been very patient and very long in his willingness to testify here today. I can say I think that he comes the farthest distance and I guess maybe that's why he's had to wait the longest. But I would like to have Mayor David Karp, chairman of the Alameda County Transportation Authority, make his presentation to us.

From your statement, Mr. Mayor, I can't tell what city you are mayor of.

Mayor KARP. The city is San Leandro. And I thank you very much, Mr. Chairman, in the true tradition, we have saved the best for the——

Mr. MINETA. Obvious.

**TESTIMONY OF HON. DAVID KARP, MAYOR, SAN LEANDRO, CA; CHAIRMAN, ALAMEDA COUNTY TRANSPORTATION AUTHORITY, OAKLAND, CA**

Mayor KARP. Good evening. Again, my name is Dave Karp and I am here as chairman of the Alameda County Transportation Authority. Alameda County is one of 18 counties in California that have enacted sales tax measures for transportation purposes. The combined revenues of these so-called "self help" counties will equal the amount anticipated by the State from the recent voter approval of propositions 108 and 111.

Despite these revenue sources, our needs continue to outpace our resources. Alameda County's one half cent sales tax will generate $1 billion in the next decade and these funds are earmarked for transportation improvements that are not programmed for State funds. However, our program also has its shortfalls and I will describe two currently unfunded projects on routes of national significance.

The Authority is participating in funding improvements to a 13 mile segment of I-880 in southern Alameda County. I-880 is the only freeway connecting Santa Clara County with the industrial area of Alameda County. At present, the total sales tax, State, and other local funds committed to this Interstate project amount to $302 million.

However, we have had to defer some needed improvements due to funding constraints. One such deferral is upgrading the Alvarado-Niles Road Interchange at post mile 13. The existing interchange will permit upgrading of the underlying freeway, but there will be substantial horizontal and vertical clearances at this location. This site will present the only constriction on this route in southern Alameda County. To meet full Interstate standards, an additional $20 million will be required. Again, that comes out to about 15 percent of the total project.

The Authority is participating also in BART's new rail extensions. Our program includes $170 million for BART's extension in Alameda County. One of the extensions is proposed to extend from San Leandro along the existing I-580 median to the cities of Dublin and Pleasanton. This extension will cost approximately $530 million and will be financed entirely by the State and also local funds.

A parking structure is proposed at the East Dublin/Pleasanton station. This structure will have the effect of reducing commute demand on I-580. This estimated cost is $35 million and it is not funded at this time.

The point I wish to make is that the citizens of California have shown a willingness to tax themselves for needed transportation improvements. However, our needs are greater than our resources and additional help is needed. I have given two examples of needs on routes of national significance. These needs should be funded at the Federal level as part of the need to preserve the existing Federal surface transportation investment.

This is probably the most important transportation act since the basic acts of 1956 and 1983, which increased the Federal gasoline tax. As we move into the 21st century, the need to maintain a major effective transportation system is essential, not only for our

Nation's economic and social development, for over our transportation routes will go the items which will become part of a worldwide international market.

The system is only as effective as the smallest of its parts—these two items which are part of a link in Northern California area are typical of those parts.

If you have any questions, I would be pleased to respond.

Mr. MINETA. David, thank you very, very much for your presentation. Let me ask, given the fact that I-880 is being upgraded to full Interstate construction design standards, has that had a very significant effect in terms of the increased costs of that project?

Mayor KARP. Absolutely.

Mr. MINETA. Do you know how much that impact is?

Mayor KARP. It went from approximately $200 million to about $300 million, primarily because of the impact of its Federal Interstate significance. We would have been happy to pay the entire tab, as we have done in the past, for a highway of national significance but we don't have any more money. We are short. I'm on one knee pleading.

Mr. MINETA. And so the shortfall that you are experiencing on I-880 is what?

Mayor KARP. That would be the overpasses, primarily. We have three significant overpasses which must be removed and be reconstructed. Vertical distance, horizontal distance, so we have to widen them out and we have to raise them up.

Mr. MINETA. That would take the $20 million?

Mayor KARP. It would take actually more than $20 million, but we need $20 million; that is our shortfall.

Mr. MINETA. And when you talk about I-880, you are not talking about the Cypress——

Mayor KARP. No, that has nothing to do with it. We are approximately ten miles away or thereabouts from the Cypress.

Mr. MINETA. Has that been resolved as to how they are going to reconstruct? Are they going to bring back the dual or double——

Mayor KARP. Okay, Mr. Chairman, I was the chairman for the new Cypress road and it will be taking a new alignment. After hearing a great deal of testimony from the citizens throughout Alameda County, a decision was made by CALTRANS to take a new route, and it will not be double-decked, it will be one level. That route would be not the existing route but actually a route that would go close to the base and then connect to the Bay Bridge. And it has been decided and they are moving ahead now.

Mr. MINETA. As far as the other I-880 and I-580 projects, how does the Alameda County Transportation Authority propose funding the unfunded segments of those two projects?

Mayor KARP. Out of our treasury, Mr. Chairman, we have taken $170 million and have applied that to the BART part of going out to Dublin as part of the help to get that going. In addition, Mr. Chairman, we also have from Proposition 116 approximately $60 million which we are also dedicating, plus the fact that I have already gone to the CTC, which is the California Transportation Commission, and we have a commitment for additional funding. We are taking actual money from a road that will be widened and be developed and we're dedicating a portion of that money, which

is normally for surface transportation, to public transportation. We want that to go right down the center of the highway.

Mr. MINETA. So the I-580 project then is a $35 million project?

Mayor KARP. No, the I-580 would be $500 to $600 million to build the project. However, by putting a garage structure, we will be able to park and get people out of their cars to take public transportation.

Mr. MINETA. And that would cost the $35 million?

Mayor KARP. Yes, $35 million.

Mr. MINETA. But the $500 to $600 million is funded?

Mayor KARP. Is funded.

Mr. MINETA. Very well.

Counsel, do you have any questions? None?

Okay, let me again——

Mayor KARP. May I make one last statement, Mr. Chairman?

Mr. MINETA. Absolutely.

Mayor KARP. Because of the lateness of the hour, I will be very quick. Just to make mention of the fact that I am also chairman of the public transportation for the U.S. Conference of Mayors and I am familiar with the five cents that was added for public transportation, we had hoped, and the two and a half cents, which we had assumed would be used for deficit reduction. I understand the two and a half cents is not available at this point and probably would be used for deficit reduction. I am encouraging Congress, Mr. Chairman, Chairman Roe, to move ahead with an additional five cents formula which you will decided upon how that money is to be spent but some guarantee that it will go into public transportation and surface transportation. I will be pushing this with the U.S. Conference of Mayors as well as the National League of Cities. I hope that additional five cents, which will bring approximately $5 billion each year, will be passed by Congress.

Mr. MINETA. Well, we appreciate very much your support on that. As I mentioned earlier today, we tried to recover that other two and a half cents that's going to deficit reduction but no one either in the Congress or in the Administration wants to revisit the budget summit agreement. That's why we're pushing for that other new five cent additional gasoline tax, which the Speaker has now announced he supports. So on that basis, I said, well, it doesn't do us any good to get the additional five cents unless you make it a mandatory spend-out program like an entitlement, which he has agreed to do.

So, again, thank you very much for your help along that line.

Mayor KARP. Mr. Chairman, I thank you very much for your time. I like to put my money where my mouth is and, in order to get this going, I would like to give you a thousand dollars, Mr. Chairman, and also a thousand dollars to our Chairman Roe. [Laughter.]

Mr. MINETA. Didn't hear a thing.

Let me thank you again for your patience and your presentation. We appreciate it.

[Mayor Karp's prepared statement appears on page 770.]

TESTIMONY

of

CAROL BELLAMY

MANAGING DIRECTOR

BEAR, STEARNS & CO., INC.

before the

SUBCOMMITTEE ON SURFACE TRANSPORTATION

of the

COMMITTEE ON PUBLIC WORKS

U.S. House of Representatives

April 10, 1991

Mr. Chairman, my name is Carol Bellamy. I am a Managing Director of Bear Stearns & Co. Inc., a leading investment banking firm. I appreciate the opportunity to speak with you regarding a matter of national importance: the future of our nation's surface transportation and, in particular, the critical need to expand the availability and use of public transportation.

While I am here on behalf of Bear Stearns, you should also know that I am a former Board Member of New York State's Metropolitan Transit Authority. Bear Stearns is pleased to be an active participant in America's Coalition for Transit NOW along with over 140 other national organizations.

Mr. Chairman, the focus of my comments today will be the role that public transportation can play in addressing some of the underlying problems in our nation's economy. These problems include:

- o the need for substantial increases in the nation's infrastructure investment,
- o transportation impediments to the nation's economic productivity,
- o the nation's balance of trade deficit, and
- o our ability to compete in the global economy.

## INVESTING IN OUR NATION'S INFRASTRUCTURE

Our nation's economic viability, competitiveness and productivity are jeopardized by our failure to invest in our infrastructure needs.

Since 1981, federal funding for public transit has declined by 50%. Even the Administration's proposed transit budget for fiscal year 1992 fails to keep pace with inflation. The consequence of our nation's failure to invest in public transportation

infrastructure can be seen in the decline in passengers per vehicle, the growth in vehicle miles traveled, and the consequences for our productivity and competitiveness.

Our nation's productivity and our ability to effectively compete in the world market have also suffered from our failure to invest in revitalizing our infrastructure. Profession David Alan Aschauer of Bates College, formerly a Senior Economist at the Federal Reserve Bank of Chicago and a leading scholar on this issue, wrote in The Wall Street Journal, on March 14, 1990:

> "Private sector production of goods and services depends crucially upon an adequate and well-maintained stock of public sector capital: a public infrastructure of roads, bridges, mass transit, water and sewer systems and similar facilities. If public sector capital accumulation fails to keep pace with private sector capital accumulation, it can be expected that:
>
> 1) The rate of return to private capital will suffer;
> 2) Private investment will be depressed; and
> 3) Private sector productivity growth will stagnate."

The nations which will comprise the European Community have recognized the truths of Aschauer's analysis. The level of transit and transportation infrastructure formation in Europe is, simply, astounding. According to an article in the March 12, 1990 Business Week:

- Spain is investing $22 billion to rebuild its national rail network.
- West Germany is investing $12 billion to build an intercity high-speed rail network.
- Scandinavian countries are building Scanlink at a cost of $6 billion to connect Scandinavian rail and road systems to Europe.
- Switzerland is spending $8 billion to build trans-Alpine rail tunnels to Italy and an additional $5 billion on a new rail and bus network.
- The British and French are building the Channel Tunnel at a cost of $12 billion to accommodate 80 mph rail traffic.

- The French high-speed rail network is being expanded to Lille and Calais tying France, and all of Europe, into a network including Brussels, Amsterdam, Cologne and London.

America's chief competitors and our closest allies make significantly greater use of transit. And they make a larger commitment to capital formation, which encompasses transit.

| | US | Japan | W.Germany | Canada |
|---|---|---|---|---|
| Transit Rides per Capita[1] | 56.9 | 316.3 | 149.5 | 134.7 |
| Gross Fixed Capital Formation As % of GDP[2] | 17.3% | 27.7 | 19.3% | 20.8% |

Mr. Chairman, while we must be attentive to the federal budget deficit, we believe that a thoughtful policy of investment in public transit infrastructure will have significant benefits for the the federal budget and the nation's economic health.

PRODUCTIVITY AND TRANSPORTATION

America's productivity is being severely hampered by the growing crisis in traffic congestion. It has been estimated that travel delays in the nation's largest urbanized areas now cause two billion hours of time to be lost annually. Time lost in traffic is projected by the General Accounting Office to grow to four billion hours within the next decade. In California, urban congestion results in $2 million a day of lost productivity. Congestion on

[2] Calculated from Europa World Yearbook 1989, Europa Publications Ltd., London, 1989.

Washington's Capital Beltway costs employers $120 million in lost productivity each year.

Considering traffic delays experienced in smaller urban areas, the amount of time spent -- and money wasted -- in unproductive travel is significantly greater. A 1983 Federal Highway Administration study shows that 11 percent of all labor force work hours are spent on the highways.

Of greatest concern is the estimate by the Department of Transportation that by the early 21st century, delays are likely to be tremendously greater than they are today. Over the next twenty years, travel in urban and suburban areas (where more than half the population resides) is projected to increase by more than 400 percent on freeways and by more than 200 percent on other roads. In areas under one million population, freeway congestion will increase more than 1,000 percent.

Productivity is not only impacted by time spent in congestion. Workers who must fight traffic experience significantly more stress than their colleagues who use transit. The negative impact of stress on worker's productivity, health and absenteeism is well documented.

The productive time and energy lost in congested traffic has direct consequences for our nation's ability to compete in the increasingly competitive global market.

The growing congestion on our nation's roads is directly attributable to the decline in average vehicle occupancy (from 1.2 persons per vehicle in 1970 to 1.1 in 1990) and the significant increase in the number of vehicle miles traveled over the past two decades (four time greater than the rate of population growth).

The point, Mr. Chairman, is that our nation's productivity will continue to suffer unless congestion is significantly reduced. Public transportation and ridesharing services offer the greatest opportunity to reduce congestion by increasing vehicle occupancy and reducing the number of vehicle miles traveled.

TRADE DEFICIT, ENERGY, AND PUBLIC TRANSPORTATION

The nation continues to suffer from deficits in international trading. For 1990, our trading deficit totaled $103 billion. Simply put, we are paying more money to foreign nations to buy their goods and service than we are being paid for the products and services we sell abroad. As you are well aware, the deficit in our foreign trading about a decade ago and persists today.

An analysis of the continuing trade deficit reveals that the cost of imported energy, nearly all of which is oil, accounts for better than 40 percent of the trade deficit. Indeed, the U.S. imports more than half of the oil we consume. It must be of great concern that the trend is for greater reliance on imported oil.

We also know that transportation accounts for better than 65 percent of our nation's petroleum use. If we are to reduce our reliance on foreign oil suppliers, and thus reduce a major component of our foreign trade deficit, we must reduce the consumption of oil for transportation purposes.

Currently, there is much debate regarding increasing CAFE (Corporate Average Fuel Efficiency) Standards as a means of achieving a more energy efficient transportation system. While that is a worthy goal, recent history tells us that increasing the efficiency of automobiles, alone, is not enough to achieve the larger objective.

In the past two decades, there has been a 44 percent increase in the fuel efficiency of the U.S. vehicle fleet. Notwithstanding that accomplishment, these efficiencies have been overwhelmed by an 88 percent increase in vehicle miles of travel. In the decade from 1979 to 1989, transportation is the only sector in which oil consumption grew.

Again, we are drawn to recognize that increasing average vehicle occupancy and reducing vehicle miles traveled must be a key strategy in reducing our dependence on foreign energy supplies and improving our foreign trade balance.

In the National Energy Strategy recently released by the Administration, this point was perfectly articulated:

> Studies and demonstration projects...have consistently shown that mass transportation, carpools, vanpools, and HOV lanes are the quickest, cheapest ways to improve transportation energy use and reduce commuter congestion.

Mr. Chairman, expanding the availability and use of public transportation and ridesharing services is an incredibly powerful tool for fixing a number of our nation's economic ills. More and better use of transit services can increase our productivity, reduce our foreign trade deficit, and position American businesses to be more competitive in the global economy.

I applaud the leadership that you and your colleagues on the Surface Transportation Subcommittee are providing in recognizing transit's value to our nation. In particular, the five year transit funding recommendation of $34.5 billion the Committee made in the submission of its views and estimates to the Budget Committee is a strong statement of the need for increased transit infrastructure investment.

I am here to tell you that our nation's business/investment community recognizes the important role that public transportation plays in our economy, and urges the Congress to also recognize transit's role by substantially increasing federal investments in public transportation.

Again, thank you for the opportunity to appear before you today. I would be happy to answer any questions.

## Introduction

The American Public Transit Association (APTA) is pleased to present its testimony before the House Surface Transportation Subcommittee.[1]

Today we offer a legislative program for your consideration that has at its core a modest proposal. APTA asks only that Congress provide a balance in our national transportation policy by recognizing and promoting the multiple roles that public transit plays in meeting the mobility needs of our citizens and other major national goals.

To achieve this balance, we ask that Congress restore the level of federal funding of public transit to where it was 10 years ago, in inflation-adjusted dollars. Second, we urge that growth in the funding of transit over the next five years be set at approximately the same rate as that advocated by the Administration for highway funding. And third, we ask that there be no bias against transit in matching ratios or other statutory or administrative requirements for new transportation investments.

Never -- absolutely never -- in our Nation's history has there been a more powerful case than there is today for increasing federal support of transit. Efficient public transit service has emerged as an essential and fundamental part of the solution to a myriad of problems affecting the quality of life and economic health of our communities and the Nation. To put our specific legislative recommendations in perspective, we will first focus on the reasons why Congress should reverse the past decade of diminishing federal support for transit.

## An Historic Opportunity

Looking back on the trends of the last decade and the extraordinary events of the past twelve months, the importance of the transportation decisions that Congress will make in 1991 is crystal clear:

o On energy policy: In the aftermath of the Gulf War, the importance of transit's role in achieving energy independence is more compelling than ever before.

o On clean air: Increased use of transit is essential if new air quality targets are to be met. Yet without major reformulation of federal transportation policy,

---

[1] APTA represents over 1000 members, including motor bus and rapid transit systems and organizations responsible for planning, designing, constructing, financing and operating transit systems. In addition, APTA members include business organizations which supply products and services to the transit industry, academic institutions, and public interest groups.

vehicle miles travelled (VMT) and vehicle emissions will continue to soar while transit ridership declines.

o On mobility: All of our Nation's citizens seek the right to participate fully in all aspects of American life. Transit has long provided mobility for millions of citizens who do not have access to personal vehicles. The Americans with Disabilities Act (ADA) has given transit far greater responsibility to provide mobility for millions more. Transit must receive increased funding to meet these needs.

o On congestion: Traffic gridlock has become a way of life in urban and, increasingly, suburban America. Not only does this waste fuel and lose millions of hours of productivity, it has greatly diminished the quality of life for Americans caught in these horrendous traffic jams.

o On competitiveness and productivity: Moving people and goods efficiently is a fundamental part of making our Nation competitive in the global economy. Nothing slows down the transportation and distribution system more than the gridlock caused by single occupant vehicles clogging our roads.

Few federal programs can serve as many national goals as transit. It is no exaggeration to say that as Congress establishes a new surface transportation policy and charts the course that public transit will take into the next century, the stakes could not be higher. A decision to "stay the course," as the Administration proposes, would, at best, merely keep transit on life support and, inevitably, squander the potential for great improvements in the quality of life of Americans and the communities where they live.

Such an outcome is just not good enough. Public transit needs both the authorization for and appropriation of significantly more federal funding for capital investment and operations. Despite the number and complexity of issues, adequate and equitable federal funding is the number one issue. Over the last ten years, passenger fares and other earnings have more than doubled and the amount of state and local assistance has more than tripled. To pretend that state and local governments have the resources to continue to make up for federal funding cuts would be a cruel hoax.

Our industry recognizes that with today's budget constraints, we must demonstrate that federal expenditures are necessary for reasons beyond just making our systems financially secure. This testimony will show that if Congress reverses a decade of radical budget cutbacks, the benefits will go far beyond improving the Nation's infrastructure. This path will enhance the energy independence of our country, improve the quality of the air we breathe, expand the mobility options of all our citizens including those with disabilities, increase levels of employment in our local communities, reduce gridlock on roads and highways, provide more opportunities for rural citizens, and make America more productive and competitive.

As Congress considers the reauthorization legislation, it is helpful to recognize that society pays an extraordinary and often hidden cost for relying on automobiles for most of our transportation needs, and that we can no longer sustain this posture in future years. Consider some of the costs of automobile use in California, as described in an article in the January 1991 issue of *Transit California*. Air pollution, at a conservative estimate, adds $9.3 billion to the health care costs of Southern California residents each year. If motorists paid for the share of these costs that vehicle use imposes on society, each motorist would pay an additional $385 per year. The health care cost estimates may be understated in light of a recent study of southern California residents. This study of Long Beach, Lancaster, and Glendora residents, conducted by medical faculty at the University of California, Los Angeles, suggests that long-term exposure to air pollution causes permanent damage to the lungs and respiratory system. These problems occur not just in southern California but in other areas with similar air pollution problems.

Paying for crop damage would add 45 cents per gallon to the cost of gasoline. Another 25 cents per gallon would cover the municipal costs of automobiles -- auto-related expenses for police, fire, paramedic and other services -- according to a study of the Pasadena city budget. Subsidized parking is another cost that drivers do not pay. Finally, it is estimated that congestion costs are about $1,100 per year per driver. If these costs were imposed directly onto drivers at the gas pump, they would add about $2 per gallon to the price. In 15 years it is estimated that this figure would rise to some $8 per gallon absent measures to reduce congestion.

Because drivers do not pay directly for these costs, there is effectively a subsidy for automobile use. It is no wonder that so many people choose to drive alone. Elementary economics tells us that demand for a highly subsidized product will always exceed supply. This is why new highways fill up to capacity as soon as they open, and why it is impossible to build enough roads to meet the demand. We recognize that it is, in many respects, impractical to address the automobile subsidy issue directly, but we ask that you recognize how hard it is to develop a transportation policy that reduces congestion and other problems that are exacerbated by these hidden subsidies.

The federal government's responsibility does not end with writing the laws, for reasons of practicality as well as fairness. Since 1981, federal transit funding has been cut in half. State and local governments, transit operators, and transit riders have all increased their contribution. They have given as much as they can give. It is time to reverse a decade of declining federal transit investment and give transit the federal resources to expand services substantially. It is only fair that the federal government should do this in order to ensure that the laws passed by Congress, such as the Clean Air Act and the Americans with Disabilities Act, do not become hollow promises. If the federal government does not expand its commitment, there will be service cuts, farebox increases, and ridership decreases. Losing this opportunity would mean that national goals set by the federal government will be further from accomplishment than ever.

In his Fiscal Year (FY) 1992 budget document, Budget Director Richard Darman states that "the benefits of transit are largely local" to justify the Administration's proposed program changes and funding cuts. At the same time, both the National Transportation Strategy and the National Energy Strategy note that transit is an important means of reducing congestion, pollution, and energy consumption. The Administration cannot have it both ways. If transit's effects are local, then do not depend on us to participate in meeting national goals. If we are part of the solution to many of the Nation's problems, then give us the resources to do our part.

In many respects, the well-being of the Nation is the sum of the well-being of its parts. The national transportation network combines many different modes and will function best if these modes are balanced and integrated more effectively than past policies have allowed. Urban freeways are largely local in benefit, but tell that to the factory owner whose trucks use those freeways. The on-time delivery of goods from one side of the country to another will not work if at the end of the journey the urban highway is so congested that goods cannot reach the port or the factory loading dock. Ask that factory owner if transit is a worthwhile investment if it has the potential to reduce congestion on those freeways and thereby reduce the time lost to that factory and other businesses and their employees.

Consider also that transit is a cost-effective means of achieving many interrelated goals at once. For example, alternative fueled vehicles may ultimately reduce pollution and demand for imported oil, many years from now. But cities full of electric cars, if such a vision could be realized at some distant future day, will still have to cope with congestion and find ways to guarantee mobility for people with disabilities, those with low incomes, and senior citizens.

In contrast, transit can answer all of these needs and more cheaply than the costs of all those alternative-fuel vehicles and the infrastructure to sustain them. We offer one solution to many problems. It is for this reason that we seek the federal resources to become a full-fledged partner in our Nation's transportation infrastructure.

## Transit Conserves Energy

The victory in the Persian Gulf must not obscure one reason why military action was necessary. Our Nation continues to be dangerously dependent on imported oil. Our military success will be diminished if we do not follow up with a plan to promote increased energy conservation, reduce oil imports, and head toward greater energy independence. There is, unfortunately, an immense "gulf" between our desire for energy independence and the steps we have so far taken to get there.

Enhanced use of transit must be part of any viable strategy to move our Nation toward energy independence. Yet it is clear that in developing such a strategy Congress must take the lead, because the Administration will not.

The Department of Transportation's surface transportation policy calls for virtually no growth in transit funding over the next five years, while highway construction would grow 40 percent. The Administration's energy proposal does not include specific, effective proposals to encourage transit use even though the National Energy Strategy recognizes that "mass transportation, carpools, vanpools, and HOV lanes are the quickest, cheapest ways to improve transportation energy use and reduce commuter congestion."

At the center of our Nation's mounting oil consumption and inefficient energy use is our traditional habit of driving alone. During the last 10 years, in fact, transportation was the only sector of the economy in which oil use grew. Chart 1 compares the change in oil consumption over a decade by transportation, industrial, residential/commercial, and electric utility uses. While transportation-related oil consumption grew nearly 10 percent, these other uses of oil declined by 20 percent to nearly 50 percent.

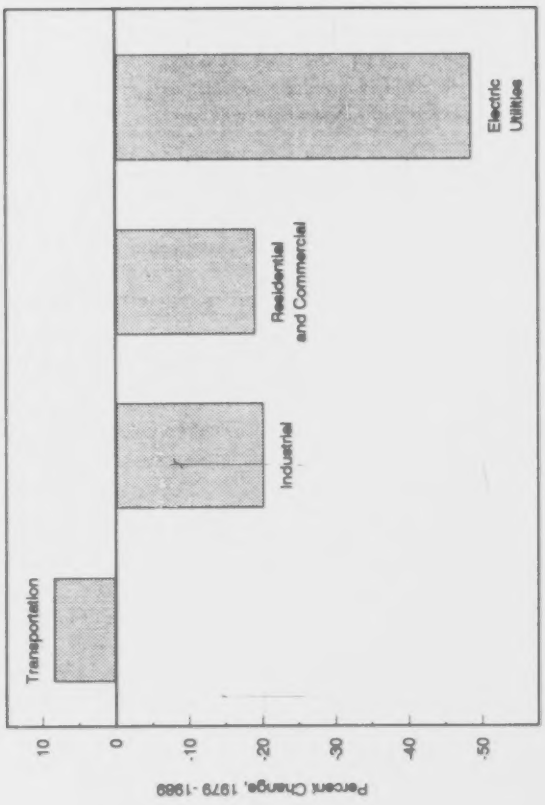
A viable national strategy for energy independence must deal with transportation-related energy consumption. Every commuter who switches from driving alone to transit saves 200 gallons of gasoline per year. If ten percent of urban auto commuter trips were replaced by transit, over 300,000 barrels of oil would be saved each day.

As these statistics suggest, transit's greatest contribution to energy conservation is to provide an alternative to single-occupant vehicle travel, the least energy efficient form of urban transportation. The industry's ability to provide this alternative is strengthened when it can expand services and keep fares low. Actions that force transit to cut services and increase fares will hamper transit's contribution to energy conservation. At a minimum, expanded federal support for transit is essential. It would be shortsighted to impose additional costs on transit in an attempt to conserve energy used by transit. The real savings are in getting people out of single-occupant vehicles and into railcars, buses, and vanpools.

Yet the Administration's proposal would cut transit spending -- in real terms -- over the next five years. Moreover, if its proposal to eliminate operating assistance to the largest systems is adopted, farebox increases and service reductions are almost guaranteed. This, in turn, would cut down on ridership, force people back to their cars, and thereby increase fuel consumption. Hit hardest would be the most transit-dependent citizens, such as low-income workers and people with disabilities, who would bear the brunt of higher fares and service cuts because they have no alternative means of transportation.

Chart 1

Change in U.S. Oil Consumption, 1979 - 1989



Finally, our current tax code provides a classic example of wasteful energy policy and lack of balance in surface transportation policy. Employers can provide free parking to employees as a fringe benefit that is tax-free, regardless of the cost. This is a direct subsidy and incentive to drive alone. If employers pay any part of an employee's cost to commute by transit, the entire contribution is taxable as income if it exceeds $15 per month. This inequity should be eliminated. The National Energy Strategy calls for increasing the tax-free amount of employer-provided transit benefits, but the Administration does not address this issue in the energy tax legislation it has submitted to Congress.

America must not lapse into complacency in the aftermath of the Gulf War. More than ever we need to match our desire to achieve energy independence with solid initiatives. That requires a greater availability of, and federal investment in, transit alternatives to the private automobile.

## Transit Reduces Pollution

Once strictly a big city problem, air pollution is now invading the suburbs and smaller communities across America, threatening people's health and the economic well-being of many places. The magnitude of the problem has prompted action at the state and local levels, as well as the enactment of the Clean Air Act Amendments of 1990 by Congress.

Beyond question, moving people out of cars and into vans, buses, and rail is essential for achieving cleaner air. Transportation sources cause 40-60 percent of ozone pollution and 70-80 percent of carbon monoxide emissions. Even the promise of tighter emission standards in the future will not be enough to improve air quality. The anticipated emission reductions from tailpipe technology will be more than offset by growth in vehicle miles travelled -- unless more people start using transit and other forms of shared-ride transportation.

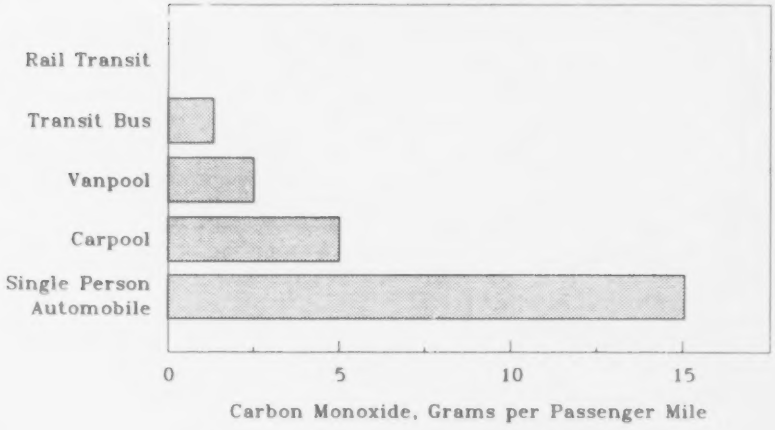
The most effective, quickest way to reduce air pollution is to reduce vehicle emissions by convincing people to stop driving to work alone and to use transit instead. When one commuter stops driving and uses transit to and from work for a year, it has the effect of preventing the emission of 9 pounds of hydrocarbons, 63 pounds of carbon monoxide, 5 pounds of nitrogen oxides, and 1 pound of particulates per year. As Charts 2 and 3 show, the improvement in air quality is substantial if people move from automobiles to transit and other high-occupancy modes.

APTA's surface transportation reauthorization proposal includes incentives and funding levels for transit that will significantly increase ridership. This, in turn, will directly benefit air quality and communities' ability to achieve attainment standards.

## Chart 2

### Emissions of Carbon Monoxide

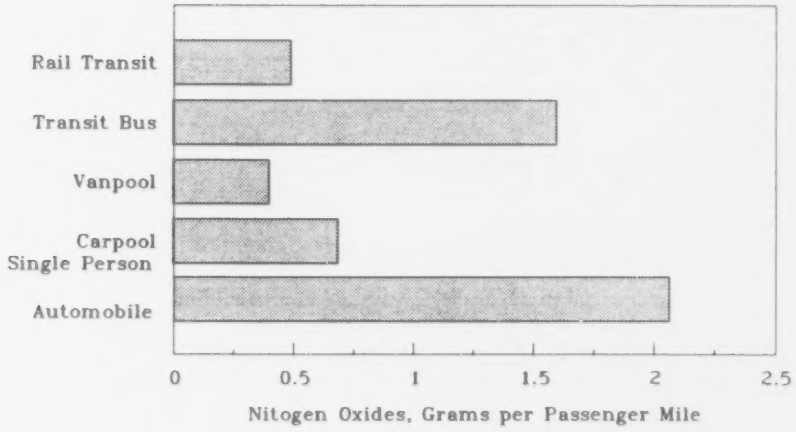
(Estimated grams per passenger mile for work trips)



## Chart 3

### Emissions of Nitrogen Oxides

(Estimated grams per passenger mile for work trips)



Increased federal transit funding will allow the industry to introduce new technology to meet emissions standards. Without additional federal support, the costs imposed on transit operators to underwrite new technologies may result in service reductions or fare increases at the very time that public transit is being called on to help communities meet attainment standards.

Most people choose whether to use transit or drive a personal vehicle based on rational judgments about the value of their time and money. This means that transit, to draw people out of their automobiles, must be an economically attractive alternative for people in terms of the cost at the farebox and the cost in their time. The surest way to undercut transit's role in cleaning up the air is to take actions that will increase fares and require service cutbacks. Enough such actions will have the opposite effect by pushing current transit riders back to their automobiles.

For this reason, the costs of compliance with the Clean Air Act Amendments of 1990 could make it much harder for transit to help reduce vehicle emissions. Much depends on the outcome of evaluations of particulate trap technology to be performed by the Environmental Protection Agency (EPA). The 1990 law gives us the opportunity to reduce urban bus emissions using "clean diesel" technology. According to a nationwide survey of transit systems conducted by the Southern California Rapid Transit District (SCRTD), conversion of U.S. urban bus fleets to particulate traps would cost an estimated $522 million. The $522 million figure represents the additional cost of the traps on new buses when they are brought into use. Assuming a 12-year replacement cycle for buses, this would be a cost of approximately $44 million per year. Additional diesel fuel costs would be an estimated $56.8 million per year. One of the great advantages of particulate traps is that they would not require costly conversion of fueling facilities as would be the case with Compressed Natural Gas (CNG) and other alternative fuels. Nonetheless, we are looking at $110 million per year just for conversion to traps and higher fuel costs.

The costs of administering these changes will be felt throughout operators' budgets, in additional person-hours, training costs, and other expenses. Many urbanized areas will have to provide additional transit services to comply with emission reduction targets. It would be a national tragedy if transit systems were forced to pass these costs directly on to riders. This would send exactly the wrong signal to all commuters. Instead of reducing pollution, it would reinforce current, high emissions travel habits.

## Transit Provides Mobility

Public transit provides essential mobility to citizens who are unable or who choose not to operate private vehicles. For people with disabilities, older Americans, the young, and the poor, access to transit can be the single most important factor in their quality of lives and their ability to work, obtain education, and gain access to essential services.

Nearly 28 million Americans would find it easier to use transit facilities if accessibility improvements were made, according to a study performed for the U.S. Architectural Barriers and Transportation Compliance Board. Cutting transit funding is tantamount to cutting the link between these people with special needs and the rest of society. The Americans with Disabilities Act of 1990 mandates enhanced and expanded transit services. But without adequate funding, these services cannot be provided.

APTA has embarked on a new era of cooperation with advocates of disabled Americans during the past several years. We are working together to see that the regulations required by the ADA meet the needs of all involved. The cost of converting equipment and increasing services will be high. Without significant increases in funding, we cannot provide the services needed to achieve the ADA's goals.

Last year, in testimony to this Subcommittee, APTA outlined some of the costs that transit systems must shoulder to comply with ADA. It remains difficult, however, to provide a definitive estimate of these costs. An ongoing, as yet incomplete regulatory process will define: 1) the obligations of transit systems in providing paratransit services to persons with disabilities who cannot use existing transit facilities, and 2) the undue financial burden beyond which a transit system cannot be expected to pay.

The transit industry needs 8,250 new buses every year to replace worn-out buses and expand service. An additional 3,100 older buses need to be rehabilitated each year. The cost of lifts for these buses is $170 million per year. We estimate a twenty-year cost to make transit rail systems accessible of $5.8 billion, with operating costs during that period of $800 million. This is $290 million per year and $38 million per year respectively.

Thus, rail and lift requirements alone would require over $498 million per year, far more than the $50 million per year in Section 3 funds proposed by the Administration for the cost of compliance with ADA, the Clean Air Act, and for other purposes. All of these costs are an appropriate subject for federal general fund assistance because they all contribute to the national goal of an accessible transportation system.

In its Proposed Rule for Transportation for Individuals with Disabilities, published in the April 4, 1991 *Federal Register*, the Department of Transportation estimates the average annual cost of providing complementary paratransit service to ADA-eligible persons by urbanized area size. If these costs are multiplied by the number of areas, the resulting cost is $923 million per year. The additional cost for rural areas should drive the total figure to well over $1 billion per year. A recent newspaper report notes that in Spokane, Washington, 15% of the transit system's budget goes to paratransit services that provide 3% of the rides. That city is experiencing a conflict over the appropriate level of service. Similar disputes are likely in many more communities in the coming years.

ADA is only one part of the broader question of mobility for all citizens. Many senior citizens also depend on transit services, including paratransit. In rural America, nearly half of the elderly are in poor health and 60 percent are not licensed to drive. Expanded public transportation services are vital to provide these people access to essential health care facilities and other social services. The proportion of the population that is elderly will continue to rise, and we expect the demand for these services to expand as well. The number of persons over 65 will grow from nearly 26 million in 1980 to more than 65 million by 2030, and the growth rate in the very elderly population, over 75 years, will be even more pronounced. Nationally, transportation is the third largest cost item for programs under the Older Americans Act.

Mobility is also a concern for low-income people, including workers and students who depend on transit. For people with limited incomes, transit can mean the difference between a decent job and unemployment. Some 28 percent of transit users live in households with annual incomes of less than $10,000. For most of these people, transit is the only transportation option. Transit is absolutely necessary to expand employment opportunities.

Finally, it is also worth noting that greater availability and use of transit services will improve mobility for people who continue to choose to drive. Anything that reduces demand for highway and road capacity will benefit those who remain on the roads.

We do not want to be caught in a competition for limited resources among all of these deserving groups of people, but that is just what will happen if the federal government does not expand its transit program.

Once again, the federal government must confront the consequences of its actions. The ADA guarantees access to transit for persons with disabilities because transit systems are a crucial part of the transportation network. Other programs are designed to meet the needs of senior citizens and other transit-dependent groups. If mobility is truly important for all Americans, then the federal government must ensure that its promises are fulfilled.

## Transit Reduces Congestion

Today, America's economic productivity is severely hampered by growing traffic gridlock. Travel delays in the Nation's largest urbanized areas (UZAs) now cause two billion hours of time to be lost annually. Over the next 20 years, congestion will increase more than 400 percent on the Nation's freeway systems and over 200 percent on other roads, according to the Federal Highway Administration (FHWA). During this period, annual delay in travel time will increase by 5.6 billion hours. The cost of congestion on urban freeways alone, according to a Transportation Research Board report, will increase by $41 billion per year.

Transit provides a low-cost alternative to congestion. The investment costs of transit compare favorably with those of highway construction. Major urban highways can cost $100-120 million per mile, while busways can be built for $4-12 million per mile, light rail for $10-20 million per mile, and heavy rail for costs comparable to or lower than major highways. In central cities, which will continue to have concentrations of high employment for the foreseeable future, highway construction may be impossible, leaving transit improvements as the only option.

Transit can substantially reduce congestion. Every bus full of passengers at rush hour removes at least 40 cars from traffic, every full rail car removes 75-125 cars from traffic, every van full of passengers removes 13 cars from traffic. One high-occupancy vehicle (HOV) lane carries the same number of people as three regular highway lanes.

## Transit Improves Economic Productivity

Transit is a major key to economic development and competitiveness. The rate of growth of productivity is a vital measure of our ability to compete in the global economy. A growing body of academic study suggests that inadequate spending on public infrastructure is directly reflected in lower productivity growth rates. One of the leading authorities on this issue is Professor David Aschauer, formerly Senior Economist at the Federal Reserve Bank of Chicago. Professor Aschauer concludes that as much as 60 percent of our productivity slump in the past 20 years can be attributed to declining investment in public infrastructure, of which transit is a key element.

As Aschauer notes, the growth in U.S. productivity has declined from 1.8 percent per year in the 1960s to 0.8 percent in the 1970s to 0.7 percent in the early 1980s. In contrast to our weak 0.7 percent, Japan has registered a 3.1 percent annual increase in productivity and West Germany achieved 2.9 percent. Japan invested 5.1 percent of its Gross National Product (GNP) in public facilities while the United States invested a minuscule 0.3 percent.

Businesses suffer from the loss of productivity caused by congestion and gridlock. Employees arrive at work with their nerves worn to a frazzle, goods do not arrive on time because trucks are caught in traffic, production lines must slow down because of transportation bottlenecks. Investments in transit are very often the most cost-effective ways to achieve a more efficient use of existing transportation facilities.

America's chief competitors and our closest allies make significantly greater use of transit. In the United States, average per capita use of transit is about 57 transit rides a year. In Canada the number is 135, in Germany it is 150, and in Japan it is 316. Each of these other countries places far greater emphasis on transit as a critical component of economic development and growth.

In addition to providing access and reducing congestion, transit is itself an excellent source of economic development. Major transit commitments around the country have spurred millions of dollars of private development in patterns that provide greater efficiency and increased amenity. For every $10 million invested in transit capital, 770 jobs are created and $33 million in business revenues are generated. Every $10 million invested in transit operations will support 960 jobs and create $30 million in business revenue.

It should also be noted that businesses may find it necessary to change their hiring practices to comply with employment requirements of the Americans with Disabilities Act. Unless employees with disabilities have access to transit services, the employment provisions of the ADA may prove to be a hollow promise.

In Los Angeles and other cities, the Clean Air Act Amendments of 1990 will require employers of more than 100 persons to encourage their employees to increase the average occupancy of vehicles use in commuting trips. These employers will find it easier to comply with these requirements and pay for these added costs of doing business if transit services are readily available.

In short, funding transit is good business for the Nation and for local communities. An essential part of our infrastructure in urban and rural areas alike, transit allows existing development to be used more effectively and it is a powerful tool for channeling future development.

## The APTA Proposal for a New Transit Policy

This year marks a once-in-a-generation opportunity to achieve a sound national surface transportation policy by strengthening the federal transit assistance program. The details of our proposal are included in the attached statement, Reauthorization Proposal for the Federal Public Transportation Act of 1991, dated February 14, 1991. This section of our testimony highlights areas where we have serious differences with the legislation proposed by the Administration.

## Funding Levels

During the past 10 years, federal transit funding, adjusted for inflation, has been slashed in half, while highway funding levels have soared. The single most important part of our proposal is to restore transit funding to the level of ten years ago, as adjusted for inflation.

To restore a more balanced federal funding policy, we urge Congress to authorize and appropriate $6.5 billion for transit in FY 1992 and to let this amount grow to $11 billion over the next five years, for a five-year program of $39 billion. We are very pleased that the Public Works Committee leadership, in the views and estimates submitted to the Budget Committee, has urged that the federal transit program be $34.5 billion over the same period. We have conveyed our enthusiastic support for the $34.5 billion proposal to Budget Committee members and look forward to working with the Public Works Committee in support of funding in this range.

We welcome the Committee's call, in the views and estimates, for recapturing for transportation purposes the 2.5 cents per gallon of the gas tax that goes to deficit reduction, and we support an eventual seven cent per gallon increase in the gas tax for transit purposes.

In contrast, the Administration would freeze funding levels with only a token increase in the fifth year of the program. During the same period, funding for highways would increase 40 percent. Given the problems of energy consumption, clean air, gridlock, mobility, and economic development, the Administration's funding priorities are exactly the opposite of what they should be.

Charts 4 and 5 demonstrate the disparity in funding priorities over the past decade. Chart 4 compares the growth of highway funding to the reduction of transit funding. Chart 5 shows how federal support of transit in real dollars has been cut in half.

A program of the size recommended by the Public Works Committee leadership and APTA will provide an appropriate federal contribution to transit capital and operating funding requirements in FY 1992 through FY 1996. The proposal reflects real needs: The Nation's transit systems require $15.1 billion per year in 1992 through 1997 for capital investments, a total of $90.8 billion in that period. More detailed information on these needs is contained in the *APTA Survey of Transit Capital Needs, 1992-1997, Advance Summary of Findings*. The *Survey* is the most definitive available source of information on the capital investment requirements of U.S. transit operators.

APTA's program is designed to double transit ridership by the end of the century. Achievement of this goal is essential if we are to have any chance of making progress on such national goals as cleaning up the air, promoting an efficient national transportation network so goods and people can move efficiently, and expanding mobility options for all citizens. Without stable and reliable federal support, our industry will be unable to make these contributions. Instead, individual transit systems will be forced to scrape by from year to year as they have over the past few years.

Chart 4

The Divergence of Federal Transit and Highway Funding, Actual Budget Authority (1981-1991) and Administration Proposed Budget Authority (1992-1996), Billions of Dollars

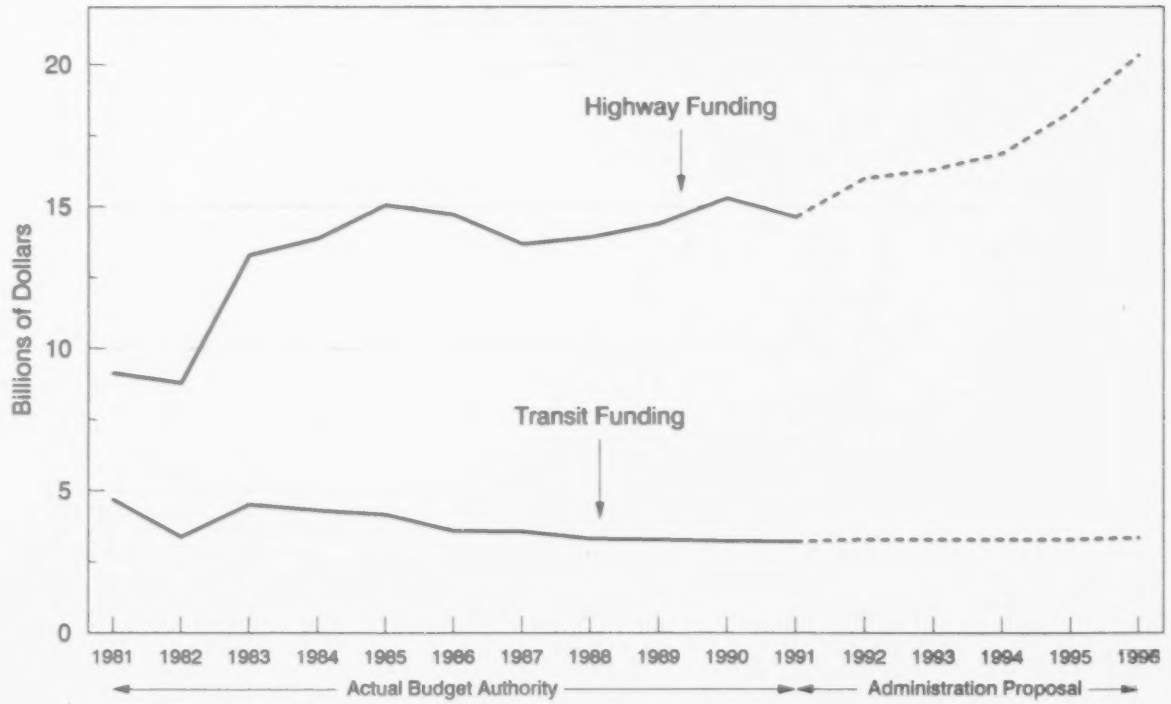

Chart 5

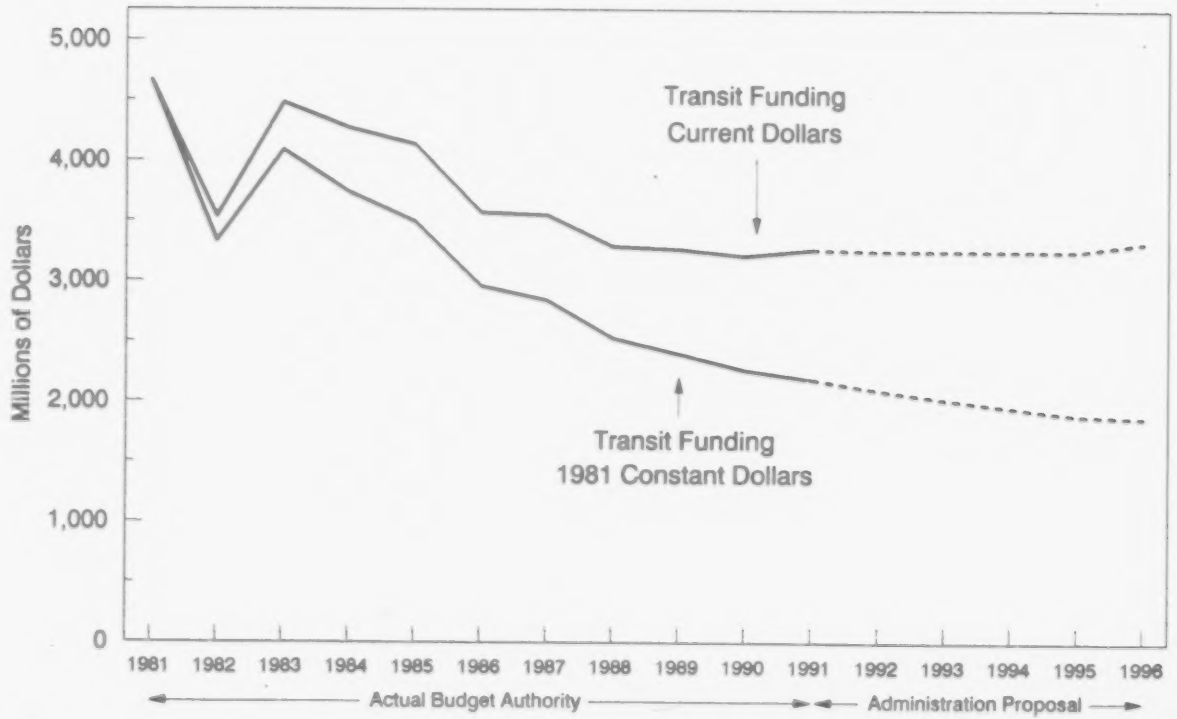
The Effect of Inflation on Federal Transit Budget Authority
(1981 - 1996, Millions of Dollars)



APTA's program will benefit the transit supply industry, which provides goods and services to transit operators. By assuring predictable, long-term demand, it will encourage firms to remain in this field. They will be able to maintain employment levels, invest in productivity improvements, and concentrate on meeting the challenges posed by new federal clean air and accessibility mandates.

In contrast, the Administration reauthorization proposal would perpetuate instability and uncertainty. The lower funding level, limits on operating assistance, and other damaging program changes will force many transit systems to delay or abandon planned maintenance of existing facilities. Long-term expansion plans will be put on the shelf. Some transit supply firms may leave the field entirely.

## Funding Sources

Currently transit is funded from both the Mass Transit Account and from General Fund revenues. The Administration proposes a departure from current policy that could have a long-term disastrous impact on transit. It proposes the immediate elimination of General Fund support for transit, together with a spend-down of the Mass Transit Account. At the end of five years, that would leave transit with no fund balance to draw on and a relatively small income stream from the Mass Transit Account.

APTA agrees that the Trust Fund balance should be spent down, but we strongly object to elimination of General Fund support. We applaud the Public Works Committee and Surface Transportation Subcommittee leadership for the bipartisan call urging the return to the trust fund of the 2.5 cent per gallon of the federal fuels excise tax that goes to deficit reduction. As your proposal recognizes, continued support from the General Fund is needed to reach the levels of funding necessary for a sound transit program.

An increase in the federal gasoline tax dedicated to mass transit should be considered. APTA recommends an eventual increase of 7 cents per gallon to be earmarked for the Mass Transit Account of the Highway Trust Fund. Our polling indicates that the American people are willing to pay a higher gas tax if they know that it will be used to reduce congestion, increase mobility, and keep transit fares at affordable levels. The recent events in the Persian Gulf are a powerful reminder that we benefit from alternatives to gas-guzzling cars and that increased fuel taxes are a means of encouraging such alternatives. Even with a 7 cent per gallon increase, the U.S. consumer would continue to pay a far lower gas tax per gallon and a far lower total price for gas than the consumer in any other industrialized nation. There has been virtually no public opposition to last year's five-cent increase in the federal gas tax. The federal government should realize that higher gas taxes provide an opportunity to invigorate a partnership for public good.

**Balance: Federal/Local Cost Sharing**

APTA's reauthorization proposal eliminates modal biases and allows states and local governments to make decisions about transportation investment based on transportation needs. Our proposal is designed to ensure that the federal program provides state and local government agencies with the resources to develop transportation plans in an unbiased way. A bias-free federal program will enable a Metropolitan Planning Organization (MPO) to incorporate air quality, congestion reduction, mobility enhancement, and land use considerations into its Transportation Improvement Plan.

We are very concerned that the Administration proposal contains a number of provisions that will make it difficult to make unbiased decisions. One obvious problem is that, under the Administration's proposal, the federal government would pay 75 to 90 percent of the cost of most highway programs but only 50 percent for transit new starts and 60 percent for other transit programs. There can be no doubt that this process will skew the local decisionmaking process in favor of highways. Whatever the balance between federal and local cost sharing Congress chooses, there should be an equal cost sharing formula for highways and transit.

We recognize that the proposed Urban/Rural Program, the most obvious "flexible" element of the Administration program, provides a 60 percent federal share for highway and transit programs. While we think that a more appropriate federal share would be 80 percent, at least this program is balanced. The problem is that many urban highways may be included in the National Highway System. At a total potential length of 165,000 miles, the National Highway System could be nearly four times the size of the present 43,000-mile interstate system. There is all too much room to include an area's proposed new highways in this program and obtain its 75 percent federal share.

In addition, we strongly oppose the Administration's proposal that new start transit projects be subjected to a cumbersome "alternatives analysis" but no such requirement would exist for highway projects. At a minimum the burden should be equal. Indeed, if anything, there should be an alternatives analysis for highway projects to see if a transit project would be more energy efficient or environmentally sound.

This is just one element of the Administration proposal that would make it more difficult for state and local governments to integrate land use and transportation plans. Another concern is that 70 percent of National Highway Program funds would be allocated according to each state's share of national highway use of motor fuel. This would penalize states that limit fuel consumption and vehicle miles travelled through transit use.

Another problem concerns the bias in planning requirements. While the FHWA defers to local planners on highway projects and allows multicorridor planning, UMTA

constantly looks over the shoulders of state and local decisionmakers and must approve many individual steps before a transit new start can be approved. UMTA, in effect, stands ready to substitute its judgment for that of the local officials who are most knowledgeable about the community. The alternatives analysis requirements proposed by the Administration will add to these hurdles. They make sense if the goal is to prevent transit projects from being built, not if the goal is to reduce vehicle emissions, conserve energy, or provide an alternative to the single-occupant vehicle.

The elimination of these provisions, which would put federal officials in the business of second-guessing localities, would go far toward creating a federal program that is neutral with respect to modal choice -- highways or transit. What is really needed, however, is a positive federal program that actively encourages energy saving, environmentally sound transportation systems.

Sacramento, one of the fastest-growing metropolitan areas in the country, illustrates the opportunities and risks. The Sacramento Regional Transit District has created an integrated rail and bus service system with community guidance. In two years, from October 1988 to October 1990, system ridership has increased by 34 percent. Initiatives include corporate outreach for transit pass subsidies and education programs, expansion of the rail system, and planning for trip reduction ordinances required by the Clean Air Act Amendments. There is also an innovative effort to incorporate "Transit Oriented Development" in the area's planning process. This concept calls for "Pedestrian Pockets," communities centered around transit stations and with population densities that allow many activities to be conducted on foot or bicycle while workers commute to their jobs by transit.

For Sacramento and other communities throughout the Nation, federal policy can help create a future where transit is an integral part of the community and a major contributor to the solution to problems of air quality, congestion, and land use. Higher federal shares for highway funding could skew local planning decisions, as could planning requirements that make it harder to implement transit programs. The elimination of operating assistance, since the Sacramento area will exceed one million in population, would cut Transit District revenues by 10 percent at this crucial juncture. Federal tax policy and funding decisions will send a strong message to individuals. The federal message should be to use transit when possible, not to penalize those who do by denying them tax advantages and forcing them to pay higher fares.

## Flexibility

Flexibility is a concept that all parties seem to embrace in this debate, but it means radically different things to different people. During the process of developing an industrywide consensus on reauthorization, the transit industry has been supportive of flexible use programs provided that a core transit program is funded adequately. We

continue to believe that it is appropriate to give metropolitan areas the option to develop transportation plans with as few restrictions as possible so that local conditions can be dealt with effectively at the level where they are best understood.

We are, however, alarmed by the concept set forth in the Administration bill, which is tantamount to a one-way policy. Somehow the concept of a protected core transit program seems to have been lost. It is theoretically possible that over 90 percent of federal transit funds could go to highway programs under this proposal. Only a small fraction of highway funds would be available for transit projects. That is precisely the wrong way to implement flexibility and we object strongly to the proposal. It would be very unfortunate if this valuable urban transportation planning mechanism were to be ensnared in a proposal of this nature. We look forward to continuing the dialogue on ways that flexibility can be implemented for both transit and highway programs in a fair and equitable way for all concerned.

The policy of flexibility adopted by Congress should assure that transit needs are adequately met before any funds are transferred. It is inequitable to have slashed funding in half over the past decade and then insist that what little is left be totally up for grabs by highway projects in the future. At current levels, transit cannot afford its core needs, much less subsidize the highway program. Neither should the bill contain, as the Administration proposes, substantial hurdles for new start transit projects when no such hurdles exist for highway projects. A precondition to flexibility should be the restoration of the balance between highway and transit funding priorities.

## Transit Program Structure

APTA's proposal builds on the existing program to ensure that transit will be a full partner in the intermodal transportation system that responds to our needs in the 1990s and beyond. Unfortunately, the Administration's reauthorization proposal includes a number of unwise changes that, if adopted, would prevent transit systems throughout the Nation from fully participating in this new intermodal transportation program. In particular, proposed changes to the Section 3 discretionary program and the Section 9 formula program will endanger existing service levels and forestall the chance to plan for the future.

APTA proposes that the Section 3 program continue as part of a transit "categorical and reinvestment program," receiving approximately 26 percent of the funds made available at the $6.5 billion funding level. Section 3 would continue to authorize the distribution of funds on a discretionary basis for the purposes of (1) construction of new fixed guideway systems and extensions to existing fixed guideway systems; and (2) for the purchase of buses and related equipment and the construction of bus-related facilities. Section 3 would also continue to fund rail modernization projects, but funds would be apportioned by formula rather than through discretionary grants.

Of the funds made available for the section 3 program, 44.44 percent would be available for new starts and extensions of fixed guideway systems; 44.44 percent for formula rail modernization; and the remaining 11.11 percent would be available for bus and bus-related capital expenditures. At a $6.5 billion funding level, this would include over $750 million for new starts, $750 million for rail modernization, and $190 million for bus capital under the section 3 program.

The federal share of a Section 3 project would be set at 80 percent of net project cost, the same as we propose for other projects. The federal share of a transit capital project should be equal to the federal share of a highway project so that the surface transportation program does not create a financial incentive to select one mode rather than another. It would also be stipulated that the Secretary of Transportation could not require a community to provide a greater local share (or "overmatch") as part of the technical criteria in making a discretionary grant award.

In contrast, the Administration proposal would effectively eliminate the bus and bus-related element of the Section 3 program, transfer the rail modernization element, with changes, to the Section 9 program, and cap the new starts program at $300 million per year in FY 1992 and 1993, $380 million in FY 1994 and 1995, and $400 million in FY 1996. Each year, an additional $50 million in Section 3 funding is available for other purposes including the costs of compliance with the ADA and the Clean Air Act.

We oppose this drastic revision of the section 3 program. It grossly underestimates the need for new start, rail modernization, and bus programs. Worse still, it is unrealistic to the point of absurdity in its underestimate of ADA and Clean Air costs.

## New Start Criteria

In recent years, UMTA has narrowed the criteria for evaluating new transit system proposals with the admitted objective of reducing federal support for new system development. Current practice force individual transit systems to focus on short-term operational economics and to provide higher local matches in order to increase the likelihood of federal approval or financial participation in new starts. These shortsighted constraints are clearly inappropriate to guide decisions on new systems that are needed to address future local and national concerns.

At a minimum, Section 3 language guiding decisions on new system development should be revised to accommodate the following objectives:

1) UMTA should not be allowed to make preemptive judgments that halt planning and analysis of a new system in its early stages. System planning, alternatives analysis, and preliminary engineering should be allowed -- and encouraged -- to proceed

with the use of federal funds. UMTA should not be allowed to declare such prospective projects effectively "ineligible" until such time that final design and engineering funds are requested.

2) Criteria must be broadened, for both transit and highway projects, to require overt consideration of land use, air quality, and related impacts, both quantitative and qualitative.

3) Provision should be made to reward and encourage areas that demonstrate progressive and effective steps to integrate land use and air quality considerations. Without such encouragement from federal programs, major transportation investment decisions will continue to be made in a vacuum.

## Rail Modernization

A vital rail modernization program is one of the best investments we can make. The Nation's heavy rail transit systems are located in densely populated, built-up urban areas that are home to millions of Americans. They pollute less per passenger mile than any other vehicle; their share of unlinked passenger trips represents a significant share of total trips in these urban areas, greatly reducing the demand for other surface transportation facilities; and they require substantial investment to maintain and upgrade services and to comply with federal accessibility requirements. Only with adequate rail modernization investment can these systems continue to provide crucial services in the urbanized areas that are the nerve centers of U.S. economic life.

APTA's rail modernization proposal is designed to accommodate the needs of the eight historic rail systems and also the newer systems which will also face significant rail rehabilitation costs during the next five years. Of the funds made available for rail modernization, the eight historic urbanized areas, as a group, would be held harmless up to an appropriation level of $455 million. In formulating this proposal, the transit industry does not have a specific recommendation for the distribution of funds among the eight traditional recipients. This could be done using many factors, including consideration of historic share, rail modernization needs, and so forth.

For funding levels over and above $455 million, the rail modernization and rehabilitation program would be distributed on a formula basis as follows: (a) for the next $70 million of funds ($455-525 million), 50 percent of this amount would be distributed to the eight historic recipients of rail modernization funds on the basis of section 9 formula factors; the remaining 50 percent would be distributed to all other fixed guideway recipients on the basis of the section 9 formula factors, and (b) for all funds in excess of $525 million, all funds shall be distributed based on the Section 9 fixed guideway formula.

Of particular concern is a consequence of the Administration's proposal to include $600 million for rail modernization funding in section 9. Because this $600 million is set aside before the section 9 funding allocation process begins, there will be an adverse impact on the section 9 bus funding if the section 9 appropriation is less than the authorized amount. This is not a theoretical concern since historically appropriations have not matched authorized funding levels. Taking a program "off the top" violates a principle that we in the industry subscribe to of "share the pain, share the gain."

**Section 9 Program/Operating Assistance**

APTA proposes to retain the existing Section 9 Formula Program at higher funding levels. The current matching requirements would be retained, with the federal share set at 80 percent of a capital project and 50 percent of a system and service maintenance grant. APTA's reauthorization proposal calls for the continuation of federal operating assistance to all transit systems as part of a service and system maintenance assistance program.

In contrast, the Administration proposal seeks to eliminate operating assistance for urbanized areas with more than 1,000,000 people and to limit the applicability of operating assistance in all other UZAs. This would have extremely negative and counterproductive results in these urban areas where the U.S. Census Bureau reports that over 50 percent of our population now resides.

The loss of large urban area operating assistance would require immediate and significant fare increases. This, in turn, would reduce ridership and prompt service reductions in precisely those areas where the problems of pollution, congestion, and gridlock are the worst. It is hard to imagine a more counter-productive policy direction.

Federal operating assistance for all sizes of transit systems remains essential to ensure adequate maintenance and effective operation of the Nation's transit infrastructure and realization of the full continuing benefit of federal capital investments in transit. APTA's operating assistance proposal is designed to maintain the viability of transit service throughout the Nation so that transit can fulfill its role in achieving national objectives relating to environmental, mobility, congestion, energy conservation, and productivity concerns. A technical description of our proposal has been provided to the Subcommittee.

The case of New Jersey Transit illustrates the drawbacks to the Administration's operating assistance proposal. The elimination of $35 million in operating assistance to New Jersey Transit would result in a 17 percent fare increase. As a result of this fare increase, more than 8.5 million additional automobile trips would be made on New Jersey highways. This would mean more pollution, congestion, and oil consumption at a time when New Jersey is struggling to meet federally established clean air mandates.

Without federal operating assistance, many transit systems would have no alternative but to increase fares and reduce services. Those who depend on transit would be unable to travel. Those who have a choice would either turn to their automobiles or pay a penalty for continuing to use environmentally sound, energy-saving transit services.

It is disingenuous at best for the Administration to say that the federal government should not have to pay for operating assistance because it does not tell transit systems how to operate. In truth, the federal government has imposed many operating requirements on the Nation's transit systems. From spare bus ratios to labor practices, the federal government has dictated operational practices that affect every aspect of transit system operations. Under these circumstances the federal government has a growing responsibility to support transit operations.

APTA's proposal preserves, with constructive changes, the existing Section 3 program and operating assistance provided under the section 9 program. These changes are responsive to the transit industry's needs and they will enable the industry to play its role in an intermodal national transportation system. In contrast, the Administration's unwise changes will prevent the transit industry from fulfilling its potential. The consequences will be felt by everyone, whether or not they use transit, in terms of increased pollution, congestion, and inefficiency.

## Rural Transportation and Small Transit Systems

Public transit is not simply an issue for large transit systems in large urban areas, but also a valuable asset for rural areas, small urbanized areas, and small operators in the larger areas. Of APTA's nearly 500 transit system members, over half are classified as small operators. These systems operate fewer than 100 buses during peak service hours. In many cases, these transit systems are a vital link in holding our communities together.

It is important to small operators and non-urban transit systems that the reauthorization proposal:

1) increase funding for the Section 18 non-urban program;

2) protect operating assistance for small operators.

3) define "flexibility" in a way that protects core transit needs;

4) retain the provision of current law that allows transit systems in urbanized areas of less than 200,000 people to be eligible for Designated Recipient status;

5) protect the independence of the Section 16(b)(2) program, the Section 18 program, and that share of Section 9 funding that goes to UZAs under 200,000 people; and

6) consider the needs of small operators within large UZAs.

Section 18 Funding

APTA supports increased funding for the Section 18 non-urban program at approximately 3 percent of the total UMTA program level, or about $200 million if the $6.5 billion level is achieved. Section 18 is a crucial element of rural development efforts. For senior citizens, services provided under this section can make the difference between staying in your hometown and unwilling displacement. For low-income people, these services can make the difference between access to training and jobs and continued unemployment.

Operating Assistance for Small Urbanized Areas

APTA's reauthorization proposal calls for the continuation of federal operating assistance to all transit systems. This proposal is responsive to the needs of all systems including small operations. It is preferable to the Administration's proposal, which retains operating assistance for UZAs with fewer than 1,000,000 people but unjustifiably limits the purposes for which these funds can be spent.

The Tri-State Transit Authority of Huntington, West Virginia, known as "TTA," is just one of many small operations that would be severely impacted by the Administration proposal. Federal operating assistance comprised approximately one-fourth of TTA revenues. Preliminary estimates indicate that the Administration proposal would allow TTA to use operating assistance for about 4 percent of its expenses. That would be a devastating blow in the absence of alternative sources of funds.

The Tri-State Transit Authority receives very little state assistance and can expect no increase because the state budget must be cut. Local assistance is a crucial source of revenues and is made up largely from property taxes which the voters approved in 1982, 1984, 1986, 1988, and 1990. More revenue is not available from this source. Many other small operators would face the same kind of difficulties if the Administration's operating assistance proposal were adopted.

Flexibility

The concept of flexibility, as construed by the Administration, is potentially a disaster for small operators and rural systems. Without protection for the core needs of transit, it may thrust these small agencies into a battle over the use of resources with much more powerful state-wide departments and agencies, many of which have an

historically greater interest in road-building. As a consequence, many smaller systems believe that flexibility should only be applied in large urban areas.

Designated Recipient Status

APTA's reauthorization proposal specifies that Congress should retain the current provision that allows transit operators in UZAs under 200,000 people to be eligible to serve as Designated Recipients. In contrast, the Administration proposal would eliminate the ability of these operators to serve as Designated Recipients. Although this change would not be a problem in some states, but in others it could be highly damaging to transit services in small urbanized areas. It is our view that current law allows for a useful and appropriate degree of flexibility for UZAs under 200,000 population and should therefore be retained.

Protect Individual Programs

APTA supports reauthorization at higher funding levels of the existing Section 16(b)(2) program, the Section 18 program, and the Section 9 funding for UZAs with fewer than 200,000 people. Each of these programs was established to meet a distinct, identifiable need and each is still pertinent. The Administration recognizes the value of these programs by proposing to retain the existing authorization language. Yet, disturbingly, the Administration undercuts its own support for these programs by seeking to turn the three programs into a block grant by giving state governors the authority to allocate the funds for the three programs.

We do not support this approach. Each program answers a particular need and should be authorized at an appropriate level with administrative protections to assure that these needs are served in a reliable and predictable way.

Small Operators in Large Urbanized Areas

Many small transit operators provide services in large urbanized areas. They must comply with any federal requirements that apply to large UZAs, however burdensome. Federal policymakers should take account, in the reauthorization proposal and other legislation, of the undue burden these requirements place on these systems.

For example, the Culver City Municipal Bus Lines, with 28 buses, and the Montebello Bus Lines, with 51 buses, both operate in the greater Los Angeles area. Federal policy should ensure that these and other small operations can continue to meet the needs of their local communities and are not overwhelmed by requirements that may be more suited to major regional operators.

Transit systems play an important role in the lives of small urban areas and rural areas. APTA's reauthorization proposal addresses the needs of these transit systems in a

number of important ways: increased Section 18 funding, maintaining reasonable but effective administrative requirements, preserving vital operating assistance, and protecting the core needs of all sizes of transit systems before making transit funding available for flexible use purposes.

## Research, Development, Training, and Human Resources

One area in which APTA is close to agreement with the Administration is the importance of transit research, development, and related programs. The Administration would earmark 2.8 percent of transit funding for research, development, training, and human resources. We propose to continue the research, training, human resources, and planning programs provided for in sections 4(i), 6, 8, 10, 11, 18, and 20 of the Urban Mass Transportation Act. These programs would receive 3 percent of the funds made available at the $6.5 billion funding level.

One-third of these funds would be used to support a "National Research and Training Program" for research, demonstration, managerial training, technical training, technical assistance, and human resource priorities as determined by the Secretary of Transportation. As part of this program, a new provision would be added to section 11 allowing the Secretary to undertake and support projects designed to showcase products and services of the domestic transit supply industry in the international marketplace.

The remaining two-thirds of these funds would be used to support a "State and Local Planning and Research Program" that would include support for transit planning at the state and local level and the rural technical assistance program. A new provision would be added to section 11 authorizing the secretary to enter into a contract with the National Academy of Sciences for the purpose of implementing the National Cooperative Transit Research Program at an annual funding level of $10 to $15 million. This program would be controlled by transit operators and would work to solve short-term operating problems.

It is our understanding that the Transit Development Corporation (TDC) will be the independent board that the Secretary will utilize to select research, development, and technology transfer activities to be carried out by the National Academy of Sciences. We welcome this approach and are redesigning the TDC board to ensure its effectiveness and to include the Federal Mass Transportation and Highway Administrators as *ex officio* members of the board. We look forward to working with them to carry out projects. We understand that the TDC would have the authority to enter into contracts with other organizations including APTA for purposes of disseminating information concerning the results of the research program.

The Section 8 planning program must be continued and strengthened, as part of the State and Local Planning and Research Program, for three reasons:

1) Metropolitan Planning Organizations will play a central role in establishing how Clean Air Act requirements will be meshed with transportation plans. Exercising this responsibility effectively will require substantial increases in support for necessary air quality monitoring and modeling activity. Without increased funding for these complex and expanding responsibilities, it is unlikely that the technical data will be available to support politically difficult decisions about the proper mix of transit and highway investments in urban areas.

2) MPOs are the only institutions that can manage the critical relationships of land use, economic development, and transportation. Considerably more support is needed for long-range community planning and development activity if transportation decisions are to serve local development goals and needs. Funding for the section 8 program should assure that these critical functions -- air quality conformity planning, and integrated land use and transportation planning -- are to be carried out more effectively.

3) Transit systems and MPOs in collaboration must be assured of adequate funds to proceed through new system planning in a comprehensive and unrestricted way without premature federal action to limit or foreclose consideration of new system development as is now the case.

## UMTA Meeting Provision

One provision of the Administration bill that is of special concern to APTA as an organization is proposed Section 26(a)(2) of the Urban Mass Transportation Administration Act. This section would encourage UMTA to hold conferences and meetings for the industry and "to charge and retain fees, tuition, or amounts resulting from conferences, seminars, training sections and the like." Under this newly proposed section, the revenues raised by UMTA would not be posted in the miscellaneous receipts of the United States Treasury but would instead be used to augment funds appropriated by Congress to administrator to UMTA.

APTA is extremely concerned that this provision will provide strong incentives for UMTA to conduct meetings and seminars that essentially resemble those carried out by trade associations like APTA for its members, competing with an activity that we believe is well performed -- and in a free society better performed -- by the private sector. No other modal administration within the Department of Transportation has such authority and we believe it is absolutely unnecessary and improper. While we have the greatest respect for Secretary Skinner and UMTA Administrator Clymer and their knowledge, experience, and forceful advocacy for transit, we do not believe that they need the authority to hold activities that compete with those conducted by the private sector. In fact, such authority appears to us to be at odds with the language expressed in the Urban Mass Transportation Act of encouraging private sector participation in programs funded under the Act. Therefore, we urge that proposed Section 26(a)(2) not be included in the

reauthorization legislation. In fact, APTA believes that if legislation on this subject is to be considered at all, it should prohibit UMTA from holding meetings that compete with the private sector and should require instead that UMTA contract with a private organization after issuing a request for proposal.

## At-Grade Rail Crossing Program

For decades, commuter rail systems have provided essential service in many parts of the country. In other areas, including the Virginia suburbs of Washington, D.C., the Boston area, and the Los Angeles-San Diego area, there is growing interest in expanding this form of transportation service. A supportive federal program can provide valuable encouragement for existing and proposed commuter rail systems.

One issue that concerns APTA's commuter rail members has to do with at-grade crossing improvements. The Administration proposal would not provide for a separate program, along the lines of the existing section 130 program, to support these safety improvements. We believe that it would be beneficial for the reauthorization legislation to address this important highway safety issue by ensuring, in an appropriate way, the continuance of a federal program that would allocate federal highway funds to the states for needed grade separation and improvement of rail-highway crossings.

## Buy America Provision

APTA has carefully reviewed the Buy America provision applicable to the transit program and recommends that no changes be made at this time. Our position is based in large part on the unanimous position of a task force made up of APTA Associate Members and includes a review of the Administration's proposal to expand the already significant waiver authority under Section 165 of the Surface Transportation Assistance Act of 1982. APTA concurs with the Railway Progress Institute's position on this issue.

We oppose the Administration's proposed change because:

1) There is a strong national interest in fostering and maintaining a healthy domestic transit supply industry. The current Buy America provisions have worked to keep U.S. dollars in this country and to attract foreign investment in the U.S. transit supply industry. They provide stability and predictability that allow foreign and domestic firms to make long-term plans that would be jeopardized by the proposed changes.

2) Thousands of U.S. jobs are at stake. The Buy America provisions help to protect these jobs.

3) The Administration delayed issuing regulations implementing 1987 amendments to the Buy America statute until earlier this year; the transit industry should be permitted to gain experience under the recently issued regulations before additional changes are considered.

4) The Administration's proposal would add a fifth waiver provision to the Buy America statute granting the President authority to waive the statute's applicability to countries where there is an agreement pursuant to Section 301 of the Trade Agreement Act of 1979. This proposal fails to address the fact that many barriers to reciprocal free trade exist at local and regional levels of government in other countries. The proposed amendment would have the potential, therefore, of opening up U.S. markets without any guarantee that U.S. firms would have reciprocal access to foreign markets.

## Conclusion

The transit industry has developed an unprecedented consensus after months of work on a comprehensive plan for reauthorization that will take transit into the next century. APTA has been immensely pleased by the outpouring of support for transit shown by Members of Congress, state and local elected officials, business, labor, and public interest groups. We are especially encouraged by the enthusiastic response of hundreds of groups to the development of the Transit Now coalition which brings together all the various supporters of transit for the first time as a unified force.

APTA's reauthorization proposal provides the federal leadership and resources to make transit a full partner in an intermodal transportation network that contributes to the achievement of national goals for clean air, energy conservation, mobility, reduced congestion, and higher productivity.

Never has the case for federal leadership and funding of transit been so strong. As we move toward the year 2000, there can be no doubt that transit will be a fundamental part of our national policy on competitiveness, energy, environment, mobility, productivity, and economic development. APTA stands ready to do everything it can to assist Congress to help get the country moving again.

TESTIMONY OF THE

AMERICAN PUBLIC TRANSIT ASSOCIATION

BEFORE THE

SUBCOMMITTEE ON SURFACE TRANSPORTATION

OF THE

HOUSE COMMITTEE ON

PUBLIC WORKS AND TRANSPORTATION

APRIL 10, 1991

STATEMENT BY

LAWRENCE DAHMS

MEMBER, APTA LEGISLATIVE COMMITTEE

EXECUTIVE DIRECTOR, METROPOLITAN TRANSPORTATION COMMISSION

OAKLAND, CALIFORNIA

I AM LAWRENCE DAHMS, EXECUTIVE DIRECTOR OF THE METROPOLITAN TRANSPORTATION COMMISSION OF OAKLAND, CALIFORNIA, THE MPO FOR THE SAN FRANCISCO BAY AREA. IT IS A PLEASURE TO BE HERE WITH MY COLLEAGUES ON BEHALF OF THE U.S. TRANSIT INDUSTRY.

WE OFFER AN AMBITIOUS PROPOSAL FOR THE REAUTHORIZATION OF FEDERAL SURFACE TRANSPORTATION PROGRAMS AS FOLLOWS:

TO BEGIN, WE PROPOSE RESTORING FEDERAL TRANSIT FUNDING TO WHERE IT WAS 10 YEARS AGO. THAT IS $6.5 BILLION IN INFLATION-ADJUSTED DOLLARS.

SECOND, WE ASK FOR GROWTH OVER FIVE YEARS SO THE TRANSIT PROGRAM REACHES $11 BILLION IN THE LAST YEAR; AND

IN THE PROCESS, WE ASK THAT CONGRESS ELIMINATE THE BIAS AGAINST TRANSIT IN MATCHING RATIOS AND OTHER REQUIREMENTS.

APTA'S PROGRAM MAKES SENSE BECAUSE TRANSIT IS A FUNDAMENTAL PART OF THE SOLUTION TO SEVERAL PROBLEMS AFFECTING AMERICA'S QUALITY OF LIFE AND ECONOMIC HEALTH. THESE INCLUDE:

*ENERGY: TRANSIT'S ROLE IN ACHIEVING ENERGY INDEPENDENCE IS

MORE COMPELLING THAN EVER BEFORE. EVERY COMMUTER WHO SWITCHES FROM DRIVING ALONE TO TRANSIT SAVES 200 GALLONS OF GASOLINE PER YEAR. IF 10 PERCENT OF URBAN AUTO TRIPS WERE REPLACED BY TRANSIT, WE WOULD SAVE OVER 300,000 BARRELS OF OIL EACH DAY.

*CLEAN AIR: NEW CLEAN AIR MANDATES MAKE TRANSIT USE MORE IMPORTANT THAN EVER. WITHOUT STRONG FEDERAL ENCOURAGEMENT FOR TRANSIT, SINGLE OCCUPANT VEHICLE USE WILL CONTINUE TO SOAR -- AND SO WILL AIR POLLUTION. WE WILL NEED EVEN GREATER TRANSIT USE TO COMPLY WITH NEW CLEAN AIR ACT REQUIREMENTS.

*MOBILITY: TRANSIT HAS LONG PROVIDED MOBILITY FOR MILLIONS OF CITIZENS WHO DO NOT HAVE ACCESS TO PERSONAL VEHICLES. NOW, SUCCESSFUL IMPLEMENTATION OF THE AMERICANS WITH DISABILITIES ACT DEPENDS ON ADEQUATE FUNDING FOR TRANSIT. TRANSIT IS THE KEY TO MOBILITY FOR MILLIONS OF SENIOR CITIZENS. FOR PEOPLE WITH LIMITED INCOMES, TRANSIT CAN BE THE DIFFERENCE BETWEEN A DECENT JOB AND UNEMPLOYMENT.

*CONGESTION: TRANSIT SHOULD BE ADVANCED WHEREVER FEASIBLE AS AN ALTERNATIVE TO GRIDLOCK THAT THREATENS OUR CITIES AND SUBURBS.

*COMPETITIVENESS AND PRODUCTIVITY: NOT ONLY DOES TRANSIT OFFER AN ALTERNATIVE TO GRIDLOCK, EVERY $10 MILLION INVESTED IN TRANSIT CAPITAL GENERATES 770 JOBS AND $33 MILLION IN BUSINESS REVENUES. EVERY $10 MILLION INVESTED IN TRANSIT OPERATIONS WILL SUPPORT 960 JOBS AND CREATE $30 MILLION IN BUSINESS REVENUE.

THE STAKES COULD NOT BE HIGHER AS CONGRESS ESTABLISHES A NEW SURFACE TRANSPORTATION POLICY. WE CAN NO LONGER PRETEND THAT STATE AND LOCAL GOVERNMENTS CAN MAKE UP FOR FEDERAL FUNDING CUTS. PUBLIC TRANSIT NEEDS MORE FEDERAL FUNDING FOR BOTH CAPITAL AND OPERATING COSTS. A STRONG FEDERAL PROGRAM WILL ENHANCE ENERGY INDEPENDENCE, IMPROVE AIR QUALITY, EXPAND THE MOBILITY OPTIONS OF ALL CITIZENS, REDUCE GRIDLOCK, AND MAKE AMERICA MORE PRODUCTIVE AND COMPETITIVE.

APTA'S DETAILED PROPOSAL IS INCLUDED IN OUR WRITTEN SUBMISSION, BUT HERE ARE SOME KEY POINTS:

*FUNDING LEVELS: IN THE PAST 10 YEARS, FEDERAL TRANSIT FUNDING HAS BEEN SLASHED IN HALF. WE URGE CONGRESS TO RESTORE WHAT HAS BEEN LOST WHICH WOULD REQUIRE $6.5 BILLION IN FY 1992, AND TO INCREASE FUNDING TO $11 BILLION PER YEAR BY FY 1996. THE ADMINISTRATION SEEKS TO FREEZE TRANSIT FUNDING AND INCREASE

HIGHWAY FUNDING BY 40 PERCENT. WE APPLAUD THE LEADERSHIP OF YOUR COMMITTEE AND SUBCOMMITTEE FOR THE FIVE-YEAR, $34.5 BILLION TRANSIT PROPOSAL THAT IS CLOSE TO APTA'S $39 BILLION PROPOSAL.

*FUNDING SOURCES: CURRENTLY TRANSIT IS FUNDED FROM BOTH THE MASS TRANSIT ACCOUNT AND FROM GENERAL FUND REVENUES. THE ADMINISTRATION PROPOSES TO ELIMINATE GENERAL FUND SUPPORT FOR TRANSIT. APTA AGREES WITH THE PUBLIC WORKS COMMITTEE LEADERSHIP THAT THE TRUST FUND BALANCE SHOULD BE SPENT DOWN, AND WE DEEPLY APPRECIATE YOUR RECOGNITION THAT CONTINUED GENERAL FUND SUPPORT IS ABSOLUTELY ESSENTIAL AS WELL.

*BALANCE: THERE SHOULD BE AN EQUAL COST SHARING FORMULA FOR HIGHWAYS AND TRANSIT. THE ADMINISTRATION'S PROPOSAL WOULD PROVIDE MUCH HIGHER FEDERAL SHARES FOR HIGHWAYS THAN FOR TRANSIT, THUS CREATING FURTHER INCENTIVES TO BUILD HIGHWAYS INSTEAD OF TRANSIT. APTA PROPOSES TO ELIMINATE MODAL BIASES AND ALLOW STATE AND LOCAL GOVERNMENTS TO MAKE OBJECTIVE DECISIONS ABOUT TRANSPORTATION INVESTMENTS. WE STRONGLY OPPOSE "ALTERNATIVES ANALYSIS" APPLIED ONLY TO TRANSIT. THERE SHOULD BE A SINGLE DECISION PROCESS THAT EMPLOYS THE APPROPRIATE LEVEL OF ANALYSIS FOR CHOOSING HIGHWAY OR TRANSIT INVESTMENTS.

*FLEXIBILITY: FLEXIBILITY IS DESIRABLE, BUT BECOMES OPERABLE ONLY IF CERTAIN NECESSARY CRITERIA ARE MET, SUCH AS THE ASSURANCE OF EQUAL ACCESS TO BOTH STATE AND FEDERAL FUNDING, COMPARABLE MATCHING RATIOS, A SINGLE DECISION PROCESS. FURTHER, FLEXIBILITY IS NOT RELEVANT OR DESIRABLE IF IT THREATENS MAINTENANCE OF EXISTING SYSTEMS, TRANSIT OR HIGHWAYS.

ONCE AGAIN, WE APPLAUD YOUR COMMITTEE'S BOLDNESS IN IDENTIFYING HIGHER TRANSPORTATION INVESTMENT TARGETS. PROGRAM STRUCTURE IMPROVEMENTS AS SUGGESTED BY THE FLEXIBLE INVESTMENT CONCEPT CAN ONLY BE ACHIEVED WHEN PROGRAM LEVELS ARE INCREASED. THE HIGHER LEVELS PROPOSED BY YOUR COMMITTEE OFFER THE DUAL BENEFIT OF NEEDED FUNDING AND STRUCTURAL ADVANCEMENT.

TESTIMONY OF THE

AMERICAN PUBLIC TRANSIT ASSOCIATION

BEFORE THE

SUBCOMMITTEE ON SURFACE TRANSPORTATION

OF THE

HOUSE COMMITTEE ON

PUBLIC WORKS AND TRANSPORTATION

APRIL 10, 1991

STATEMENT BY

SHIRLEY A. DELIBERO

MEMBER, APTA LEGISLATIVE COMMITTEE

EXECUTIVE DIRECTOR, NEW JERSEY TRANSIT CORPORATION

NEWARK, NEW JERSEY

I AM SHIRLEY DELIBERO, EXECUTIVE DIRECTOR OF THE NEW JERSEY TRANSIT CORPORATION. NJ TRANSIT IS NEW JERSEY'S STATEWIDE PUBLIC TRANSPORTATION AGENCY, PROVIDING COMMUTER RAIL, LIGHT RAIL, COMMUTER BUS, AND LOCAL BUS SERVICE TO APPROXIMATELY 400,000 DAILY RIDERS.

AN EFFECTIVE AND EFFICIENT MASS TRANSPORTATION SYSTEM IS ESSENTIAL IF NEW JERSEY AND THE NATION ARE TO SUSTAIN ECONOMIC DEVELOPMENT, IMPROVE AIR QUALITY, AND REDUCE FOREIGN OIL DEPENDENCE. NEW JERSEY, LIKE MANY OTHER STATES, IS CONFRONTED WITH TRAFFIC CONGESTION AND AIR POLLUTION PROBLEMS THAT THREATEN OUR OVERALL QUALITY OF LIFE.

GOVERNOR FLORIO AND OTHER STATE OFFICIALS RECOGNIZE THAT A STABLE AND EXPANDED MASS TRANSIT SYSTEM IS THE KEYSTONE TO PROMOTING MOBILITY AND REDUCING THE DEPENDENCY ON THE SINGLE OCCUPANT AUTOMOBILE. GOVERNOR FLORIO, IN HIS STATE FISCAL YEAR 1992 BUDGET REQUEST, HAS PROVIDED SUFFICIENT FUNDS TO HOLD FARES AT CURRENT LEVELS. IN ADDITION, HIS BUDGET RECOMMENDS APPROXIMATELY $200 MILLION IN STATE CAPITAL ASSISTANCE, A 300 PERCENT INCREASE COMPARED TO FISCAL YEAR 1988.

OUR EFFORTS IN NEW JERSEY WILL GO FOR NAUGHT UNLESS THE FEDERAL COMMITMENT TO MASS TRANSIT IS INCREASED. APTA'S REAUTHORIZATION

PROPOSAL BUILDS ON THE EXISTING PROGRAM TO ENSURE THAT THE FEDERAL ROLE IS STRENGTHENED, AND THAT TRANSIT WILL BE A FULL PARTNER IN THE INTERMODAL TRANSPORTATION SYSTEM THAT WE NEED IN THE POST-INTERSTATE ERA. IN SHARP CONTRAST, THE ADMINISTRATION'S PROPOSAL WOULD UNDERMINE THE ABILITY TO DEVELOP A COMPREHENSIVE AND INTERMODAL TRANSPORTATION SYSTEM SINCE MASS TRANSPORTATION WOULD BE UNDERFUNDED AND THE RESOURCES ARE NOT THERE TO ADDRESS THE MOST URGENT MOBILITY NEEDS OF THE NATION.

SECTION 3 DISCRETIONARY GRANT PROGRAM

APTA PROPOSES THAT THE SECTION 3 PROGRAM CONTINUE TO PROVIDE FUNDS FOR FIXED GUIDEWAY, RAIL MODERNIZATION, AND BUS NEEDS. IN CONTRAST, THE ADMINISTRATION PROPOSAL WOULD ELIMINATE THE SECTION 3 BUS PROGRAM, TRANSFER THE RAIL MODERNIZATION ELEMENT TO THE SECTION 9, AND CAP NEW STARTS AT $300 MILLION IN THE FIRST TWO YEARS, $380 MILLION FOR THE NEXT TWO YEARS, AND $400 MILLION IN FY 1996.

WE OPPOSE THIS DRASTIC REVISION OF THE SECTION 3 PROGRAM. IT GROSSLY UNDERESTIMATES THE NEED FOR NEW START, RAIL MODERNIZATION, AND BUS PROGRAMS. I CAN TELL THIS COMMITTEE, THAT THE ADMINISTRATION'S PROPOSAL WOULD SEVERELY CURTAIL NEW JERSEY'S ABILITY TO MAINTAIN ITS BUS SYSTEM AND, WITH THE LIMITATION PLACED ON NEW STARTS, WOULD

SERIOUSLY CURTAIL NEW JERSEY'S ABILITY TO ADDRESS EMERGING MOBILITY NEEDS WITHIN THE GROWTH AREAS OF THE STATE.

AS IT CONCERNS RAIL MODERNIZATION, APTA'S PROPOSAL IS DESIGNED TO BETTER ACCOMMODATE THE NEEDS OF THE EIGHT HISTORIC RAIL SYSTEMS THAN DOES THE ADMINISTRATION'S PROPOSAL. THE APTA PROPOSAL ALSO RECOGNIZES THE NEED TO ADDRESS THE REHABILITATION NEEDS OF NEW SYSTEMS OVER THE COMING YEARS. THE ADMINISTRATION'S PROPOSAL WOULD SIGNIFICANTLY HURT THE OLDER RAIL SYSTEMS' ABILITY TO ELIMINATE DEFERRED MAINTENANCE BACKLOGS AND RETURN TO A STATE OF GOOD REPAIR. IT WOULD ALSO COME AT A TIME WHEN OLDER RAIL SYSTEMS MUST SPEND MILLIONS OF DOLLARS TO MEET THE AMERICANS WITH DISABILITIES ACT MANDATES.

SECTION 9 FORMULA PROGRAM

APTA PROPOSES TO RETAIN THE EXISTING SECTION 9 FORMULA PROGRAM AT HIGHER FUNDING LEVELS. WE CONTINUE OPERATING ASSISTANCE TO ALL TRANSIT SYSTEMS.

IT IS HARD TO IMAGINE A MORE COUNTERPRODUCTIVE POLICY THAN THE ADMINISTRATION PROPOSAL TO ELIMINATE OPERATING ASSISTANCE FOR URBAN AREAS WITH MORE THAN ONE MILLION PEOPLE. THIS WOULD REQUIRE FARE INCREASES OR SERVICE REDUCTIONS IN THE VERY PLACES WHERE POLLUTION,

CONGESTION, AND GRIDLOCK ARE MOST SERIOUS.

FOR EXAMPLE, THE ELIMINATION OF $35 MILLION IN OPERATING ASSISTANCE TO NJ TRANSIT WOULD RESULT IN A 17 PERCENT FARE INCREASE. MORE THAN 8.5 MILLION ADDITIONAL AUTO TRIPS WOULD BE MADE ON NEW JERSEY HIGHWAYS AS A RESULT OF THIS FARE INCREASE. WHAT THIS WOULD MEAN FOR NEW JERSEY IS MORE POLLUTION, MORE CONGESTION, AND MORE FOREIGN OIL CONSUMPTION. THIS INCREASED POLLUTION WOULD OCCUR AT A TIME WHEN NEW JERSEY IS STRUGGLING TO MEET FEDERALLY ESTABLISHED CLEAN AIR MANDATES.

ALTHOUGH THE $35 MILLION IN FEDERAL OPERATING ASSISTANCE IS A SMALL SHARE OF OUR BUDGET, APPROXIMATELY 6 PERCENT, IT IS CRUCIAL. WITHOUT IT, WE WILL HAVE TO INCREASE FARES OR REDUCE SERVICES, SOMETHING THAT OUR GOVERNOR HAS TRIED VERY HARD TO AVOID THIS YEAR. IT WOULD COME AT A TIME WHEN THE STATE IS HARD-PRESSED TO DEVELOP AN AIR-QUALITY PLAN TO ENSURE COMPLIANCE WITH THE CLEAN AIR ACT.

FEDERAL OPERATING ASSISTANCE FOR ALL TRANSIT SYSTEMS IS ESSENTIAL TO MAINTAIN AND OPERATE THE NATION'S TRANSIT INFRASTRUCTURE. APTA'S PROPOSAL IS DESIGNED TO ENSURE THAT TRANSIT CAN FULFILL ITS ROLE IN ACHIEVING NATIONAL GOALS FOR CLEANING UP THE AIR, ENHANCING MOBILITY FOR ALL CITIZENS, REDUCING CONGESTION, SAVING ENERGY, AND IMPROVING

PRODUCTIVITY.

CONCLUSION

APTA'S PROPOSAL RETAINS THE EXISTING SECTION 3 AND SECTION 9 PROGRAMS, INCLUDING OPERATING ASSISTANCE. WE HAVE ALSO INCLUDED CONSTRUCTIVE CHANGES THAT WILL ENABLE THE TRANSIT INDUSTRY TO BE A VITAL LINK IN A NATIONAL TRANSPORTATION SYSTEM.

TESTIMONY BY
HONORABLE DAVID N. DINKINS
MAYOR
CITY OF NEW YORK

Before

HOUSE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION
SURFACE TRANSPORTATION SUBCOMMITTEE

2167 Rayburn House Office Building
Washington, DC

Wednesday, April 10, 1991
11:00 A.M.

Chairman Mineta and members of the Subcommittee on Surface Transportation:

I thank you for the opportunity to testify this morning on the reauthorization of our crucial federal highway and transit programs. I am joined this morning by Dr. Lucius Riccio, who serves with great ability as Commissioner of Transportation of the City of New York.

As Mayor of this nation's largest city, and perhaps the busiest center of commerce and communication in the entire world, one of my major concerns is transportation -- ensuring that New York City's nearly eight million residents can get from one place to another with the greatest possible ease and efficiency.

At a time of severely limited public resources, meeting this responsibility can be a daunting task. And as we prepare to enter the twenty-first century, our needs in this vital area have become increasingly complex.

New and comprehensive federal legislation demands that we balance our desire to improve mobility with our need to protect the environment from dangerous auto emissions -- and our need to

make communities more accessible to those with disabilities.

As our troops return from months of bitter conflict on the sands of the Persian Gulf, we must strive to reduce our dependence on foreign oil -- to loosen the grip of foreign dictators on our nation's economy. And we must begin to repair our nation's crumbling infrastructure, which is suffering from decay and neglect after more than a decade without a national transportation policy. I don't need to tell this subcommittee that the work that needs to be done for the maintenance and repair of our bridges, tunnels, tracks, and roads has left our transportation system lagging far behind that of other countries.

Amid these tremendous challenges, I am delighted that this subcommittee recognizes the need for a cohesive national strategy for transportation, and is approaching the issue with great seriousness and determination.

As this subcommittee is well aware, our nation needs a much larger transportation program to meet the rapid growth and increasing congestion in our nation's metropolitan areas. Indeed, recent census data indicates that nearly 90 percent of our nation's growth in the past ten years has occurred in metropolitan areas with more than one million residents. Today more than 77 percent of the nation's population lives in metropolitan areas.

Despite the growing needs of urban America, I believe that the Bush administration's proposals will have a devastating impact on New York and other cities that rely on mass transit. These proposals would shift our nation's transportation programs

into reverse -- at a time when we must move forward.

The most disturbing -- and regressive -- aspect of the President's program is that it favors our nation's highways at the expense of mass transit. Astonishingly, the proposals reward automobile use and gas guzzling -- while states and cities that strive to be more efficient and environmentally sound by encouraging the use of public transportation are essentially punished.

As highway funding would jump from this year's 14.1 billion dollars to 20.3 billion in fiscal year 1996, transit funding will merely inch from 3.25 billion to 3.4 billion during the last year of this five-year reauthorization -- an increase that will barely keep pace with inflation. And that's still far below the 1981 all-time high of 4.66 billion.

At the same time, this program would slash all mass transit operating assistance to cities with more than one million residents. The bitter irony is that these are the cities whose need for these funds is greatest. New York City's Metropolitan Transit Authority stands to lose 93 million dollars per year, and our Department of Transportation will lose 7 million per year -- dollars that we will be hard-pressed to replace.

In the past two months, the Bush administration has touted the "flexibility" of this plan; theoretically, we can transfer our highway funds to mass transit, and vice versa. But while every penny of a state's transit funds can be transferred to highways, a paltry 30 percent of highway funds can be transferred to mass transit.

4

And these transfers do not take place on a level playing field. Since the federal government will contribute 75 percent of the funds for state and local highway projects but only 60 percent of the funds for transit programs, this proposal actually makes mass transit more expensive.

This reduction in matching funds is another classic example of the federal government shifting its traditional responsibilities onto state and local governments, without giving us the money to pay for them. Along similar lines, the Bush administration has also proposed the elimination of all General Fund support for transit; all funding would be shifted to the mass transit account of the Highway Trust Fund. In the long run, this will only make it easier for the federal government to reduce even further its commitment to mass transit. Such an underhanded tactic should be rejected out of hand.

By thwarting our efforts to expand transit programs, these proposals will make it virtually impossible for localities to comply with the Federal Clean Air Act and the Americans with Disabilities Act. Indeed, by advancing a transportation policy that conflicts with its own environmental and equal opportunity policies, the federal government is flattening its own tires.

Let me be very clear on this point: I fully support greater funding to rehabilitate our nation's highways. However, mass transit is essential if we are to reverse the growing congestion and pollution that plague our cities, and our entire country. We need to reduce dramatically the number of automobiles occupied by only one person. We need to shift some of the 100 million

45-155 O—91——24

commuter vehicles off of our congested highways, and encourage these commuters to use mass transit. Right now, cars account for 85 percent of all commuting, and most households have more automobiles than members of our workforce. What is even more distressing is that over two-thirds of our workforce travel to their jobs along highly congested roads and highways. Given these conditions, our so-called "rush hour" isn't much of a rush.

To address this proliferation of cars solely by focussing on highways is to forsake prevention for a costly -- and not very prudent -- cure.

The solution is clear. The federal government should increase mass transit funding to 6.2 billion dollars per year -- the level recommended by the House Committee on Public Works. This would help to expand transit programs; reduce our reliance on cars, fossil fuel, and crowded highways; and ultimately save us money.

On this issue, the statistics speak for themselves. In New York State, public transportation reduces our fuel consumption by 1.33 billion gallons each year. Every additional one percent increase in our ridership would save another 7.5 million gallons! Transit programs are not a drain on our treasury; they are a sound investment in our economic and environmental future.

In addition to increased mass transit funding, federal matching funds for both highway and transit programs should be kept at their current levels, so that we can meet our needs, and not create a monetary incentive to forsake mass transit for highways.

I also recommend that transit operating assistance be continued for cities with populations over one million. The large and comprehensive mass transit systems of cities such as New York, Washington, Chicago, and Boston are truly national treasures -- serving millions of visitors and business people from around the country. In fact, New York City's transit system and commuter railroad serve roughly 33 percent of all mass transit users nationwide. These valuable networks must be supported and nurtured by our federal government.

I realize that these measures would not be inexpensive. But the federal government can find a large part of the money right away by following the suggestion of this subcommittee and placing the entire national gasoline tax and all related taxes, at their current levels, into the Highway Trust Fund -- and releasing the funds for transportation purposes. That way, those who use our roads can help to pay for them, rather than help to close the deficit.

The highway portion of this new plan receives much more generous funding than mass transit. But the administration proposal would have a crushing impact on our environment, and would be inequitable to our nation's cities.

First of all, despite the fact that urban centers hold about 15 percent of all roads eligible for funding under the National Highway System, the federal government has decided, for no apparent reason, that urban roads can comprise no more than six percent of any National Highway System program.

My reasons for opposing this artificial limit are simple --

it is unfair, and quite frankly, it doesn't make sense.

According to the administration's plan, funds under the National Highway System will be distributed according to a highly questionable formula -- 70 percent of which will be based on a state's gas consumption. Under the proposed Urban Rural System, funding will be based entirely on gas consumption.

In effect, these new and regressive formulas reward gas guzzling, while penalizing the energy conservation that the Bush administration claims is such a high priority. This sends absolutely the wrong message to our people and our local governments -- the more gas you use, the less cash you lose. Indeed, one wonders whether Saddam Hussein knew about this pro-gas policy when he invaded the oil fields of Kuwait.

New York State currently has the lowest per capita gas consumption of any state in the country, and in New York City, gas consumption is about one-fifth of the national average. We are extremely proud of our record of efficiency, and it is ridiculous to penalize us for it. The fact is, these new formulas would cost our state 100 million dollars per year. A more equitable formula could be developed by using factors such as population and highway miles.

I am also dismayed that the Bush administration proposes to end the Federal Aid to Urban Systems program -- the only source of direct transportation aid to our nation's cities. This means that, although our transportation needs are in many ways greater than those of the rest of the state, we are not guaranteed any aid whatsoever, and must appeal to state officials for every

penny.

There are a few small bright spots in the administration's highway proposals. I am pleased that, for the very first time, the federal government will help to cover highway operating expenses through the Congestion Relief Program. And I applaud the continuation of the Interstate Trade-In program, which will ensure that New York City not lose the funds earmarked for the abandoned Westway project. But much more needs to be done.

I believe that the federal government should establish a special Metropolitan Transportation program to meet the needs of urban and suburban areas. It's an idea based on common sense -- we hold most of the people -- and suffer most of the congestion. Of course, a significant rural program is necessary as well.

Just as critically, we need a substantial commitment to preserve our nation's interstate system by resurfacing, restoring, rehabilitating, and reconstructing this 129 billion dollar national investment.

It is important for me to address the bridge component of the Bush administration's program. I'm sure the subject of New York City's bridges needs no introduction -- the poor state of our bridges has received widespread media attention in recent months.

The facts are sobering. We estimate that about 56 percent of the 874 bridges we operate are structurally deficient. That's the result of many decades of neglect and insufficient funding, especially at the federal level. This problem extends far beyond New York -- the U.S. Department of Transportation estimates that

*40 percent of all of the nation's bridges are structurally deficient or functionally obsolete.

Despite a few press reports to the contrary, New York City has not fallen down on the job of bridge maintenance. Our Department of Transportation has a world class maintenance and repair team. I am proud to report that the Federal Highway Administration recently visited New York to review our inspection and repair procedures, and gave us very high marks.

Over the next ten years, we are dedicating three billion dollars to bridge reconstruction, including one billion for the East River bridges alone. Unfortunately, we cannot meet this challenge by ourselves. I urge the subcommittee to allow the use of federal funds for bridge maintenance. Ultimately, this is a constructive and far-sighted approach. After all, decades of deferred maintenance allowed our bridges to deteriorate in the first place. An aggressive maintenance program can preserve a bridge almost indefinitely -- at a far lower cost than rebuilding it every thirty to forty years.

Ironically, by allowing federal funds to be used only for reconstruction, Washington offers localities an incentive to let structures decay until they must be reconstructed -- at a much higher cost -- with the help of federal funds. I urge the members of the subcommittee to alter this proposal, in order to allow these funds to be used for critical maintenance efforts.

Finally, allow me to raise two important issues that concern the construction of highways as well as bridges. In New York City, we have found that the federal design standards for

federally funded highway and bridge construction are cumbersome, outdated, and impractical. The fact is, the federal government applies the very same standards to both small, rural towns and densely populated cities -- while the needs of cities are clearly unique. Large cities require greater flexibility to meet our complex design needs, and I hope that the subcommittee will help us to develop a less cumbersome design process.

Federal law also requires that construction contracts worth more than 50,000 dollars be awarded through competitive bidding. I believe that we can save a lot of time and money -- without sacrificing quality -- by using our own public employees for these projects.

In closing, I cannot overemphasize the importance of these programs to New York City, and to localities across our country. After all, transportation is the very foundation of modern society, and one of the most basic responsibilities of government. If our roads and bridges are not safe and secure; if our transit networks do not run smoothly; if our people cannot move freely between their homes and their workplaces, then we will have created a society paralyzed by indifference.

I am grateful for the work of this subcommittee in addressing this problem, which has been neglected for far too long. I look forward to working with you to devise solutions that use our limited resources creatively, and that meet the needs of all Americans.

AMERICA'S COALITION FOR

# TRANSITNOW

TESTIMONY

of

BRUCE M. FRIED

Executive Director

America's Coalition for Transit NOW

before the

SUBCOMMITTEE ON SURFACE TRANSPORTATION

of the

COMMITTEE ON PUBLIC WORKS

U. S. House of Representatives

April 10, 1991

Mr. Chairman, my name is Bruce Fried. I am the Executive Director of America's Coalition for Transit NOW. Transit NOW is comprised of over 140 national businesses, associations, and public interest groups. A list of Transit NOW members is provided for your review. The members of Transit NOW have come together to support a major increase in federal funding for public transportation, which to us includes all forms of shared occupancy vehicles: buses, rail, car pools, van pools, and HOV lanes. In addition to the national coalition, Transit NOW affiliates have been organized in many communities across the country.

I have the honor of introducing to the Committee Carol Bellamy. Ms. Bellamy is a Managing Director with Bear, Stearns & Co., the well known investment banking firm, which is an active member of Transit NOW. Ms. Bellamy will offer her views on the importance that public transportation can play in the economic well-being of our nation.

I am also pleased to introduce Steve Heminger. Mr. Heminger is the Vice President for Transportation of the Bay Area Council, which is made up of several hundred businesses from throughout the San Francisco Bay Area. The Bay Area Council is a Transit NOW member and has recently helped to organize the Bay Area Coalition for Transit NOW.

Following the statements of Ms. Bellamy and Mr. Heminger I would be pleased to answer any questions that the Committee may have.

For the record, Mr. Chairman, I am pleased to advice the committee of Transit NOW's position on the reauthorization of the Surface Transportation Assistance Act (STAA). Transit NOW urges the following considerations in STAA reauthorization:

1. Enactment of a 5-year bill;

2. Provisions which assure a stronger linkage between federal transportation investment and major national goals, including enhanced mobility and greater accessibility for people with disabilities, reduced congestion, increased economic development, productivity and competitiveness, increased energy conservation, improved air quality; and expanded services for transit-dependent people;
3. Major increases in federal investment in transit and other forms of high-occupancy, shared-ride transportation services, including increased capital, operating and research and development funding for urban, small urban and rural services;
4. Continued commitment of both general funds and user fees to support increased federal transit investment;
5. Increased local decision-making in the use of available funds;
6. Provisions which assure better balance in the availability and use of transportation funds, and equal consideration of transit and other transportation improvements to achieve major national goals: for instance,
   - making all matching ratios equal;
   - broadening project eligibility;
   - assuring support for maintenance and reinvestment in existing systems and services; and
   - equalizing tax treatment of employer-provided transit and parking subsidies;
7. Enhanced equity, reliability and stability in the flow of funds through greater reliance on formula distribution mechanisms.

Thank you for your consideration.

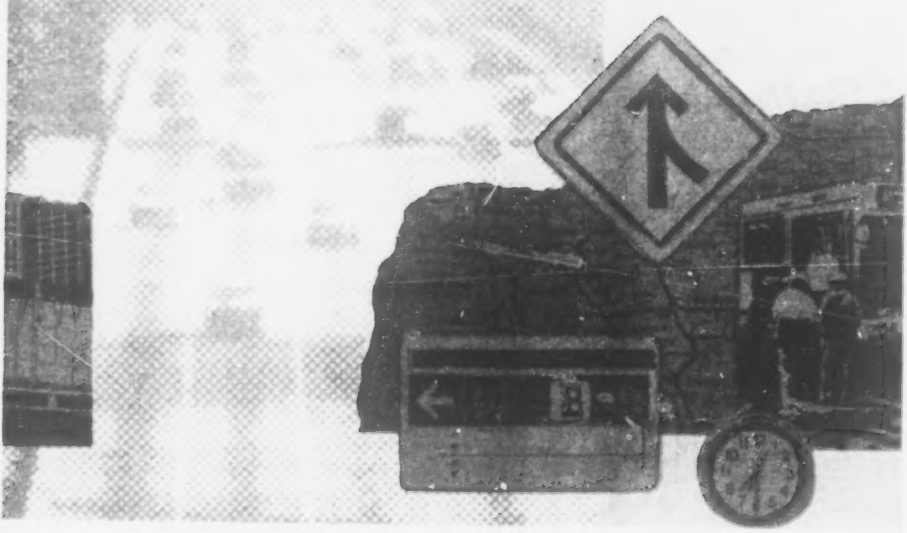
SOLVING THE BAY AREA'S
TRANSPORTATION MESS

# Roadmap to the Future

BAY AREA COUNCIL



INTRODUCTION

Your day begins and ends in the car. You travel at an average speed of 25 miles an hour on the freeway. So you avoid the freeway and take surface streets and realize everyone else has the same idea. You wait to go and then you stop again. ☐ The minutes tick by and every one of them is lost: one more you owe the babysitter, one less you spend with your husband or wife or child or friends. Time stolen from that slim reserve you try to keep for yourself, away from the schedule, away from the list of things you have to do. ☐ You ask yourself, "Why do I do it? Why do we all do it?" ☐ You think someone must be to blame—a politician, a bureaucrat or maybe some developer somewhere. You know someone is supposed to be working on this. It's their job, their elected responsibility. Somebody somewhere is sliding, you say, or getting away with something. Why else would you be here stuck in this traffic? ☐ The cars inch forward and still you're not getting anywhere. ☐ So you think of the house, the house you couldn't have had any other way. You think of the job that was too good to pass up even if it is a long commute. You think of the choices you've made: owning versus renting, schools versus commuting, one area where you like living versus another where the jobs are booming. Friends, relatives, stores and all the rest. "Maybe soon I'll move," you say, "or get a new job, closer to home." But it's not that easy. Maybe you should move somewhere else, somewhere where the traffic's not as bad. But you would be giving up a lot. You like the Bay Area. You make good money. There is opportunity here. You feel it everywhere you go. This is where the action is. ☐ So you think, all right, it's the price I pay. And then you think, but I'm willing to do something to make it better, and you ask yourself what that might be. "What can I do? What can anyone do?"

*"I saw in their eyes something I was to see over and over in every part of the nation — a burning desire to go, to move, to get under way, anyplace, away from any Here . . . Nearly every American hungers to move."*

John Steinbeck

## WHERE THERE'S A WILL, THERE'S A WAY

Despite the relative gloom of the recent past the Bay Area's transportation system is not beyond hope. Recent trends, in fact, suggest that many of us realize that if we want a first-rate system of roads and transit we have to be willing to pay for it. And we cannot wait for government officials in Sacramento or Washington to act. ¶ In the last several years, voters in Alameda, Santa Clara, San Mateo and Contra Costa counties have approved sales tax increases to finance transportation improvements. In 1988, Bay Area voters overwhelmingly approved higher tolls on the region's bridges to pay for bridge improvements and transit projects. Together, these measures will raise more than $4 billion for transportation over the next 20 years. ¶ New funding, however, is only part of the solution to the Bay Area's traffic woes. Most of us would never stand for the increase in taxes it would take to create enough freeways to meet the demand. Nor is it apparent that most of us would want to solve the problem this way. ¶ What we need is a balanced approach to solutions, one that mixes new funding for additional capacity with changes in habits and lifestyles. Traffic, after all, reflects choices we make about where to build housing and where to put jobs, who to let in to our communities and who to keep out, and how we live as individuals versus how we live as a community. ¶ The fact is, transportation in the Bay Area today and in the future is and will be profoundly shaped by the individual decisions of dozens of local governments, thousands of employers, and millions of commuters. Our problems are solvable, but the solutions rest with each of us: as individuals and families, as employees and employers, and as citizens and voters.

*"We stand at a crossroads. One path leads to despair, the other to destruction. Let's hope we choose wisely."*

Woody Allen

## A SUMMARY: WHO CAN DO WHAT

*Resolving the crisis in transportation in the Bay Area isn't a question of getting those other guys to ride transit so we can drive, or getting housing built in someone else's neighborhood so that ours will stay just the way it's always been. Instead, we need to approach the future with the understanding that we cannot stop change. We will be doing well if we can manage it. And managing it will take the resources and best efforts of all of us.*

### What Commuters Can Do:

- Leave your car home at least one day a week and on that day take transit or rideshare. On most freeways in the Bay Area, if one out of five cars were left in the garage or a park & ride lot, congestion would be eliminated.

### What Voters Can Do:

- Support peak-hour pricing on the region's bridges so that those who drive alone at rush hour pay a premium.
- Call on Congress and the President to expand the range of acceptable uses for federal gas tax money.
- Ask the California Department of Transportation (CalTrans) or your local government to locate a park & ride lot in your neighborhood.
- Call CalTrans and tell them you'd like to see more commuter or high occupancy vehicle lanes on the region's highways.
- Contact your state and federal representatives and say you'd like to see bigger tax breaks for carpoolers and employers who invest in ridesharing.
- Support funding increases to expand public transit services. Let transit operators know what kind of service you want and where.
- Support proposals which would provide for local revenue sharing between cities that have high concentrations of jobs and those that have a surplus of housing.
- Support new transportation funding measures that encourage communities to plan together.
- Support the development of new housing close to transit services.
- Support new funding for transportation, specifically, local sales tax measures and the campaign to raise the Gann spending limits (and enable a 9-cent gas tax increase) on the June 1990 statewide ballot.

### What Employers Can Do:

- Implement a ridesharing program either on your own or with neighboring employers.
- Establish flexible work schedules, particularly if you're located in a suburban area where rush hour has a definite and narrow peak.
- Reconsider free parking privileges and provide ridesharing and transit benefits to employees.
- Work with transit operators to locate stops and service where it's convenient for your employees.
- Sell transit passes on site. Call the Regional Transit Connection for information.

- Contact the Metropolitan Transportation Commission (MTC) and request a copy of *Commute Alternatives: A Manual for Transportation Coordinators*.
- Encourage the development of childcare programs, banking, postal and shopping centers close to the job.
- Provide matching funds to help finance local transportation improvements.
- Support new funding for transportation, specifically, local sales tax measures and the campaign to raise the Gann spending limits (and enable a 9-cent gas tax increase) on the June 1990 statewide ballot.

**What Transit Operators Can Do:**

- Improve fare, transfer and schedule coordination to make it easier for riders to get from one subregion to another.
- Consider cost-cutting measures such as more use of part-time drivers to meet rush hour demand, and competitive bidding for more services.
- Work with employers to improve the effectiveness of transit services in and around employment centers.
- Offer commuters more incentives to try transit, and follow through with good service.

**What Local Government Can Do:**

- Establish a commute alternatives program for local employees including government employees.
- Work with other local governments to coordinate land-use planning and balance the number of jobs and homes in a given subregion.
- Support mixed-use development.
- Allow new housing development at higher densities, especially near transit services.
- Require new commercial and employment centers to implement traffic management systems.

**What State Government Can Do:**

- Provide financial incentives for planning that balance the location of jobs and housing.
- Increase tax benefits to employers and commuters who rideshare.
- Support changes in the Gann Spending Limit to allow for higher revenues and spending for transportation.
- Put in more commuter or HOV lanes on the regions highways.
- Expand the number of park & ride lots.
- Move toward automatic toll collection on the regions bridges.
- Support the development of privately operated transportation systems.
- Provide matching capital funds for transit extensions.

**What the Federal Government Can Do:**

- Expand the range of uses for federal gas tax money.
- Increase the tax benefits to employers and commuters who rideshare.
- Provide matching capital funds for transit extensions.

## HOW DID WE GET INTO THIS MESS?

*A hundred years ago, virtually everyone who lived in the Bay Area lived in San Francisco. Then real estate developers discovered that if they built trolleys and linked them with ferries, people would buy land and homes in Berkeley and Oakland. By the 1920s, nearly 200,000 passengers a day went through the ferry terminal in San Francisco. But by then Henry Ford was already selling automobiles, and we began to abandon public transit for the freedom of the open road.* ¶ *It was the car that really changed the map of the Bay Area. Its popularity in the 1920s sparked the movement to build the first highways and bridges all around the bay, culminating with the construction of the Golden Gate and Bay Bridges. It allowed us to take our search for the American Dream three-bedroom home with a yard and a patio farther and farther from Oakland and San Francisco to places where land was cheap and houses affordable. The car and its cousin the truck also allowed businesses and factories to leave the city after World War II and relocate on cheap land all around the perimeter of the bay.*

*"I am going to democratize the automobile. When I'm through everybody will be able to afford one, and about everyone will have one."*

Henry Ford

### When the Present System Was Created

By the late 1940s, with the number of new cars on the road in the Bay Area expanding by 9% per year—more than three times the rate of the population—the flow of families to the suburbs in the East Bay, on the Peninsula, and in Marin became a flood. With it came major traffic jams, especially on the region's bridges and highways, as most workers continued to come back to San Francisco or Oakland to work. The region pondered solutions that ranged from building bridges and dikes across the bay for automobiles to tunnels and skyways for futuristic monorails.

One part of the solution in the 1950s and early 1960s was to embrace the construction of a network of freeways as part of the state and federal Interstate construction program. Bay Area residents also strongly supported the expansion of the region's highways, and state government invested heavily in the construction or reconstruction of the region's bridges—new lanes replaced trolley tracks on the Bay Bridge, a new bridge was built from Richmond to San Rafael, and the Dumbarton and San Mateo bridges were completely rebuilt—creating ever more capacity for the car. Residents in San Francisco, Alameda, and Contra Costa counties also decided to build BART.

### Our Investments Helped Create Our Prosperity

Partly as a result of these investments in transportation, our economy grew dramatically in the 1960s, 70s and 80s, outpacing the growth of the population, providing more and more people with jobs, and improving the standard of living for most of the region's residents. But ironically, at the very moment that this system was helping to make the region rich, the government and the voters stopped investing in it.

In the 1970s road construction slowed dramatically for three major reasons. First, rapid inflation raised the cost of construction considerably. Secondly, through the so-called "freeway revolt" and the growth of the environmental movement, voters concerned about air and noise pollution and the destruction of neighborhoods called a halt to continued expansion of the system and promoted the development of transit instead. And finally, following hard on the heels of the "freeway revolt," came the "tax revolt," which effectively reduced expenditures on transportation at all levels of government.

In one respect the Bay Area was lucky. For an economy to grow it needs more workers. During the 1970s and 80s, a dramatic increase in the percentage of working women provided the extra labor force needed for economic growth. Since 1970, the percentage of Bay Area women employed outside the home has risen from 44% to more than 60%. Since most of these women have come from existing households, their entry into the labor force has allowed the economy to grow without

the kind of population boom that might otherwise have been necessary. As a consequence, the demand for new transportation capacity and housing hasn't grown nearly as much as it might have.

### Social Changes Have Led to New Transportation Patterns

The creation of two-earner households has tended to lead to more and longer commutes as families and households compromise on the location of their home (usually somewhere between both jobs). With both parents working, the need for additional daily trips to daycare has increased. Moreover, more people need to shop and do errands in the peak hours just before the start and after the end of the work day.

Responding to these social changes and taking advantage of new computer and communications technologies, many employers have moved data processing and other so-called "back office" jobs from the central cities to the suburbs, following the path laid down by factories and manufacturers a generation ago.

In the wake of corporate relocations and increased job growth in the suburbs, commute patterns in the Bay Area have changed dramatically. Less than 20% of the region's commuters now travel to downtown San Francisco, Oakland or San Jose to work. Eighty percent of those who go from suburb to suburb do so by driving alone. As a result, traffic on almost all the region's roads has increased dramatically in just the last five years.

The number of miles now logged on Bay Area roads and highways is increasing faster than population, employment, and even the number of vehicles (see figure). We are simply driving more. And by driving more miles each day, even if the region's population doesn't grow at all, the effect is the same as adding more cars to the road. We increase the level of congestion.

### Public Transit Hasn't Sold

With the highway system clearly at or near capacity, we who live in the Bay Area must make some hard choices about the future. Seventeen years ago, just as BART was being constructed, Bay Area voters expressed a great deal of optimism about mass transit. They turned down a proposal to build a new bridge or "southern crossing" across San Francisco Bay in order to wait and see how BART and other public transit systems would fill the need before building more freeways or bridges.

What we have discovered in the last 17 years is that selling public transit to most of us is difficult, especially given our pattern of increasingly suburban commutes. In the last four years, the number of people taking transit has dropped by almost 8%, despite a 9% increase in the number of employed residents going to work each day.

As workers move farther and farther from the center of the region in their continuing search for affordable homes, they find fewer and fewer transportation options just as we stopped investing in new highway capacity in the 1970s, we also curtailed our investments in transit infrastructure. The original BART system, for example, has not been expanded since its completion in 1974. Even in those communities where relatively new transit systems have been developed (Santa Clara, Contra Costa, and San Mateo, for example), low-density development of suburban homes and spacious office parks has made it difficult for transit operators to offer service which comes close to competing with the car for time and convenience.

FIGURE 1

# RAISING NEW MONEY TO PAY FOR TRANSPOR

*Money is not the only solution to the Bay Area's traffic woes, but without it we can't begin to address the region's problems. In the 1950s and 60s, California was committed to having the best transportation system in the world. We were the number one state in the country in per capita spending for transportation. Today, we're at the bottom. What we spend for the maintenance and repair of our roads has not come close to keeping pace with the need. It's as if we bought a brand new car, then never changed the oil or the spark plugs and expected the thing to run like new for 200,000 miles. Today, the governor's office estimates that the state will need at least another $20 to $30 billion over the next 10 years, of which the Bay Area's share is at least $5 billion, just to maintain current conditions on state roads. To improve them, we'll need to raise more.*

*"There's a simple solution to this traffic problem. We'll have business build the roads, and government build the cars."*

**Will Rogers**

### How Did We Pay For Highways In the Past?

Historically, the most important sources of funding for highways have been state and federal taxes on gasoline and tolls on local bridges. Our philosophy has been: those who use the roads should pay for them.

Today, gasoline taxes and tolls still provide most of what funding there is for roads, but thanks to inflation and the increased fuel efficiency of cars, the buying power of these taxes has dropped dramatically. Twenty-five years ago, for example, we paid 7 cents tax on every gallon of gas; today we pay 9 cents. But 7 cents in 1964 dollars produced the buying power of 28 cents today. Furthermore, most people can drive at least twice as far on a gallon of gas today as they could in 1964. This increased fuel efficiency is great for energy conservation but terrible for transportation revenues.

With shrinking resources, we have been unable not only to expand the transportation system to keep up with the growing use of cars, but also to adequately maintain the system. Potholes and cracked highways evidence the fact that many of the region's major road surfaces are nearing the end of their anticipated useful life and money is simply not available to reconstruct them.

### What About Public Transit?

Since most of the Bay Area's transit operations get less than half their annual revenue from fares, they depend on subsidies from local, state and federal sources to meet the difference between what riders pay and the total cost of operations. In the 1970s, the federal government, and later the state as well, provided significant subsidies to transit operators to keep fares low and attract riders. But in the 1980s, federal and state subsidies have been cut back. At the same time, inflation and operating costs, which soared in the late 70s and 80s, have given transit operators severe budget whiplash. Unable to pay for current operating costs, much less expand their services, transit operators have reduced service and/or increased fares substantially. As a result, ridership has dropped—putting more people in cars back on the road.

## WHAT WE NEED TO DO

### Raise the Gas Tax

California's gas tax is currently one of the lowest in the country. An increase in the gas tax has been debated for many years. After protracted negotiations, the legislature and the governor have finally agreed on a plan which would raise the gas tax by 9 cents over the next five years. But the tax hike cannot be put into effect unless voters approve a June, 1990 ballot measure to change the Gann spending limit so the new revenues can be spent.

Even if approved, the higher gas tax will leave California with less buying power than we had in 1964. Though a 9-cent increase may sound like a lot to commuters and voters, it represents the bare minimum needed just to keep up with highway maintenance and carry out some improvement plans that have long languished unfunded. It won't even begin to cover any newly planned projects needed to improve our transportation system, but at least it will put us well ahead of where we are now.

Concerned citizens and business leaders should now support the campaign in favor of next June's ballot measure to raise Gann spending limits and enable the gas tax increase so hard-won in the legislature.

### Raise Sales Taxes in the Rest of the Bay Area

All the Bay Area's nine counties have a tremendous need for transportation improvements. Voters in Alameda, Contra Costa, San Mateo and Santa Clara counties have already approved sales tax increases which will help fund major new transportation projects. San Francisco, Marin, Sonoma and Solano counties are considering similar measures. Interested citizens should contact their county board of supervisors and city council.

### Redirect Interstate Money For Broader Use

Since the 1950s, the bulk of federal gas tax money has gone to the development of the Interstate highway system. But while these funds have supported the construction of super highways, funds for expressways, new public transit facilities and other local transportation alternatives have been in short supply. With the last mile of Interstate highway scheduled for construction in 1991, Bay Area residents need to join with other urban communities around the country and convince Congress and the President that the range of acceptable uses for federal gas tax money should be expanded.

## A FEW MORE GOOD IDEAS

### More Private Sector Funding

Increasingly in the public mind, traffic jams are linked with commercial and residential development, despite the fact that it is not necessarily growth, but poor planning, that tends to create these problems. In our effort to solve the traffic problem, voters have increasingly turned to "ballot box planning," enacting no-growth or slow-growth measures which threaten to impede business development and curtail economic opportunity. The long-term solution for business is not in simply fighting these measures, but in playing a greater and more visible role in helping to manage and enhance the existing transportation system. For example, a number of major Bay Area corporations with offices in north Pleasanton recently helped fund the construction of new overpasses, extra roads and computer-operated traffic controls which will provide better access for workers and residents.

### Peak-Hour Pricing

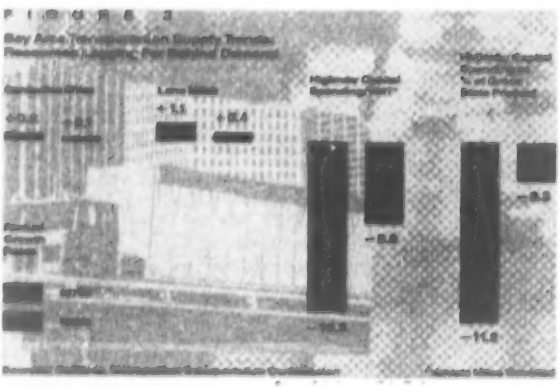
The cost of constructing a transportation system is directly related to the cost of providing maximum service at rush hour. Thus, it would be fair to suggest that those who use the system during rush hour should bear the heaviest portion of the overall cost. We need, therefore, to begin considering a long-term approach to managing traffic that charges for the privilege of using the road at peak hours.

Specifically, bridge tolls could be significantly higher during rush hour. Moreover, within the not-too-distant future, we may need to explore a system that charges people according to how far they drive on the region's roads and what time of day they do it. One local economist, for example, has proposed a system that would use computers and electronic sensors to record which cars travel over a roadway at a given time and provide car owners with a monthly bill similar to a phone bill. Charges would be based on the distance travelled and the time of day.

## C O N C L U S I O N

In the Bay Area, drivers and passengers on the 12 most congested stretches of freeway in the region waste more than 46,000 hours a day in lost productivity; this amounts to over $1 million in wages or 23 person/years of work each day. In a single year we waste enough time and productivity to pay for more than 30 miles of new freeway lanes or 200 new BART cars. If we keep deferring maintenance on the current system, this waste will only increase. In the Bay Area today, it's no longer a question of being unable to afford to invest in the future of our transportation system. We can no longer afford not to.

F I G U R E 2



*No matter how much money we raise for transportation, the fact is, more of us need to leave the driving to someone else more often. What most of us don't understand is that relatively small increases or decreases in the number of cars on an already crowded road make for enormous differences in congestion and delay. A five-mile stretch of highway that takes five minutes to drive at midnight, for example, may take twice as long at rush hour if the lane is crowded but still moving fairly freely. But increase the number of cars by just 5% and the delay jumps enormously, traffic comes to a standstill, and it may take 30 minutes to get through that same stretch of road. Fortunately the process also works in reverse. Get 5% of the cars off the road and traffic is moving again. The problem, of course, is breaking old habits. As Mark Twain said, you need to do some coaxing.*

*"Habit is habit, and not to be flung out of the window by any man, but coaxed downstairs a step at a time."*

**Mark Twain**

## WHAT WE NEED TO DO

### Expand the Use of Flextime

Perhaps the easiest way to beat the rush is for some people to go to work later or earlier than everybody else. During the 1984 Olympics, companies and government agencies in Los Angeles staggered their starting times to reduce traffic at peak hours. The result was a reduction in congestion despite an increase in the number of vehicles on the road.

In the Bay Area, similar efforts have been made in Pleasanton where a transportation systems management ordinance was adopted requiring large employers to reduce the number of employees driving alone to work at peak hours to no more than 55%. Employers have been able to meet this goal primarily by shifting starting times. Pleasanton estimates that this effort by employers keeps approximately 9,000 cars off the road at rush hour.

In some employment centers in the Bay Area staggered work hours would improve local traffic flows substantially.

Employers interested in finding out about using flextime to reduce traffic should call the Metropolitan Transportation Commission (MTC) at (415) 464-7793.

### Expand Ridesharing

As congestion on the Bay Areas highways gets worse and the number of carpool or high-occupancy vehicle (HOV) lanes expands, ridesharing is becoming more and more attractive to Bay Area commuters and their employers. An increasing number of residents are discovering that ridesharing not only saves them money, it puts time back in their lives: time to read the paper, sleep, or even work. RIDES for Bay Area Commuters, a regionwide organization that matches workers looking to share rides, places nearly 10,000 commuters in carpools and vanpools in an average year. That means 10,000 fewer cars on the road most days.

In some particular corridors, the percentage of carpoolers is astonishing. While only 12% of the non-transit commuters coming through the Caldecott Tunnel between 7 and 8 a.m. share the ride, 99% of those crossing the Bay Bridge and 46% on Highway 237 in Santa Clara County are travelling in carpools. On each of these routes, HOV lanes provide a major incentive. The effect on the Bay Bridge is equivalent to building 4 5 new lanes—or almost another bridge. If commuters through the Caldecott Tunnel carpooled at the same rate, it would be the same as adding a new tunnel and opening two more lanes for twenty minutes out of each hour. The flow of traffic would improve from stop and go to a relatively smooth 45 miles per hour.

Employers are also discovering significant payoffs in developing ridesharing programs. Varian Associates, for example, wanted to build a 90,000 square-foot building without putting in acres of parking. They established an aggressive commute alternatives program and more than doubled the number of employees using ridesharing to 37%. This eliminated the need to provide more parking, saving the company nearly a million dollars in construction costs. Employers also can get tax deductions for their contributions to commute alternatives.

Those interested in a carpooling program should call RIDES at (415) 861-7665.

### Add More High-Occupancy Vehicle (HOV) Lanes

Carpooling can be attractive because it saves gas money and driving hassle. But what clinches the attractiveness of sharing the ride is a faster trip to work. In critical places where traffic often comes to a standstill, HOV lanes provide a powerful incentive to share rides.

New commuter lanes on the San Tomas Expressway in Santa Clara helped increase ridesharing 50% on this road since 1982 and cut commute times on the expressway for those in carpools by half. Likewise, commuters on the Bay Bridge who use the carpool HOV lane reduce their commute time to San Francisco by an average of 20 minutes and keep more than 6,000 cars a day out of rush hour bridge traffic.

But more needs to be done. In some places HOV lanes can be added by restriping or expanding the roadway. Policy makers need to know that they have the support of business and the public to give HOV lanes a high priority.

If you're interested in finding out more about HOV lanes or expressing your support, call the California Department of Transportation (CalTrans) at (415) 923-4444.

### Remove the Free Parking Incentive

One of the greatest incentives to driving alone is free parking. Looked at one way, it constitutes an employee benefit to some without compensating those who take transit or carpool. One solution: companies could offer a transportation allowance to all employees and then begin charging for parking at a cost roughly equal to the allowance. Carpools park free. This way, those who share rides or take transit have an economic incentive to do so. Alternatively, some institutions like United Airlines or Stanford University with large parking lots give preferential "close-in" space to carpools and vanpools.

Businesses and institutions interested in finding out more about innovative parking policies should call MTC at 464-7751.

## A FEW MORE GOOD IDEAS

### More Park & Ride Lots

In suburban areas, "park & ride" lots near freeway entrances provide an easy point for carpoolers to meet, minimizing the time spent picking up other members of the carpool. The problem is, many park & ride lots in the Bay Area are already full. CalTrans is currently working to expand the network of lots within the Bay Area, but more needs to be done. Call RIDES at 861-7665 for information on park & ride lots and locations.

### Tax Breaks for Those Who Carpool

Changes in state, local and federal tax policies could create incentives for commuters and employers to beat the drive alone commute. The federal government currently allows employers to offer employees a tax-free subsidy up to $15 per month to pay for transit passes. This amount should be raised significantly. Moreover, Congress and the state legislature should boost tax credits to employers who invest in vanpool vehicles and other commute alternative programs. For information on tax credits for ridesharing call RIDES at 861-7665. Citizens interested in advocating an increase in tax credits should write or call their state and federal representatives (see back panel for directory).

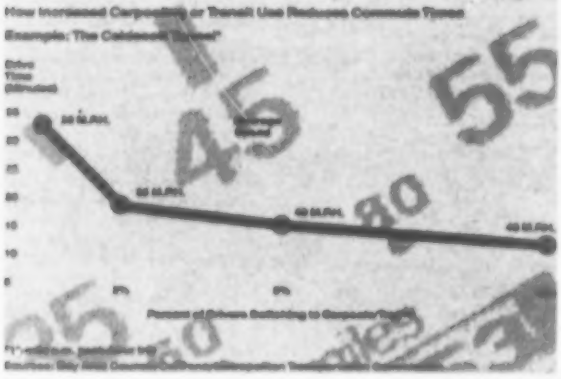
## CONCLUSION

If old habits are to be broken, new alternatives must be convenient and relatively easy. Bay Area employers can exert leverage with the commuter by restructuring the options to driving alone to make them more attractive: controlling what time work starts and stops; providing incentives for people with a common destination to share the ride. Government agencies, which are among the largest Bay Area employers, should lead the way with their own employees. But all of us need to work together to make the options to driving alone both viable and convenient.

FIGURE 3

**How Increased Carpooling or Transit Use Reduces Commute Times**

**Example: The Caldecott Tunnel***



*"Worst-case" application to the Southbound Bay Area Caldecott/Broadway Tunnel, Oakland-Contra Costa

*Public transit took a beating in the 1980s. Rising costs, declining subsidies, and poor financial management led to fare increases, service cuts and bad press. Ridership and public support both dropped as a result. But recently there is some evidence that the transit picture is improving. Fed up with crowded freeways, a small but growing number of commuters appear to be giving transit a second chance, and transit operators are trying to meet them half way.*

*"Now, here, you see, it takes all the running you can do to keep in the same place. If you want to get somewhere else, you must run at least twice as fast as that."*

Lewis Carroll

## What's Happened to Public Transit?

When most of us choose how we're going to get to work we weigh three important considerations: what will it cost, how long will it take, and hassle for hassle, how convenient and comfortable will it be? In some situations public transit clearly stacks up better than in others. Of the 270,000 commuters headed for downtown San Francisco each morning, for example, over half take some form of public transit — the highest rate of transit usage anywhere in California. The cost of parking, the toll and backup on the bridges, and the generally high level of transit service to San Francisco provide powerful incentives for people to leave their cars behind.

But as a smaller and smaller percentage of the Bay Area's commuters travel from the suburbs to San Francisco and Oakland each day, the crux of the region's problem focuses more on workers who commute from suburb to suburb. Transit operators need to adjust to a changing marketplace even as they recover from funding cuts. For the suburban commuter, traffic may be bad, but parking at the job site is usually free, stores and shopping are farther away, and transit is much less likely to serve both home and destination.

As congestion has swelled on the region's roads, there is some evidence that transit riders are abandoning long-haul bus rides in favor of rail or ferry services that avoid crowded highways. Ridership on BART, Caltrain, and Golden Gate Ferry, for example, has recently recovered and started to climb, while the number of people taking the major suburb-to-central city buses (AC Transit, Golden Gate Transit and Sam Trans) has continued to decline. These trends indicate that the bus services, particularly, need to reevaluate the kind of service they provide.

## WHAT WE NEED TO DO

The challenge to transit now is two-fold. On one hand, rail lines and ferry services need to be able to keep up with increasing demand by expanding their capacity, controlling costs, adding parking at their stations, and continuing to improve their service. Fortunately the recent East Bay-West Bay agreement on expansion of the regional rail system which includes BART, Caltrain and the Santa Clara County Light Rail System, coupled with the passage of sales tax increases in Contra Costa, San Mateo, and Alameda counties makes it likely that rail extensions will actually be under construction in the 1990s. In the meantime, BART expects to add new cars and convert to a new computer system which will allow it to run longer trains closer together. By the end of 1993, BART hopes to carry an additional 10,000 commuters each day in and out of downtown San Francisco.

In contrast to the fixed rail services, the major bus agencies need to fundamentally re-orient themselves to serve a changing marketplace. AC and Golden Gate Transit have already begun this process. AC Transit is changing its routes and schedules to emphasize connections with BART and reduce its own transbay service across the Bay Bridge. Similarly, with funding from increased tolls on the Golden Gate Bridge, Golden Gate Transit hopes to make bus riding from Sonoma to Marin as easy as from Marin to San Francisco.

### Improve Cost Effectiveness

In the last decade, costs per paying passenger on most of the region's major bus and ferry services have risen much faster

than the rate of inflation. To hold down fares, local governments and transit agencies need to look at strategies that improve cost effectiveness, including hiring more part-time drivers during peak hours (an issue that will need to be negotiated with the transit labor unions); using smaller vehicles for less heavily travelled routes; and contracting some services to the private sector. In some suburban areas where local governments are providing heavy subsidies for transit, private operators should be encouraged to develop taxi/van systems, which have been shown to be more cost effective than bus systems.

### More Schedule and Fare Coordination

The Bay Area has an incredibly complex system of 24 different transit agencies ranging in size from one to 1,000 buses. As the region's transit operators tailor their service to meet the needs of their riders, transit operators must work much more closely together to create fare/transfer systems that will allow riders to make easy connections. Already the MTC has requested transit operators to look for ways to integrate schedules and fares, but MTC needs to insist on real progress. Transit operators should move towards the creation of more regional transit passes, such as the Peninsula commute pass which allows riders to use Caltrain, SF Muni, SamTrans and Santa Clara County Transit all with the same ticket. From the rider's point of view, it shouldn't matter how many boundaries he or she has to cross—only that transfers can be made smoothly and quickly.

### What Can Business Do?

As transit operators strive to meet the needs of a changing marketplace, they need to work closely with employers to maximize service to employment centers and to encourage employees to use transit. It's more convenient if we can buy a transit pass right at work, and we're even more likely to use it if our employer offers a subsidy. For the employer, the benefits of subsidizing employee transit use can be substantial: less congestion in and around the physical plant; less land needed to be set aside for parking; better community and employee relations; and less "stressed," more productive employees. Employers can get help establishing transit pass sales programs by calling the Regional Transit Connection at (415) 323-8338.

Employers and developers should also work with local transit officials on schedules and the location of stops. They must help create responsive options for workers who would otherwise take transit but fear a childcare emergency or some other personal matter might require the use of a car. Likewise, employers can create lunchtime transit options to get employees from suburban worksites to commercial centers. Employers in the Stanford Business Park, for example, recently joined with Caltrain and Santa Clara County Transit to create a noontime shuttle to downtown Palo Alto, thereby removing one excuse employees might have for driving to work alone.

## CONCLUSION

Despite the troubles experienced by transit in the 1980s, the Bay Area has one of the highest percentages of workers who commute by transit in the country—but it's still only 11%. As commute patterns change, transit operators and their employees must be able to adapt to the changing needs of the region's commuters. They must show a genuine willingness to serve and a desire to sell their service.

## PLANNING TO REDUCE DRIVING

*Will Rogers may have been 50 years ahead of us in realizing that no matter how many roads we build or freeway lanes we add, cars will come to fill them up unless we do a better job of planning. If we want to cut down on auto traffic, then we need to put housing, jobs, shopping and daycare together. Where we spend money to develop good, high-volume transit options—like BART—we need to make sure they can be filled.*

*"In 1914, the Ford Company passed its first 1,000-cars-a-day production. So Americans woke up and said: 'We got to have somewhere to put these things'; and somebody thought of the idea of building roads to store them on. And as fast as they would make roads, these things would clutter them up. I don't care where you try to hide a road, one of those road fillers will find it."*

**Will Rogers**

### How Zoning Affects Traffic

Through their zoning laws, cities decide what part of their communities will be used for homes, stores, factories, and other uses. They also determine how much of each kind of use they will allow. The traditional approach in planning, over the last sixty years, has been to separate homes from shopping and factories and offices. This kept dirty and noisy factories as well as downtown traffic away from quiet residential streets. And until recently getting from one area of town to another was no problem because the building of roads and highways generally kept ahead of the growth of the community. Furthermore, offices were generally concentrated in a few large downtown centers which were well served by regional highways and public transit.

Today, heavy industry in the Bay Area has been replaced by cleaner, more high-technology manufacturing. More than half of all new office space in the Bay Area is being built in suburban office parks, many of them laid out with large parking lots, miles from shopping and housing. Despite these changing realities, however, most local zoning still separates housing from jobs. The effect of this separation is to force people not only to drive but to do so in crazy patterns.

### WHAT WE NEED TO DO

### Bring Housing and Jobs Together

What we need to do in the Bay Area is improve the balance of jobs and affordable housing in each community and in each subregion. In part, traffic in the Bay Area has gotten worse because we have pushed new housing development to the periphery of the region, mostly in the north and east, while jobs are being added in the center, south and west. High land prices, caused in part by restrictive zoning that requires large lots, are a major factor in this problem, making it difficult for new homebuyers to find affordable housing anywhere within the traditional urbanized area. Frequently, zoning restrictions result from neighborhood opposition to increased densities. Each community tends to make decisions based on its own parochial interests without considering the well-being of the region as a whole.

### Create Incentives for Coordinated Planning

To overcome local resistance and achieve a broader vision, communities need to begin planning together more. But accomplishing this kind of planning will not be an easy task. Traditionally, Bay Area communities have jealously guarded their control over local land-use decisions. Many local officials and voters are reluctant to let someone outside their community share in the decision over how their community will develop. But the fact is, local control in the Bay Area today is illusory. The quality of life in each Bay Area community is increasingly dependent on decisions made in nearby cities, so that even if one community tries to stop development, traffic in their neighborhoods may still continue to increase because growth is taking place in the city next door.

To encourage cities to plan together, strong incentives need to be created which will provide communities real rewards for taking higher concentrations of housing to balance the number of jobs. Legislation should be enacted that will share the local tax revenues from commercial development with neighboring communities who supply the necessary housing.

Contra Costa County's Measure C provides an example of how incentives can be tied to new funding. Under its terms, revenues raised through an increase in the local sales tax are available to cities for transportation improvements, but only on the condition that these improvements are designed in cooperation with neighboring communities and that the city is regionally responsible in its management of growth.

## A FEW MORE GOOD IDEAS

### Increase Housing Densities Near Transit and Employment

One of the top priorities for coordinated planning should be to increase the density of development around transit stations and along major routes to make transportation services more efficient and convenient to a larger number of workers. As BART is extended to the San Francisco Airport, Pittsburg, Dublin, South Fremont and beyond, every effort should be made to see that land around the stations is reserved for high-density housing and commercial uses so that a large number of local residents and workers can walk to rapid transit. We also need to look at solutions that allow us to build more affordable housing in areas that are already developed. One solution is to rezone land set aside for commercial uses—which is overabundant in the Bay Area—and allow for more housing.

### Site Childcare and Shopping Near Employment Centers

In addition to coordinating the location of housing and employment opportunities, local governments and employers need to work together to encourage the development of childcare options near job centers. After-school programs for elementary school children also will help reduce the need for working parents to have a car available at work. Stores, banks and post office facilities should be located within office parks to minimize the need to drive around on errands during the day.

### Overcoming the "Not-In-My-Backyard" (NIMBY) Syndrome

One of the biggest impediments to improving land-use planning is the attitude that says "Fine, build more housing, but don't put apartments or a daycare center or an office building near my neighborhood. Put it in the other guy's." Frequently this attitude is oblivious to the merits of a well-designed project which can allow for more housing and enhance the neighborhood at the same time. If we want to maintain the quality of life in the Bay Area, it means making compromises and being open to change which may actually make life better.

## CONCLUSION

Traffic is a result of poor planning, but it's not necessarily the fault of the bureaucrats or developers. More often, it results from lack of coordination and an unwillingness on the part of individuals, neighborhoods and cities to be part of a regional solution. The result is a deterioration in everyone's quality of life. To improve traffic in the future, coordinated planning must take place on a regional and subregional level.

## MAKING DECISIONS FOR THE FUTURE

There are no easy cures for the Bay Area's transportation woes. Every solution, every plan, no matter how good, encroaches on someone's way of life. Every public body that has to make a decision has to weigh the interests of those most immediately affected with the needs of a larger, usually unrepresented population which may or may not live or work in their community or even be born yet. And when they bear the interests of that population in mind, they have to hope and trust that others in similar situations around the region are doing the same. It's not an easy thing to do. In this day and age it's much easier to duck issues, to let debate drag on for years, and to cast blame wherever it is convenient. Meanwhile, the problems get worse. ¶ In the Bay Area, part of the problem with transportation is related to a lack of regional leadership and authority. And one of the most important steps that needs to be taken is to find a way to fill this void. We need to strengthen the Metropolitan Transportation Commission or some other regional agency, providing it with more carrots and sticks, the power to grant and withhold money, to encourage local governments to embrace planning which goes beyond a single community's immediate interests. Moreover, we need to reevaluate the process by which projects are considered and debated to find some way that allows full public participation but which leads to timely decision-making for the greater regional good. ¶ We are today at a crossroads. After twenty years of neglecting our transportation system and living off the investments made by prior generations, the time has come for us to prepare for the region's future as we did in the 1950s and 60s. The process will demand participation and compromise from every one of us and certainly some measure of cash. But by working together in good faith, we can hope to build a better future than the one looming on the region's horizon today.

*"When faced with the choice between two evils, I always choose the one I haven't tried before."*

PRESENTATION BY MAYOR DAVE KARP

TO THE

TRANSPORTATION SUBCOMMITTEE

OF THE

PUBLIC WORKS COMMITTEE

U.S. HOUSE OF REPRESENTATIVES

APRIL 10, 1991

Good Morning. My name is Dave Karp and I am here as the Chairperson of the Alameda County Transportation Authority. Alameda County is one of eighteen counties in California that have enacted sales tax measures for transportation purposes. The combined revenues of these so-called "self help" counties will equal the amount anticipated by the State from the recent voter approval of propositions 108 and 111.

Despite these revenue sources, our needs continue to outpace our resources. Alameda County's one half cent sales tax will generate one billion dollars in the next decade and these funds are earmarked for transportation improvements that are not programmed for State funds. However, our program also has its shortfalls and I will describe two currently unfunded projects on routes of national significance.

The Authority is participating in funding improvements to a 13 mile segment of I-880 in southern Alameda County. I-880 is the only freeway connecting Santa Clara County with the industrial area of Alameda County. At present, the total sales tax, State and other local funds committed to this interstate project amount to $302 million.

However, we have had to defer some needed improvements due to funding constraints. One such deferral is upgrading the Alvarado-Niles Road Interchange at post mile 13. The existing interchange will permit upgrading of the underlying freeway, but there will be substandard horizontal and vertical clearances at this location. This site will present the only constriction on this route in southern Alameda County. To meet full Interstate standards, an additional $20 million will be required.

The Authority is participating also in BART's new rail extensions. Our program includes $170 million for BART's extensions in Alameda County. One of the extensions is proposed to extend from San Leandro along the existing I-580 median to the cities of Dublin and Pleasanton. This extension will cost approximately $530 million and will be financed entirely by State and local funds.

A parking structure is proposed at the East Dublin/Pleasanton station. This structure will have the effect of reducing commute demand on I-580. This estimated cost is $35 million and it is not funded at this time.

The point I wish to make is that the Citizens of California have shown a willingness to tax themselves for needed transportation improvements. However, our needs are greater than our resources and additional help is needed. I have given two examples of needs on routes of national significance. These needs should be funded at the Federal level as part of the need to preserve the existing Federal surface transportation investment.

This is probably the most important Transportation act since the basic Acts of 1956 and 1983, which increased the Federal gasoline tax. As we move into the 21st Century the need to maintain a major effective transportation system is essential, not only for our Nation's economic and social development, for over our transportation routes will go the items which will become part of a world-wide international market.

The system is only as effective as the smallest of its parts--these two items which are part of a link in the Northern California area are typical of those parts.

For this reason, I urge you to support both projects.

Statement of Joseph J. Kenna
Presented to the House Subcommittee on Surface Transportation
April 10, 1991

Mr. Chairman, Members of the Subcommittee, my name is Joseph J. Kenna. I am the Chairman of the Board of Commissioners of Chester County, Pennsylvania.

It is indeed a true honor and privilege to appear before this Subcommittee. I know you have a very difficult task in creating the legislation necessary to reauthorize the Surface Transportation Act. Your task is particularly difficult in light of the fact that we are entering the post-interstate era. The directions you provide in this legislation will have a profound impact on mobility, safety and the economic development of our nation for many years to come.

I appear before you today to request your special consideration on a project which is of utmost importance to me, to the residents and businesses of Chester County, to the residents and businesses of the Philadelphia and Wilmington, Delaware metropolitan areas.

The project I am referring to is what is commonly called the Exton Bypass.

You have before you an information package which provides more detail and information than I could possibly cover in five minutes. The illustrations in this package attempt to provide geographical location while identifying issues and perspectives at the regional, interstate, intermodal and local levels.

As is evident from the first map in the package and on this presentation board, the Exton area is located almost midpoint between Washington, D.C. and New York City. The Exton Bypass is a proposed five mile relocation of U.S. Route 30 in the heart of Chester County, which is one of the fastest growing counties in Pennsylvania. U.S. Route 30 is the most significant non-toll arterial west from Philadelphia.

From the package you have before you, I would like to highlight some of the more significant issues:

> The Bypass has unanimous community support with an overwhelming priority from the entire legislative delegation in the County. I have, as part of my written testimony, letters of support from the entire State legislative delegation. These letters were part of a presentation to the Secretary of the Pennsylvania Department of Transportation.

This project would demonstrate amazing consistency with the transportation policies of the Bush Administration as defined in the U.S. DOT policy document entitled, "Moving America". These are identified on the list and map entitled, Regional Perspective. Of particular interest is the consistency with the policies on modal integration, capacity enhancements, private sector participation, highway safety and linking urban and rural areas.

The project would significantly improve regional mobility and access to public transportation (in the form of commuter rail stations and bus routes), airports and river ports, including ports in Philadelphia, Wilmington, Delaware and Camden, New Jersey. The Exton Bypass would essentially create a hub for intermodal transportation. The maps on interstate and intermodal perspective explain these points.

Townships and private developers in the immediate U.S. 30 corridor have attempted to resolve some of the traffic problems with major capacity improvements to U.S. Route 30, with a proposed commuter rail station, and possibly with land or financial contributions to the Exton Bypass. The next speaker, Mr. Thompson, will add to this point.

The project will be ready for construction in 1992.

As we move into the post-interstate era, the apparent next focus will be on roads of national significance. U.S. Route 30 certainly is categorically high on that list, as it has been for 200 years. Documentation of this is evident in the fact that U.S. Route 30 carries higher daily traffic volume and higher truck volume than the nearest parallel interstate route (I-76).

The Exton Bypass is an integral link in the national network because it closes a five mile gap between three different limited access roadways.

The Exton area is a classic example of a suburban area that was overwhelmed by land development in the 1980's and is now suffering from severe "suburban mobility" problems.

My intent today is to request your assistance in advancing funds for the construction of the Exton Bypass. While the Pennsylvania Department of Transportation has been able to move the project through all pre-construction stages, they have not been able to commit funds for the construction.

I believe that $87 million would:

Expedite construction;

Mitigate many of our suburban mobility problems; and

Improve the regional mobility in the Philadelphia metropolitan area.

Thank you for the opportunity to present this information. I wish you well in your deliberations on the Reauthorization Act and I certainly hope you can consider my request.

Mr. Chairman, I would be glad to try to answer any questions.

THE AMERICAN INSTITUTE OF ARCHITECTS

STATEMENT OF DOUGLAS KORVES, AIA

on behalf of

THE AMERICAN INSTITUTE OF ARCHITECTS

before the

U.S. HOUSE OF REPRESENTATIVES
SUBCOMMITTEE
ON SURFACE TRANSPORTATION

of the

COMMITTEE ON PUBLIC WORKS AND
TRANSPORTATION

APRIL 10, 1991

1735 New York Avenue, N.W.
Washington, D.C. 20006-5292
Telephone: (202) 626-7300

Mr. Chairman, and members of the Subcommittee, my name is Douglas Korves, and today I am representing The American Institute of Architects and the Livable Communities Coalition, which the Institute hosts and convenes. The Livable Communities Coalition is composed of 21 planning, design, environmental, and historic preservation organizations, and our purpose is to encourage the development of transportation policies that enhance the quality of life for our local communities. If I may, I would like to submit a list of these organizations as part of my written testimony for the record.

I am an architect with my own firm, Douglas Korves Architects in New York, and I am President of the New York State Association of Architects.

On behalf of the AIA and the coalition, I want to thank you for this opportunity to present our views on surface transportation reauthorization legislation, and for the open process you have established that allows groups like ours to contribute to the development of this legislation. I also want to take this moment to express our appreciation for your continued thoughtful and progressive leadership in this area of critical national interest.

My message is simple. Federal transportation policies must be changed for the sake of our communities' futures. And this

year's reauthorization of the Surface Transportation Assistance Act offers an extraordinary opportunity to do it. The AIA and its coalition have developed a measure we call the Transportation for Livable Communities Act, a copy of which I have attache to my written statement for the record. This measure creates the framework for change by significantly strengthening the linkage between transportation and community planning and improvement. Many of the provisions of our proposal have been incorporated into the omnibus transportation legislation announced yesterday by the Surface Transportation Policy Project. The Project is composed of a broad range of coalitions and individual organizations seeking a comprehensive national transportation policy to better serve this country's environmental, social, and economic interests. The AIA is a member of the Project's steering committee.

Federal transportation policies have had enormous influence over the way our country has grown and developed since World War II. The federal highway program, begun for national security, has helped bind the nation together, to the benefit of agriculture, commerce, and tourism. It has ended the isolation of rural areas, driven the development of the nation's suburbs, and fueled world class industries that provide employment to millions. Yet by giving full throttle to the automobile, these same policies have also helped create rampant overdevelopment that has depopulated downtowns and overcrowded the suburbs. We have too

often damaged the very cities and countryside which we have built our highways to serve. Too often we have laid out our highways first and considered the effects on our communities and natural resources later. In the process, we have turned farmland into interstates, wetlands into causeways, neighborhoods into freeways, and greenbelts into beltways. We have paved over our scenery and history, and we have blanketed our cities, suburbs -- and even our national parks -- with smog. Low density development has sprawled over the landscape, imposing on us enormous and inefficient dollar and resource costs for water, sewer, and power infrastructure. There has been a social cost, too: workers no longer live near their work; shoppers no longer live near their shopping. We have headed down the highway to the suburbs to experience the freedom of life on the open road, only to sit stalled in traffic on our way to work.

If we continue along the current path, we consign our urban areas to gridlock and pollution -- and in some cases economic stagnation -- as inefficient transportation systems impede workers from getting to jobs and ultimately drive away business. Without an end to the business - as - usual approach to this nation's transportation needs, many localities will cease to function as livable places. If I may quote the chairman of a Washington, D.C. area Task Force on Growth and Transportation, "We have seen the future and it doesn't work." Regretfully, this grim assessment applies to urban areas all over the country.

Some statistics may be instructive.

By the year 2010, the average speed on Los Angeles freeways will drop from today's 31 miles per hour to 11 miles per hour. The New York metropolitan region is projected to experience 600,000 additional commuters by the year 2000. By the year 2005, if no improvements are made, it will take five hours to travel from New Brunswick, New Jersey to Trenton, on U.S. Route 1, a distance of about 30 miles. The Federal Highway Administration projects that nationwide, traffic congestion delays on freeways will amount to 6 billion hours by 2005, up from 1.2 billion in 1984.

Of course, we don't have to wait until then to see the results of today's transportation policies. In Moreno Valley and Rosamond, California, as many as one-third of commuters are making 100-mile round trip commutes to work. In Fairfax County, Virginia, the Tyson's Corner area has more office development than all but eight U.S. cities, yet this area is served almost entirely by auto. In fact, people routinely use their cars to get across the street there. A beltway around Atlanta has led to the development of 20 million square feet of new office space nearby, yet there is little transit service to this outlying area. The explosive growth in many suburbs has resulted in twice as many commutes across suburban lines as occur from the suburbs to downtown. In California, highway congestion results in 300,000 hours of delay every day, with a dollar cost of $550 million a

year.

Reliance on the auto has taken its toll on our energy security. Today, half our energy needs are filled by foreign sources, and that proportion is expected to grow. Considering that more than 70 percent of U.S. oil consumption is related to transportation, more efficient transportation policies can produce substantial energy savings. For each 40 person bus, 4250 gallons of gasoline a year can be saved for a daily commute of 10 miles round trip. A van with nine people can reduce fuel consumption by over 80 percent.

The Livable Communities Coalition believes there must be a better approach. This better approach starts with coordinated planning that makes transportation more than just an exercise in getting from one place to another. National policy should ensure that each transportation project is considered in light of its contribution to community livability and fits within the environment of the locality it serves. National policy ought to be concerned with moving people and goods -- not just automobiles -- and with caring about what happens along the way.

Unfortunately, current law pays scant attention to transportation planning. In fact, the use of rock salt receives greater emphasis. The Administration's Surface Transportation bill is an

improvement over the current law's almost total neglect, yet its provisions fall short. While in urban areas of 200,000 or more it sets requirements for establishment of a "congestion management system," and for consistency of significant new or reconstruction highway projects with this system. This congestion management system is undefined, the requirements are incomplete, and the potential for affecting business-as-usual is weak. The state planning sections are even weaker, providing only for coordination with local transportation planning and "promoting the coordination of various transportation modes with due consideration of national goals like system preservation, highway safety, and preservation of the environment." Since the Administration bill also provides a smaller federal match for mass transportation projects, the flexibility to produce multi-modal systems is diminished.

The Transportation for Livable Communities Act has four specific sections: 1) state and urban planning, 2) transportation enhancement activities, 3) establishment of a national system of scenic and historic highways, and 4) reform of the Highway Beautification Act. The Transportation for Livable Communities Act would amend selected sections of the existing federal-aid highway statutes contained in title 23 of the United States Code. It would not alter the existing categories of federal-aid programs or the apportionment or federal share formulas. I would like to outline the provisions of this proposal.

**TITLE I.** This title would strengthen the link between comprehensive and environmental planning and transportation investment decisions by requiring that local and state highway plans use management and investment strategies that make the most efficient use of existing transportation facilities, as measured by the movement of people and goods. Their plans should promote land use patterns for residence and employment that make mass transportation more attractive and feasible. Specifically, state and local officials should be able to demonstrate why alternative transportation modes or management strategies are not feasible substitutes to any proposed expansions of highway capacity and how they would take steps to reduce energy consumption and minimize physical or visual disruption of scenic landscapes, vistas, and historic areas. Their plans should conform to and complement local and state plans concerning housing, community development, rural conservation, recreation, historic preservation, and air and water quality -- including the transportation provisions contained in the Clean Air and Clean Water Acts. Good planning should result in reductions in the demand in congested areas for motor vehicle travel, particularly for single-passenger automobile travel. These plans also should specify proposed transportation enhancement activities, which are noted in Title II. States must consult the public and local officials in developing their plans.

**TITLE II.** This title would create a new category of

transportation activities eligible for federal funding -- many of which are now only vaguely eligible under current law. Included would be scenic and historic landscape enhancements, demonstration projects to encourage excellence in the design, construction, rehabilitation, and use of transportation facilities; building construction or rehabilitation, signage, or other programs related to traveler information and education; rehabilitation of historic transportation buildings or structures; preservation of abandoned railway corridors, including their conversion and use for pedestrian walkways, and other programs to accommodate nonmotorized travel; archeological planning and research; acquisition of scenic, recreational and historic sites or areas, or of easements related to such sites or areas; and control and removal of outdoor advertising signs.

The bill would authorize an increase in whatever federal share is payable for a project by one percent for each two percent of the project that goes for these enhancement activities. For example, where the federal share would be 75 percent for a project without any of these activities, the federal share would be increased to 80 percent if 10 percent of the total project costs went for such activities. This bill would also require states to devote at least eight percent of their annual apportioned funds to these activities. We do not believe that this is inconsistent with present enlightened practice.

The planning and enhancement provisions of the act could

actually smooth the way for the development of necessary transportation solutions because they encourage early in the planning process, issues that are now often pursued through the courts. To the extent to which these issues can be settled sooner at the state and local level, both time and money can be saved. At the same time, the planning process and the more effective coordination of land use and transportation planning that would result could help to head off the anti-growth ballot initiatives that constituencies fed up with urban sprawl and traffic congestion have sought to implement. Their frustration is understandable, but such initiatives don't solve the problems of growth, they only displace them to outlying areas where transportation needs are even less efficiently addressed.

Federal transportation planning woefully lags behind what is already taking place in states and localities all across the country: New Jersey, Florida, Georgia, Vermont, Washington state's fast-growing western portion, San Diego, Los Angeles, Portland, Oregon, and even Aquidank Island, Rhode Island, where the Newport County Chamber of Commerce has called for comprehensive planning in part because of clogged roads.

These and many other initiatives by states and localities are not perfect. Even though Portland is considered a national model, less than 1 percent of suburban residents use mass transit in their commutes. Yet they are the necessary next steps for governments which have seen that their futures will not work and which are taking those futures in hand to guide and shape them

for the benefit of their citizens.

The federal government should follow their example, and show the way to others who still believe that more roads are the only answer to transportation problems.

**TITLE III.** This title would establish the National Scenic and Historic Highway System. States would nominate highways for the system, except that federal agencies would do so for federally-owned highways. National standards would be developed for designation and for operation and management, signage, and resource protection. The U.S. Department of Transportation would administer the program and establish standards in cooperation with the U.S. Departments of Interior and Agriculture. The Secretary of Transportation would have the discretion to fund projects including: the survey of highways for potential designation; acquisition and rehabilitation of historic facilities related to a National Scenic and Historic Highway; design, construction, and rehabilitation of landscaping and associated highway facilities; and, the design and production of signage and educational and promotional materials.

The bill would set aside $25 million for each of the next five fiscal years for projects related to this activity, and the funding would be available on a 95 percent federal share basis. No funds would be made available from this program for actual highway construction or repair.

A scenic and historic highway system could protect and

enhance highways - federally funded and otherwise - that hold a special place in the nation's history and culture.

**TITLE IV.** This title encompasses legislation to reform the Highway Beautification Act recently introduced by Senator John Chafee (R-RI) and Representatives John Lewis (D-GA) and Sherwood Boehlert (R-NY). It would restore to states and localities the jurisdiction to remove non-conforming billboards, and, accordingly, allow states and localities to decide whether to compensate billboard owners outright or to amortize the compensation. It would also impose a moratorium on new billboard construction on the Federal Interstate and primary systems, require states to inventory all existing billboards on those systems, and permit states to expend up to three percent of their annual Interstate and primary apportionments for non-conforming billboard removal. In addition, the legislation would prohibit owners of non-conforming billboards from making improvements which would extend the billboard's useful lives and would prohibit states from cutting down trees or vegetation for the purpose of improving the visibility of a billboard.

These reforms are necessary because the Highway Beautification Act has failed in its purpose. More billboards are going up than are coming down. They can be erected in any manner of places along federal highways. Even though states and localities may wish to impose stronger controls over signage, the act prohibits it. And although virtually every court that has

heard the issue has ruled that amortization is a legal form of compensating billboard owners for removal of non-conforming signs, which the law expects to come down, the cash compensation requirement has blocked effective removal.

Prior to 1983, the U.S. spent $220 million for sign removal, but appropriated no funds for this purpose since then. Between 1986 and 1989, 2,657 non-conforming signs were brought down, while 47,519 new signs went up. The AIA is not anti-billboard. We are opposed to their rampant proliferation through the provisions of a law that was specifically designed to regulate them. Considering that of the top ten billboard advertisers, nine were alcohol and tobacco companies, one must wonder just what national transportation interest this law now serves. The Administration bill contains many of the above concepts, and is a welcome addition to the issue.

Mr. Chairman, we believe the Transportation for Livable Communities Act, combined with adequate federal funding, and flexibility for states and localities to choose their transportation solutions within a framework of rational, coordinated planning, will contribute toward a transportation policy truly responsive to the needs of this nation as it approaches the new century. The reauthorization of the Surface Transportation Assistant Act provides the once in a generation opportunity to enact this necessary policy. We should not let it slip away.

*"Roads can make or break a nation."*

**- U.S. Senator Daniel P. Moynihan**[1]

Or, to paraphrase Churchill, we shape our highways and then they shape us. In not yet two generations, federally-assisted highways--for better or worse--have reshaped the American landscape and pattern of settlement.

On the one hand, the Interstates and major highways have shortened travel time for commercial transport and personal business and pleasure to the benefit of agriculture, industry, and tourism. On the other hand, they have unleashed rampant development which has depopulated cities, overcrowded suburbs, paved over scenery and history, and spread pollution.

In our enthusiasm for the auto, we have too often damaged the very cities and countryside which we built our highways to serve. Too often, we have laid out our highways first and considered the effects on our communities and natural resources afterward. In the process, we have turned farmlands into Interstates, wetlands into causeways, neighborhoods into freeways, greenbelts into beltways. We have blanketed our cities--even our national parks--with smog.

Low density development dribbled down the highways imposing on us enormous and inefficient dollar and resource costs for water, sewer, and power infrastructure. There has been a social cost, too: workers no longer live near their work, shoppers no longer live near their shopping. We have fanned ourselves out, only to face the paradox of intolerable congestion on our commutes.

We need to maintain and improve our highway system. In the congressional reauthorization of the federal highway program scheduled for 1991, we have a unique opportunity to address the environmental and quality of life issues which the program poses. With only minor adjustments in funding and planning, and retaining our traditional reliance on state and local initiative, we can begin to turn the highway program into a vehicle for preserving and enhancing our natural and man-made heritage and rebuilding livable communities.

---

## SUMMARY AND EXPLANATION OF THE TRANSPORTATION FOR LIVABLE COMMUNITIES ACT OF 1991

The bill amends selected sections of the existing federal-aid highway statutes. It does not alter the existing categories of federal-aid programs or the apportionment or federal share formulas. All section references below are to title 23 of the United States Code.

### TITLE I - PLANNING

The bill would strengthen the planning process associated with the federal highway system by:

--rebuilding the link between transportation investment decisions and comprehensive planning;
--improving links between transportation investment decisions and environmental planning; and
--encouraging consideration of conservation and preservation actions at the earliest stages of planning.

Specifically, the bill would revise the existing local and state planning processes in sections 134 and 307 to require that local and state highway plans required under those sections:

--take into account all planned transportation investments;
--preserve and make efficient use of existing transportation facilities;
--promote land use patterns that enhance the viability of mass transportation;
--consider feasible substitutes to substantial expansions of highway capacity;
--minimize disruptions to scenic and historic areas;
--conform to other governmental plans for community development and environmental protection;
--reduce demand in congested areas for motor vehicle travel; and
--consider public comments on the plans.

The bill would make approval of a state's highway program and projects under section 105 contingent on conformance with these planning processes.

### TITLE II - TRANSPORTATION ENHANCEMENT ACTIVITIES

The bill would create a new category of eligible activities known as Transportation Enhancement Activities. These would include:

--scenic enhancements, including those authorized under existing section 319 (roadside facilities and the wildflower program);
--demonstration projects to encourage design excellence in the construction, rehabilitation and use of transportation facilities;
--traveler information and education facilities and signage;

--rehabilitation of historic transportation structures;
--preservation of abandoned rail corridors and their conversion to pedestrian and bicycle trails;
--construction and maintenance of pedestrian and bicycle ways;
--archeological planning and research;
--acquisition of scenic, recreational and historic areas or easements; and
--control and removal of billboards;

The bill would authorize an increase in the federal share payable for a project by one percent for each two percent of the project that is accounted for by Transportation Enhancement Activities, up to a maximum, generally, of 95 percent. For example, where the federal share would be 75 percent for a project without any Transportation Enhancement Activities, the share could be increased to 80 percent if 10 percent of total project costs were accounted for such activities.

The bill would also require states each year to devote not less than eight percent of apportioned funds to Transportation Enhancement Activities.

## TITLE III - NATIONAL SCENIC AND HISTORIC HIGHWAY SYSTEM

The bill would create a system of National Scenic and Historic Highways, to be nominated and administered by the states (or by the federal agencies in the case of federally-owned highways) in accordance with national standards for operation and management, signage, and resource protection.

The Department of Transportation would administer the program and establish its standards in cooperation with the Departments of Interior and Agriculture. The Secretary of Transportation would have discretion to fund projects including:

--surveying highways for potential designation;
--acquisition and rehabilitation of historic facilities related to a National Scenic and Historic Highway;
--design, construction, and rehabilitation of landscaping and appurtenant highway facilities; and
--design and production of signage and educational and promotional materials.

The bill would set aside $25 million for the next five fiscal years for projects related to National Scenic and Historic Highway. Funds would be available on a 95 percent federal share basis. No funds would be made available from this program for actual highway construction or repair.

## TITLE IV - CONTROL OF OUTDOOR ADVERTISING

This title of the bill incorporates intact the provisions of S. 2500 from the 101st Congress, the Visual Pollution Control of 1990, a bill introduced by Senator Chafee. It was approved by the Committee on Environment and Public Works by a vote of 11-4, but was not considered by the full Senate. It would:

--restore to states and localities the jurisdiction to remove nonconforming billboards and, accordingly, allow states and localities to decide whether to compensate nonconforming billboards outright or to amortize compensation;
--impose a moratorium on new billboard construction on the federal Interstate and primary systems;
--require states to inventory all existing billboards on those systems;
--permit states to expend up to 3 percent of their annual Interstate and primary apportionments for nonconforming billboard removal;
--prohibit owners of nonconforming billboards from making improvements which would extend the billboards' useful lives; and
--prohibit states from cutting down trees or vegetation for the purpose of improving the visibility of a billboard.

A BILL

To amend Title 23, United States Code, to promote effective transportation planning, support conservation of significant environmental, historic, and recreational resources related to the nation's highways, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that this Act may be cited as the "Transportation for Livable Communities Act of 1991".

Sec. 2. The Congress finds and declares that --

(1) since its inception, the system of Federal-aid highways has shaped the national landscape and pattern of development;

(2) federal-aid highways have contributed to the economic development of the nation by improving transportation for agriculture, business, employment and recreation;

(3) federal-aid highways have also unintentionally promoted unplanned and inefficient development which has harmed cities socially and economically, forced wasteful suburban expenditures for utility and transportation infrastructure, and resulted in aggravating and costly traffic congestion throughout urban areas;

(4) federal-aid highways situated without adequate consideration of long-term effects or available alternatives have needlessly displaced farmland and open space, disrupted neighborhoods, and contributed to air and water pollution and excessive energy consumption;

(5) federal-aid highways should be planned and designed as part of a balanced system that supports State and local transportation, land use and environmental improvement plans;

(6) the federal-aid highway system, as part of a balanced transportation strategy, should contribute to energy conservation;

(7) federal aid should promote highway design and maintenance that preserve and enhance surrounding landscapes and protect historic resources; and

(8) a national system of scenic and historic highways will foster appreciation of the scenic beauty and historic significance of the nation's highways.

TITLE I - PLANNING

Sec. 101. Section 105(a) of title 23, United States Code, is amended by adding the following at the end thereof:

"The Secretary may not approve a program in whole or in part, nor approve any project in a proposed program, unless he finds that the program, considered as a whole, conforms to and carries out and carries out the plans and programs developed pursuant to sections 134(a) and 307(c)(1)(B) of this title. In determining whether to grant such approval, the Secretary shall give due consideration to the public comments and State agency views provided pursuant to section 307(c)(1)(B)."

Sec. 102. The title of section 134 of title 23, United States Code, is amended to read, "Transportation Planning in Metropolitan Areas."

Sec. 103. Section 134(a) of title 23, United States Code, is amended to read as follows:

"(a) It is declared to be in the national interest to encourage and promote the conservation and development of transportation systems embracing various modes of transportation in a manner that will serve the States and local communities efficiently and effectively. To accomplish this objective, the Secretary shall cooperate with the State and local officials in the development of transportation plans and programs which shall, at a minimum: utilize transportation system management and investment strategies designed to make the

most efficient use of existing transportation facilities, as measured in terms of the movement of people and goods; promote or reinforce patterns of land use for residence and employment that enhance the attractiveness and feasibility of mass transportation; demonstrate why alternative transportation modes or management strategies are not feasible substitutes to any proposed expansions of highway capacity; incorporate actions to reduce energy consumption; minimize physical or visual disruption of scenic landscapes, vistas and historic areas; conform to and complement local and state plans and programs concerning housing, community development, rural conservation, air quality (including the transportation provisions of any "applicable implementation plan" as defined in section 302(q) of the Clean Air Act, as amended [42 U.S.C. 7602(q)], water quality (including the continuing planning process approved under section 303(e) of the Clean Water Act [33 U.S.C. 1313(e)]), recreation, and historic preservation; effectuate reductions in the demand in congested areas for motor vehicle travel, and particularly for single-passenger automobile travel; and specify proposed transportation enhancement activities. The planning process shall consider all modes of transportation and account for reasonably anticipated funds, and shall be continuing, cooperative, and comprehensive. No highway project may be constructed in any metropolitan area unless the responsible public officials of the metropolitan area in which the project is located have been consulted and their views considered with respect to the corridor, the mode of transportation, and location, and design of the project."

Sec. 103. (a) Section 101(a), title 23, United States Code, is amended by inserting, at the appropriate place in alphabetical order therein, the following:

"The term "metropolitan area" means a metropolitan statistical area, as defined and

designed by the Office of Management and Budget."

(b) The term "urbanized area" is hereby replaced by the term "metropolitan area" at each place where it appears in section 104, title 23, United States Code, and each reference to "urbanized area" in said section is hereafter deemed to be a reference to "metropolitan area."

Sec. 104. Section 307(c), title 23 United States Code, is amended by redesigning subsection (c) (1) as subsection (c) (1) (A), and by adding, following said subsection, a new subsection (c) (1) (B), as follows:

"(B) The Secretary shall cooperate with the State in the development of transportation, which will serve the State and its local communities and rural areas effectively, accomplish social and economic development goals, conserve energy, preserve open space and scenic and historic resources, promote improvement of air and water quality, and encourage efficient land use patterns. The state transportation plans and programs shall be based on long-range needs and goals and shall, at a minimum: incorporate, coordinate and reconcile the transportation plans and programs developed pursuant to section 134(a) of this title and such similar plans as may be developed pursuant to section 134(a); reflect available funding and account for all transportation investments planned in the state and reconcile those investments with the transportation plans and needs of the state; encourage the preservation and most efficient use of existing transportation facilities, as measured in terms of the movement of people and goods; promote or reinforce patterns of land use for residence and employment that enhance the attractiveness and feasibility of mass transportation; demonstrate why alternative transportation modes or management strategies are not feasible substitutes to any proposed substantial expansions of highway capacity; minimize physical or visual disruption of scenic landscapes, vistas and historic areas; conform to and complement state plans and programs concerning housing, community development, rural conservation, air quality (including the

transportation provisions of any "applicable implementation plan" as defined in section 302(q) of the Clean Air Act, as amended [42 U.S.C. 702(q)], water quality (including the continuing planning process approved under section 303(e) of the Clean Water Act [33 U.S.C. 1313(e)]0, recreation, and historic preservation (including plans prepared pursuant to section 101(b) (3) of the National Historic Preservation Act) and include views on such conformity from State agencies responsible for such plans and programs; effectuate reductions in the demand in congested areas for motor vehicle travel, and particularly for single-passenger automobile travel; and specify proposed transportation enhancement activities. In developing plans and programs pursuant to this section, the State shall provide an opportunity for public comment and shall respond in reasonable detail to the comments received.

TITLE II - TRANSPORTATION ENHANCEMENT ACTIVITIES

Sec. 201(a). Section 101(a), title 23, United States Code, is amended by inserting; at the appropriate place in alphabetical order therein, the following:

"The term "transportation enhancement activities" means, with respect to a project and the area to be served by the project; scenic and historic landscape enhancement, including those authorized by section 319 of this title; demonstration projects to encourage excellence in the design, construction, rehabilitation and use of transportation facilities; building construction or rehabilitation, signage, or other programs related to traveler information and education; rehabilitation of historic transportation buildings or structures; preservation of abandoned railway corridors, including conversation and use thereof for pedestrian walkways, and other programs to accommodate nonmotorized travel, including program authorized by section 217 of this title; archeological planning and research, in addition to that authorized by section 305 of this title; acquisition of scenic, recreational and historic sites or areas, or of easements related to such sites

or areas; and control and removal of outdoor advertising signs, displays, and devices, including measures authorized by section 131 of this title.

(b) Section 101 (a), title 23, United States Code, is amended by adding at the end of the definition of the term "highway": "It also includes transportation enhancement activities."

(c) Section 144(d), title 23, United States Code, is amended by adding at the end of the first sentence thereof, "including related transportation enhancement activities."

Sec. 202. Section 120, title 23, United States Code, is amended by adding at the end thereof the following new subsection: "(o) Transportation Enhancement Activities -- The Federal share payable on account of any project on the system of Federal-aid highways shall be increased above the Federal share otherwise authorized by this section by 1 percentage point for each full 2 percent of project costs that are attributable to transportation enhancement activities, except that the Federal share payable on any project shall not exceed the larger of 95 percent of the total cost of such project or such other Federal share for which the project may otherwise be eligible."

Sec. 203. Section 104, title 23, United States Code, is amended by inserting the following new subsection (g) and redesigning existing subsection (g) and (h) as subsections (h) and (i), respectively:

"(g) Not less than 8 percent of the amount apportioned in any fiscal year to each State in accordance in any fiscal year to each State in accordance with this section shall be expended upon transportation enhancement activities."

TITLE III - NATIONAL SCENIC AND HISTORIC HIGHWAY SYSTEM

Sec. 301. There is hereby established the National Scenic and Historic Highway System.

Sec. 302. Within one year of the date of enactment of this Act,the Secretary, in consultation with the Secretary of the Interior and the Secretary of Agriculture, shall establish criteria for designating National Scenic and Historic Highways. Such criteria shall include--

(i) consideration of the scenic beauty and historic significance of the highways or the highway's surroundings;

(ii) operation and management standards, including standards and strategies for maintaining or improving those qualities for which a highway was designated a National Scenic and Historic Highway, for preserving or enhancing landscape and view corridors, and for averting traffic congestion;

(iii) standards for highway signage, including uniform signage identifying highway as component of the National Scenic and Historic Highway System; and

(iv) design review procedures for highway siting, structures, landscaping, and travelers' facilities.

Sec. 303. A State or States may nominate existing or planned highway, whether or not on one of the Federal-aid systems, to the Secretary for inclusion in the National Scenic and Historic Highway System. Each such nomination shall be accompanied by a certification from the State that, if designated for inclusion on the National Scenic and Historic Highway System, within two years of designation the highway will be managed by the State or a political subdivision of the State in full compliance with the criteria established pursuant to section 302 of this Act.

Sec. 304. The Secretary, in consultation with the Secretary of the Interior and the Secretary of Agriculture, shall within eighteen months of the effective date of this Act, conduct an inventory of Federal lands highways and designate appropriate such highways for inclusion on the National Scenic and Historic Highway System. The head of a Federal agency administering a Federal lands highway so designated shall ensure that, no later than two years following

designation, the highway is managed in full compliance with the criteria established pursuant to section 302 of this Act.

Sec. 305. The Secretary shall withdraw the designation of a highway, other than a Federal lands highway, upon the request of a State or upon determining that the highway does not meet the criteria established pursuant to section 302 of this Act.

Sec. 306. Designation of a highway as a National Scenic and Historic Highway shall not be deemed to constitute inclusion of the highway on any of the Federal-aid systems for any purpose if it is not otherwise so included, nor shall such designation of a highway otherwise included on a Federal-aid system in any way affect the highway's inclusion or eligibility for funding in the Federal-aid system.

Sec. 307. (a) The Secretary is authorized to approve projects for the purpose of identifying, designating, and operating National Scenic and Historic Highways, including, but not limited to--

(i) surveying and planning preparatory to application for designation;

(ii) acquisition and rehabilitation of historic transportation facilities related to the route of a National Scenic and Historic Highway;

(iii) design, construction and rehabilitation of landscaping, highway appurtenances, and travelers' facilities; and

(iv) design and production of signage and education and promotional materials.

(b) The Secretary shall not approve pursuant to this section any project for the grading, construction, repair, or rehabilitation of a highway roadbed.

(c) The Federal share payable on account of any project pursuant to this section shall not exceed 95 percent.

(d) (1) Before any apportionment is made under section 104(b) of title 23, United

States Code, in each of fiscal years 1992, 1993, 1994, 1995, and 1996, the Secretary shall set aside the sum of $25,000,000 to carry out the purpose of this section. Any funds not obligated at the end of the fiscal year in which such funds are set aside shall remain available for obligation to carry out the purpose of this section for a period of three years after the close of the fiscal year in which such funds are set aside.

(2) Section 104(b) of title 23, United States Code, is amended in the first paragraph thereof, by inserting "and section 307(d) (1) of the Transportation for Livable Communities Act of 1991," following "and the set asides authorized by subsection (f) of this section and sections 118(c) and 307(d) of this title".

TITLE IV - CONTROL OF OUTDOOR ADVERTISING

Section 401. Section 131 of title 23, United States Code, is amended as follows--

(1) in subsection (b):

(A) by striking "shall be reduced " and inserted in lieu thereof "may be reduced"; and

(B) by striking the words "equal to 10 " in the second to last sentence, by inserting in lieu thereof "up to 5", and by striking the last sentence;

(2) in subsection (c):

(A) by striking "(c)" and inserting in lieu thereof "(c) (1)" and redesigning clauses 1 through 5 as clauses A through E;

(B) by inserting at the end thereof the following new paragraphs:

"(2) As part of effective control, each State shall maintain an annual inventory of all outdoor advertising signs, displays, and devices required to be controlled pursuant to this section. Such

inventory shall identify all such signs as either illegal, nonconforming, or conforming under State law."

"(3) As part of effective control, each state shall assure that signs, displays, and devices required to be removed by this section shall be removed within ninety days of (A) the date upon which they must be removed pursuant to State or local law, or (B), if eligible to receive cash compensation pursuant to this section or to be amortized, the date upon which cash compensation is paid, or the State or local amortization period ends.

"(4) As a part of effective control, no State may allow or undertake any vegetation removal or other alteration of the highway right-of-way with the purpose of improving the visibility of any outdoor advertising sign, display or device located outside of the right-of-way.

"(5) As part of effective control, no State may permit any person to modify any outdoor advertising sign, display, or device which does not conform to subsection (c) or (d) of this section to improve its visibility or to prolong its useful life.

(3) in subsection (d), by inserting in lieu thereof "(d)(1)", and by adding at the end of the subsection the following:

"(2) After October 1, 1991, no new signs, displays or devices may be erected under the authority of this subsection. Any sign, display or device lawfully erected under State law after October 1, 1991, and prior to the effective date of this section shall be treated as

nonconforming,";

(4) in subsection (e) by amending subsection (e) as follows:

"(e) The Secretary shall not require a State to remove any lawfully erected sign, display or device which does not conform to this section and is lawfully in existence on the date which this section becomes effective. Nothing in this subsection shall prevent a State from removing any sign, display or device.";

(5) in subsection (g) by amending subsection (g) to read as follows:

"(g) (1) The Secretary may participate in the costs incurred by the State for the following:

"(a) physically removing signs, displays, or devices that are located in areas required to be effectively controlled by this section and are illegal under State law or that are required by this section to be removed and that were lawfully erected and have been lawfully maintained under State law; and

"(b) acquiring signs, displays, or devices that are required by this section to be removed and that were lawfully erected and have been lawfully maintained under State law.

"(2) Payments made to a State by the Secretary may be made for the removal or acquisition of signs, displays, and devices located in areas adjacent to the Federal-aid primary system and the Interstate System from funds apportioned to such State under section 104(b)(1) and 104(b)(5) of this title. For the removal or acquisition of signs, displays, or devices, the Federal share of any costs participated in under this subsection shall not

exceed that set forth in section 120(a) for those adjacent to the Federal-aid primary system and that set forth in section 120(c) for those adjacent to the Interstate System.

"(3) After September 30, 1991, a State may use to carry out this section in any fiscal year not to exceed three percent of funds apportioned in such fiscal year to such State for the Federal-aid Interstate and Primary System.

"(4) A sign, display, or device acquired with funds made available pursuant to this section may be disposed of by sale or other means to a private party only if the State receives satisfactory written assurances that the material will not be used to construct or reconstruct an outdoor advertising sign, display, or device.":

(6) in subsection (h) by striking "(h)", by inserting in lieu thereof "(h)(1)", and by adding at the end the following new paragraph:

"(2) No outdoor advertising sign, display, or device shall be permitted by any Federal agency on all public lands or reservation, excluding Indian lands and renovations, owned or controlled by the United States, unless such sign, display, or device conforms to regulations issued by the Federal agency with jurisdiction over, or responsibility for, such land. Such regulations shall be at least as stringent as the requirements of this section and the requirements of the State in which the land is located. The regulations required by this subsection shall be developed in consultation with the Secretary of Transportation and shall be promulgated within 12

months of the effective date of this Act.";

(7) in subsection (k) by striking the words "Subject to compliance with subsection (g) of this section for the payments of just compensation nothing: and inserting in place thereof the word "Nothing"; and

(8) by repealing subsection (n) and (p). Sec. 402. On a date no later than one year from the date of enactment of this Act, the Department of Transportation shall promulgate uniform national regulations to implement all sections of this Act.

Sec. 403. The amendments made by this section shall be effective upon the date of enactment of this Act, provided that any amendment which a State cannot implement without legislation shall be effective upon the date of enactment of this Act or the end of the first regular legislative session in such State which is commenced after the date of enactment of this section, whichever is later.

STATEMENT BEFORE
THE SURFACE TRANSPORTATION SUBCOMMITTEE
OF THE
HOUSE PUBLIC WORKS AND TRANSPORTATION COMMITTEE
Regarding the
REAUTHORIZATION OF THE SURFACE TRANSPORTATION ASSISTANCE ACT

By
ALFRED B. LAGASSE III
Chairman, Coalition for Transit Opportunities
and
Executive Vice President
International Taxicab and Livery Association
April 10, 1991

Mr. Chairman, my name is Al LaGasse and I am the Chairman of the Coalition for Transit Opportunities. The Coalition consists of the following associations including the International Taxicab and Livery Association of which I am their Executive Vice President, the American Bus Association, the National School Transportation Association, the United Bus Owners of America, the Airport Ground Transportation Association and several private transportation provider companies. The major objective of our Coalition is to preserve in the Urban Mass Transportation Act provisions that allow for a fair and reasonable consideration of private sector involvement in the implementation of public transit services and any attendant regulations or guidance that define those provisions. We are plain and simply stating that this part of the Urban Mass Transportation Act is working fine and does not need to be changed in any way.

The private transit industry operates more than 125,000 charter, tour and school buses --- more than three times the number of public transit buses in operation each day. The private transit industry has earned an unparalleled safety record. Presently, the industry operates 30 percent of all school bus service (operating more than twice as many buses daily as are operated by all U.S. public transit agencies combined), and 70 percent of all public transit dial-a-ride service for senior citizens and the disabled.

The Coalition for Transit Opportunities has been formed to ensure a continued role for the private sector in providing public transportation and to protect the rights the private sector has gained. Specifically, the Coalition's goals are as follows:

1) Preserve the Urban Mass Transportation Act provisions 3(e) and 8(e) as written in 1964 and interpreted in statute and guidance by UMTA since that time ,and

2) Preserve the more recent Charter Bus Regulations in their current form.

In regards to 3(e) and 8(e), over the last decade the private sector has interpreted these provisions as not providing any mandates or requirements but simply a fair and open opportunity to provide contracted out services defined and controlled by the public transit authority. In fact, these provisions were an original part of the 1964 Act that created UMTA. The track record of contracted out paratransit and line haul services has been impressive

and has provided a level of flexibility in providing cost effective and efficient service that public transit can and has utilized to its passengers' best advantage. Competitive contracting ensures the most effective use of tax funding and it permits higher levels of service for lower public subsidies and fares.

In the absence of competitive incentives, public transit costs have risen at a rate greater than inflation. From 1970 to 1988, public transit costs per mile increased 382 percent or more than double the 189 percent inflation rate. Competitive bus industry costs increased less than the rate of inflation from 1970 to 1987. In most cases, private operators are able to provide the same quality and quantity of service for less than the public operators. The average savings resulting from competitive contracting of public transit service is 30 percent. In addition, continued use of the competitive contracting process assists public transit agencies to control their own costs.

In addition, Most competitively contracted public transit service is operated by employees represented by national labor unions and in the United States. To the best of our knowledge, competitive contracting has been implemented without the layoff of public employees.

The results of competitive contracting savings for public transit services across the U.S. have been significant and documented. For example, in Denver, an average savings of 27.5 percent have been achieved on competitively contracted service according to an audit done by KMPG Peat Marwick, and these services were found to be equal in quality and safety to services operated by the public transit system. We would like to take this opportunity to present for the Committee record the performance audit done by Peat Marwick, one of the largest public accounting and consulting firms in the United States. Peat Marwick reported the facts as they saw them and have put their good name on the line in support of these published results. The importance of the operations in Denver is the fact that a few years ago the Colorado legislature required the Denver RTD to contract out 20 percent of their service. This requirement has saved the Denver RTD millions of dollars in an initiative that was locally derived and implemented.

In Los Angeles, Price Waterhouse reported improved safety and service quality as well as 50 percent savings on competitively contracted service.

San Diego's competitive contracting program has exerted a downward pressure on costs including costs on those services still operated by the public transit agency. Subsequent to the initiation of contracting, San Diego's savings, relative to the average public transit industry costs, have exceeded $100 million since 1979.

In the San Francisco Bay area, nearly 300 buses provide competitively contracted services including the feeder service to BART trains, bus systems in suburban counties, and an express bus system to downtown from San Mateo County.

In Dallas, competitively contracted service employs more than 200 buses including most suburban and express service.

Near Atlanta, Cobb County has established its own competitively contracted bus service to MARTA trains and to downtown Atlanta. Costs are below that of MARTA, and ridership reached its third year projection in the first year.

In Seattle, Snohomish County is now saving more than 30 percent on a system of competitively contracted express services. Ridership has increased more than 100 percent in the three years of contracted operation and service quality has improved.

There are many more examples which we could cite nationally and internationally where contracted out service is being used successfully. The savings realized from contracting are derived from a combination of more competitive employee wage rates,increased efficiencies, which generally result in the need for fewer administrative personnel, and streamlined work place approaches that simply make the operations run better. We believe that should be the goal of not only private operators but the public transit industry as a whole.

The introduction of competition into the Federal mass transit program has created a new industry for large and small private transportation companies which creates jobs and pay taxes at the local, state and federal levels. No one can objectively criticize the track record that has been established over the past fifteen years for paratransit and line haul service. Therefore, we urge this Subcommittee and the Full Committee to refrain from making any legislative changes.

The second issue of concern to our Coalition is the UMTA Charter Bus Regulation. Issued in 1987, this regulation states that if an unsubsidized operator were available and willing to provide charter service, then it should not be provided by a publicly subsidized operator. Under certain circumstances such as a special event or a situation where no private carrier is able to serve the area, the public authority would be authorized by UMTA to provide service.

We would want to state for the record that thousands of private bus companies, who receive no federal subsidy and must obtain private financing for their equipment, perform charter bus service in the United States. These tax paying companies should not have to compete for their livelihood against federally subsidized grantees whose principal mission is the transport of passengers to and from work.

Again, as with the 3(e)8(e) issue the charter bus regulation is working. The vast majority of public transit authorities is dealing with the regulation and the private sector for the first time in decades has seen marked improvement. In four years complaints from the public sector have been minimal and for the most part, have been solved to the mutual agreement of public and private providers.

In the thousands of cities in the United States, very few have exemptions because the private sector could not serve that area. The private sector responds to demand and for all intents and purposes is available throughout the country.

We believe that future evidence provided by UMTA and our own research will show that the provision of charter service is being superbly handled by private market forces and that is where it should stay. Any attempt by the federal government to intrude into that market will surely result in the loss of jobs, tax base revenue in local communities and service quality.

We urge no action whatsoever in this area.

In conclusion, we are probably one of the few groups that will approach your Subcommittee this year as you reauthorize the Surface Transportation Assistance Act who will not ask for any money or any legislative action. We simply request on the private sector provisions of the Urban Mass Transportation Act, namely 3(e)8(e) and the Charter Bus provisions that you leave them as they are and change no guidelines or regulations in any way related to them. In these times of budget uncertainty, we believe public transit needs the cooperation and a partnership with the private sector to provide flexibility when subsidy dollars are becoming more scarce and precious.

We appreciate this opportunity to present our views and I would be glad to try to answer any questions you may wish to ask.

# EXECUTIVE SUMMARY

## INTRODUCTION

This report documents the performance of the Regional Transportation District (RTD) in its implementation of the provisions of Colorado Revised Statutes 32-9-119.5, as amended, specifically the provisions of Senate Bill 164 of 1988 and Senate Bill 8 of 1990 (hereinafter referred to as SB 164), and the resulting performance of the contractors selected by RTD to provide transit service. SB 164 required that RTD contract at least 20 percent of its service to qualified private businesses in negotiated contracts.

The Final Report and the Technical Report, bound separately, fulfill the requirements of SB 164 that RTD contract with an independent certified public accounting firm for a neutral and unbiased performance audit.

The privatization effort has identified long-term cost savings and has shown that service quality can be preserved when transit services are privatized. These positive findings must be tempered, however, by the consideration of poor initial performance by all of the contractors and continuing problems with one of the contractors, significant front-end RTD costs resulting from intensive contract administration and operational oversight, and the uncertainty of the contractors' long-term financial situation, given high start-up costs and initial operating losses.

## COST OF SERVICE

### Determination of Savings to RTD Resulting from Privatization

The comparison of fiscal impacts of RTD directly operated versus contracted transit services was performed on both a fully-allocated and an incremental basis.

#### Fully-Allocated Cost Analysis

This analysis was structured to determine the dollar difference between the modeled in-house fully-allocated cost, had RTD directly operated privatized services, and the fiscal impacts resulting from RTD contracting service. The fully-allocated estimate of RTD's in-house costs implied that indirect operating costs would proportionately decline with the quantity of service contracted out. In addition, the fully-allocated costs included an allocation of the sunk capital-related costs for depreciation.

Two analyses were performed:

- Cumulative costs over five-year contract-term: This analysis addressed the cost savings that will result over the full five-year term of the contracts. The analysis projected a five-year savings resulting from privatization, on a fully-allocated basis, of $29.3 million, or 24.5 percent of RTD's in-house cost.

- Stable year costs: This analysis focused on 1993, the last full-year in which all the contracts will be in effect (assuming that RTD exercises the options). This analysis assumed that all transitional financial impacts associated with implementation of the privatization process (e.g., amortized non-recurring RTD labor costs for contract administration and operational oversight, consultant costs, underutilized RTD labor costs, and bus lease income) diminish to zero. This analysis determined a stable year savings resulting from privatization, on a fully-allocated basis, of $6.9 million, or 27.5 percent of RTD's in-house cost.

## Incremental Cost Analysis

The net fiscal impacts on an incremental (or "cash") basis were compared with the costs derived from the fully-allocated cost model. The net fiscal impacts were based on actual/forecasted (as opposed to modeled) reductions in indirect costs based on RTD's 1990 proposed amended and 1991 recommended budgets. In addition, the incremental comparison did not address depreciation costs since these were sunk costs, expended prior to the privatization effort. Three analyses, were performed:

- Cumulative costs over five-year contract-term: This analysis addressed the cost savings that will result over the full five-year term of the contracts. This analysis projected a five-year net positive fiscal impact (or savings) resulting from privatization, on an incremental basis, of $15.9 million, or 14.9 percent of RTD's in-house cost.

- Stable year costs: This analysis focused on 1993, the last full-year in which all the contracts will be in effect (assuming that RTD exercises the options). As in the fully-allocated comparison, this analysis assumed that all transitional financial impacts associated with implementation of the privatization process diminish to zero. This analysis projected a stable year net positive fiscal impact (or savings) resulting from privatization, on an incremental basis, of $3.9 million, or 17.0 percent of RTD's in-house cost.

- Cash basis through June 30, 1990: This analysis focused on cost and revenue experience during the period through June 30, 1990 (the most recent quarter for which financial results were available). This analysis estimated a net negative fiscal impact (or cost) of privatization of $1 million, on an incremental basis, through June 30, 1990.

## Analysis of Contractors' Actual Costs and Profitability

In order to preserve the confidentiality of proprietary information, this report presents only the sum of the costs for all three contractors. The following detailed analyses were performed on the contractors' actual cost data:

- Profitability: With start-up and leasehold improvement costs amortized over a three-year period, the contractors lost $217,000 out of total expenses of approximately $10.4 million, or a loss of 2.1 percent.

- Start-up and leasehold improvement costs: These costs were estimated at $1.6 million, or 2.4 percent of the proposed five-year base contract price for all of the contractors. In terms of actual cost experience through June 30, 1990, amortized start-up and leasehold improvement costs were 4 percent of actual costs.

- Local taxes: As profit making enterprises, the contractors were subject to state and local fuel, licensing, property, sales taxes to which RTD would not have been subjected. The result was an increase in revenue to state and local governments in the amount of $469,000, or approximately 5 percent of the contractors actual costs.

While the contractors have incurred a loss to date, each is an operating unit of larger corporations that have and may continue to fund relatively small local operating losses in individual operating units. Two of the contractors are actively pursuing other transit-related businesses in the Denver area. The privatized RTD services may effectively be a "loss-leader" which provided these contractors a "foot in the door" in the Denver market place.

Without knowledge of the overall business strategy of each contractor, which is, of course, subject to change, the financial

performance of individual operating units of larger businesses may not give any indication of the future price strategy of each contractor.

## SAFETY AND QUALITY OF SERVICE

The performance audit addressed the several measures of safety and quality of service, including accidents, on-time performance, maintenance reliability, and complaints. Because of inherent differences in operating conditions (e.g., density of street traffic) and passenger loadings, the comparison of quality of service between RTD and the contractors distinguished between several fundamental different types of bus services. These included local/limited radial and non-radial, express, and circulator routes.

### Safety

The contractors' accident rates were lower than RTD for bodily injury accidents, but higher than RTD for property damage accidents. This applied for all types of service. The contractors' property damage accident rates were much higher during the initial months of operation for local/limited radial routes and circulator routes.

### On-Time Performance

The contractors' on-time performance was better than RTD's for local/limited radial routes, approximately the same for local/limited non-radial and express routes, and slightly worse for circulator routes. The contractors' were observed running late more often than RTD and running early less often than RTD.

### Maintenance Reliability

During the April-June 1990 quarter, the contractors had a worse rate of miles between roadcalls than RTD for all types of service. The contractors' miles between roadcalls declined over the total analysis period. This can be partially explained by the new vehicles operated by the Group I contractor, which experienced fewer in-service maintenance problems during the initial months of operation.

### Complaints

The findings focused on operator performance, maintenance, and on-time performance:

- Operator performance: The contractors performed approximately the same as RTD for local/limited radial and express routes. The contractors performed much better than RTD for circulator routes.

- Maintenance: During the April-June 1990 quarter, the contractors performed slightly better than RTD for express routes and worse than RTD for circulator routes. In the total analysis period through June 1990, the contractors performed worse than RTD for express routes, but significantly better than RTD on circulator routes.

- On-Time Performance: The contractors' "early" complaint rate was close to RTD's rate for local/limited radial and radial and express routes. The contractors' "early" complaint rate was higher than RTD's for circulator routes in the April-June 1990 quarter but lower in the total analysis period through June 1990.

  The contractors had a higher "late" complaint rate for local/limited radial and express routes, but a significantly lower rate for circulator routes.

  The contractors had higher a "no-show" complaint rate for local/limited radial and express routes, but a significantly lower rate for circulator routes.

## CONTRACTORS' COMPLIANCE

### Compliance with Terms of Contracts

The contractors' compliance with the terms of their contracts was measured in two ways:

- Service delivery: In the total analysis period through June 1990, the contractors delivered in excess of 99.8 percent of scheduled revenue hours.
- Liquidated damages: 495 liquidated damage incidents were initiated by RTD, of which 288 were eventually assessed. There was a broad range in the level of compliance among the three contractors using this measure.

RTD's management experience goes beyond the quantitative descriptions, however. From RTD management's perspective, one contractor has had relatively few problems and has generally been receptive to recommendations for improvement from RTD management. Another contractor, after experiencing significant problems during start-up and initial revenue service, applied increased corporate and local management oversight to resolve its operational problems and currently is operating with only minor, routine problems. Concerns have been raised as to whether the third contractor has had an adequate level of management and supervision.

### Cost of Compliance

As noted above, the contractors incurred start-up and leasehold improvement costs of approximately $1.6 million.

The liquidated damages assessed to the contractors resulted from failure to provide service, provision of poor quality service, and other operational problems. Through June 30, 1990, liquidated damages resulted in a total cost of $27,625 to the contractors. This amounts to less than 0.3 percent of total contractor expenses.

## RTD MANAGEMENT OF PRIVATIZATION PROCESS

### Internal Procedures, Policies, and Financial Controls in the Implementation of SB 164

RTD structured a comprehensive technical evaluation process to qualify contractors. This evaluation addressed:

- Experience/qualifications/safety (40 percent of the evaluation score)
- Understanding/approach and organization for implementation (30 percent of the evaluation score)
- Financial responsibility (30 percent of the evaluation score)

RTD pursued several management approaches to monitor contract compliance and to control the safety and quality of service provided:

- Review of contractor instructor qualifications
- Weekly contractors meetings
- Street supervision
- On-site inspection of contractors' facilities and equipment
- Follow-up on customer complaints

In addition, RTD established several types of financial controls in its administration of the contracts:

- Review of daily service provision reports submitted by the contractors
- Review of daily fare revenue reports obtained from electronic fareboxes and review of contractor bank deposit receipts

During the course of the privatization effort, particularly during start-up activities and the initial weeks of operation of each

group of service, RTD management intensively oversaw the contractors' activities. While not actually "running the buses for them", RTD management made suggestions for improvements and even assigned RTD supervisors to work with the contractors during the initial operating period.

## Effectiveness and Efficiency of the Implementation of the Requirements of SB 164

Privatization of a segment of an existing public transportation network is a complex process. Conflicting goals of minimizing public subsidy and maintaining high service quality make it difficult to integrate outside operators into an existing operation.

RTD efficiently implemented privatization. As described above, privatization will result in a long-term savings to RTD. Further, RTD enhanced its income and minimized its net costs through leasing of buses and the Longmont facility, consolidating operating divisions, and more efficiently utilizing its bus operators through new provisions in its current union contract. At the same time, RTD has experienced a short-term net cost, due to extensive efforts necessary to initiate the privatization effort and underutilization of hourly labor resulting from the labor protection provisions of SB 164.

Effectiveness addresses ridership and quality of service. Ridership measurement was avoided as an evaluation measure because of the inability to account for external variables such as significant changes in employment along a route, traffic conditions, and changes in parallel transit service. The quality of service measures indicate that after initial start-up problems, service quality has been largely stable or improved.

## Cooperation Between RTD and the Contractors

Cooperation between RTD and the contractors was critical to the success of the privatization effort. RTD's approach was to deal with the contractors in a professional manner, explicitly recognizing the contractors' objective of operating profitable service. At the same time, RTD expected the contractors to deliver safe, first class service with limited direct operational assistance from RTD.

The contractors were generally satisfied with the professionalism of the RTD staff. Early operational problems did result in antagonistic attitudes by some RTD staff, but as contractor performance improved this attitude faded. The contractors characterized the RTD staff as "tough, but fair".

## CONCLUSIONS AND RECOMMENDATIONS

From the time that the privatization issue was first addressed by the General Assembly, RTD recognized that the success of the privatization effort would be the direct result of a cooperative relationship between RTD and the private sector. Further, both the RTD Board and senior management recognized the need to meet all of the requirements of the Bill, both in terms of the spirit and the letter of the law.

RTD faced the challenge of maintaining a balance between providing the contractors the opportunity to run their own businesses effectively and profitably and protecting the public's interest through preserving safe and reliable service. RTD has attempted to accomplish this through:

- Selecting contractor's qualified on the basis of previous operating experience, understanding of the Denver situation and approach for organizing the implementation of privatized service, and sufficient financial capacity

- Providing incentives to the contractors through retention of 100 percent of fare revenues collected
- Penalizing the contractors through assessment of liquidated damages for non-compliance of specific contract articles related to service provision and service quality.

The problem with this approach is twofold. First is the temptation for RTD to impose its own expectations as to how the contractors should manage their businesses. While RTD was quite properly concerned about the adequacy of training and the level of street supervision during the initial months of privatization, the initial mobilization problems faced by the contractors were eventually overcome.

Second, the incentive/penalty provisions had limited financial impact, address some performance measures over which the contractors have little control, and result, in some cases, from inconsistent observations of performance.

Once contractors have successfully mobilized and have achieved a stable level of safe and high quality service, RTD's objective in monitoring contractor performance should be to focus oversight on a set of consistently applied measures, tied to specified performance goals.

By adhering to an oversight program that addresses service safety and quality rather than contractor management of their own operations, RTD will both assure that the public's interests are protected and avoid the tendency to focus on the mechanics of service delivery rather than on the results.

## SUMMARY

RTD met both the spirit and the letter of the law in the implementation of the privatization initiative. RTD has successfully contracted out 20 percent of its service in an efficient and effective manner.

RTD has demonstrated that it can successfully implement privatized services and oversee initial operations by the contractors. Future contracts may provide RTD the opportunity to shift the focus of its attention from the contractors' management of their services to the contractors' actual performance. This can be accomplished through incentive/penalty provisions tied to the attainment of meaningful, realistically measured and obtainable, and consistently applied performance standards. Incentives and penalties should be established at dollar amounts that would encourage contractors to perform well. Such an approach would be appropriate once a contractor has successfully mobilized and achieved a stable level of safe and quality service.

RTD's experience to date indicates that, for low productivity routes, transit service contracted to the private sector can result, in lower long-term public subsidy than service provided directly by RTD. In the short-term, however, there were real costs to RTD during the initiation of privatized services in contract administration and operational oversight, and mandated consultant studies. Further, despite careful selection of potential contractors, and intensive oversight, some contractors experienced severe start-up problems and quality of service suffered in the initial months of operation.

Finally, it should be noted that operating losses by the current contractors and uncertainty regarding economic conditions may lead to higher proposed prices from both the current contractors, who may wish to operate their Denver projects profitability, or from new contractors, who may wish to minimize risk given the experience of the current contractors.

# I. INTRODUCTION

## PURPOSE OF THIS REPORT

This report documents the performance of the Regional Transportation District (RTD) in its implementation of the provisions of Colorado Revised Statutes 32-9-119.5, as amended, specifically the provisions of Senate Bill 164 of 1988 and Senate Bill 8 of 1990 (hereinafter referred to as SB 164), and the resulting performance of the contractors selected by RTD to provide transit service in the region. SB 164 required that RTD contract at least 20 percent of its service to qualified private businesses in negotiated contracts.

This report, which includes an Executive Summary, accompanied by a Technical Report, bound separately, fulfills the requirement of SB 164 that RTD contract with an independent certified public accounting firm for a neutral and unbiased performance audit. Specifically, SB 164 required this performance audit to address:

- Comparison of RTD's cost had it operated the privatized routes with the costs it experienced when these routes were privatized
- Evaluation of the contractors' compliance with the terms of their contracts and the costs of such compliance
- Determination that RTD's in-house costs reflect both the full cost of operation and that the costs for a particular route represent a valid use of part-time operators not higher than the District-wide average.
- Determination that RTD's in-house costs are based on the latest Board approved budget

In addition, the contract between RTD and the independent certified public accounting firm called for the following additional issues to be addressed:

- Evaluation of internal procedures to implement SB 164
- Evaluation of the methods utilized to compare RTD and contractor costs
- Evaluation of the contractor's profitability
- Review of general policies and procedures and implementation of financial controls
- Opinion on the efficiency and effectiveness of the implementation of the requirements of SB 164
- Cooperation between RTD and the private providers
- Significant matters observed by the auditors but not recognized by RTD
- Deviations by District employees from codes of conduct and policies and procedures (if any)
- Ambiguities, contradictions, and other issues presented by SB 164
- Recommendations concerning privatization procedures, monitoring of contractors, or cost allocations

## OVERVIEW OF RTD IMPLEMENTATION OF SB 164

SB 164 was signed into Colorado law by Governor Romer on May 3, 1988. Beginning in the spring of 1988 RTD management initiated a process to solicit proposals from potential contractors to provide the privatized service.
To date, RTD has accomplished the following:

- Solicitation of Proposals:
  - Created a Peer Review Committee to obtain information from public and private transit operators regarding opportunities for privatization
  - Prepared a draft Request for Proposal (RFP) and Service Contract
  - Determined the fair market value of the Longmont facility to establish monthly lease amount
  - Prepared vehicle lease and facility lease agreements
  - Identified four groups of services, consisting of a total of 17 route packages, for privatization.
  - Board approved routes selected for privatization and authorized issuance of RFP
  - Issued RFPs for four groups of privatized service
  - Held pre-proposal meetings with interested contractors
  - Received proposals 45 days after release of RFP
- Selection of Contractors:
  - Reviewed, evaluated and made recommendations of contract awards
  - Board awarded contracts on the basis of staff recommendation
  - Negotiated contracts and vehicle and facility leases and assisted contractors in implementing service
- Pre-Revenue Service Activities:
  - Contractors initiated start-up activities (beginning approximately 60 days before revenue service)
  - Monitored and assisted contractors in start-up activities
  - Trained contractors regarding contractual reporting obligations
  - Initiated weekly progress meetings with the contractors
- Revenue Service Activities:
  - Contractors initiated revenue service (each group began on a Sunday, at the beginning of a new run board)
  - Monitored revenue service
  - Received monthly billings from contractors
  - Reviewed billings, deducted liquidated damages (as necessary), and paid contractors

## OVERVIEW OF PRIVATIZED SERVICES

Exhibits 1 and 2 summarize the services contracted out by RTD. Originally, RTD intended to issue RFPs for three groups of service, each consisting of approximately seven percent of RTD's service. Each group of service was composed of several smaller packages of individual routes. Proposals were solicited for each package. This approach was intended to provide opportunities for smaller potential contractors to propose. Revenue service for Groups I, II, and III began on June 11, September 3, December 10, 1989, respectively.

All responsive proposals for the regional routes originally included in Group II/Package C had a price higher than

EXHIBIT 1

## DETAILED DESCRIPTION OF RTD PRIVATIZED SERVICES

| Group/ Package | Contractor | Type of Service | Route #/Description | Day of Week Operated |
|---|---|---|---|---|
| I/ABCDE | Mayflower | Local/Limited Non-Radial | 17-Jefferson County | MTuWThF |

References:

1) Based on contracts as revised. Original contract total = $63.168 million/328,920 annual revenue hours.
2) Based on recent RTD and contractor experience, annualized and adjusted for inflation.
   Total cost to RTD = Contract amount plus retained revenues.
3) Based on 1989 fully-allocated cost model, adjusted for recent and projected inflation. See Section of Final Report entitled "Cost Allocation Model" for description of the estimation methodology.
4) RTD systemwide revenue hours based on Dec 1989 runboard annualized to 1989 = 1,677,283 hours
   This represents hours of service in published timetables.
5) RTD systemwide platform hours based on Dec 1989 runboard annualized to 1989 = 1,850,224 hours
   This represents hours RTD bus operators are "behind the wheel" and excludes platform hours which RTD budgets but does not schedule in fixed-route service.

Dated 11/30/90

RTD's estimated in-house cost to provide the service. As a result, this service was not awarded. RTD elected to issue a fourth RFP to meet the requirement of SB 164 that at least 20 percent of the service be privatized. Group IV included three packages of regional routes and one package containing a local/limited non-radial route. Again, none of proposed prices for the regional service were less than RTD's in-house cost and none of these packages was awarded. The package containing the local/limited non-radial route was less than RTD's in-house cost and was awarded.

In order to avoid conflicting with the contract administration and operational oversight of the start-up and initial operations of the Groups II and III service, RTD delayed the issuance of the Group IV RFP by several months and delayed initiation of revenue service for Group IV until September 2, 1990.

Privatized services were provided by the following contractors:

- Mayflower Contract Services, Inc. (Mayflower):
  - Group I/Packages ABCDE
  - Group II/Package E
  - Group III/Package A
  - Group IV/Package C
- Laidlaw Transit, Inc. (Laidlaw):
  - Group II/Packages ABD
- American Transit Corporation (ATC):
  - Group III/Packages BC

## PERIOD OF ANALYSIS

SB 164 called for RTD to submit its report to the General Assembly by December 1, 1990. The period of evaluation in this study ended on June 30, 1990. The evaluation period included slightly more than a full year of Group I service, nearly 10 months of Group II service, and more than 6 months of Group III service. Group IV revenue had not yet commenced during the evaluation period.

Thus, while 20.5 percent of RTD's service was contracted out (in terms of annualized revenue hours), only the performance of Groups I, II, and III (amounting to 19.4 percent of RTD's service, on an annualized basis) was evaluated in this report. Various management issues that have evolved since July 1990, however, are addressed in the report.

## ORGANIZATION OF THIS REPORT

Due to the complexity of the operational, management, and financial issues involved, the success or failure of RTD's privatization effort cannot be summarized or reduced to a simple numerical or quantitative value. In the sections below, findings are discussed for the following major issues:

- Cost of service
- Safety and quality of service
- Contractors' compliance
- RTD management of privatization effort

This is followed by a discussion of conclusions, recommendations, and summary observations regarding the implementation of SB 164 by RTD.

[This page intentionally left blank]

# II. COST OF SERVICE

## INTRODUCTION

The following cost analyses were performed:

- Comparison of RTD's in-house cost of providing transit service on the privatized routes with the net cost to RTD of privatization: RTD's in-house costs were based on long-term, fully-allocated and short-term, incremental cost analyses of the routes privatized. The net cost to RTD of privatization included contractor invoices, retained fare revenues, RTD labor costs to implement and monitor privatization, initial underutilized manpower and fixed assets costs, and lease income.

- Analysis of contractors' actual costs and profitability: This analysis combined and reclassified the contractors' actual costs in a format comparable to RTD's cost structure.

## COMPARISON OF RTD'S NET IN-HOUSE COSTS OF PROVIDING TRANSIT SERVICE ON THE PRIVATIZED ROUTES WITH THE NET COST TO RTD OF PRIVATIZATION

### Structure of the Analysis

The cost comparison involved two alternative approaches, in order provide a realistic range in which the eventual fiscal results of privatization will likely reside. This was accomplished through the estimation of long-term, fully-allocated costs and short-term incremental (or "cash basis") costs.

Structuring the cost analyses involved several considerations. It was assumed that the price of privatized services would remain relatively stable (allowing for annual contract unit price adjustments). Based on the trend in proposals for the initial groups of service, however, there are strong indications that proposed prices will increase in the future. The operating losses experienced by the contractors, as described below, further support this conclusion.

The labor protection provisions of SB 164 initially precluded RTD from optimizing the utilization of the most costly component of its direct costs. This and other transitional fiscal impacts suggested the desirability of considering a stable year of operation in addition to the full five-year term of the contracts.

### Long-Term, Fully-Allocated Cost Analysis

Fully-allocated cost analyses implicitly assume that all costs are directly related to the level of service provided. The interpretation of long-term savings, as projected in a fully-allocated cost analysis, must be made in the following context:

- RTD's indirect "Category 1" costs are influenced more by Board and Federal policy, organizational structure, and fixed capital plant than by service levels. The fully-allocated cost model assumes that such costs are directly related to the quantity of service provided, and thus projects pro rata savings. The likelihood of this occurring is remote. Savings in administrative functions are dependent more on management initiatives and Board policy than on service levels.

- Long-term financial forecasts, and the fully-allocated cost projections upon which they are based, are an economic concept which imply that RTD has the ability to modify the

infrastructure that was assembled to operate the pre-privatized service. This includes a large administrative staff and large discrete fixed assets (e.g., garages) that may be less efficiently deployed as a result of reducing directly operated service.

Long-term, fully-allocated cost analyses may, therefore, provide an upper boundary of projected financial impacts.

### Short-Term, Incremental Cost Analysis

While the fully-allocated cost approach was appropriate in determining long-term savings and whether to award contracts, a more appropriate approach for estimating the short-term financial implications of privatization is the incremental costing methodology. The purpose of incremental cost analysis is to identify near-term "bottom-line" effects of alternative management decisions, each resulting in alternative revenue and cost flows.

This approach was addressed in the analysis in two ways:

- Indirect operating costs: The fully-allocated analysis implied theoretical reduction in indirect costs of 20 percent, or proportionate to the quantity of service privatized. By contrast, the incremental analysis applied the actual and forecasted reductions in such costs identified in the RTD proposed amended 1990 and recommended 1991 budgets. These budgets reflect the actual costs reductions achieved by RTD subsequent to privatization.

- Depreciation costs: The incremental analysis does not address the sunk capital-related costs for depreciation decisions.

Short-term, incremental cost analyses may, therefore, provide a lower boundary of projected financial impacts.

### Projection of Fiscal Impacts Had RTD Directly Operated Privatized Transit Service

U.S. Urban Mass Transportation Administration (UMTA) guidelines explicitly, and SB 164 implicitly, required RTD to use a fully-allocated costing methodology for determining RTD's in-house costs for each route it operates. RTD developed a state-of-the-art cost allocation model which addressed differences in unit cost associated with the different types of service that RTD operated. This was accomplished by distinguishing labor productivity and other unit cost factors for peak and off-peak service, different types of buses, and different RTD bus garages. It was thus possible to apply the model at the route-level and develop reasonable estimates of the cost for each group of service that was privatized.

For the purposes of comparisons of RTD's net in-house cost with the net cost to RTD of privatization, the cost allocation model did not include the costs of "retained functions". These include various operations and administrative functions, that RTD continued to provide regardless of whether or not it operated the routes to be privatized. Many of these functions represent system-wide responsibilities which could not be economically privatized or which RTD was specifically mandated to perform:

- Board Office
- Legal Counsel: Litigation/Real Estate and Property Management
- Security/Mall Stations
- Materials Management: privatization contract administrator
- Marketing (entire department)

- Controller: Revenue Collection/ Passes & Tokens, Commercial Advertising, Grants Administration, Ridership Reporting
- Administration: Print Production Management (portion), Janitorial Services (mall stations)
- Planning & Development: System Planning, Service Planning, Service Monitoring
- Bus Operations: Transportation Services/Dispatchers, Facilities Maintenance/Public Facilities and Transfer Facilities (including the maintenance of 10,000 bus stops, 415 bus shelters, 45 park-and-ride lots, the Market Street and Civic Center Stations, and the 16th Street Mall), and operation of the 16th Street Mall Shuttle (peak period only)

These retained function costs represent $9.9 million, or approximately 9.8 percent of the adopted 1989 RTD operating budget.

In addition, the cost allocation model excluded from the analysis various capital project-related expenses including:

- Legal Counsel: Litigation/ Construction Claims Management
- Controller: Interest
- Planning & Development: Design & Construction Administration, Transitway Technical Analysis, Construction Quality & Cost Control, Southwest Corridor, Rapid Transit Program

These excluded function costs represent $5.6 million, or 5.5 percent of the adopted 1989 RTD operating budget.

The cost allocation model classified costs according to the RTD chart of accounts, distinguishing between "Category 1" administrative costs and "Category 2" costs, largely associated with the transportation and maintenance functions. The costs of operating capital were allocated on the basis of fixed asset depreciation costs. The 1989 and 1990 estimates were based on budgeted costs, adjusted for actual cost experience. The inflation rate for cost projections was based on a weighted average of inflation rates for labor and selected commodities prepared by the Colorado Bureau for Economic Forecasting.

The cost allocation model was based on the most recently available RTD internal cost data, just prior to the initiation of privatized service. This included the current year operating budget and the most recent 12 months of labor productivity data for bus operators and mechanics and unit costs for parts and fuel. The model was initially validated and adjusted to replicate the 1989 budget, the year in which the privatization effort began.

SB 164 required the determination as to

> "... whether the District's costs for a particular route are based on a higher part-time driver labor cost percentage on the route than part-time drivers represent as a percentage of all district bus driver costs."

The concern here was that RTD should not base its estimate of the in-house cost of the routes to be privatized on the assumption that such routes would be unrealistically manned with part-time operators.

The fully-allocated cost model estimated costs on the basis of the average labor productivity and wage rates for each RTD bus garage, regardless of the type of route operated. The mix of part-time and full-time operators at each garage was assumed to occur evenly for each route operating out of that garage.

The cost allocation model was used to project both long-term, fully-allocated and short-term, incremental cost impacts.

**Fiscal Impacts Resulting from RTD Contracting Transit Services**

The following fiscal impacts resulted subsequent to privatization:

- Gross Contractor Cost to RTD:
  - Invoice costs: The contracts specified the amounts to be paid for each unit of service provided, for each year of the five-year term of the contracts.
  - Retained fare revenues: These are revenues retained by the contractors, which were previously received by RTD. It was assumed that had RTD continued to receive the fares, the proposed prices would have been higher (by the amount of the fare revenues). Thus, these retained revenues were interpreted as a cost to RTD.
- RTD labor charged costs to privatization: This included both "one-time" costs associated with initiation of privatization (spread out over the three-year base term of the contracts) and estimated recurring costs for contract administration and operational oversight.
- Consultant costs: This included the costs resulting directly from the provisions of SB 164, including this performance audit, the development of the cost allocation model, and a study of privatization of RTD management.
- RTD underutilized labor costs: This included a projection of wages and fringe benefits for underutilized operators, mechanics, and servicers resulting from the labor protection provisions of SB 164. These projected costs reflect adjustments for wage increases and more efficient utilization of bus operators permitted under the current union contract and for attrition.
- RTD underutilized fixed assets costs: This included an allocation of the costs of underutilized RTD facilities. By choosing to lease buses, RTD has efficiently managed the size of its bus fleet and, in fact, has been able to maintain its spare ratio (total active buses/peak buses - 1) at the UMTA-mandated ratio of 20 percent. Future bus acquisitions are planned to either replace buses to be retired or to provide for service expansion.
- Lease Income: This included revenue generated by leasing RTD buses and the Longmont facility.

**Results of Analyses**

The comparison of fiscal impacts of RTD directly operated versus contracted transit services was performed on both a fully-allocated and an incremental basis.

**Fully-Allocated Cost Analysis**

Exhibit 3 compares the fiscal impacts of RTD directly operated versus contracted service, computed on a fully-allocated basis. This analysis was structured to determine the dollar difference between the modeled fully-allocated cost, had RTD directly operated privatized services, and the fiscal impacts resulting from RTD contracting service. This dollar difference was then compared with the fully-allocated in-house cost to determine the percentage savings.

The analysis includes the following impacts:

- Projected fiscal impacts had RTD directly operated privatized transit services: This included the results of the fully-allocated cost model:
  - Category 1 (indirect) operating costs
  - Category 2 (direct) operating costs
  - Depreciation costs

- Fiscal impacts resulting from RTD contracting transit services:
  - Gross contractor cost to RTD
  - Lease income
  - RTD labor costs charged to privatization
  - Consultant costs
  - Underutilized labor costs
  - Underutilized fixed assets costs

Two analyses, consistent with the above discussion, were performed:

- Cumulative costs over five-year contract-term: This analysis addressed the cost savings that will result over the full five-year term of the contracts. The analysis projected a five-year savings resulting from privatization, on a fully-allocated basis, of $29.347 million, or 24.5 percent of RTD's in-house cost.

- Stable year costs: This analysis focused on 1993, the last full-year in which all the contracts will be in effect (assuming that RTD exercises the options). This analysis assumed that all transitional financial impacts associated with implementation of the privatization process (e.g., amortized non-recurring RTD labor costs for contract administration and operational oversight, consultant costs, underutilized RTD labor, and bus lease income) diminish to zero. This analysis determined a stable year savings resulting from privatization, on a fully-allocated basis, of $6.949 million, or 27.5 percent of RTD's in-house cost.

## Incremental Cost Analysis

Exhibit 4 compares the fiscal impact of RTD directly operated versus contracted service, computed on an incremental basis. This comparison is structured somewhat differently than the fully-allocated analysis in Exhibit 3. The analysis determined the net fiscal impacts on an incremental (or "cash") basis and then compared these impacts with the modeled Category 1 and Category 2 operating costs derived from the fully-allocated cost model. The net fiscal impacts were determined by summing favorable and unfavorable impacts resulting from privatization:

- Favorable impacts resulting from privatization:
  - Lease Income: This included the income resulting from leasing RTD buses and the Longmont facility.
  - RTD cost reduction: RTD realized actual cost reductions subsequent to privatization. This included the actual/forecast reductions in Category 1 indirect costs (which were lower than the fully-allocated projections). It also included reductions in Category 2 transportation and maintenance costs, adjusted for the adverse manpower utilization impacts of the labor protection provisions of SB 164 and efficiencies in manpower utilization achieved through recent changes in RTD's labor agreement.

- Unfavorable impacts resulting from privatization:
  - Gross contractor cost to RTD
  - RTD labor costs charged to privatization
  - Consultant costs

The net fiscal impacts were compared to the modeled RTD in-house operating costs. Only Category 1 (indirect) and Category 2 (direct) operating costs were considered. The incremental analysis did not address depreciation costs since these were sunk costs, expended prior to the privatization effort.

EXHIBIT 3 (Continued)
**COMPARISON OF FISCAL IMPACTS OF RTD DIRECTLY OPERATED VERSUS CONTRACTED TRANSIT SERVICES COMPUTED ON A FULLY-ALLOCATED BASIS ($ Millions)**

References (Continued):

4) Category 1 costs are not directly related to service levels.
5) Category 2 costs primarily include transportation and maintenance costs which are highly dependent upon level of service provided.
6) Reflects pro rata share of capital assets used to provide transit services.
7) Cumulative and stable year contractor invoices based on contract amounts. Value through 6/30/90 is less than contract amount because of adjustments for liquidated damages and services not delivered. The RTD Board has authorized the expenditure of liquidated damages income for increased contractor oversight.
8) Based on most recent RTD and contractor experience and projected for future years based on existing RTD Board policy. Revenues retained by contractors represent a cost to RTD.
9) Based on rental rate provisions of leases of buses and Longmont facility. Because bus lease income is derived from assets of short economic life, it is assumed to diminish to zero in the stable year analysis.
10) Labor costs charged to privatization separate recurring costs (based on annualized level of bi-weekly costs in August 1990) and non-recurring costs (including pre-implementation and post-implementation costs above the August 1990 bi-weekly level). Recurring costs are assumed to increase at the rate of inflation each year in the cumulative and stable year analyses; non-recurring costs are amortized over a three-year period.
11) Includes development of fully-allocated cost model, study of privatization of RTD management, and privatization performance audit. Amortized over a three-year period.
12) Results of labor protection provisions of SB 164, adjusted for wage increases and more efficient utilization of RTD hourly employees permitted in current union contract.
13) Reflects underutilization of RTD facilities and equipment acquired in anticipation of RTD directly operating a larger amount of service.

EXHIBIT 4 (Continued)
**COMPARISON OF FISCAL IMPACTS OF RTD DIRECTLY OPERATED VERSUS CONTRACTED TRANSIT SERVICES COMPUTED ON AN INCREMENTAL BASIS ($ Millions)**

References (Continued):

9) Labor costs charged to privatization separate recurring costs (based on annualized level of bi-weekly costs in August 1990) and non-recurring costs (including pre-implementation and post-implementation costs above the August 1990 bi-weekly level). Recurring costs are assumed to increase at the rate of inflation each year. In the cumulative and stable year analyses, non-recurring costs are amortized over a 3-year period.
10) Includes development of fully-allocated cost model, study of privatization of RTD management, and a privatization performance audit. Amortized over a three-year period.
11) Based on projections derived from a cost allocation model structured in conformance with requirements of SB 164 and UMTA policy. The model is based on 1989 RTD operating budget. Projections are based on actual inflation through June 1990 and projected increases in local cost of living and commodity prices. Does not include retained and excluded functions.
12) Category 1 costs are largely unaffected by service levels.
13) Category 2 costs primarily include transportation and maintenance costs which are highly dependent upon the level of service provided.

Three analyses, were performed:

- Cumulative costs over five-year contract-term: This analysis addressed the cost savings that will result over the full five-year term of the contracts. This analysis projected a five-year net positive fiscal impact (or savings) resulting from privatization, on an incremental basis, of $15.859 million, or 14.85 percent of RTD's in-house cost.

- Stable year costs: This analysis focused on 1993, the last full-year in which all the contracts will be in effect (assuming that RTD exercises the options). As in the fully-allocated analysis, this analysis assumed that all transitional financial impacts associated with implementation of the privatization process. This analysis projected a stable year net positive fiscal impact (or savings) resulting from privatization, on an incremental basis, of $3.852 million, or 16.96 percent of RTD's in-house cost.

- Cash basis through June 30, 1990: This analysis focused on cost and revenue experience during the period through June 30, 1990 (the most recent quarter for which financial results were available). The net cost of privatization included actual revenues and costs on a cash (not amortized) basis. This analysis estimated a net negative fiscal impact (or cost) of privatization of $1.009 million, on an incremental basis, through June 30, 1990.

## ANALYSIS OF CONTRACTORS' ACTUAL COSTS AND PROFITABILITY

### Structure of the Analysis

Actual cost information was obtained from each of the contractors. This information was reviewed for both completeness and reasonableness. In order to preserve the confidentiality of proprietary information, this report presents only the sum of the costs for all three contractors.

Exhibit 5 summarizes the analysis of the contractors' actual costs and profitability. Because the chart of accounts and accounting basis varied among the contractors, actual costs were restated in a common structure similar to RTD's chart of accounts. This involved separating "Category 1" administrative costs from "Category 2" transportation and maintenance costs. In addition, capital-related costs were separated from operating costs. By reclassify the contractors' costs, protection of the confidentiality of proprietary information is further enhanced, although the ability to interpret the contractors' business strategy is somewhat diminished.

### Analysis of Profitability

This analysis determined that, with start-up and leasehold improvement costs amortized over a three-year period, the contractors lost approximately $217,000 out of total expenses of approximately $10.413 million or a loss of 2.1 percent. The contractors have indicated that they may have underestimated their projected costs, both for start-up and of revenue operations.

While the contractors have incurred a loss to date, each is an operational unit of larger corporations that have and may continue to fund relatively small local operating losses in individual operating units. Two of the contractors are actively pursuing other transit-related businesses in the Denver area. The privatized RTD services may effectively be a "loss-leader" which provided these contractors a "foot in the door" in the Denver market place.

Without knowledge of the overall business strategy of each contractor, which is subject to change, the financial performance of individual operating units of larger businesses may not give any indication of the future price strategy of each contractor.

EXHIBIT 5

## CONTRACTORS' ACTUAL COSTS AND PROFITABILITY AND COMPARISON TO RTD COST STRUCTURE

To Date Through June 30, 1990

($ Millions)

| | Contractors' Actual Experience | | | Comparison to RTD Expenses | |
|---|---|---|---|---|---|
| | Revenues & Expenses | % of Total Expenses | % of Operating Expenses | % of Total Expenses | % of Operating Expenses |
| REVENUE | | | | | |
| Fares | $1.208 | 11.8% | | | |
| Invoices | $8.951 | 87.8% | | | |
| Other | $0.039 | 0.4% | | | |
| Total Revenues | $10.196 | 100.0% | | | |
| EXPENSES | | | | | |
| Category 1-Type Expenses | | | | | |
| Admin Salaries & Fringes | $0.116 | 1.1% | 1.4% | | |
| Corporate Overhead/Fee | $0.193 | 1.9% | 2.4% | | |
| Insurance/Claims | $0.327 | 3.2% | 4.0% | | |
| Other Admin Expenses | $0.255 | 2.5% | 3.1% | | |
| Subtotal | $0.892 | 8.8% | 11.0% | 10.8% | 12.3% |
| Category 2-Type Expenses | | | | | |
| Operator Wages & Fringes | $3.760 | 37.0% | 46.3% | | |
| Veh Ops Salaries & Fringes | $0.501 | 4.9% | 6.2% | | |
| Mechanic Wages & Fringes | $0.740 | 7.3% | 9.1% | | |
| Maint Salaries & Fringes | $0.118 | 1.2% | 1.5% | | |
| Fuel | $0.627 | 6.2% | 7.7% | | |
| Tires | $0.142 | 1.4% | 1.7% | | |
| Parts & Supplies | $0.491 | 4.8% | 6.0% | | |
| Repairs & Other Maintenance | $0.181 | 1.8% | 2.2% | | |
| Local Fuel/Veh/Prop/Sales Tax | $0.469 | 4.6% | 5.8% | | |
| Other Operations Expenses | $0.208 | 2.0% | 2.6% | | |
| Subtotal | $7.236 | 71.2% | 89.0% | 77.0% | 87.7% |
| Capital Expenses | | | | | |
| Bus Lease | $1.222 | 12.0% | | | |
| Facility Lease/Rent | $0.260 | 2.6% | | | |
| Depreciation | $0.132 | 1.3% | | | |
| Amortized Start-Up | $0.332 | 3.3% | | | |
| Amortized Leasehold Improvements | $0.086 | 0.8% | | | |
| Subtotal | $2.032 | 20.0% | --- | 12.2% | --- |
| Total Expenses Less Interest | $10.160 | 100.0% | 100.0% | 100.0% | 100.0% |
| Interest | $0.254 | | | | |
| Total Expenses | $10.413 | | | | |
| PROFIT (LOSS) | ($0.217) | (2.1%) | | | |

Note:

1) Contractors' expenses reclassified to conform to RTD chart of accounts and to preserve confidentiality.

2) Start-up and leasehold improvement costs are amortized over a 3-year period.

3) Comparison to RTD expenses does not include retained and excluded functions.

It is not possible to predict the economic conditions which influence contractor business and pricing strategies. However, as shown in Exhibit 2, RTD has received an increasingly higher hourly rate in proposed prices subsequent to Group I. If the current contractors are selected for future additional service, the effect of the start-up costs might be moderated, but all proposers will probably have higher hourly rates than previously received by RTD. The reasons for this include:

- Initial operating losses: The cost data provided by the contractors and included in this analysis show they are losing money fulfilling the terms of their contracts.

- Higher labor costs: Proposers may have anticipated the availability of RTD employees. Firms that were awarded contracts in Groups II and III found that few of these employees were available. The result may have been higher than expected training costs.

  One of the contractors has recently received notice from the National Labor Relations Board that an election will be held regarding representation of hourly employees. This will likely result in higher labor costs for the contractor. Subsequent proposals from this contractor and other contractors may, as a result, have a higher unit price.

- Higher fuel costs: The Groups I through IV contracts do not include any escalator for diesel fuel costs. Such costs have increased significantly since the summer of 1990 and were not anticipated by the contractors. Fuel costs, however, are a relatively small proportion of the contractors actual costs (i.e., 6.2 percent). Further, the contractors have the opportunity to control these costs through bulk purchases and/or use financial instruments to hedge against future price increases. This could be accomplished by the large national firms, who have the opportunity to arrange fuel purchase contracts on a national level. Alternatively, the RTD contractors could pool their local fuel purchases.

- Higher vehicle costs: The Group I contractor has experienced increasing maintenance costs for its "school bus-type" buses. RTD realized significant savings from proposals based on such less expensive vehicles. These savings may not be repeated if future contractors propose only standard transit coaches.

## Detailed Cost Analyses

The following additional analyses were performed on the contractors' actual cost data:

- Start-up and leasehold improvement costs: The cumulative start-up costs of all three contractors was estimated at $1.6 million, or 2.4 percent of their proposed five-year base contract price.

- Local taxes: As profit making enterprises, the contractors were subject to state and local government fuel, licensing, property, and sales taxes to which RTD would not have been subjected. The result was an increase in revenue to the State of Colorado and local governments in the amount of approximately $469,000, or approximately 4.6 percent of the contractors actual costs.

- Compensation for bus operators: The contractors' average cost for wages and fringe benefits for bus operators was $14.10 per revenue hour. This compares RTD's estimated $23.21 per revenue hour (based on 1989 cost allocation model and December 1988 runboard revenue hours annualized to 1989). RTD's higher cost per hour is explained by higher wages, more

expensive fringe benefits, and less efficient utilization of hourly labor resulting from work rules in the RTD union contract.

Other pertinent findings resulting from the analysis of the contractors' actual costs include:

- Inflation: The contractors' assumed overall inflation rate in their prices was only 3.66 percent, compared to a long-term projection of RTD's expenses of 5 percent.

- Fare revenues: Some of the contractors experienced higher than anticipated farebox revenue, in part a result of RTD's new fare structure, which has partially offset the higher costs.

- Reasonableness: The actual cost information provided by the contractors appears to be an accurate representation of their costs of providing service. Wage and fringe benefits costs are in a reasonable range. The relative mix of administrative and transportation/ maintenance costs were comparable with RTD's cost structure (not including the costs of retained and excluded functions, described above).

[This page intentionally left blank]

# III. SAFETY AND QUALITY OF SERVICE

## INTRODUCTION

The performance audit addressed the following measures:

- Safety
- On-time performance
- Maintenance reliability
- Complaints

Because of innerent differences in operating conditions (e.g., density of street traffic) and passenger loadings, the comparison of safety and quality of service between RTD and the contractors distinguished between several fundamental different types of bus services:

- Local/limited radial routes: These include local and limited routes operating largely on surface streets and either passing through or terminating in downtown Denver. Limited routes operate over the same streets as local routes, but make fewer stops. They operate primarily during the peak periods.
- Local/limited non-radial routes: These include local and limited routes operating largely on surface streets, but not entering downtown Denver. These routes, sometimes referred to as "crosstowns", generally encounter less congested streets.
- Express routes: These include routes between suburban park-and-ride lots and either the Market Street Station or the Civic Center Station in downtown Denver.
- Circulator routes: These include routes with relatively low passenger volumes and operating between primarily residential areas and nearby commercial areas. Circulator routes operate in Denver (two Central Circulator routes), Arvada, Aurora and Broomfield. The Central Circulator West (CCW) and Broomfield field Circulator (BRC) routes were privatized. After this study began, the Route CCW was reclassified as a local/limited radial route by RTD. It is considered a circulator route in this analysis.

In addition, the HandyRide service for handicapped passengers was contracted out. Because of significant changes in the operation of this service (e.g., revised eligibility and expanded service), direct comparisons of safety and quality of service were not possible. This service represented only 1.6 percent of total vehicle-hours.

Two other types of service were not specifically analyzed in this study:

- Regional routes: These include routes between outlying areas in the RTD service area. Since no qualified proposers submitted a price less than RTD's in-house cost of providing the service, RTD did not contract for this type of service.
- Mall shuttle: This is the service operated with specialized low-floor vehicles on the 16th Street Mall.

The safety and quality of service analysis had two perspectives:

- Retrospective: addressing overall contractor experience, focused on the total analysis period from contract initiation through June 1990
- Prospective: addressing future RTD management actions, focused on the April-June 1990 quarter which represented a stable period of operation for all contractors.

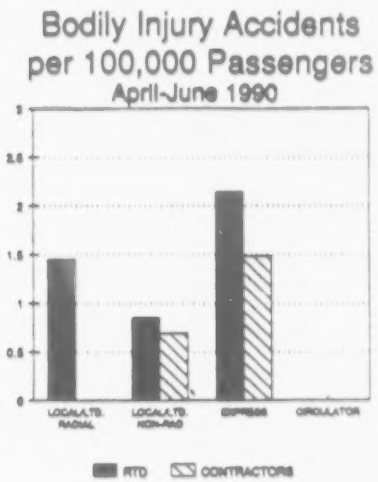
## SAFETY

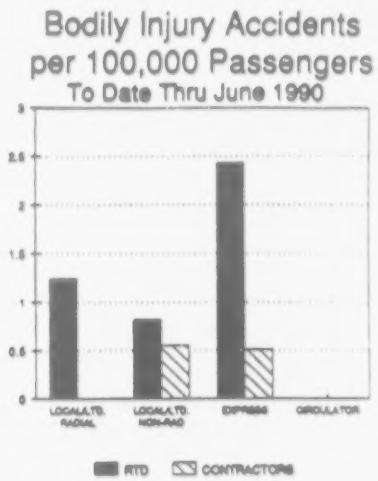
The results of the analysis are shown in Exhibit 6. The bodily injury accident rate was measured in terms of accidents per 100,000 passengers. The property damage accident rate was measured in terms of accidents per 100,000 vehicle-miles.

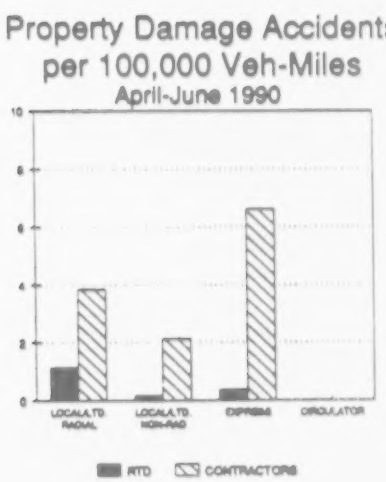
- Bodily injury accidents: In the April-June 1990 quarter and in the total analysis period through June 1990, the contractors' accident rates were lower than RTD's for local/limited radial and non-radial and express routes; neither RTD nor the contractors had bodily injury accidents on the circulator routes. During the total analysis period through June 1990, RTD had 455 bodily injury accidents and the contractors had 18.

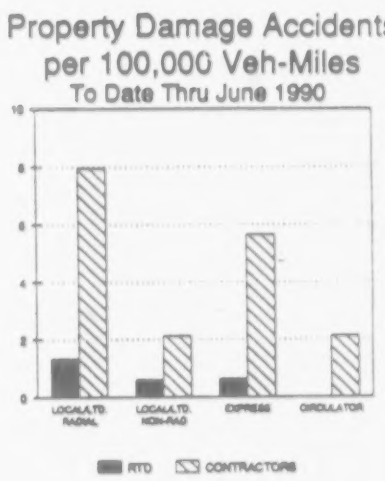
- Property damage accidents: The contractors had a higher rate than RTD for all types of service in both the April-June 1990 quarter in the total analysis period through June 1990. The contractors' accident rates were much higher during the initial months of operation for local/limited radial routes and circulator routes, resulting in higher rates in the total analysis period than in the April-June 1990 quarter. During the total analysis period through June 1990, RTD had 255 property damage accidents and the contractors had 168.

EXHIBIT 6
ACCIDENTS









## ON-TIME PERFORMANCE

The results of the analysis are shown in Exhibit 7. This measure addressed the conformance of bus arrival times to RTD schedule adherence standards. These standards define a bus as "on-time" if it arrives at time-points between one minutes earlier than scheduled and 5 minutes later than scheduled. Buses more than 5 minutes later than scheduled are defined as "late" and buses more than 1 minute earlier than scheduled are defined as "early".

On-time performance is measured by RTD traffic checkers at selected time-points for local/limited radial and non-radial and circulator routes. On-time performance of express routes is measured at the Market Street and Civic Center stations for all trips. Early arrivals of the express routes were ignored since passengers were not incovenienced.

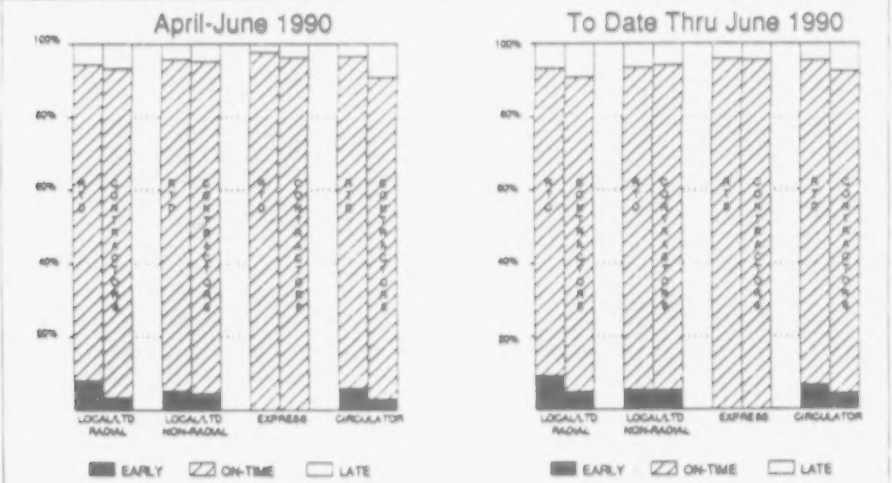
In the April-June 1990 quarter, the contractors' on-time performance was better than RTD's for local/limited radial routes, approximately the same for local/limited non-radial and express routes, and slightly worse for circulator routes. The contractors' were observed running late more often than RTD and running early less often than RTD.

The comparisons between RTD and the contractors was generally consistent for the April-June 1990 quarter and for the total analysis period through June 1990. The overall finding is that the contractors performed very well in terms of on-time performance.

EXHIBIT 7

ON-TIME PERFORMANCE

Percent of Observed Trips



## MAINTENANCE RELIABILITY

The results of the analysis are shown in Exhibits 8 and 9. This measure was based on the rate of vehicle-miles between mechanical roadcalls (as recorded by the RTD dispatch center). This included roadcalls due to mechanical failure or the need to replace a bus for mechanic reasons. It did not include roadcalls due to operator requests for a supervisor, accidents, passenger illness, or other emergencies.

During the April-June 1990 quarter, the contractors had an overall worse rate of roadcalls than RTD for all types of service. Miles between roadcalls declined for both RTD and the contractors over the total analysis period. The declining contractor value can be partially explained by the new vehicles operated by the Group I contractor, which experienced fewer in-service maintenance problems during the initial months of operation.

EXHIBIT 8
MAINTENANCE RELIABILITY, BY TYPE OF SERVICE
Miles Between Roadcalls

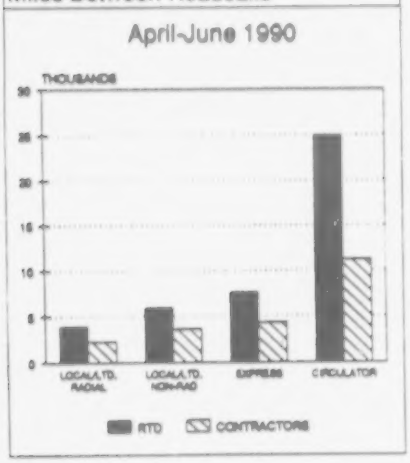


EXHIBIT 9
MAINTENANCE RELIABILITY, BY QUARTER

| Quarter | Miles Between Mechanical Roadcalls All Types of Service | |
|---|---|---|
| | RTD | Contractors |
| Jun-Sep 1989 | 6,120 | 8,575 |
| Oct-Dec 1989 | 5,255 | 5,629 |
| Jan-Mar 1990 | 4,817 | 4,182 |
| Apr-Jun 1990 | 4,513 | 3,538 |
| Total Through June 1990 | 5,174 | 4,665 |

## COMPLAINTS

The results of the analysis are shown in Exhibits 10, 11, and 12. Complaints were measured based on the rate of complaints received at RTD's Telephone Information Center (TIC) per 100,000 passengers. Complaint data was entered into a computerized data base that classified complaints by route, by type of complaint, and company name (RTD or the contractors).

The overall findings focused on operator performance, maintenance, and on-time performance:

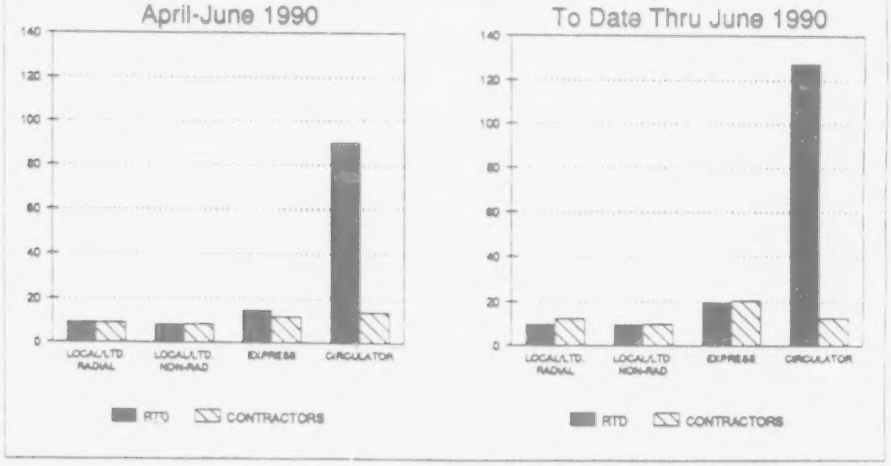
- Operator performance complaints: These findings are shown in Exhibit 10. These complaints included careless driving, driver discourtesy, driver not knowing the route, not calling stops, improper procedures (which included other, unclassified complaints), providing incorrect information to passengers, passing a bus stop, passing a passenger waiting for a bus, and causing a passenger to miss a transfer.

In both the April-June 1990 quarter and in the total analysis period through June 1990, the contractors performed about the same as RTD for local/limited radial and non-radial and express routes, but significantly better for circulator routes.

EXHIBIT 10

OPERATOR PERFORMANCE COMPLAINTS

Complaints per 100,000 Passengers



- Maintenance Complaints: These findings are shown in Exhibit 11. Maintenance complaints addressed problems with the mechanical condition and the cleanliness of the bus. Local/limited radial and non-radial route complaints were negligible for both RTD and the contractors. During the April-June 1990 quarter, complaints were slightly lower for the contractors' express routes and significantly higher for the contractors' circulator routes.

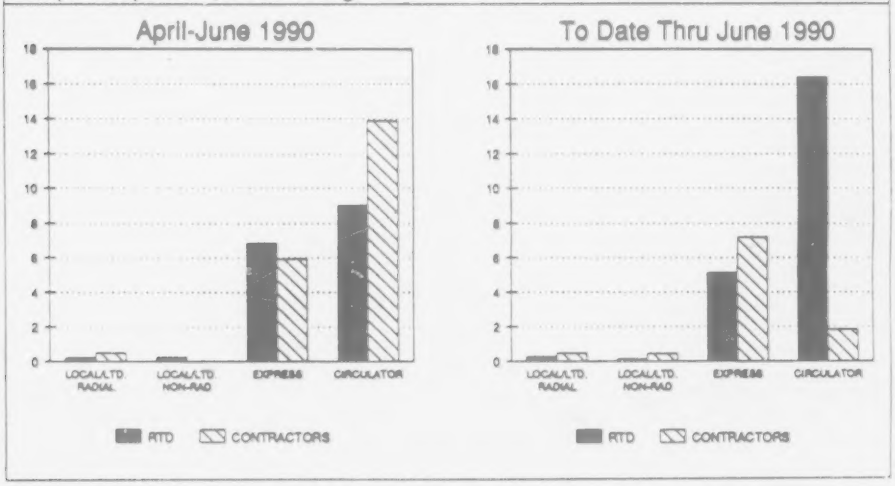
  In the total analysis period through June 1990, the contractors performed worse than RTD on the express routes but significantly better than RTD on the circulator routes.

  The variances between these findings and the maintenance roadcall analysis addressed above may be due to the limitations discussed below.

EXHIBIT 11

MAINTENANCE COMPLAINTS

Complaints per 100,000 Passengers



- On-Time Performance Complaints: These findings are shown in Exhibit 12. The contractors' "early" complaints were similar to RTD's rate for all types of service except circulator routes. In the April-June 1990 period, the contractors' circulator route complaint rate was significantly higher than RTD's. In the total analysis period through June 1990, the contractors' "early" complaint rate was significantly lower than RTD's for circulator routes.

  The "late" complaint findings contrasted with the "early" complaints. In the April-June 1990 quarter, the contractors were slightly higher than RTD's rate of "late" complaints for all types of service except for circulator routes, where the contractors had no complaints. In the total analysis period through June 1990, the contractors had a significantly higher "late" complaint rate than RTD for local/limited and express routes, a slightly higher rate for local/limited non-radial routes, and a significantly lower rate for circulator routes.

  In the April-June 1990 quarter the contractors had higher "no-show" complaint rates for local/limited radial and express routes, a slightly lower rate for local/limited non-radial routes, and a significantly lower complaint rate than RTD for circulator routes. The contractors' complaint rates were significantly higher over the total analysis period through June 1990 for local/limited radial and express routes, slightly higher for local/limited non-radial routes, and significantly lower for circulator routes.

It should be noted that complaint data has significant limitations. Based solely on the volume of complaints received at the TIC, the data reflects none of the follow-up routinely given complaints by either RTD and the contractors. The validity of each complaint is not researched before it enters the data base. Further, none of the complaints received directly by the contractors (at their local offices) are included. The extent to which the complaint findings differ from the maintenance roadcall and observed on-time performance data described in sections above can be explained partially by these limitations.

# IV. CONTRACTORS' COMPLIANCE

## INTRODUCTION

SB 164 required that RTD determine the contract compliance by the private providers and the cost of such compliance, including whether such costs will be recurring or reducible.

## CONTRACTORS' COMPLIANCE WITH TERMS OF CONTRACTS

RTD had two quantitative approaches to measure overall contractor compliance:

- Service delivery: RTD addressed service delivery through two gross measures, revenue hours and vehicle miles. In the total analysis period through June 1990, the contractors delivered in excess of 99.8 percent of scheduled revenue hours. This measure was based on daily service provision reports by the contractor and verified by electronic farebox data (for two contractors) and observation by RTD traffic checkers and street supervisors.

  The contractors were required to gather and report certain financial and non-financial data that they asserted was not necessary for the operation of their services. RTD, however, required this information so that it could discharge its reporting responsibilities to UMTA.

- Liquidated damages: The contracts included provision for RTD to assess liquidated damages in those cases of observed lack of compliance by the contractors. Exhibit 9 summarizes the number of liquidated damages incidents, by contract provision, initiated by RTD and eventually assessed in the total analysis period through June 30, 1990. A total of 495 liquidated damage incidents were initiated by RTD, of which 288 were eventually assessed. Overall, there was a broad range in the compliance among the three contractors.

  Most liquidated damages occurred during the initial months of service for each group of service. In general, the number of liquidated damages has been declining as contractors' operations have stabilized and they have come to understand and respond to RTD expectations regarding service quality.

RTD's experience goes beyond the quantitative descriptions described above, however. From RTD management's perspective, one contractor has had relatively few problems and has generally been receptive to recommendations for improvement from RTD management. Another contractor, after experiencing significant problems during start-up and initial revenue service, applied increased corporate and local management oversight to resolve its operational problems and currently is operating with only minor, routine problems. Concerns have been raised as to whether the third contractor has had an adequate level of management and supervision.

RTD transmitted cure notices to one of the contractors in the initial weeks of its revenue service. These notices addressed the contractor's failure to maintain its leased buses per the terms of the lease and the contractor's failure to meet RTD contract standards regarding the quality of service provided (e.g., failure to provide service and on-time performance). The cure notices were issued after the assessment of a large number of liquidated damages and after extensive discussion with the contractor's on-site manager and with corporate management. The contractor quickly responded to the cure notices and these notices have since been closed.

45-155 O—91——28

## CONTRACTORS' COST OF COMPLIANCE

The contractors' incurred costs related to either complying with their contracts or as a result of being observed in non-compliance:

- Start-up and leasehold improvements: Non-recurring start-up and leasehold improvement costs amounted to $1.6 million, or 2.4 percent of the five year total contract price. By amortizing these costs over the initial three year term of the contracts, they amounted to $418,000 or 4.1 percent of total actual costs through June 30, 1990. These costs were the result of:
  - Training: This includes costs to hire and train bus operators, mechanics, cleaners, supervisors, and instructors.
  - Buses: Contractors operating their own vehicles were required to paint the buses to RTD's standards and install wheelchair lifts, emergency exits, and destination signs to meet RTD's specifications.
  - Facility preparation: The contractors acquired operating facilities which had to be converted to transit use. This included construction of office space; installation of shop equipment, ventilation, and lighting; and paving of storage areas. The Group III/Package B and C contractor leased RTD's existing Longmont facility, thereby limiting this expense somewhat.
- Liquidated damages: As shown in Exhibit 13, assessed liquidated damages resulted in a total cost of $27,625 to the contractors. This represented less than 0.3 percent of the contractors' total actual costs.

# V. RTD MANAGEMENT OF PRIVATIZATION PROCESS

## INTRODUCTION

The following discussion addresses several areas of RTD's management of the privatization process:

- Internal procedures, policies, and financial controls in the implementation of SB 164
- Effectiveness and efficiency of the implementation of the requirements of SB 164
- Cooperation between RTD and the contractors
- Significant matters observed by the auditors but not recognized by RTD
- Deviations by RTD employees from codes of conduct and policies and procedures
- Ambiguities, contradictions, and other issues presented by SB 164

## INTERNAL PROCEDURES, POLICIES, AND FINANCIAL CONTROLS IN THE IMPLEMENTATION OF SB 164

RTD structured a technical evaluation process to qualify contractors. This evaluation consisted of the following:

- Experience/Qualifications/Safety (40 percent of evaluation score):
  - Contractor's previous experience in performing transit services of similar quality, scope, and complexity
  - Qualifications of key staff assigned to the contract
  - Safety record in providing bus services (emphasized in RTD's evaluation forms)
  - References
- Understanding/Approach and Organization for Implementation (30 percent of evaluation score):
  - Understanding of the scope and complexity of the scheduled fixed-route service
  - Approach to system implementation and operation, administrative management plan, maintenance plan, operations plans, and driver selection and training plan
  - Availability of sufficient qualified personnel, facilities, and equipment to comply with all solicitation requirements
- Financial Responsibility (30 percent of evaluation score):
  - Sufficiency of financial resources or ability to obtain financing for the proposed services, including bonding and insurance
  - Adequacy of financial statements over last three years
  - Adequacy of proposed financing of equipment acquisition
  - Bank references

RTD pursued several management approaches to monitor contract compliance and to control the safety and quality of service provided:

- Review of Contractor Instructor Qualifications: RTD researched the professional experience of instructors that the contractors intended to use to train their bus operators. RTD discovered several instances where the contractors proposed personnel did not have adequate experience to perform as instructors.

- Weekly contractors meetings: RTD operations, finance, and contracts staff routinely met with the contractors to review progress and to identify and resolve problems. These meetings began soon after contract award and continue on an on-going basis. These meetings provided an opportunity for the open exchange of information and ideas. In many cases incipient problems were resolved before service disruption resulted. The meetings were documented in the form of letters to the contractors' on-site managers.

- Street supervision: RTD supervisors routinely monitored the performance of the contractors. This included observation of on-time performance, driver and bus appearance, and other operational issues.

- On-site inspection of contractors' facilities and equipment: In order to be assured that buses were being safely maintained, RTD conducted inspections of buses both in the contractors' maintenance facilities (leased buses only) and other locations. Vehicle condition and maintenance records were reviewed to determine if the vehicles were being inspected per the terms of the contracts and were in a state of good operating condition.

- Follow-up to customer complaints: Complaints received by RTD required responses from the contractors. RTD reviewed the contractors' responses to determine what follow-up by RTD would be appropriate.

RTD established several types of financial controls in its administration of the contracts:

- Quantity of service provided: Since the billing was on the basis of a contractually agreed upon hourly billing rate, RTD needed assurance that the quantity of service in the invoices was actually provided. This was achieved through a combination of daily service provision reports by the contractors, which documented service actually provided, by route, and independent verification.

- Fare revenues: RTD provided the basis for evaluating the reasonableness of the financial and ridership reports submitted by contractors in several ways. RTD required bank deposit slips from the contractors. In addition, RTD counted the tokens and tickets collected by the contractors and reimbursed them for the discounted value.

During the course of the privatization effort, particularly during start-up activities and the initial weeks of operation of each group of service, RTD management intensively oversaw the contractors' activities. While not actually "running the service for them", RTD management made suggestions for improvements and even assigned RTD supervisors to worked with contractor supervisors during the critical initial operating period.

## EFFICIENCY AND EFFECTIVENESS OF THE IMPLEMENTATION OF THE REQUIREMENTS OF SB 164

Privatization of a segment of an existing public transportation network is a complex process. Conflicting goals of minimizing public subsidy and maintaining safety and service quality make it difficult to integrate outside operators into an existing operation.

RTD's efficiency in its implementation of privatized transit service was demonstrated through the following measurable cost savings:

- Long-term cost savings: As shown in the cost of service analysis above, the long-term net savings in public subsidy resulting from the privatization of the low productivity routes selected by RTD was projected to be $21 million, or approximately 19 percent of net cost.

- Leasing underutilized assets: By leasing buses and the Longmont facility, RTD will derive $7.2 million dollars. Leasing these assets keeps them in productive use for transit purposes, mitigates excess capacity of assets, and avoids any problem regarding Federal funding.

- Consolidating operating garages: Privatization provided RTD the opportunity to consolidate its operations from five locations to three. RTD had previously been considering closing its Alameda division at the time the new District Shops facility opened. This action had the potential for long-term savings of approximately $400,000 resulting from reduction in transportation and maintenance managerial and clerical staff costs, facilities maintenance costs, and rental of adjacent property for bus storage. The actual achievement of this level of savings would depend on the rate of attrition and the occurrence of job vacancies.

  The advent of privatization provided a clear advantage to close Alameda. Privatization of several routes operating out the Alameda division reduced the number of peak vehicles be moved to other divisions and minimized additional pull-out/pull-in and relief travel time and pull-out/pull-in vehicle miles, thus reducing additional bus operator costs to acceptable levels.

  RTD closed its Alameda division and leased the Longmont facility to a contractor. RTD now operates only out of the East Metro, Platte, and Boulder divisions (Boulder operates only on weekdays; weekend operations were privatized).

- Biddable Trippers: RTD was able to negotiate a significant change in its current union contract regarding the utilization of bus operators. The presence of SB 164 may have contributed to RTD's ability to negotiate this change.

  In the scheduling process, schedulers often use unconnected pieces of work ("trippers") as a mechanism for assembling efficient day-long assignments, or "runs", for bus operators. The prior union contract provided for a specified number of trippers to be selected by the bus operators, on the basis of seniority. This provision severely lessened RTD management's ability to efficiently utilize manpower.

  The RTD Schedules Department estimated that the elimination of biddable trippers has resulted in a savings of approximately $1.6 million for the 80 percent of service currently operated by RTD.

- Assessment of Liquidated Damages: RTD's intent in the assessment of liquidated damages was to encourage compliance by the contractors. The income derived was not a major objective. Indeed, the RTD Board authorized management to use such income to cover the cost of additional street supervisors needed to oversee contractor operations. The net result will be safer and higher quality service.

It is important, however, to consider several real costs of privatization:

- Labor protection provisions of SB 164: To a large extent, RTD's efficiency was lessened by the no-layoff provisions of SB 164. Labor costs are approximately 70 percent of the average transit system budget, including RTD. Thus, SB 164 prevented RTD from fully controlling the largest of its cost components.

  While the rate of attrition was greater than anticipated, RTD was forced to schedule its operators in a less than optimal manner following the privatization of each group of service. This is a transitional problem, however, and will diminish in later years as attrition reduces the RTD work force to an optimal level.

- RTD Start-Up Costs: The time charged to privatization by RTD staff prior to the initial revenue service, while extensive, appeared to be necessary and appropriate. RTD management, as noted above, had two conflicting objectives. While it was obliged to minimize cost and meet the terms of SB 164, it still had to protect the public's interest in terms of safety, quality of service, and protecting RTD assets. RTD's efforts included preparing the initial RFP, meeting with potential proposers, selecting routes to be privatized, issuing the RFPs, selecting contractors, and monitoring start-up activities.

- Fare revenues retained by the contractors: SB 164 called for the contractors to retain between 50 and 100 percent of the fare revenues collected. RTD elected to have the contractors retain 100 of the fares collected (i.e., the cash fares and the discounted value of the tokens and tickets). This arrangement provided a clear incentive to the contractors to maintain attractive, reliable service. At the same time, the contractors benefitted from RTD's fare restructuring in 1989 which resulted in increases in overall fare revenue.

- Increased deadheading: Consolidation of RTD operations to three garages, while reducing various administrative and facility maintenance costs, does increase the amount of unproductive deadheading and relief travel time between the garages and the point where buses and operators enter revenue service. RTD attempts to minimize this adverse impact through efficient scheduling practices.

- Use of Part-Time Operators: RTD's new union contract provided for an increase in the percentage of part-time operators from 10 to 20 percent. While RTD has significantly increased the number of part-time operators, RTD has found it increasing difficult to attract and retain such operators.

  This is a problem common in the transit industry. Very often, persons hired as part-time operators are, in fact, seeking eventual transition to full-time positions. By decreasing the proportion of full-time operators, RTD has made it more difficult for part-time operators to achieve full-time status. The net result of this is increased turnover and training costs to RTD.

Effectiveness addresses ridership and safety and quality of service. Ridership measurement was avoided as an evaluation measure because of the inability to account for external variables such as significant changes in employment along a route, traffic conditions, and changes in parallel transit service. In terms of bodily injury accidents, the contractors performed better than RTD; in terms of property damage accidents, the contractors performed worse than RTD. The quality of service measures indicate that after initial start-up problems, service quality been stable or improved.

## COOPERATION BETWEEN RTD AND THE CONTRACTORS

Cooperation between RTD and the contractors was critical to the success of the privatization effort. RTD's approach was to deal with the contractors in a professional manner, explicitly recognizing the contractors' objective of operating profitable service. At the same time, RTD expected the contractors to deliver safe, first class service with limited direct operational assistance from RTD.

This level of cooperation began in the early phases of the privatization effort, during the development of the Request for Proposals, and continues as an on-going effort, now that all contracts are in place. Specific elements of the cooperative relationship between RTD and the contractors, include:

- Peer Review Committee
- Pre-proposal meetings
- Weekly Review meetings
- Start-up oversight
- Early operations oversight
- Continuing oversight

In addition, RTD accomplished the following, not specifically required in its contracts:

- RTD invited the contractors' operator instructors to attend classes for RTD's operator instructors.
- RTD Quality Control staff instructed contractor staff regarding procedures for preventative maintenance inspections.
- RTD Maintenance Reporting System staff instructed contractor staff regarding the reporting of preventative maintenance and repair data.
- RTD Operations staff visited the contractors' facilities to assist in the training of the contractors' dispatchers. The contractors' dispatchers visited the RTD dispatch center to observe RTD procedures and gain a better appreciation of the need for close communication and coordination.
- RTD Finance staff trained the contractors' administrative staff in reporting UMTA Section 15 data. This included providing report forms, identifying certified public accountants, and answering questions at the contractors' facilities.
- RTD developed an agreement wherein if a contractor notifies RTD that it will not be able to perform a specific piece of work, RTD will replace that service and waive liquidated damages at a price that results in a lesser cost to the contractor than if the contractor failed to provide service entirely. This approach encouraged the contractors to report missed trips and resulted in the potential for improved quality of service.

Discussions with all of the contractors revealed that they were generally satisfied with the professionalism of the RTD staff. Early operational problems did result in antagonistic attitudes by some RTD staff, but as contractor performance improved this attitude faded. The contractors generally believed that RTD staff were "tough, but fair".

## SIGNIFICANT MATTERS OBSERVED BY THE AUDITORS BUT NOT RECOGNIZED BY RTD

During the course of the performance audit, no new issues were uncovered that had not been previously recognized by RTD or the contractors.

## DEVIATIONS BY RTD EMPLOYEES FROM CODES OF CONDUCT AND POLICIES AND PROCEDURES

No such problems were observed.

## AMBIGUITIES, CONTRADICTIONS, AND OTHER ISSUES PRESENTED BY SB 164

SB 164, while clear in its overall objectives, did include some language which would have made implementation difficult for RTD. RTD contributed toward the language in Senate Bill 90-8 amending CRS 32-9-119.5, which addressed many of these problems:

- Reference was made to "negotiated contracts" rather than lowest price "bids": The intent of SB 164 was to obtain the lowest cost from the most qualified available contractor. Since contractors were not selected solely on the basis of price, the term "bid" and "bidder" was not appropriate and actually conflicted with the context of the selection process. Reference was therefore made to "proposers" rather than "bidders".

- Maximum duration of the contract: This was increased from one year to up to three years with options for extending the contracts up to a total of five years. This change recognized that few contractors will be willing to assume the risk for mobilization and capitalized cost for short-term contracts. It was anticipated that proposed prices would have been significantly higher for shorter term contracts, reflecting the increased risk to the proposers.

- Time period for response to the Request for Proposals: This was changed from less than 90 days to "not to exceed 90 days nor less than 45 days"

# VI. CONCLUSIONS AND RECOMMENDATIONS

## CONCLUSIONS

The privatization effort has demonstrated that, for lower productivity routes, RTD can reduce its net cost by contracting for transit services from private providers. Over the five-year term of the privatization contracts, RTD is projected to save more than $29 million (25 percent), on a fully-allocated basis, and nearly $16 million (15 percent), on an incremental basis, over its in-house costs. In stable years, after various privatization initiation costs have been fully amortized, the annual savings were projected to be as high as 28 percent, on a fully-allocated basis, and 17 percent on an incremental basis. Further, for many measures of safety and quality of service, the contractors performed as well or better than RTD.

These positive findings must be tempered, however, by the consideration of:

- Significant front-end RTD costs resulting from contract administration and operational oversight
- The uncertainty of future contractor proposed prices and, hence, RTD cost savings given higher than expected contractor start-up costs and initial operating losses.
- Lower performance by the contractors in terms of some performance measures, for some types of service
- Poor initial performance by all of the contractors and continuing problems with one of the contractors

It should be noted that the results at the conclusion of the three-year base term of the contracts (or after four or five years, if RTD exercises options with the current contractors) may vary from the findings contained herein, given the relatively short-term focus of this study.

RTD faced the challenge of maintaining a balance between providing the contractors the opportunity to run their own businesses effectively and profitably and protecting the public's interest through preserving safe and reliable service and protecting RTD assets leased to the contractors. RTD recognized the potential advantages of the profit motive and competition in controlling the proposed price but at the same time made provision for controls to assure that all services contracted for were actually provided and were consistent with RTD's own safety and service quality standards.

RTD has attempted to accomplish this through:

- Attention to the "business" side of privatization: This included preparation of the RFP, selection of contractors, and program oversight. RTD structured a procurement process that was intended to protect the public's interest, in terms of safe and reliable service, and provided opportunities for qualified local and small businesses. This process was developed in cooperation with RTD's Peer Review Committee, composed of knowledgeable persons in the public and private transit industry.
- Contractor selection: Contractors were evaluated and judged qualified on the basis of previous operating experience, adequate understanding of the Denver situation and approach for organizing the implementation of privatized service, and sufficient financial capacity.
- Performance incentives: These were in the form of retention of 100 percent of fare revenues collected.

- Performance penalties: These were in the form of liquidated damages for non-compliance of specific contract articles related to service provision and safety and service quality.

Routine observation by RTD street supervisors, spot inspections of vehicles and facilities, and periodic meetings with the contractors assured that service safety and quality was measured, that problems were identified, and that resolution of problems could be initiated. The dedication of both a contracts and operations department project manager helped assure that the appropriate level of attention was paid to the privatization effort.

A concern with RTD's management approach, identified by the contractors and others, is the temptation for RTD to impose its own expectations as to how the contractors should manage their businesses. While RTD was quite properly concerned about the adequacy of training and the level of street supervision during the initial months of privatization, the initial mobilization problems faced by the contractors have largely been overcome.

The incentive/penalty system utilized by RTD had several weaknesses:

- Financial impact: The dollar amount of the incentives and penalties were too small to be of significant importance to the contractors. Incentives from retained fare revenues were difficult to determine, since the effect of the recent fare restructuring probably overshadowed any passenger response to quality of service. In all likelihood, such incentives would have been small, since, in the total analysis period, retained fare revenues equaled less than 17 percent of total contractor costs.

  Penalties resulting from liquidated damages amounted to less than 0.3 percent of contractor costs.

- Degree of contractor control: The incentives to the contractors for good quality service are based on fare revenues received. Unfortunately, the contractors do not have the ability to directly control two important aspects of fare revenue. The overall fare structure is imposed by RTD. While the recent fare restructuring actually benefitted the contractors, the revenue increase probably had little to do with the quality of service they provided.

  The other aspect affecting fare revenue is ridership. Prevailing regional economic conditions, as well as route-specific changes (e.g., expansion of major employers and increases in traffic congestion) can have as much or greater influences on ridership than any change in service quality.

- Inconsistent observations: Liquidated damages are imposed by RTD based on observations from a variety of sources. These include observations by street supervisors, maintenance inspections of buses, and passenger complaints. There is no assurance that the occurrence of these observations is uniform or consistent. Street supervision, for example, is deployed based on day-to-day and hour-to-hour operational considerations, rather than on any attempt to observe all service.

  By contrast, measurement of on-time performance by traffic checkers was an example of unbiased performance measurement. The number of observations were in approximately the same proportion as the number revenue hours operated by the contractors. Thus, each contractor had the same likelihood of being observed.

## RECOMMENDATIONS

Once contractors have successfully mobilized and have achieved a stable level of safe and high quality service, RTD's objective in monitoring contractor performance should be to focus oversight on a set of consistently applied measures, tied to specified performance goals.

In such a management structure the contractors would be given a set of performance goals. Achieving better than an established goals (e.g., more than, say, 7,500 miles between roadcalls) would result in a incentive bonus to the contractor.

Achieving worse than established goals (e.g., less than, say, 2,500 miles between maintenance roadcalls) would result in two actions by RTD. First, RTD would assess a penalty to the contractor. Second, RTD would be a position to follow-up, requesting further documentation from the contractor and plans for improving the situation. In this example, RTD might request maintenance records and the contractor's plan to bring inspections up to date.

RTD has already taken similar actions as a result of its occasional inspections of equipment. The difference in this recommendation is that RTD would take follow-up actions primarily as a result of measured problems in performance, in this case maintenance reliability.

RTD should continue to require highly qualified and experienced on-site managers and should require the contractors to replace their local management staff and/or supplement such staff if, in RTD's opinion, the safety and quality of service does not meet contractual requirements.

By adhering to an oversight program that addresses established safety and service quality goals rather than on contractor management of their own operations, RTD can both assure that the public's interests are protected and avoid the tendency to focus on the mechanics of service delivery rather than on the results.

The key to such a management approach is to devise a set of performance measures that are:

- Meaningful: The performance measures should address safety and service quality issues that are important from the public's perspective. Thus, while measuring arrival and departure times at the downtown stations is relatively easy to collect for the express routes, arrival and departure times at park-and-ride lots and other en route locations are also important to passengers. In another example, cleanliness of bus seats and interiors may be much more important to passengers than the cleanliness of bus exteriors.

- Realistically measurable and obtainable: The performance measures should be able to be quantified with data that is possible to collect without extraordinary expense. For example, 100 percent measurement of whether bus operators are properly in uniform would not be possible unless each operator was observed en route. This measure might require an unreasonable amount of manpower.

- Consistently applied: The performance measures should be uniformly collected for both RTD and contractor buses. Observations should not be biased by operational considerations which tend to address known problem areas. On-time arrivals of express routes at the Market Street and Civic Center stations is an excellent example of a consistently applied performance measure.

Several potential approaches that RTD should consider in this regard are the following:

- Sampling: A stratified random sampling approach, tied to specific standards of precision and level of confidence, would provide an

unbiased approach to measuring both RTD and contractor performance. RTD already uses this approach in collecting passenger-mile data reported to the Urban Mass Transportation Administration.

Sampling requires careful management controls. Manpower must be deployed in the field. Data collectors need to be trained and carefully supervised. Opportunities exist for both failing to collect and improperly and/or falsely collecting and processing data. This may lead to questions as to the extent to which the sample is unbiased.

- Advanced technology: Emerging automatic vehicle location (AVL) technologies are beginning to provide the transit industry the ability to monitor from a central location the location of every vehicle in a fleet. Such a technology, properly designed and applied, has the potential for providing 100 percent samples of on-time performance and missed trips and could provide useful information regarding other operational measures, such as roadcalls and accidents.

  The real challenge in this approach will be for RTD management to adequately capture, analyze, and act on the data. Real-time data could be most useful in supervising operations. Properly designed reports, with appropriate analysis and interpretation, can be used both to reward and penalize contractors and to improve overall quality of service.

There are two weakness in the use of complaint data, problems common to the transit industry:

- Data quality: Complaint data are based solely on complaints received and do not reflect any follow-up by management. If such data are to be relied upon for incentives or penalties, a process must be established by which management assures that only complaints that have been adequate reviewed are used as the basis for performance measures.

- Reporting bias: There is no control as to the extent to which the reported problems accurately portray overall service quality. By their very nature, the incidence of complaints cannot be controlled, since the origin of the data (i.e., telephone calls) is not subject to precise sampling. Additionally, it is dependent on the expectations of the caller and his propensity to complain.

Incentive bonuses and penalties might be based on either a point or a range. Performance above or below that point or range would result in imposition of the incentive or penalty. RTD would need to accomplish the following to structure such an incentive/penalty scheme:

- Establish target performance goals: This could be based on historic or current RTD performance, by type of service. For example, in the case of on-time performance in the April-June 1990 quarter, contractors operating local/limited non-radial routes that performed worse than RTD's value of 90.7 percent on-time and would be subject to a penalty.

  Alternatively, performance goals could be based on desired targets in excess of RTD performance to date. Gaining contractor acceptance of such an approach might be more difficult, however, since it could be argued that such performance goals might be unattainable.

- Establish incentive and penalty dollar amounts: This determination must take into consideration the point at which the financial implications of incentives and penalties become significant to the contractors and the degree of risk contractors would be willing accept.

# VII. SUMMARY

RTD met both the spirit and the letter of the law in the implementation of the privatization initiative. RTD has successfully contracted out 20 percent of its service, representative of the broad range of services RTD provides throughout the Denver region. It has done so in an efficient and effective manner.

While it could have responded to SB 164 as a threat to the RTD's institutional integrity, RTD management and the Board worked deliberately to establish a management and operational structure that assured the success of the privatization effort. RTD's implementation of SB 164 recognized the profit making objectives of the private contractors and provided opportunities for small and disadvantaged businesses. At the same time, RTD management maintained control over the safety and quality of service provided and over RTD assets utilized by the contractors.

Privatization of transit services by a public entity involves many trade-offs with respect to degree of control, cost, and quality of service. There have been many examples in the U.S. of expanded transit services operated by private contractors. RTD was one of the first cases of a major replacement of existing publicly operated service. RTD's primary goal from the outset was to maintain the safety and quality of service it has previously achieved when it directly operated the privatized routes.

While fully implementing the privatization goals of SB 164, RTD hoped to accomplish this, in part, by making the privatization of transit services transparent to the passenger. RTD hoped to achieve this with very detailed service specification in the RFP and contracts, selection of qualified contractors, significant oversight effort, and the provision of incentives (in the form of retained fare revenues) and penalties (in the form of liquidated damages).

Discussions with the contractors identified management areas in which improvements were desired. Many, in fact, were resolved during the initial months of revenue service by each contractor. To a large extent, these issues addressed the trade-offs between allowing the contractors the opportunity to manage their own businesses versus RTD management's real and perceived need to oversee the contractors in order to protect the public's interests.

RTD has demonstrated that it can successfully implement privatized services and oversee initial operations by the contractors. Future contracts may provide RTD the opportunity to shift the focus of its attention from the contractors' management of their services to the contractors' actual performance. This can be accomplished through incentive/penalty provisions tied to meaningful, realistically measurable and obtainable, and consistently applied performance standards. Incentives and penalties should be established at dollar amounts that would clearly encourage the contractors to perform well. Such an approach would be appropriate once a contractor has successfully mobilized and has achieved a high and stable level of safe and quality service.

RTD's experience to date indicates that, for low productivity routes, transit service contracted to the private sector can result, in the long-term, in lower public subsidy than service provided by RTD forces. However, in the short-term there were real costs to RTD through the dedication of significant resources during the initiation of privatized services, in routine contract administration and operational oversight, and mandated consultant studies. Further, despite careful selection of potential contractors, and intensive contract administration and operational oversight, some contractors experienced severe start-up problems and quality of service suffered in the initial months of operation.

Finally, it should be noted that these findings are valid only for the relatively low productivity routes actually contracted out. Operating losses by the current contractors and uncertainty regarding economic conditions may lead to higher proposed prices from both the current contractors, who may wish to operate their Denver projects profitability, or from new contractors, who may wish to minimize risk given the experience of the current contractors.

TESTIMONY OF GEORGE LEITZ, INTERNATIONAL PRESIDENT, TRANSPORT WORKERS UNION OF AMERICA, AFL-CIO BEFORE THE SUBCOMMITTEE ON SURFACE TRANSPORTATION OF THE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

Good morning, my name is George Leitz and I am International President of the Transport Workers Union of America. The TWU represents some 60,000 members involved in urban and intercity surface transportation. We represent bus and subway drivers in New York City, Philadelphia, Houston, San Francisco, Miami and numerous other smaller cities. We have a continuing interest in a strong and viable urban transit system. This is, in our view, the purpose of the Urban Mass Transit Act, and the Surface Transit Assistance Act now being considered.

At the outset, I am pleased that after many years of recommending drastic and destructive cuts, the administration is at least proposing a modest increase in assistance. I believe that significantly more assistance is called for if we are to restore public transit to a central role in our national transportation system, but I am grateful that the destruction of urban transit assistance programs is no longer in the administration's game plan.

Aside from arguing for an increase in funding levels, TWU has continuing concerns about the administration of the program which I will now discuss.

PRIVATIZATION

It is clear that UMTA, through its interpretation of Sections 3(e), 8(e), and 9(f) of the Act - as well as regulations published pursuant to these provisions - has sought to establish a bias in favor of contracting out and privatization by transit authorities. Indeed, UMTA has, in essence, forced public authorities to justify performing their own work as a condition of assistance. In our view the actual terms of the law do not permit this sort of presumption. Of equal significance, this is the exact opposite of how efficient private sector firms operate in relation to contracting out core functions of a business.

For example, in our contract with American Airlines we have a provision requiring the company to contract in at least as much work as it contracts out. Notably, UMTA has found similar restrictions on contracting out in transit contracts to be inconsistent with its privatization regulations. I doubt that anyone would contest that American has been one of the most successful airline enterprises over the past few years. By contrast, Texas Air - which for years contracted out far more work then most carriers - is one of the least successful carriers. In other words, UMTA's presumption in favor of contracting out has not, in our experience, been a sound strategy in the private sector. In light of this, I cannot see wh UMTA retains this sort of policy.

The true cost of UMTA's privatization initiative, though, is revealed by the Miami experience. In that city, Administrator Ralph Stanley forced the authority to enter into what was known as the "Private Enterprise Participation" ("PEP") plan as a condition to receipt of rolling stock. The authority was compelled to contract out several well traveled routes to Greyhound Corporation. The notion was that this experiment would show that private firms would operate more efficiently and effectively than the established public authority and, therefore, justify more contracting out.

The experiment eventually established the exact opposite point. Polls of the public showed great dissatisfaction with the service provided by Greyhound and far greater happiness with the work of our members in Miami. While the private company began with a significant labor cost advantage, that advantage was soon eliminated by the higher accident, turnover, and absenteeism rates among the private drivers and mechanics. In short, while Greyhound paid its employees less, the Miami ridership got what Greyhound paid for - less effective service.

The ultimate cost of privatization, though can be simply revealed by looking at the busses themselves. Greyhound walked away from the PEP contract. They returned the buses to the Miami authority - <u>stock paid for by UMTA dollars</u> - in a complete state of disrepair. Any proponent of forced privatization should be compelled to walk through the warehouse where the cannibalized, leaking, now unusable buses, operated by Greyhound are kept. That

will reveal in starkest possible terms the true cost of privatization

Clearly, this policy is unworkable. TWU strongly recommends that Congress amend the Act to require UMTA to remain neutral with respect to contracting out decisions.

LABOR PROTECTION

To its credit, UMTA has not proposed elimination of 13(c). However, we strongly believe that certain loopholes in the law should be closed. In particular, UMTA has proposed deletion of 13(c) for so called demonstration grants. Yet, such grants many represent significant privatization initiatives. In any case, I see no reason why an authority should be allowed to circumvent negotiations with the Union on any federal grant which may affect our members.

DRUG TESTING

TWU remains opposed to legislation mandating the imposition of drug and alcohol testing, especially random drug testing, as a condition for the receipt of federal transit grants. Over 80 percent of the urban mass transit industry is engaged in massive drug and alcohol testing, employing pre-employment reasonable suspicion, post-accident and other testing as part of negotiated programs or employee practices. We have such programs in New York

and Philadelphia.

The Committee has not received nor has UMTA presented any evidence indicating a need to legislate any additional testing at this time. Indeed, the experience in the airline industry indicates that the cost of random testing programs far exceeds their value in removing drug impaired personnel from the work place.

(PRESENTED BY ROBERT MALOFSY,
LEGISLATIVE DIRECTOR, AMALGAMATED
TRANSIT UNION)

STATEMENT OF JIM LA SALA

INTERNATIONAL PRESIDENT

AMALGAMATED TRANSIT UNION

BEFORE

THE SUBCOMMITTEE ON SURFACE TRANSPORTATION

OF

THE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

U. S. HOUSE OF REPRESENTATIVES

ON

REAUTHORIZING THE FEDERAL MASS TRANSPORTATION PROGRAMS

APRIL 10, 1991

Amalgamated Transit Union
5025 Wisconsin Avenue, N. W.
Washington, D. C. 20016
(202) 537-1645

## *Summary*

## *ATU Positions on New 1991 Five-Year Surface Transit Bill*

① **Passage of a new five-year highway/mass transit bill** by September, 1991.

② **Increased federal transit funding** to $6 billion per year.

③ **Raising the federal gas tax** to seven cents per gallon with funds dedicated to mass transit.
